"A pretty face," he remarked, carelessly, to his mother. "I suppose it is some one I have known or should know."

Old Mrs. Haliburton, with her keen eyes and beak nose glanced sharply back toward Georgy, whom she had not perceived, and nodded.

"It is that young person whom Jane Appleton brought up. She is married now to one of our men, I believe."

Georgy found Paul Appleton and his bride holding a sort of formal reception. The rooms where her own wedding had been solemnized a year before were quite filled with guests. A very dainty and graceful bride was the new Mrs. Paul, in her lavender train and point-lace shawl. Georgy tried not to feel the least tinge of envy as she looked at her.

Aunt Appleton had always a sense of gratitude towards her protege for having forborne to fascinate either of her own marriageable boys, and this gratitude cropped out in active kindness under the exultation she felt over Paul's match.

Georgy moved easily about the well-furnished rooms; somehow she seemed just fitted for such surroundings. The subdued, well-bred manners, the faint perfumes, the refined faces, and the rich dresses, were like a stimulant to her. She needed such quickening to be fully herself. Her composed, delicate beauty unfolded to perfection in this atmosphere.

She had been talking to one and another, taking in shapes and trimmings with her quick artist's eye, and in a pause was just reflecting upon the hang of the new curtains, when a voice said near her:

"I seem not to be able to recall you at all, Mrs. Randall. Yet I must have known you before I went away. My mother has just told me your name, and I have come to reclaim acquaintance if you will permit me."

"I remember you perfectly, Mr. Haliburton," Georgy returned quietly. "I was hardly grown up when you left us, five years ago."

"Five years? Ah, true enough! Won't you take this chair? What a lovely lily! Why, it is not real?"

"No; these wax flowers are very like nature, though—almost a plagiarism; don't you think so, Mr. Haliburton?"

"Why, yes. It must be quite difficult to make them. I dare say they bring a good price."

Under her serene smile a quick thought went through Georgy Randall's mind. She began to examine the gentleman before her with interest.

Stephen Haliburton was a gentleman by habit, and a man of the world by force of circumstances. But nature intended him for a diligent, painstaking, persevering man of business.

If he was not a great or a very good man, it was because he had so much time, so much money, so much flattery. He was spoiled by his opportunities, yet he needed only the right influence to elevate him beyond himself. He was thirty years old now—he was past the age when a man disdains to be led by a woman. But Stephen Haliburton had never disdained it. He had always been led by the keen-eyed, beak-nosed woman in steel silk, who, as Georgy talked with the heir, sat holding her wine-cup up to the firelight not far off.

The heir seemed to like Mrs. Randall's talk; perhaps because there was so little of it. In return he was rather unreserved—gossiping about his plans and his prospects. He said that he was glad to get home. He meant to settle down at Millville now; look after his factories and the operatives, and introduce some improvements. He wanted a better class of work—more tasteful designs; he hadn't seen a pretty print from the factory. Didn't Mrs. Randall agree with him?"

Yes; she agreed with him. It was a strange basis for parlor gossip—oils, chemicals, designs for calicoes. He was surprised to find how much she knew about it; and she—she was a little surprised herself. The most delicate pink began to flush her cheeks, the irises of her eyes grew into great black flakes, full of luster. All at once, at last, she turned a casual glance without the window.

"Why," she said, with a slight start, "it is almost dark. And I believe it is raining. I must go at once."

She stepped towards the window. Great plashing drops were falling upon the flagstones. The dull November daylight was almost gone.

Mr. Haliburton rose also.

"Did you walk?" he inquired. "Let us take you home. My mother will be going soon."

The little stir attracted Mrs. Appleton, who—most of the guests having gone—was devoting herself to Mrs. Haliburton.

"Stay to tea, Georgy," she suggested. "John knows you are here—does he not?"

"Yes; but it is raining. I think I had better not stop."

"I have been asking Mrs. Randall to take a seat with us, mother," interposed Stephen Haliburton.

"Ah, yes!" said the lady, with contracted nostrils and prolonged lip again. "I shall be happy."

And then the keen eye overlooked Georgy, as if to ask if there were any just cause why the Haliburton carriage, the Haliburton horses, and it might be the Haliburton heir, should traverse the length of Millville to take home this young person, who had married one of the Haliburton employees.

Georgy stood unmoved, a little concerned as to whether her last dress and bonnet should walk or ride, not at all concerned as to her own disposal.

The factory bell had done ringing, and John Randall was in sight of home just as the carriage of his employer stopped at the door, and his wife stepped from it. He did not, however, overhear her say to Stephen Haliburton, "If you call to-morrow afternoon, I will show you what I mean."

"Had you a pleasant afternoon?" her husband asked, by-and-by, as they sat at the tea-table.

"Very pleasant," she said, thoughtfully.

"It was very polite in Mrs. Haliburton to bring you home."

"Yes, I should have spoiled my dress."

It was always with a little effort that John Randall could get his wife to talk, and she seemed peculiarly silent to-night, and absent as well as silent.

Her eyes were brighter, too, than common—her face a little flushed. He was too generous, too unselfish a man to begrudge her even a happiness in which he had no part; but something in her abstraction filled him with uneasiness. The uneasiness was not decreased when, reaching home a little before the usual hour the following afternoon, he met Stephen Haliburton just leaving the house, nor when he found Georgy with the same brightened eyes and blightened color as the night before.

That was the beginning of John Randall's trouble.

It was not so much common jealousy—a man's instinct of revolt at another man's admiration of his handsome wife—as it was a fear—a desperate, death-like fear—that Georgy needed something he could not give to make her happy. He could never give her luxuries. He could never say such things as he fancied Stephen Haliburton must be able to say to woman. But he loved her so! O heavens! he loved her so! How could he endure that anything should come between them?

"I won't wrong her and tease her with suspicions," he said to himself, in the depth of the night. "I'll just fight my way the best I can against it. I'll keep on steady. Perhaps she'll see it right by-and-by."

Poor fellow! he did not realize how his own determination implied the dreary thought that her heart was turned from him. He raised himself on his arms to look on her as she slept; and all through what followed he retained the pure, calm face, as it pressed the pillow, whitened by the moonlight that glinted the frost on the window-panes and flooded the room.

She seemed colder to him after this, and he kept silent.

He knew that she met Haliburton at her aunt's; he knew that when she went to the seaside the ensuing Summer, for a week's visit to Mrs. Paul Appleton, there he was also. He knew that she seemed to be living a life apart from him; and once—that was when the iron entered his soul, when he went to her little desk, a present he had made her during their engagement—for a sheet of note paper, and found it locked and asked her carelessly enough for the key, she flushed and said she would get the paper for him.

But he kept true to the promise he made himself. He kept on "fighting his way against it as best he could," hoping, with a sick heart, that she "might see it right by-and-by."

The months wore away. The second year of their marriage was nearly completed. John had been very careful—as careful as Georgy herself—that there should be no outward and visible sign of misunderstanding or coldness between them. No suspicion had come to any that the second year of their married life had been less happy than the first. Nor had he ever omitted to give her any little indulgence within his power. He had prepared a surprise for her on the coming anniversary of their wedding during the year.

The anniversary fell upon Sunday; and so their little commemoration of the day must come the preceding evening. No allusion had been made to any celebration by either of them; but John felt sure, some way, that she could not let the time pass without some sign. For his own part, he had half resolved to attempt some explanation of their estrangement. Any thing, he thought, would be better than this chilling reserve. With his mind divided between the anticipation of relief and jealous dread, he went to the counting-house that Saturday night to receive his money. The cashier looked up with a certain embarrassment at his approach.

"Ah, Mr. Randall—the accumulation you have left in my hands? To be sure! And, by the way, Mr. Haliburton spoke to me to mention to you that there were to be some changes made, and—and—but there he is himself, sir."

John Randall turned, with a feeling akin to desperation, to meet his employer. It had gone through him like a thunderbolt, as the cashier spoke, that he was to be displaced. Stephen Haliburton simply said, as John faced him, "I'll not detain you now, Mr. Randall. I shall call this evening to let you know of the changes I feel obliged to make."

And the owner bowed, and left him.

With the money in his nerveless hands, John Randall walked homeward like a man dazed. He was to lose his place. For what reason he could not conjecture. But to lose it was to lose reputation, courage—everything. He had never imagined such a possibility as that. The money that he carried—he should not dare to make a present of it to Georgy now. He might have to wait for other employment. It might be needed for their bare every-day need, before he got work again. A chill like death struck to his soul.

Georgy, evidently, had not overlooked the recurrence of their wedding day. The cosy rooms of the cottage all wore a little air of festivity. Some slender vases held the gleanings of the flower-beds; chrysanthemums—blood-red, white, and purple—verbenas, and scarlet geraniums.

She came to the door that night to meet him—one of her "company" dresses on, some knots of velvet fastening her collar, and seeming to give a glow and brightness to her white skin. He took her hand; she raised her face, and with a wild heart-bound he kissed it, as he had not for years before. She was coming back to him again! That was the thought that thrilled him. Her infatuation—if such it had been—was at an end. She was his once more! And then, close upon his new happiness, came the dreary recollection of his last situation. He thrust the money in his pocket. By-and-by he would tell her all.

"You won't mind waiting supper for an hour, will you, John?" she asked, as she led him in. "I am going to give you something nice, by-and-by, and I think Mr. Haliburton will be in."

John Randall's blood froze once more. It was not for him, then, that all these preparations were made. Gregory had never spoken Mr. Haliburton's name to him before. He could feel that she was embarrassed as she did so.

"I want you to dress, John," she added, coaxingly. "I have laid everything out for you."

It seemed to him that he would have turned upon her but that he felt so broken by the thought of losing his place, and resented her gayety, her indifference, her secrecies—all that had made him so miserable through this long year. But he had not the spirit.

He went to dress as she had asked him. When he returned to the parlor Stephen Haliburton and his wife sat upon the sofa side by side. It was rare indeed to see Georgy's fair face so illuminated. Her cheeks were glowing, her eyes were sparkling.

As for Mr. Haliburton he was always the quiet gentleman, with no sense of being out of his place, no apparent suspicion of what was rankling in the heart of his employee.

What a nice little supper Georgy had ready. Yet nobody ate.

Finally the supper was over, and they went back to the parlor.

Georgy disappeared for a moment, and, returning, approached her husband, glancing shyly at the same time to her guest, whose face brightened beyond its wont as he caught her eye.

"We meant to make it all very formal, John; but I see Mr. Haliburton thinks I might as well tell it at once in my own way."

She paused and a sober pallor overspread her husband's face.

"What was coming?" his eyes asked, with no faith that it was anything to lighten his secret burden.

Georgy nervously folded and unfolded a slip of paper which she held.

"This is for you, John;" and she held it shyly towards him. "My anniversary gift. I have been working for Mr. Haliburton, too, this year. And I have thirty guineas here—the price of the designs I have made for the calicoes."

"Georgy!"

"You never suspected it? I did not want you to till I knew whether I could succeed."

John Randall had no voice in which to word his amazement or his gratitude for his restored faith, which, though his wife did not suspect it, was by far his most precious anniversary gift. She went on:—"I could always use my pencil nimbly, you know, John. And it had occurred to me one day why I couldn't do something with it for profit. I spoke to Mr. Haliburton, and he was so kind—you must thank him, John—he took so much trouble with my crude attempts; he did so much to encourage me. And now I am fairly in the way of work. I shall work better, to know that you know of it. I want to design for carpets by-and-by, as for prints; that pays so well—a percentage on the sale."

She stopped short, suddenly conscious of how much she was saying.

"I have a surprise, also, for you, Mr Randall," added Stephen Haliburton, quietly. "I hope it, too, will prove agreeable. The universal testimony of the mill officials, as to your efficiency and trustiness, make me feel that I am not showing you a proper appreciation, and I desire to give you a somewhat more responsible position, with an increase of salary!"

The very glory of heaven seemed to be opening a way to John Randall out of all his trouble.

"I am too happy, Mr. Haliburton, to talk much," he said in his straightforward way. "I have been depressed lately—the sudden removal of all causes for low spirits—"

He stopped short. Two big tears rolled down his cheeks. Stephen Haliburton alone perceived what Georgy never suspected, that her secret had made her husband jealous. He grasped John's hand.

"My dear fellow, it's too bad! I feared it a little once or twice. Of course I could not hint it to Mrs. Randall."

"What, John? What, Mr. Haliburton?"

"Nothing, Georgy, that you will ever know."

They were alone together, by-and-by, with their new-found happiness. Perhaps Georgy was equally relieved that there was no more need for mystification.

"What ever made you think of it, Georgy?" her husband asked.

"Why, John, it was that day about the gloves. I set myself considering why you should have all the toil, and I all the indulgence. I pondered how I could make or save something."

"I am happier than I ever thought I could be again, dear."

"Do you know, I have fancied you were unhappy lately, John, because you thought I was longing for things you could not give me? I could hardly wait for to-night to come to tell you all."

"My darling!"

And he folded his arms about her, with his face on her shoulder; and in the brightness and silence of the room, with its odor of flowers and glow of leaves, they felt their way through the coming future, safe, confident, out of the reach of any bitter trouble, since they loved and trusted one another.

Sabbath Reading.

THE OLDEST CHRISTIAN HYMN.

In Book III. of Clement of Alexandria is given (in Greek) the most ancient hymn of the Primitive Church. It is there (one hundred and fifty years after the Apostles) asserted to be of much earlier origin. The version given below will give some imperfect idea of its spirit:

SHEPHERD of tender youth,
Guiding in love and truth,
Through devious ways;
Christ, our triumphant King!
We come Thy name to sing,
And here our children bring,
To shout Thy praise.

Thou art our holy Lord!
And all subduing Word,
Healer of strife!
Thou didst thyself abase,
That from sin's deep disgrace
Thou mightest save our race
And give us life.

Thou art Wisdom's High Priest!
Thou hast prepared the feast
Of holy love!
And in our mortal pain
None calls on Thee in vain;
Help thou dost disdain,
Help from above.

Ever be Thou our guide,
Our Shepherd and our pride,
Our staff and song!
Jesus! Thou Christ of God
By the perennial Word,
Lead us where Thou hast trod,
Make our faith strong.

So, now, and till we die,
Sound we Thy praise on high,
And joyfully sing:
Infants, and the glad throng
Who to Thy Church belong,
Unite and swell the song
To Christ, our King!

"EVERY-DAY LIFE" FROM A DIFFERENT POINT OF VIEW.

BY COUSIN JOHNNIE.

Mr. Lead Pencil's friend, Ida Foxglove, (*vide* Rural of July 6th) says she knows nothing of "creeds, dogmas, devils or gods." She evidently thinks such ignorance a thing to be proud of. She does not consider that we are just as accountable for what we *believe*, as for what we do or say, since we have a direct Revelation from the Deity, and minds endowed with a power to discriminate between truth and falsehood. She is "afraid of hugging a belief that will make her unhappy;" but it seems to me a belief in the following texts would have the very opposite effect. "God so loved the world that he gave his only begotten Son that *whosoever* believeth in him should not perish, but have everlasting life." "Greater love hath *no* man than this, that a man lay down his life for his friends."—"If ye then being evil, know how to give good gifts unto your children, how much more shall your Heavenly Father give the Holy Spirit to them that ask him."

Three simple texts, breathing of the great Creator's love to his creatures! Of the love of the Father, who has not even withheld from us his only and well beloved Son: of the love of the Son, who voluntarily laid down his life for us: of the love of the Holy Spirit, who condescends to unite himself to souls, the "spiritual beauty" of which is by nature sadly "weakened and marred," that we may be made partakers of the Divine Nature. Three simple texts in which are yet implied the stupendous doctrine of the Trinity, the doctrine of the Incarnation, and the doctrine of the Atonement. Let Ida Foxglove believe them: they need not frighten her, even were she "easily scared." Let her rest confidently in them, for they are the words of Scripture; the external and internal evidence of whose inspiration has been all-satisfying to some of the greatest minds the world has ever known.

RELIGIOUS ITEMS.

With every joy connects the possibility of a proportioned pain. Surely love, if nothing else, inclines the soul to feel its helplessness, and be prayerful, to place its treasures in a Father's hand.

How often we feel and act as if our mood were the atmosphere of the world! It may be a cold frost within us while our friend is in the glow of a summer sunset; and we call him unsympathetic and unfeeling.—*Geo. MacDonald.*

Ignorance is not so bad as error; the former is a blank sheet on which we may write: but the latter is a scribbled one from which we must first erase. Ignorance is content to stand still; but although our error moves, it goes in the wrong direction.

If we had a keen vision and feeling of all ordinary human life, it would be like hearing the grass grow and the squirrel's heart beat, and we should die of that roar which lies on the other side of silence. As it is, the quickest of us walk about well wadded with stupidity.—*Geo. Eliot.*

It is not great battles alone that build the world's history, nor great poems alone that make the generations grow. There is a still small rain from heaven that has more to do with the blessedness of nature, and of human nature, than the mightiest earthquake or the loveliest rainbow.—*Geo. MacDonald.*

Ladies' Port-Folio.

FARMER BROADFIELD'S WIFE.

BY MAJASA.

THE laylocks are in bloom again,
And Spring has come once more,—
Draw up your chair, now, MARTHY ANN,
Close to the open door;
Well, can you b'l'eve 'tis thirty years
Of shadow, rain and shine,
Since me and you together played
Keep house with HANNER RINE?

And she is gone; 'twas May, you know;
How bad we felt that day!
I never liked to walk again
Along the meader way;
It seemed so sad to leave the world
When life was fresh and green;
But then she never lived to know
The troubles we have seen.

You've had your troubles, MARTHY ANN,
The folks have told me so,
And mine—well, them that's lived like me,
They are the ones that know.
I can't tell all them tired years,
The hard tug, day by day;
Your hair is brown, and mine was then,
But now 'tis thin and gray.

We moved out to the Ridge, you know;
Our wagon seemed to me
Just like a ship, with broad white sails,
Alone upon the sea.
For there was not a tree in sight,
And prairie grass so tall,
A man horseback beyond that ditch
You couldn't see at all.

I cooked for weeks out in the grass,
No shelter for my head,
The wagon cover kept at night
The dew off of my bed.
At last the cabin, rough and small,
Looked large and grand to me,—
A shelter from the storms and wind
Of that wild prairie sea.

The nearest neighbor was four miles,
The town twenty and more;
But after while was built half way,
A school house, shop and store.
With big ox teams they broke the sod,
And corn and nger grew;
And all around the country there,
Well folks was mighty few.

But we lived on, year after year,
I hardly can tell how,
And got the land all under fence,
Though hedges we have now.
And somehow men folks hardly thought
Of women's cares and work,—
And they were not the kind, them days,
To turn back, or to shirk.

As money came, JOHN bought more land,
And kept on hiring men,
But never seemed to see how much
I needed help, too, then.
Machines were got, and lots of things
To make work light out door;
I carried wood, and had no pump,
No carpet for the floor.

I tell you, MARTHY ANN, I b'l'eve
Some men make land a curse;
They get so much it turns their head,
And they grow worse and worse.
To children's lernin', women's lives,
They hardly give a thought;
I've sometimes wondered if they think
That even souls are bought.

The seven children looked to me;
There was one girl, you know,
The prettiest baby of them all—
Yet she was first to go:
Oh, how I loved her, but somehow
I couldn't hardly cry;
My life had been so hard and sad—
All this she had passed by.

You say I'm living easy now—
I know it, MARTHY ANN;
But money won't buy me new health,
As it bought that dish pan.
My boys, I couldn't bring 'em up
Accordin' to my way;
You can't change men; I've tried it, sure,
For many a weary day.

You can't forgit, jest as you will;
When Sunday mornings come,
I allus think of those long days
Out in that prairie home.
Oh, how I wanted meetins then;
Ten miles across the creek,
Sunday, they couldn't drive a team,
Though they went every week.

Of all hard things of them hard years,
This wore the deepest in;
I can't forgit—I wish I could,—
The bitter wrong and sin.
If only once in a three months,
The preacher's words of prayer
Had fallen on my ears, I've thought
I could have lived on there.

You wonder, MARTHY ANN, I'd tell
All this to even you;
The creek will only hold so much,
And then the dam breaks through.
If you knew all, you'd wonder more
That women bear so long
In country homes, where many find
Such hardship, toil and wrong.

But let us talk of something else;
I know my blood runs high
Whenever women's wrongs come up,
But better days are nigh.
And even for the broken lives
The Master rest can bring,
And joy may bud and bloom again,
Like laylocks in the Spring.

EVERY-DAY LIFE.

BY LEAD PENCIL, ESQ.

I MET blonde MOLLIE this morning. She had been out among the New Jersey verdure. Her eyes sparkled like—anything that sparkle; but occasionally I saw an abstract, far-away look in them. I asked what she was looking at.

"Mr. PENCIL, I think you are egotistic and conceited."

"Wherefore?"

"Because you are always fancying you see something in people's faces that they don't care to reveal. I don't like it. I want you to know that I can synthesize as fast as you can analyze."

And, with a pout upon her pretty lips, she tossed up her little blonde head and left me! Now, what had I done? Poor innocent I! I walked on thinking about it. And I know by experience and observation how acute and accurate are the analyses men and women make, mentally, of each other. It is not always pleasant either. That I know from experience, too! And this same blonde MOLLIE is as much given to such dissection as any woman I know. But she was vexed that I should have discovered what she, relying upon my stupidity, evidently took no pains to conceal.

There ought to be something philosophical to be evolved in this connection; for instance, is it not safe to say that a man's and woman's perception is greater or less in proportion to the scope of their own experiences. They know when other people struggle with themselves if they (of the first part) have ever struggled. The lines of the face are, many of them, scars gained in warfare of one sort or another. Sometimes these lines indicate present pain; at other times they are but scars healed over; they have left the marks of pain, but the suffering long since ceased. Few are the faces that do not carry wounds or scars. And who does not know a sabre cut from the mark a ball leaves? Who does not know the wounds given the heart from the scars conscience or remorse inflicts? And the eye tells its certain story. It leaves no room for doubt to those who have learned well the alphabet of its language.

SOMEBODY has inclosed me, in an envelope, a clipping from some paper, of which the following is a copy:

"It is not much that heart to heart
Can tell in words of human speech;
Its deep recesses lie apart
Where only thought to thought can reach.

"That is not friendship which can ask
And tell the best it seeks and gives;
That is not love which can unmask
Itself to anything that lives.

"The deeper motions of the soul
Are never heard by human ear;
That which we can not speak is all
That we most truly hope or fear."

I take it that is an expression of the daily life of many human souls; but of how few, comparatively! And yet, underneath what seems indifference and callousness burn fires of which few people take cognizance. JOHN SUMPTER said to me the other day:—"PENCIL, you would hardly believe me to be brimfull of sentiment and the tenderest feelings that human nature is capable of expressing, would you? You think me cold, heartless, indifferent. Whether *you* do or not, there are some who do, whom I would give half a life to convince otherwise. And yet, I seem to lack the power of expression. I know I make some who love me suffer, because of this lack of power on my part. But you say, 'if you *feel* you can express.' No, I cannot. Did you ever have a nightmare?—realize the most horrible experiences; desire to do or say something, and yet know yourself to be perfectly powerless? If you have, you know how I often feel when I see the necessity, and know what compensation would result if I could convey to others all that is in my heart to express, and yet am powerless to do it."

JOHN SUMPTER convinced me that what he said was true; and he had, by some agency or other, arrived at a period in his life when expression was both easy and potent. Whether this developed power would prove available under other circumstances, when he might want to use it, I cannot say. In his case, I doubt if the deeper motions of the soul are ever heard by human ear.

The subtlety with which the affections act upon and through the mind is wonderful. They are most vigilant sentinels—keen and quick-hearing—who always demand and exact the countersign.

I walked home with THOMAS the other night and stopped at his house. In the parlor Mrs. THOMAS met him with a kiss on her lips. The kiss was given and returned when I heard:

"THOMAS, what troubles you to-night?"

"Oh, nothing darling; I'm all right."

Then, in the inflection with which THOMAS replied, the wife read the confirmation of her first perceptions. She *felt* at first the presence of trouble, and then she heard the crackling of the twigs under the feet of the intruder and she demanded the countersign, simply saying,

"What is it, THOMAS, dear?"

THOMAS surrendered; he could not creep into camp unobserved with such a sentinel on guard.

This is the every-day life in thousands of households where there is a loving heart on watch. And it is useless to attempt to evade the challenges such hearts make. Sometimes I think it would be better if the man's mask were impenetrable; for some sensitive souls are terribly weighted with burthens they ought not to bear, which there is no need they should hear, and which no one is the better for their bearing—burthens too often imposed upon them by the shirking weakness of men, and at others only taken on because of the too apparent efforts of husbands to conceal the loads they are compelled to carry.

Perhaps it is best as it is; but I confess I sometimes do not think so.

Reading for the Young.

THE STORY OF THE FROG, That Wanted to be Large as the Ox.

FROM THE FRENCH OF LA FONTAINE.

"THERE never did live so unhappy a frog,
For all I can do is to sit on a log,
And grow greener each day.
I was born to great things, and should be immense,
Like my neighbor the ox, that lives over the fence."
Croaked the frog, "Lack-a-day!"

"Mr. Ox! Mr. Ox! if I swell myself out,
Shall I ever develop myself, and be stout
Like you?" sighed the frog.
"Moo! Moo!" said the ox, "I am sure I can't tell;
But hop on the fence, give your very best swell,
And we'll see how you'll do, neighbor Frog."

"Neighbor Ox, I will do it. Take notice, I beg,"
Said the frog, when he'd made himself large as an egg.
In his effort forlorn.
"Am I large enough now?" "No, I don't think 'twill do."
"I'll try, just once more, Mr. Ox." But in two
His small breast was torn.

Good people, this story a moral contains,
For him, who from envy his station disdains,
And sighs to be great.
The world has a need of us, just in our place:
And to fill that place well is a praise, not disgrace,
Whatever its state.

ELIZ. CUMINGS PIERCE.

THE PIGEON PIE.

"MOTHER, will you make a pigeon-pie to-morrow?" asked father, when the silence in the bed-room showed that sleep had at last conquered the *frolicers*.

"A pigeon-pie?" said mother.

"Yes," replied father. "I have told the children times enough that if they did not give those doves away I would kill them.

"But they knew you wouldn't," suggested Mary.

Father pretended not to hear. "They are all over everything in the barn, have just ruined that buckwheat, and I can't stand it any longer. I have got them shut up to-night, and Mrs. CLARK will kill them and dress them over there for you, if you will make a pie of them to-morrow."

"Why, yes; I suppose I can," said mother, "if I can only manage it so the children won't know it; they'll feel so badly, you know."

"Let them go chestnutting," said MARY.

"That will do," answered mother. "They wanted to go to-day. I will let them take their dinner, so they'll stay all day, and then they won't know what became of the doves."

"Say, FAN," said ELLA, early the next morning, "wake up; mother says we may go chestnutting, and take our dinner."

"Good," said FANNY, wide-awake in a minute.

"You'd better hurry up after breakfast," said MARY, "so as to have a nice, long day of it. I'll do the dishes for you."

"Will you? That's good!" said ELLA, for "doing the dishes" was the trial of her life.

"What may we have for dinner, mother?" asked FANNIE.

"Oh, get anything you are a mind to," said she. "There's some pie, and some ginger-cakes, and take those tarts, if you want."

"I thought *something* was up," said ELLA afterwards. "You were all so *wonderful* good, and so anxious we should have a good, long day of it!"

But it did seem as if they would never get started that morning. I do believe all four shoestrings broke, and the red basket couldn't be found "high nor low," and nothing else would do to hold the nuts, and we expected every moment Mrs. CLARK would bring in the doves, and then! But at last the shoes were all tied, and the basket found, and FANNIE ready, but where was ELLA.

"Oh, she has found some old paper of course," said FANNIE, "and she must stop and read it. Come, ELLA; Oh, come along. You've read that old story forty times. I know you have."

"Do wait one minute, please, FAN," said ELLA. "I'll finish it in one minute."

"Oh, dear! just one minute. It's always the way," said FANNIE.

"Come, ELLA, I'll save the paper till you get home," said MARY. "Don't keep FANNIE waiting so." And at last they were fairly out of sight.

Mrs. CLARK brought the birds all nicely dressed, and mother had the pie all ready for the oven, when—"There, I declare," said MARY, "if there ain't the children come back again!"

"Oh, dear, we shall have a fuss now!" said mother.

"What did you come home for, girls?" asked MARY, when they came in.

"Oh, we didn't feel like staying one bit," said FANNIE; "and there wasn't any chestnuts, either."

There was no help for it now, so we must make the best of it. ELLA caught a glimpse of the pie as it went into the oven, and exclaimed:

"Chicken-pie for dinner! Oh, I'm glad I came home."

"Mother couldn't quite say she was glad, too. It was a wonder FANNIE did not go out to feed the doves; but she didn't happen to think of it, and all went on right till dinner time. ELLA took some pie and pronounced it "splendid." FANNIE didn't eat chicken, but she wanted to know—"Pa, what chicken did you kill?"

"How can I tell you which one?" said father.

"Was it Top-knot?" said she.

"No."

"Was it Yellow-legs?"

"No, it wasn't Yellow-legs," said father.

"Was it Blackey?"

"No; it wasn't Blacky or Whitey, either," said father.

"Well, then, I don't care which one you did kill," said FANNIE.

"It must have been a very small chicken," said ELLA.

We grown folks were very busy eating, and didn't look at each other. ELLA had commenced on her third plateful, when she exclaimed:

"Well, if this ain't the *funniest* chicken I ever *did* see! I can't find the wish-bone or anything."

We didn't answer. A minute after ELLA's knife and fork went down on the table—not very softly—I knew what was coming next.

"FAN, do you know what we are eating?"

Poor FANNIE, she thought in an instant. Her knife and fork fell slowly out of her hands; the large, black eyes filled with tears, and with a great sob she ran out of the room. We were so sorry for her, and for ELLA, too; only it was so funny that ELLA had eaten them and called them good, she could not help laughing herself, though she was crying too. She kept still till father had gone out, then burst out.

"It was a shame to make me eat them. It was mean to make a pie of my doves. I suppose we shall have a pie made out of kitten next!" (The old cat had four in a barrel in the shed.

Poor little FANNIE cried all the afternoon, till at last MARY told her she might look over her box of "pretty things," as the children called them, and have whatever she wanted most, if she wouldn't cry any more. She chose a little needle-book, which MARY gave her, calling it a "peace-offering." In the evening I heard them telling it all over.

"It was too bad to kill our little pets," said FANNIE.

"I tell you what, ELLA, let us have father arrested for murder."

"No, we can't do that," said ELLA; "for, you know, he didn't kill them himself."

"Well," said FANNIE, "I tell you what we can do. We can have him arrested for false-imprisonment, for he shut them up for Mrs. CLARK to kill."

The Puzzler.

ILLUSTRATED REBUS.—No. 5.

☞ Answer in two weeks.

Note to the Katies.—"Katie" asks us to ask the Katies who study this department to send each a riddle to the Editor, to be published as "The Katies' Riddles," if found worthy. She says:—"Girls, let us see who hearing our name can send the most difficult and yet the best one."

BIBLE QUESTION.—No. 1.

WHAT did Pharoah call Joseph's name? 5 a's, 3 h's, 2 p's, 2 n's, 1 i, 1 l, 1 z.

☞ Answer in two weeks. E. J. R.

PUZZLER ANSWERS.—July 20.

ILLUSTRATED REBUS NO. 3.—Be above meddling in a family between man and wife.

HIDDEN ISLANDS NO 1.—Orleans, Formosa, Cuba, Malta, Long, Borneo.

BOTANICAL RIDDLES NO. 1.—1, Tea; 2, Hop; 3, Beech; 4, Slippery Elm; 5, (to be supplied by some one at request of author); 6, Bay; 7, Pine; 8, Yew; 9, Cane; 10, Date; 11, Basswood; 12, Honeysuckle; 13, Judas; 14, Peach; 15, Fir; 16, (author requests some one to supply it); 17, Broom; 18, Cypress.

News of the Week.

CURRENT TOPICS.

Contents of the Confederate Archives.

GEN. PICKETT has sold to the United States Government the archives of the Confederate Government, which had been sent, intact, to and preserved in Montreal, for $75,000. These archives contained the report of Jacob Thompson, the rebel agent in Canada, who had charge of the organization of incendiaries for the purpose of destroying Northern cities by fire in 1861. The report was made to the Confederate Secretary of State, Benjamin, in Dec., 1861. In it is given a detailed account of a Western organization in the interest of the Confederates, known as Sons of Liberty; of the attempt to organize a rebel uprising in Illinois, Indiana, Ohio, Wisconsin, Kentucky and Missouri; of the plot to release the rebel prisoners at Camp Douglass, Chicago, &c., &c. It asserts that the plots to burn Northern cities would have been successful but for the foolish experiments with Greek fire. The report is printed and shows us a phase of civil war which ought to make men thoughtful and appreciate the blessings which peace has finally brought, and encourage all just action to make us a homogeneous and united people.

The Acrimony of Political Debate.

THERE is little discussed in the newspapers or in the street, in the cars or at the country corners, that is not political. Who shall know the truth by listening to or reading such discussions? The language of newspapers and of politicians supporting opposing candidates, is not the most refined and courteous. Statements are made by each party, and flatly pronounced "lies" by the other. The vocabulary of hatred seems to be drawn upon to characterize opponents. It matters not to us which side applies these epithets, or indulges in this billingsgate, the RURAL NEW-YORKER has no word of commendation or encouragement for either. If a calm, dispassionate statement and review of facts, and a statesmanlike discussion thereof, will not save a candidate (no matter which) from defeat, let that candidate go to the wall. The RURAL NEW-YORKER has no other interest in this political warfare than that the people may be benefited by its results. Its editors are divided in their preferences for men, but each seeks the same results as the others, and will be satisfied with them, no matter who wins. Meantime, we advise our readers to keep cool, clear heads, well-controlled tongues, and decide how to vote, and vote according to the best knowledge of the situation that can be obtained. That is all of a citizen's duty. Let politicians and partisans spout and demolish each other, as they will; the true citizen will seek only the truth, and act upon it.

Stanley—Dr. Livingstone.

THE New York Herald, July 26, publishes a letter from Dr. David Livingstone, the African Explorer, dated "Ujiji, on Tanganyika, East Africa, Nov., 1871," and addressed to James Gordon Bennett. It occupies nearly two columns of the Herald, and was telegraphed from London thereto. Dr. Livingstone had just returned from a "five hundred mile tramp" beneath a blazing, vertical sun, having been baffled, worried, defeated and forced to return when almost in sight of the end of the geographical part of my (his) mission." He was miserable because of the near prospect of beggary among the Ujijians. In this disheartening condition he heard "vague rumors of an English visitor," One of his people finally rushed up, at the top of his speed, and in great excitement, gasped out, "An Englishman coming! I see him!" and off he darted to meet him. An American flag, the first ever seen in these parts, told the nationality of the stranger. "I am as cold and non-demonstrative as we islanders are usually reported to be; but your kindness made my frame thrill. It was indeed overwhelming, and I said in my soul, 'Let the richest blessings descend from the Highest on you and yours!'" Dr. Livingstone then describes the interest with which he listened to the news brought him from the outside world by Mr. Stanley, details what he has discovered geographically, what he proposes to discover, "notwithstanding the sore longing for home that seizes him every time he thinks of his family." Ere this reaches our readers, the English doubts will have been confirmed or set at rest by the arrival of Stanley in England, with or without credentials, showing that he has really seen Dr. Livingstone.

American University Rowing.

THE University races of our college oarsmen are getting to be as much of an established institution in this country as in England. The competition prior to last year, has been, we believe, invariably between Harvard and Yale. Last year, the Amherst Agricultural College crew entered the lists, and won. This year, Harvard, Yale, Amherst, the Amherst Agriculturals, Bowdoin, and Williams entered against each other for the silver cups and prize colors. The result of the race disappointed the expectations of most of those who took any interest in it. The row was three miles. The following is the order and time in which the crews passed the goal:—Amherst, 16.32 4-5; Harvard, 16.57; Amherst Agriculturals, 17.10; Bowdoin, 17.31; Williams, 17.59; Yale, 18.13. These different crews had a three-fold impulse to win:—One, to beat for the sake of beating; another, to beat for the glory of their respective *Alma maters;* another to win the money they or their friends had staked on their colors. Query:—All to what real profit so far as education is concerned?

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, July 29, 1872.

DURING the week past the general business of the City was very quiet. In Wall Street there is so little doing in the way of speculation on the Stock Exchange that Money on temporary loan is from 3 to 5 per cent., and while the operators in the Gold Room who believe in higher rates than 114@114¼ per cent. continue their manipulations, the movement excites little attention among the Bankers and Importers, who are chiefly interested in the course of the Gold premium. The shipments of Gold are larger in July than last year, but since January 1 they are very nearly even, say $51,000,000 against $50,500,000 for the seven months last season.

The destruction by fire of the Jersey City machine shops of the Erie Road, on Thursday night, created something of a flutter for a day or two in the Stock of the Road in Wall Street, resulting in a decline, however, of only one or two per cent.

There is a fair export demand for Breadstuffs and Provisions—$1,250,000 in value for the week—but the receipts are moderate by Canal, and not above the average by the Railroads. There has been some extra diversion of the Grain trade from Chicago and other lake ports to Montreal, *via* the Welland Canal and the St. Lawrence, this season, and it is by no means certain that New York will not soon feel the loss of this movement.

The Importers will be busy this week in withdrawing Goods from Bond, the reduced Tariff coming into full operation on Thursday, Aug. 1.

The changes in the City Bank movement the week past are not important. The Deposits continue to come in from the Country, in the shape of interior Bank balances, and it will probably be September before the tide turns and Money improves in demand and rates of Interest.

The table below of Stock quotations is on a generally small business, the chief operations, of a speculative nature, being in Erie and Pacific Mail.

PRICES OF STOCKS AND BONDS.

American Gold	114½	N. Y. Central	98
U. S. 6s of 1881	117⅞	Erie	51½
U. S. 5-20's of 1867	115½	Lake Shore	92⅜
U. S. 5-20s of '65 (old)	116¼	Rock Island	112

New 5s	113¾	Northwest	75½
U. S. Currency 6s	114½	Do. Preferred	92½
N. Y. Hoonty 7s	106	St. Paul	56½
Tennessees	73	Do. Preferred	79¼
South Carolinas	29	Union Pacific	38
Missouris	94½	Adams Express	98
Central Pacifics	101¼	Pacific Mail	76½
Union Pacifics	30	United States Exp's	85½
Western Telegraph	75¼	American Express	74

PRODUCE AND PROVISIONS.

NEW YORK, Monday, July 29, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,620,000	Meal, bbls	2,650
Oats, "	902,000	Flour, "	41,000
Wheat, "	627,500	Eggs, "	4,962
Rye, "	15,900	Cotton, bales	1,486
Barley, "	—	Hops, "	92
Malt, "	82,000	Wool "	3,120
Seed, "	600	Butter, pkgs	12,100
Beans, "	109	Cheese, "	116,400
Meal, bags	1,384	Lard, "	3,268
Peanuts "	2,865	Dried fruits, pkgs	81
Pork, bbls.	236	Cut Meats "	2,319

Beans and Peas.—Trade has been very light in beans the last few days, and holders have shown more disposition to realize.

The quotations are, for prime medium, $3.20@3.25; fair do., $2.75; prime marrowfats, $3.45@3.50; fair do., $3.10; prime kidney, $3.30@3.40; fair do. $3; red kidney, $2@3. Peas, for green, $1.70@1.80; Southern B. E., per two-bushel bag, $2.25@2.50.

Beeswax.—The market is well supplied with Western, and prices are again easier. 34½@35c. for Western, and 35@35½c. for Southern.

Butter.—The market has been favored with cool nights and moderated weather generally, and trade has daily improved. Prices are not quotably changed, and, as before, only fresh express packages will bring out highest rates for Western. The improved weather induces holders to display some of their stale stock, with the hope of diminishing some of that surplus, but the demand is not of a character that admits the venture; besides, the bad reputation that a large portion of the stock has obtained, will for a long time prevent it from entering into competition with even the poorer grades of fresh arrivals. Shippers are moving a few hundred packages, but not fast enough to tell upon the supply of damaged Western. Should good weather continue, we may expect a renewed call from the East. Some parcels bought for that use several weeks ago have only within the past week been telegraphed for. Fine pails are quoted as before. Perhaps a little more State than is arriving could be used, as choice pails are not abundant; still no better prices can be named for even fine State. Receipts latterly are in better order, and this fact greatly stimulates a feeling for buying in rather larger lots.

The quotations are:—State pails, choice, 28@30c.; other, 22@26c.; State selections, 20@21c.; good to prime firkins, 24@26c.; do. half tubs, 24@26c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 18@19c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.

Cheese.—We have had the largest business in this market the past week on record. With receipts of fully 116,000 boxes the market at the close is almost cleared. Exporters have been so anxious to obtain stock that they have been buying as fast as received at the depots, paying very little attention to marks. It is very evident that factorymen have been sending along all the stock they could possibly market, as a good part of the arrivals are badly cured. The cable reports have been of strong markets, and an advance in prices here has been established. At the close there is rather a weak feeling. We quote State factory fine at 12@12¼c.; good do. 10¾@11¼c.; common do. 9¾c.; skimmed as low as 3c.; State dairy, 10½@11c. for prime, fair do., 9½@10c.; Ohio factory 10½@11½c.

Cotton.—The crop advices are favorable and prices are again lower. Sales are mainly to spinners.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16¾	16¾	16¾	16¾
Good Ordinary	19½	19¾	19¾	19¾
Low Middling	21	21¼	21¼	21½
Middling	22	22¼	22¼	22½
Good Middling	23¾	23¾	23¾	23⅞

Dried Fruits—Trade is opening in pitted cherries with fair sales at 20c.; other articles are dull at unchanged prices.

We quote cherries at 20c.; raspberries, 30@32c.; blackberries, 11c.; apples, new State, quarters, 8½ 9¼c.; extra sliced, 11¾@12c.; Southern new, quarters, 6@7c.; do. fine sliced, 10c.; new prime Western, 7¼@8¼c.; common Western, 6@8c.; unpeeled peaches, 5@5¼c. for quarters; 6@6¼c. for halves; peeled peaches, 17@19c. for North Carolina, 13@14c. for Virginia, and 15@16c. for Georgia; plums, State, 27@28c.; a few new raspberries 25c., and do. blackberries offered at 8c.

Eggs.—The old stock is entirely cleared off the market, and dealers have moderate daily receipts to find a market for. Prices have been advanced and there is a firm feeling at the close. Sales of Western at 20@21c.; State and Pennsylvania, 21@22c.; Jersey, 22@24.

Flour.—Prices have shown very little change, if anything, they are more in the seller's favor. The arrivals are moderate, and there is not sufficient fresh ground stock to meet the demand. The export movement is moderate.

Superfine State	$5 50	@	5 75

Rye, common to fine	4 10	@	5 00
Corn meal, Brandywine	4 85	@	4 85

Fresh Fruits.—Apples arrive largely in excess of the demand, and prices for ordinary N. J. are very low. Southern are quoted at $1@1.75 per bbl.; fancy, including Red Astrican, $2@3.50 do. Summer Pippins and Sweet Bergh $1.75@2.25; Sour Bergh, $1.75@2. Pears begin to show. Bartletts have been picked too green. They have quoted as high as $5@7 per crate. Other fancy pears, $6@7 per bbl.; common and Sugar pears, $2@3.50 do. Blackberries are in demand at 15@20c. for Delaware and N. J. seedlings. Whortleberries, $3.75@4.00. Cherries and raspberries are about done. Peaches begin to assert their position in the steady demand for fruit, and very good qualities have been on sale throughout the week. We shall not have the abundant supply of the past two years; the dry, hot weather has greatly diminished the crop in Delaware. Delaware crate, prime, $3@4; do. fine to good, $2@3; Virginia, $1@2; poor to fair New Jersey windfalls, 50c@$1 per basket. Augusta watermelons, prime, $60@75 per 100; small, $30. Norfolk nutmegs, per bbl., $2. There has been a movement in Virginia peanuts at $1.90@2, and the market is firm at that price.

Grain.—Spring grades of wheat have advanced with some speculative inquiry. Sales at $1.45@$1.49 for No. 2 in store; $1.49@1.50 for No. 1 do.; $1.58@1.64 for winter red Western; $1.67@1.73 for amber Western. Rye is higher. Sales of Western at 71c. Oats are dull and weak, at 42@43½c. for Western, 44@47c. for Ohio. Barley malt is firm, at $1.10@1.20 for two and four-rowed State, $1.30 for Canada. Corn is higher, with an active trade; sales at 58@61c. for steamer lots, 62c. for sailing do.

Hay and Straw.—The arrivals are moderate, and prices are steadily held. Sales at $1 for old shipping; $1.20@1.45 for retail qualities; salt, $1; clover, 60@70c. The best qualities of new sell at from $1@1.15. Straw at $1.05@1.10 for long rye, 85@90c. for short rye; 75@80c. for oat.

Hops.—Sales are of prime lots, to meet wants of brewers, at steady prices.

New Yorks, growth 1871, 22@65; Eastern do., 22@60c.; Western do., 22@30c.; Yearlings do., '70, 10@30c.; Olds do., '69, 10@15c.; Bavarians, 65@75c.; English, 60@65c.

Poultry and Game.—Live Poultry—Spring chickens 75c.@1.12 per pair, ¾ m. 28@30c. Fowls—Jersey, 21@23c.; do. Western, 20@21c. Turkeys—Jersey, 18@20c.; Western, do., 18@20c. Roosters per lb., 12@13. Ducks—Jersey, pair, $1.25@1.50; Western, 75c. Geese—Western, $1.75@2. Woodcock are salable at 87½@1.

Provisions.—There have been some pretty liberal transactions in pork, August being the principle month operated for. Prices have touched $14 for that month, but at the close there is only a light demand at $13.70. On cash round lots nothing was done. Jobbing parcels sold at $13.60@13.87 for ordinary to fresh inspected; Extra prime $11, which is better. Prime mess $12.50. Beef nominal at the following: We quote plain mess, bbls., $8@10; extra mess, do., $10@12; prime mess, tcs., $12@14; India mess, do., $17@20. Cut meats are firm for both pickled and smoked, with continued high prices and scarcity of hogs. We quote city smoked hams, 15@17c.; city smoked shoulders, 6¾@7c.; pickled bellies, boxed, 6@7¾c.; do. loose, 7@7½c.; pickled hams, Western, 13@14c.; do. city, 14@15¾c.; Western hams, in tight tcs., 12@13c., according to brand; pickled shoulders, 8½@9c.; shoulders in dry salt, boxed, 5¾@6¾c.; fresh hams, 12½@13½c. Lard is drooping; for spot steam contract 9c. is bid, 9¼c. for August, and 9½c. for September; New Western, 8¾c., and city 8¾c. for steam and kettle, and 8c. for No. 1. Bacon is in active demand, and prices are much stronger. Long clear at 7½@7¾c.; short do., 8¼@8½c.; short rib, 7¾c. Tallow weak at 9 1-16 for city, and 8¾@9c. for good to fine. Country Stearine, 9¾@10c.

Seed.—Grasses are lower. Michigan and Indiana 9¾@10c. State, 10¼@10½c. Timothy at $3.25@3.50.

Tobacco.—Prices of Kentucky leaf are unchanged. There is a moderate trade from exporters, and a good

home demand. For Seedleaf business has been very light; the recent free trade seems to have about met temporary wants of shippers. Prices are held with confidence, as stocks are not excessive. Virginia common to good lugs, 7½@8½c.; low to medium leaf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.	Heavy Grades.
Lugs	8½@ 9 c.	9 @ 9½c.
Common to medium leaf	9½@10	9½@10½
Good do	10½@11	11 @12½
Fine do	11½@12½	13 @14
Selections	13 @14	15 @16
New crop Seedleaf.

Pennsylvania do medium	12	@14
fair	15	@17
fine	18	@22
Ohio, running lots	10½@15	
Wisconsin and Western	8½@10	

Vegetables.—There is a fair demand for potatoes and prices are not materially changed, though quality favors buyers. Garden truck is abundant, and must be in good order to bring the extreme prices. Tomatoes are in demand. Norfolks not wanted.

New potatoes, L. I., bbl., $2@2.37; do. Jersey, $2@2.37 Southern, $1@2. Tomatoes, $1.00@1.50; Squash, ₱ bbl., $1.25@2.25, white and yellow. Cucumbers, ₱ 100, 50c. Onions, Bermuda, 50c. Turnips, ₱ bbl., $1@1.50. Cabbages, bbl., $6@7. Large Dutch cabbages, $10@12. Green corn, ₱ 100, 62c.@$1.50. Marrow squash, ₱ bbl., $1.00 for Southern and $1.50 for Northern. Onions, ₱ bbl., $2@3.00.

Whisky—is a shade firmer, with a fair inquiry; sales of Western at 91c.

Wool.—Sales of fleeces are still made with difficulty. There is scarcely any of the new clip arriving, as but few lots have changed hands at the West, owing to the high prices named. The asking prices at the West range from 57@65c., but buyers' bids are fully 5 cents ₱ lb. under these figures. Fine foreign grades are in good demand from manufacturers, with steady prices paid. Sales of Pennsylvania fleeces at 65c.; new Western, 65c.; unwashed Western, 52c. Old fleeces, 58c.; super. pulled, 75c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., July 27, 1872.

THE market at Little Falls for the week ending July 27 was brisk, with an advance in prices over last week of fully one cent per pound. The delivery of farm dairies amounted to about 800 boxes, and sales were made at 9½@10¼c.

The offerings from factories were very large, amounting to between 11,000 and 12,000 boxes, 8,000 of which were sold. The highest point reached was 12½c. We give quotations of leading transactions as follows:

West Schuyler	11¾	Newport Hill	10¾
Short lots	11¾	Beecher	11
Schuyler	11¾	Christmar	10½
Danube Cold Spring	11	Little Falls Central	11
Brown	11	Mannheim	11½
Stone Arabia	11½	Manheim Center	11¾
Houstngliver	10¾	Manheim Turnpike	11¾
Reyster	11	Mindenville	11¾
Dunkle	11¾	Mother Creek	11¾

Wm. Dunkle	11½	Vanhornsville	11¾
Empire	11¾	Keys	11
Eatonville	11¼	Cold Brook	11¾
North Edefield	12		
Old Fairfield	12		

We have advices from abroad for the second week in July. Our London correspondent says American cheese is in demand at quotations, and the prices are given for extra fine at 58@60s.; fine, 56@57s.; second quality, 50@53s. The other descriptions of cheese sell as follows:—New English Cheddar, 66@76s.; Wiltshire double, 55@63s.; Cheshire medium, 52@62s.; fine, 70@80s; Scotch, new, 61@66. Dutch cheese.—Edams, 50@56s.; Gondas, 46@52s.; Derby shape, 50@56s. In butter, the best descriptions of foreign sell in London at an advance. We quote, Chonnells, 110s.; Normandy extra, 108s.; Canadian, 50@56s.

The corresponding prices last year for butter and cheese were:—American cheese, 60s. Clonnells butter, 120s.

The weather in Herkimer, N. Y., is cooler, with a heavy fall of rain on Sunday and Sunday night. Pastures are good for the season, and cows are yielding fair returns in milk.

LIVE STOCK MARKETS.

NEW YORK, July 27, 1872.

THERE has been quite an increase in the receipts of cattle and sheep, with a falling off in hogs. The long heated term has given place to cooler weather, which increases the demand for meats. In the face of very large supplies of cattle, the market rules rather stronger than it did one week ago. There has been some call for stock of different kinds for further feeding—grass been very good. Late rains give promise of fine pastures at a time when we frequently have a drouth. Taken as a whole, the season is an unusually good one for graziers.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,765	133	2,311	29,767	25,893
" last week	7,716	101	2,375	22,059	28,341
Corresponding week last year	8,266	91	2,495	30,229	23,979
Average last year	7,187	88	2,301	25,133	25,177

Beeves.—It will be seen from the above figures that the past has been one of the large cattle weeks. There was a good showing on Monday, and stock has come forward freely since. The quality, however, has not been up to the standard. Not that there were many Texans, but that some of the Western natives were quite inferior to the Texans. The call was for good cattle, while the yards generally were filled with half-fed grass steers. Some choice cattle were on sale Monday, and brought 13¾c. Such would do it now, but we are getting none good enough to exceed 13c. These are prime, but not double extra. The general prices for such as are sent in are 11¾@12¾c. Accounts from the Far Southwest speak of swollen streams which prevent Texan cattle from reaching Kansas, save in limited quantities. The run of this kind of stock will probably fall short of last year's drive. It is considerably behind now. Just at the close our markets lag; here and there is some unsold stock, but the prospect is good for Monday.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb	13 @ 13¼	12¾ @ 13
Good to prime	12 @ 12¾	11¾ @ 12¾
Ordinary to medium	10¾ @ 11¾	10 @ 11¾
Lowest grade	8½ @ 10	8 @ 9½
Average sales	11¾ @ —	11¼ @ —

Hogs—These have further improved under light arrivals. The market rules strong at 6¾@6¾c, few light pigs selling at 6¾c., dressed. They have gone up in like proportion at the West.

Milch Cows—Have had a slow sale during the entire week. The offerings have been free while the demand runs light. The unusually good pastures, for this season of the year, cause cows to hold out remarkably well in milk, so that fewer animals suffice. Again, during the very hot weather, when it was impossible to get enough milk, the great and small producers of that article stocked up heavily with cows and have no use for more. Prices rule lower, or at $30@40 each, the average being from $50@55.

Sheep and Lambs.—While there is no decline in sheep, lambs are falling off, and it is time they should. They have kept up remarkably well until late in the season. They usually decline much earlier. Even now a few right fine 60 ℔. Jersey lambs might sell at 12c., but 11½c. is really the top of the market, with common to fair Western at 8¾@10½c. Prime State and Western sell at 10¾@11c. Sheep are quotable at 5¾@6c. for quite thin to scarcely medium, and 6¾@6¾c. for good to prime, choice lots going at 7c., and one or two extra parcels at 7½c. Fat sheep are scarce, but ordinary and medium lambs glut the market.

Veal Calves.—These fully hold their own. In fact, they almost admit of quoting higher, a few odd calves of extra quality selling at 10c.; wholepens sell at 9½c. without rejecting any, but they must all be good. The best size to suit the butcher is from 125 to 150 lbs. Those of larger size, and known as grass or buttermilk calves are now sold by the head at $9@12 each. Fair veals are worth 8½@9c.

LATEST.—Monday, July 29, 4 P. M.—Beeves.—Arrivals to-day, 147 cars at Communipaw, 64 at 100th St., and 30 at Weekawken, making 4,123 for sale. This light run, added to a good demand, with favorable weather, caused an advance of ½c. per lb., and the market was very active. Prime steers sold at 13@13¼c.

Sheep and Lambs.—Arrivals for to-day's market, 9¼ car loads at Communipaw, 16 at 48th St., and 16 40th St., making 8,771 on sale. The market ruled weak at Saturday's prices for sheep, and nearly ¼c. lower for lambs, very few selling above 10¼c., while some thin lots went at 8c. Most sales were at 9@10c.

Hogs.—Receipts to-day, Sunday included, 21 car loads at Communipaw and 33 at 40th St., making 8,243. The only change is a stronger tone, without much advance. A few pigs reached 6¾c. dressed. Live are worth 5@5¼c.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

Societies, Etc.

THE ANNUAL EXHIBITION
OF THE
Pennsylvania State Ag'l Society,
For 1872,
Will be Held at the City of Erie,
Commencing Tuesday, Sept. 17th, to continue Four Days.

The competition is coextensive with the United States and Provinces, and the citizens of the several States and the Dominion are cordially invited to compete for our prizes. There is no Entry Fee charged. For Premium Lists, and other information, apply to either of the undersigned, at Harrisburg, until August 20th, after which date headquarters will be at Erie.

JACOB R. EBY, President.
D. W. SEILER, Recording Secretary.
ELBRIDGE MCCONKEY, Cor. Secretary.
Harrisburg, Pa., June 1, 1872.

Northern Ohio Fair.

THE
THIRD ANNUAL EXHIBITION
OF THE
Northern Ohio Fair Association,
WILL BE HELD
On their Beautiful Fair Grounds, in the CITY OF CLEVELAND,
ON THE
9th to 13th days of September, 1872.

This is the largest Fair between Boston and St. Louis. For schedule of Premiums, &c., address

GEO. W. HOWE, Sec., Cleveland, O.

NEW YORK STATE FAIR, 1872.
AT ELMIRA,
Sept. 30, Oct. 1, 2, 3, 4.
COMPETITION OPEN TO ALL COMERS.

☞ ENTRIES may be made at any time until Aug. 31st, after which no entries, except of Fruits and Flowers, will be received.

☞ PREMIUM LISTS are now ready, and will be forwarded by mail to all applicants.

The Society having been enabled, by the liberality of the citizens of Elmira and Chemung County, to enter (under an arrangement by which the Fairs are to be held at that city once in three years) upon permanent grounds, with permanent buildings, can this year offer better and more ample accommodation to Exhibitors than ever before.

An increased number of Prizes is offered, and the List in general has been liberally revised. Address

STATE AGRICULTURAL SOCIETY,
T. L. HARTSON, Sec'y. Albany, N. Y.

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks, and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY,
ST. LOUIS, MO., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 200 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

SAM'L N. PIKE, Pres't.
DAVID ALLERTON, Vice-Pres.
W. C. MOORE, Treasurer.
A. WELLES, Secretary.
E. McMURDY, Director.
D. D. T. MOORE, Director.

Office second floor.

PERSONAL ITEMS.

STOKES is to be tried in Saratoga.

WM. LLOYD GARRISON is visiting Newport.

MONSIGNOR CAPEL is coming to this country.

MADAME RUDERSDORFF speaks six languages.

BISHOP SIMPSON is summering at Long Branch.

GUSTAVE DORE has injured his health by overwork.

ONE of Rachel's sons is a cashier in a Marseilles bank.

DR. J. G. HOLLAND and family are in Washington, Conn.

SENATOR SUMNER is going to the White Sulphur Springs.

MRS. ELLIOT is writing a work on "Old Court Life in France."

A. T. STEWART gives $20,000 to the Liberal Republicans.

REV. ROBERT COLLYER is to have a $16,000 residence in Chicago.

MISS NILSSON'S friends on this side of the water are sending her wedding presents.

THOMAS MURPHY denies that he paid anything towards Grant's Long Branch cottage.

SETH GREEN of Rochester, N. Y., has been invited to visit France. The Minister of Agriculture has sent him a valuable gold medal.

BRAVE AND BOLD;

Or, The Fortunes of Robert Rushton.

BY HORATIO ALGER, JR.,

Author of Abner Holden's Bound Boy, Ragged Dick, Sink or Swim, Rough and Ready, Ben, The Luggage Boy, Luck and Pluck, etc.

THE main school-room in the Millville Academy was lighted up, and the various desks were occupied by boys and girls of different ages from ten to eighteen, all busily writing under the general direction of Professor George W. Granville, Instructor in Plain and Ornamental Penmanship. He was a traveling teacher, and generally had two or three evening schools in progress in different places at the same time. In a course of twelve lessons, for which he charged the very moderate price of a dollar, he contrived to impart considerable instruction. His course in Millville had been unusually successful. There were a hundred pupils on his list, and there had been no disturbance during the course of lessons.

At nine precisely, Professor Granville struck a small bell, and said, in rather a nasal voice:

"You will now stop writing."

There was a little confusion as the books were closed and the pens were wiped.

"Ladies and gentlemen," said the professor, placing one arm under his coat tails and extending the other in an oratorical attitude, "this evening completes the course of lessons which I have had the honor and pleasure of giving you. I have endeavored to impart to you an easy and graceful penmanship, such as may be a recommendation to you in after life. It gives me pleasure to state that many of you have made great proficiency, and equaled my highest expectations. There are others, perhaps, who have not been fully sensible of the privileges which they enjoyed. I would say to you all that perfection is not yet attained. You will need practice to reap the full benefit of my instructions. Should my life be spared, I shall hope next winter to give another course of writing lessons in this place, and I hope I may then have the pleasure of meeting you again as pupils. Let me say in conclusion that I thank you for your patronage and for your good behavior during this course of lessons, and at the same time I bid you good-by."

With the closing words Professor Granville made a low bow, and placed his hand on his heart, as he had done probably fifty times before, on delivering the same speech, which was the stereotyped form in which he closed his evening schools.

There was a thumping of feet, mingled with clapping of hands, as the professor closed his speech, and a moment later a boy of sixteen, occupying one of the front seats, rose, and, advancing with easy self-possession, drew from his pocket a gold pencil case, containing also a pen, and spoke as follows:

"Professor Granville, the members of your writing class, desirous of testifying their appreciation of your services as teacher, have contributed to buy this gold pencil case, which, in their name, I have great pleasure in presenting to you. Will you receive with it our best wishes for your continued success as a teacher of penmanship?"

With these words he handed the pencil to the professor and returned to his seat.

The applause that ensued was perfectly terrific.

When silence again reigned, the professor arose and said:

"Ladies and gentlemen, I cannot give fitting utterance to the emotions that fill my heart at this most unexpected tribute of regard and mark of appreciation of my humble services. Believe me, I shall always cherish it as a most valued possession, and the sight of it will recall the pleasant, and, I hope, profitable hours which we have passed together this winter. To you in particular, Mr. Rushton, I express my thanks for the touching and eloquent manner in which you have made the presentation, and, in parting with you all, I echo your own good wishes, and shall hope that you may be favored with an abundant measure of health and prosperity."

This speech was also vociferously applauded. It was generally considered impromptu, but was in truth as stereotyped as the other.

"The professor made a bully speech," said more than one, after the exercises were over.

"So did Bob Rushton," said Edward Kent.

"I didn't see anything extraordinary in what he said," sneered Halbert Davis. "It seemed to me very commonplace."

"Perhaps you could do better yourself, Halbert," said Kent.

"Probably I could," said Halbert, haughtily.

"Why didn't you volunteer, then?"

"I didn't care to have anything to do with it," returned Halbert, scornfully.

"That's lucky," remarked Edward, "as there was no chance of your getting appointed."

"Do you mean to insult me?" demanded Halbert, angrily.

"No, I was only telling the truth."

Halbert turned away, too disgusted to make any reply. He was a boy of sixteen, of slender form and sallow complexion, dressed with more pretension than taste. Probably there was no boy present whose suit was of such fine material as his. But something more than fine clothes is needed to give a fine appearance, and Halbert's mean and insignificant features were far from rendering him attractive. However, self-deception is very common, and despite the testimony of his glass Halbert considered himself a young man of distinguished appearance, and was utterly blind to his personal defects.

What contributed to feed his vanity was his position as the son of the richest man in Millville. Indeed his father was superintendent, and part owner, of the great brick factory on the banks of the river in which hundreds found employment. Halbert found plenty to fawn upon him, and was in the habit of strutting around the village, swinging a light cane, neither a useful nor an ornamental member of the community.

After his brief altercation with Edward Kent he drew on a pair of kid gloves and looked about the room for Hester Paine, the lawyer's daughter, the reigning belle among the girls of her age in Millville. The fact was that Halbert was rather smitten with Hester, and had made up his mind to escort her home on this particular evening, never doubting that his escort would be thankfully accepted.

But he was not quick enough. Robert Rushton had already approached Hester, and said, "Miss Hester, will you allow me to see you home?"

"I shall be very glad to have your company, Robert," said Hester.

Robert was a general favorite. He had a bright, attractive face, strong and resolute when there was occasion, frank and earnest at all times. His clothes were neat and clean, but of a coarse, mixed cloth, evidently of low price, suiting his circumstances, for he was poor, and his mother and himself depended mainly upon his earnings in the factory for the necessaries of life. Hester Paine, being the daughter of a well-to-do lawyer, belonged to the village aristocracy, and so far as worldly wealth was concerned, was far above Robert Rushton. But such consideration never entered her mind as she frankly, and with real pleasure, accepted the escort of the poor factory boy.

Scarcely had she accepted than Halbert Davis approached, smoothing his kid gloves and pulling at his necktie.

"Miss Hester," he said, consequentially, "I shall have great pleasure in escorting you home."

"Thank you," said Hester, "but I am engaged."

"Engaged!" repeated Halbert, "and to whom?"

"Robert Rushton has kindly offered to take me home."

"Robert Rushton!" said Halbert, disdainfully. "Never mind! I will relieve him of his duty."

"Thank you, Halbert," said Robert, who was standing by, "I won't trouble you. I will see Miss Paine home."

"Your escort was accepted because you were the first to offer it," said Halbert.

"Miss Hester," said Robert, "I will resign in favor of Halbert, *if you desire it*."

"I don't desire it," said the young girl, promptly. "Come, Robert, I am ready if you are."

With a careless nod to Halbert, she took Robert's arm and left the school-house. Mortified and angry, Halbert looked after them, muttering, "I'll teach the factory boy a lesson. He'll be sorry for his impudence yet."

Mrs. Rushton and her son occupied a little cottage not far from the factory. Behind it were a few square rods of garden, in which Robert raised a few vegetables, working generally before or after his labor in the factory. They lived in a very plain way, but Mrs. Rushton was an excellent manager, and they never lacked the common comforts of life. The husband and father had followed the sea. Two years before he left the port of Boston as captain of the ship Norman, bound for Calcutta. Not a word had reached his wife and son since then, and it was generally believed that he had gone to the bottom of the sea. Mrs. Rushton regarded herself as a widow, and Robert, entering the factory, took upon himself the support of the family. He was now able to earn six dollars a week, and this, with his mother's earnings in braiding straw for a hat manufacturer in a neighboring town, supported them, though they were unable to lay up anything. The price of a term at the writing school was so small that Robert thought he could indulge himself in it, feeling that a good handwriting was a valuable acquisition, and might hereafter procure him employment in some business house. For the present he could not do better than to retain his place in the factory.

Robert was up at six the next morning. He spent half an hour in sawing and splitting wood enough to last his mother through the day, and then entered the kitchen, where breakfast was ready.

During the meal Mrs. Rushton appeared unusually grave and silent. At last she said—

"It is just two years to-day since your poor father left us for Boston to take command of his ship. I little thought then that I should never see him again!" and Mrs. Rushton sighed.

"It is strange we have never heard anything of the ship. Sometimes I think father may have escaped from the ship in a boat, and may be still alive."

"I used to think it possible, Robert; but I have given up all hopes of it. Two years have passed, and if your father were alive, we should have seen him or heard from him ere this."

"I am afraid you are right. There's one thing I can't help thinking of, mother," said Robert, thoughtfully. "How is it that father left no property? He received a good salary, did he not?"

"Yes; he had received a good salary for several years."

"He did not spend the whole of it, did he?"

"No, I am sure not. Your father was never extravagant."

"Didn't he ever speak to you on the subject?"

"He was not in the habit of speaking of his business; but just before he went away I remember his telling me that he had got some money invested; but how or where he did not inform me. Since his death I have looked everywhere in the house for some paper which would throw light upon it; but I have been able to find nothing. I do not care so much for myself, but I should be glad if you did not have to work so hard."

"Never mind me, mother; I'm young and strong. I can stand work—but it's hard on you."

"I am rich in a good son, Robert."

"And I in a good mother," said Robert. "And now, to change the subject. I suspect I have incurred the enmity of Halbert Davis."

He then, at the request of his mother, gave the particulars of his recent difficulty with Halbert.

"I am sorry you have incurred his enmity, Robert," she said. "You know his father is superintendent of the factory, and Halbert may prejudice him against you, and get you turned off."

"I don't think he would be quite so mean as that. We won't borrow trouble, mother. But time's up, and I must go."

Robert seized his hat and hurried to the mill. He was in his place when the great factory bell stopped ringing on the stroke of seven, and so escaped the fine which would have cut off one-quarter of a day's pay.

Meanwhile, Halbert Davis had passed an uncomfortable and restless night. He had taken a fancy to Hester Paine, and had fully determined to escort her home on the previous evening. Being much sought after among her young companions, it would have gratified his pride to have it known that she had accepted his company. But he had been cut out, and by Robert Rushton—one of his father's factory hands. This made his jealousy more intolerable, and humiliated his pride, and set him to work devising schemes for punishing Robert's presumption.

At twelve o'clock the factory bell pealed forth a welcome sound to the hundreds who were busily at work within the great building. It was the dinner-hour, and a throng of men, women, and children poured out of the great portals and hastened to their homes or boarding-houses to dine. Among them was Robert Rushton. As he was walking home with his usual quick, alert step, he came upon Halbert Davis, at the corner of the street.

Halbert was dressed carefully, and, as usual, was swinging his cane in his gloved hand. Robert would have passed him with a nod, but Halbert, who was waiting for him, called out:—

"I say, you fellow, stop a minute. I want to speak to you."

"If you are addressing me," said Robert, sharply, "you had better mend your manners."

"What do you mean?" demanded Halbert, his sallow face slightly flushing.

"My name is Robert Rushton. Call me by either of these names when you speak to me, and don't say 'you fellow.'"

"It seems to me," sneered Halbert, "that you are putting on airs for a factory boy."

"I am a factory boy, I acknowledge, and am not ashamed to acknowledge it. Is this all you have to say to me? If so, I will pass on, as I am in haste."

"I have something else to say to you. You were impudent to me last evening."

"Was I? Tell me how."

"Did you not insist on going home with Hester Paine, when I had offered my escort?"

"What of that?"

"You forget your place."

"My place was at Hester Paine's side, since she had accepted my escort."

"It was very presumptuous in a factory boy like you offering your escort to a young lady like Miss Paine."

"I don't see it," said Robert, independently; and I don't think it struck Hester in that light. I assure you we had a very agreeable walk."

Halbert was provoked and inflamed with jealousy, and the look with which he regarded our hero was by no means friendly.

"You mustn't regard yourself as Miss Paine's equal because she condescended to walk with you," he said. "You had better associate with those of your own class hereafter, and not push yourself in where your company is not agreeable."

"Keep your advice to yourself, Halbert Davis," said Robert, hotly, for he felt the insult conveyed in these words. "If I am a factory boy I don't intend to submit to your impertinence; and I advise you to be careful what you say. As to Miss Hester Paine, I shall not ask your permission to walk with her, but shall do so whenever she chooses to accept my escort. Has she authorized you to speak for her?"

"No; but——"

"Then wait till she does."

Halbert was so incensed that, forgetting Robert's superior strength, evident enough to any one who saw the two, one with his well-knit, vigorous figure, the other slender and small of frame, he raised his cane and struck our hero smartly upon the arm.

In a moment the cane was wrested from his grasp and applied to his own person with a sharp stinging blow which broke the fragile stick in two.

Casting the pieces upon the ground at his feet, Robert said, coolly:

"Two can play at that game, Halbert Davis. When you want another lesson come to me."

He passed his discomfited antagonist and hastened to the little cottage, where his mother was wondering what made him so much behind time.

Stung with mortification and more incensed against Robert than ever, Halbert hastened home. The house in which he lived was the largest and most pretentious in Millville. As he entered the dining-room, his mother saw by his face that something serious had disturbed him.

"What's the matter, Halbert?" she asked.

"Do you see this?" said Halbert, displaying the pieces of his cane.

"How did you break it?"

"I didn't break it."

"How came it broken, then?"

"Robert Rushton broke it."

"The Widow Rushton's son?"

"Yes; he's a low scoundrel," said Halbert, bitterly.

"What made him break it?"

"He struck me with it hard enough to break it, and then threw the pieces on the ground. I wouldn't mind it so much if he were not a low factory boy, unworthy of a gentleman's attention."

"How dared he touch you?" asked Mrs. Davis, angrily.

"Oh, he's impudent enough for anything. He walked home with Hester Paine last evening from the writing-school. I suppose she didn't know how to refuse him. I met him just now and told him he ought to know his place better than to offer his escort to a young lady like Hester. He got mad and struck me."

"It was very proper advice," said Mrs. Davis, who resembled her son in character and disposition, and usually sided with him in his quarrels. "I should think Hester would have more sense than to encourage a boy in his position."

"I have no doubt she was bored by his company," said Halbert, who feared on the contrary that Hester was only too well pleased with his rival, and hated him accordingly; "only she was too good-natured to say so."

"The boy must be a young brute to turn upon you so violently."

"That's just what he is."

"He ought to be punished for it."

"I'll tell you how it can be done," said Halbert. "Just you speak to father about it, and get him dismissed from the factory."

"Then he is employed in the factory?"

"Yes. He and his mother are as poor as poverty, and that's about all they have to live upon; yet he goes round with his head up as if he were a prince, and thinks himself good enough to walk home with Hester Paine."

"I never heard of anything so ridiculous."

"Then you'll speak to father about it, won't you?"

"Yes; I'll speak to him to-night. He's gone away for the day."

"That'll pay me for my broken cane," said Halbert, adding, in a tone of satisfaction: "I shall be glad to see him walking round the streets in rags. Perhaps he'll be a little more respectful then."

Meanwhile Robert decided not to mention to his mother his encounter with the young aristocrat. He knew it would do no good, and would only make her feel troubled. He thought himself with a little concern of the probable consequence of his action. He caught the malignant glance of Halbert on parting, and he knew him well enough to suspect that he would do what he could to have him turned out of the factory. This would certainly be a serious misfortune. Probably the entire income upon which his mother and himself had to depend did not exceed eight dollars a week, and of this he himself earned six. They had not more than ten dollars laid by for contingencies, and if he were deprived of work that would soon melt away. The factory furnished about the only avenue of employment open in Millville, and if he were discharged it would be hard to find any other remunerative labor.

Two years before, Captain Rushton, on the eve of sailing upon what proved to be his last voyage, called in the evening at the house of Mr. Davis, the Superintendent of the Millville factory. He found the superintendent alone, his wife and Halbert having gone out for the evening. He was seated at a table with a variety of papers spread out before him. These papers gave him considerable annoyance. He was preparing his semi-annual statement of account, and found himself indebted to the corporation in a sum three thousand dollars in excess of the funds at his command. He had been drawn into the whirlpool of speculation, and, through a New York broker, had invested considerable amounts in stocks, which had depreciated in value. In doing this he had made use, to some extent, of the funds of the corporation, which he was now at a loss how to replace. He was considering where he could apply for a temporary loan of three thousand dollars, when the captain entered. Under the circumstances he was sorry for the intrusion.

"Good evening, Captain Rushton," he said, with a forced smile. "Sit down. I am glad to see you."

"Thank you, Mr. Davis. It will be the last call I shall make upon you for a considerable time. I sail to-morrow for Calcutta."

"Indeed—that is a long voyage. But I hope it may prove a prosperous one."

"Thank you. If things go well I expect to come home with quite an addition to my little savings. And that brings me to the object of my visit this evening. You must know, Mr. Davis, I have saved up, in the last ten years, a matter of five thousand dollars."

"Five thousand dollars!" repeated the superintendent, pricking up his ears.

"Yes; it has been saved by economy and self-denial. Wouldn't my wife be surprised if she knew her husband were so rich?"

"Your wife doesn't know of it?" asked the superintendent, surprised.

"Nothing at all. I have told her I have something, and she may suppose I have a few hundred dollars, but I have never told her how much. I want to surprise her some day."

"Just so."

"Now, Mr. Davis, for the object of my errand. I am no financier, and know nothing of investments. I suppose you do. I want you to take this money and take care of it while I am gone on this present voyage. I meant to make inquiries myself for a suitable investment, but I have been summoned by my owners to leave at a day's notice, and have no time for it. Can you oblige me by taking care of the money?"

"Certainly, captain," said the superintendent, briskly. "I shall have great pleasure in obliging an old friend."

"I am much obliged to you."

"Don't mention it. I have large sums of my own to invest, and it is no extra trouble to look after your money. Am I to pay the interest to your wife?"

"No. I have left a separate fund in a savings bank for her to draw upon. As I told you, I want to surprise her by-and-by. So not a word, if you please, about this deposit."

"Your wishes shall be regarded," said the superintendent. "Have you brought the money with you?"

"Yes," said the captain, drawing from his pocket a large wallet. "I have the whole amount here in large bills. Count, if you please, and see that it is all right."

The superintendent took the roll of bills from the hands of his neighbor, and counted them over twice.

"It is quite right," he said. "Here are five thousand dollars. Now let me write you a receipt."

He drew before him a sheet of paper, and, dipping his pen in the inkstand, wrote a receipt in the usual form, which he handed back to the captain, who received it and put it back in his wallet.

"Now," said the captain, in a tone of satisfaction, "my most important business is transacted. You will keep this money, investing it according to your best judgment. If anything should happen to me," he added, his voice faltering a little, "you will pay it over to my wife and child."

"Assuredly," said the superintendent; "but don't let us think of such a sad contingency. I fully expect to pay it back into your own hands with handsome interest."

"Let us hope so," said the captain, recovering his cheerfulness. "Our destinies are in the hands of a kind Providence. And now good-by! I leave early to-morrow morning, and I must pass the rest of the evening with my own family."

"Good-night, captain," said the superintendent, accompanying him to the door. "I renew my wish that you have a prosperous and profitable voyage, and be restored in good time to your family and friends."

"Amen!" said the captain.

The superintendent went back to his study, his heart lightened of its anxiety.

"Could anything be more fortunate?" he ejaculated. "This help comes to me just when it is most needed. I can make my semi-annual settlement and have two thousand dollars over.

It's lucky the captain knows nothing of my Wall street speculations. He might not have been quite so ready to leave his money in my hands. It's not a bad thing to be a banker," and he rubbed his hands together with hilarity.

When the superintendent accepted Captain Rushton's money he did not intend to act dishonestly. He hailed it as a present relief, though he supposed he should have to repay it some time. His accounts being found correct, he went on with his speculations. In these he met with varying success. But on the whole he found himself no richer, while he was kept in a constant fever of anxiety.

After some months, he met Mrs. Rushton in the street one day.

"Have you heard from your husband, Mrs. Rushton?" he inquired.

"No, Mr. Davis, not yet. I am beginning to feel anxious."

"How long has he been gone?"

"Between seven and eight months."

"The voyage is a long one. There are many ways of accounting for his silence."

"He would send by some passing ship. He has been to Calcutta before, but I have never had to wait so long for a letter."

The superintendent uttered some commonplace phrases of assurance, *but in his own heart there sprang up a wicked hope that the Norman would never reach port, and that he might never set eyes on Captain Rushton again.* For in that case, he reflected, it would be perfectly safe for him to retain possession of the money with which he had been intrusted. The captain had assured him that neither his wife nor son knew aught of his savings. Who then could detect his crime? However it was not yet certain that the Norman was lost. He might yet have to repay the money.

Six months more passed, and still no tidings of the ship or its commander. Even the most sanguine now gave her up for lost, including the owners. The superintendent called upon them, ostensibly in behalf of Mrs. Rushton, and learned that they had but slender hopes of her safety. It was a wicked thing to rejoice over such a calamity, but his affairs were now so entangled that a sudden demand for the five thousand dollars would have ruined him. He made up his mind to say nothing of the special deposit, though he knew the loss of it would leave the captain's family in the deepest poverty. As a slight salve to his conscience, for he was not wholly destitute of one, he received Robert into the factory, and the boy's wages, as we already know, constituted their main support.

Such was the state of things at the commencement of our story.

When the superintendent reached home in the evening, he was at once assailed by his wife and son, who gave a highly-colored account of the insult which Halbert had received from Robert Rushton.

"Did he have any reason for striking you, Halbert?" asked the superintendent.

"No," answered Halbert, unblushingly. "He's an impudent young scoundrel, and puts on as many airs as if he were a prince, instead of a beggar."

"He is not a beggar."

"He is a low factory boy, and that is about the same."

"By no means. He earns his living by honest industry."

"It appears to me, Mr. Davis," said his wife, "that you are taking the part of this boy who has insulted your son in such an outrageous manner."

"How am I doing it? I am only saying he is not a beggar."

"He is far below Halbert in position, and that is the principal thing."

It occurred to the superintendent that should he make restitution, Robert Rushton would be quite as well off as his own son; but, of course, he could not venture to breathe a hint of this to his wife. It was the secret knowledge of the deep wrong which he done to the Rushtons that now made him unwilling to oppress him further.

"It seems to me," he said, "you are making too much of this matter. It is only a boyish quarrel."

"A boyish quarrel!" retorted Mrs. Davis, indignantly. "You have a singular way of standing by your son, Mr. Davis. A low fellow insults and abuses him, and you exert yourself to make excuses for him."

Mrs. Davis had a sharp temper and a sharp tongue, and her husband stood considerably in awe of both.

"Well, what do you want me to do?" he asked, submissively.

"Discharge the boy from your employment," said his wife, promptly.

"But how can he and his mother live?—they depend on his wages."

"That is their affair. He ought to have thought of that before he raised his hand against Halbert."

"I cannot do what you wish," said the superintendent, with some firmness, for he felt that it would indeed be a piece of meanness to eject from the factory the boy whom he had already so deeply wronged; "but I will send for young Rushton and require him to apologize to Halbert."

"And if he won't do it?" demanded Halbert.

"Then I will send him away."

"Will you promise that, father?" asked Halbert, eagerly.

"Yes," said Mr. Davis, rather reluctantly.

"All right!" thought Halbert; "I am satisfied; for I know he never will consent to apologize."

Halbert had good reason for his opinion, knowing, as he did, that he had struck the first blow, a circumstance he had carefully concealed from his father. Under the circumstances he knew very well that his father would be called upon to redeem his promise.

The next morning, at the regular hour, our hero went to the factory, and taking his usual place, set to work. An hour passed, and nothing was said to him. He began to think that Halbert, feeling that he was the aggressor, had resolved to let the matter drop.

But he was speedily undeceived.

At quarter after eight the superintendent made his appearance, and after a brief inspection of the work, retired to his private office. Ten minutes later, the foreman of the room in which he was employed came up to Robert and touched him on the shoulder.

"Mr. Davis wishes to see you in his office," he said.

"Now for it!" thought Robert, as he left his work and made his way, through the deafening din of machinery, to the superintendent's room. The continuation of this story, from where it stops here, is given in No. 40 of the New York Weekly, now ready. It will be sent to mail subscribers three months for 75 cents; six months, $1.50; one year, $3. Two copies of the New York Weekly will be sent one year for $5. Any person sending $20 for a club of eight yearly subscribers will be entitled to a ninth copy free. Address all letters to STREET & SMITH, 55 Fulton street, New York. Remember, No. 40 contains the continuation of the story commenced above—"BRAVE AND BOLD; OR, THE FORTUNES OF ROBERT RUSHTON."

Agents Wanted.

SIGHTS AND SENSATIONS OF NEW YORK.

A Work Descriptive of the City of New York in all its Various Phases.

Its splendors and wretchedness, its high and low life, its marble palaces and dark dens, its attractions and dangers, its **Rings and Frauds**, its leading men and politicians, its adventurers, its charities, its mysteries and crimes. **Illustrated with nearly 250 Fine Engravings.** *Send for Circulars, with terms and a full description of the work.* Address NATIONAL PUBLISHING CO., Philadelphia, Pa.

$200! An unequaled opportunity for a few smart business men with small capital, as Local, State or County Agents, who will be satisfied to make $200 per month. Goods first-class, and ready sales and established trade. Apply to FOOT & SLEIGHT, 116 Chambers St., N. Y.

AGENTS WANTED FOR GOODSPEED'S PRESIDENTIAL CAMPAIGN BOOK EVERY CITIZEN WANTS IT.

Also for CAMPAIGN GOODS. Address GOODSPEED'S EMPIRE PUBLISHING HOUSE, Chicago, Cincinnati, St. Louis, N. Orleans or N. York.

AGENTS WANTED for Chamberlin's

Struggle of '72;

A Novelty in Political and Popular Literature.

Contains a History of the Republican, Democratic and Liberal Parties. Inside view of the Cincinnati Convention and minor tickets or side shows. Review of Grant's administration. Illustrated. Octavo, near 500 pages. A book wanted by every citizen. Send $1 for outfit and secure territory. UNION PUBLISHING CO., Philadelphia, Pa., Cincinnati, Ohio, Springfield, Mass., Savannah, Ga.

AGENTS wanted on a large commission in every Township in the United States, to introduce our new works, which will yield at least **$2,000** per annum. Good, smart, live Agents can make money by addressing us. Circulars free. Write at once. Address WORTHINGTON, DUSTIN & CO., Hartford, Conn.

Agents Wanted for the AUTOBIOGRAPHY of

HORACE GREELEY:

or Recollections of a Busy Life. Illustrated. The Life and Times of so great a Philanthropist and Reformer cannot fail to interest every true American. Send $3.50 for sample copy. E. B. TREAT, Publisher, 805 Broadway, N. Y.

THE STRUGGLE OF '72.

A GRAND CHANCE. Nothing ever offered like it before. A Novelty in Political and Popular Literature. Agents, address UNION PUBLISHING CO., Chicago, Ill., Philadelphia, Pa., or Springfield, Mass.

WANTED.

First-class Canvassers, to introduce *first-class subscription books.* Our terms are *very liberal.*

☞ Send for descriptive and confidential Circulars.

VIRTUE & YORSTON, Publishers, 12 Dey St., New York.

AGENTS EARN $100 Weekly. Address MYERS M'F'G Co., 101 John St., N. Y.

MASTER FRED., in a strange whisper:—"O, Ma, see that man with his Shirt on outside his clothes!" This concerning SHANKS' striped Summer coat, which he considers so becoming!

BANKING HOUSE OF JAY COOKE & CO.,
20 WALL STREET, NEW YORK.

We continue to sell at par, adding accrued interest, the First Mortgage Gold Bonds of the Northern Pacific Railroad Company. Track-laying on the Road is now progressing at the rate of two miles a day, through the most fertile prairie region of Dakota. On the completion of this season's contracts, there will be FIVE HUNDRED AND SEVENTEEN miles of the main line in operation, uniting Lake Superior with the Missouri River, and securing the large traffic of the Northwest. This amount of Road also entitles the Company to Ten Million Four Hundred Thousand Acres of Land, located in Central Minnesota, Eastern Dakota, and in the Columbia Valley on the Pacific Coast. The bonds are secured by a first mortgage on the Road, its Traffic and Franchise, and on the entire Land Grant received from the Government. The rate of interest is Seven and Three-Tenths Gold, equivalent to about Eight and a Quarter per cent. in currency. Believing the security to be ample and the rate of interest satisfactory, we recommend these bonds as a desirable investment. Holders of U. S. 5-20s and high-priced corporate securities may materially increase both their principal and their interest income by exchanging for Northern Pacifics.

JAY COOKE & CO.,
New York, Philadelphia and Washington.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,
HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

AGENTS WANTED WHERE NOT ALREADY ESTABLISHED.

TARRANT'S SELTZER APERIENT.

Reaching the North Pole.

It is claimed that the North Pole will certainly be reached by one of the expeditions now in search of it. Suppose it should be, and the American flag should be hoisted there, to revolve with the axis of earth once in twenty-four hours (!) what then! Would the discovery be one-tenth as valuable to the world in general as

TARRANT'S EFFERVESCENT SELTZER APERIENT

is to the sick and suffering? Is not an agreeable preparation, that will cure indigestion, constipation, nervousness, bilious complaints, and all manner of internal disturbances arising from debility, of more importance to mankind than the location of the Pole? Rather! The true article is procurable at all good drug stores.

A SILVER TIP
ADDS FIVE CENTS

CARRIER PIGEON RACE.

NOT long since there was an "All England Pigeon Race" from the Crystal Palace, London. There were five classes of competitors, according to the distances the pigeons had to fly from the Crystal Palace to their respective homes. The first class was of birds whose owners lived within thirty miles, as in London and its suburbs, or as far as Richmond or Windsor in one direction and Gravesend in another. The second class, those dwelling within a distance of from thirty to fifty miles, included the pigeons of Brighton and Hastings, of Canterbury and Maidstone, of Chelmsford, Hertford, and Reading. The third class, from fifty to one hundred miles, extended to Dover, Margate, Norwich, Leicester, Northampton, Cambridge, Oxford, Gloucester, Winchester, and Southampton. The fourth class, from one hundred to 150 miles, reached Nottingham, Derby, Sheffield, Stafford, Shrewsbury, Monmouth, Bath, Bristol, and part of Devon. The fifth class was that of birds which belonged to places more than 150 miles distant, such as Plymouth, Manchester, Hull, and the North of England. Besides these, there was a flight of seventy pigeons belonging to the Brussels society, which had to cross the Channel. Prizes were given, in each class separately, for the swiftest flight of a pigeon from the Crystal Palace to its home; a regular time allowance, of so many minutes to the mile, being made for differences of distance within the limits of each class. The time actually taken by each bird for its journey was promptly made known by a telegram announcing its arrival, which the owner was required to send to the secretary, at the Crystal Palace instantly upon the pigeon getting home. He was also required to state, in the same telegram, the number stamped at the Crystal Palace on the bird's wing, which he could not know except by the arrival of the bird. The pigeons of that class which had the longest distance to fly were sent off first, at noon; the next lot were released half an hour later; and so on till they were all let out. The telegrams came in quickly that afternoon and evening, and the prizes were duly awarded next day. The birds that won prizes were sent back to the Crystal Palace, by railway, for exhibition.

We copy from The Graphic Mr. HARRISON WEIR'S portraits of the pigeons which won the first prize in each class. Unfortunately we have not seen the time made and the distance traveled by the respective birds. Why can we not have carrier pigeon races in this country similar to this projected by Mr. TEGETMEIER?

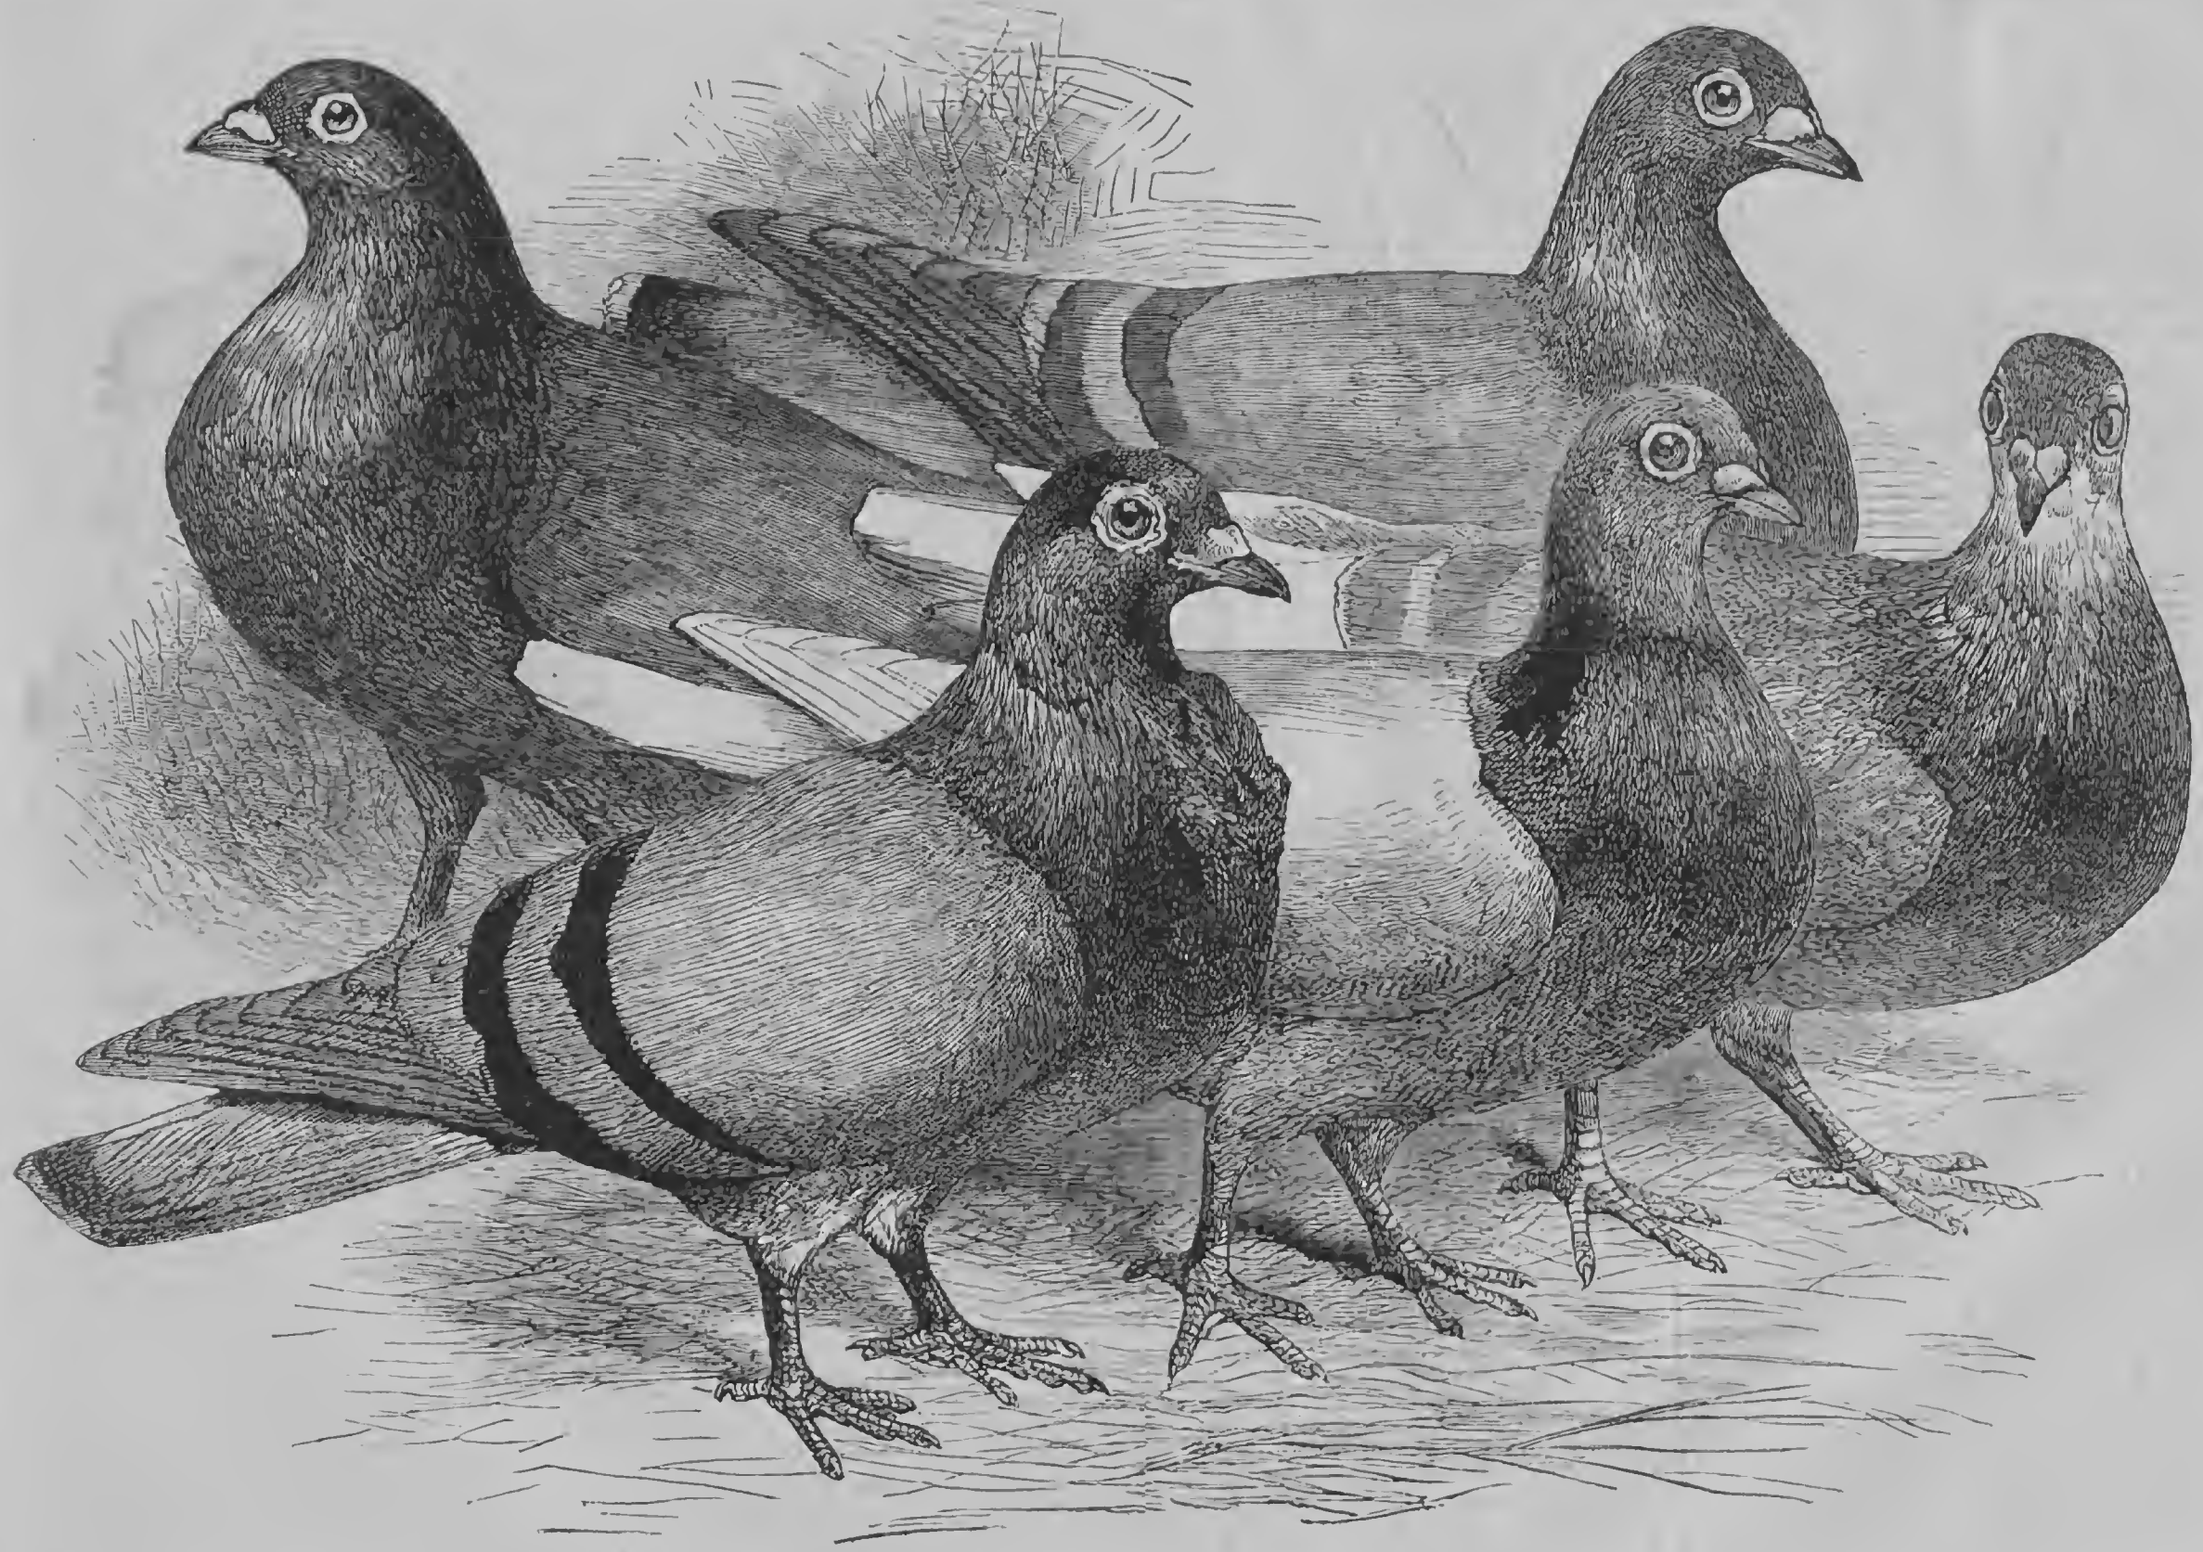
POULTRY NOTES AND QUERIES.

Distinctive Features of Light Brahmas.—Can you tell me the distinguishing features between pure-bred and mixed Light Brahmas; or how could I select from a mixed flock the pure-bred fowls.—J. C. G., *Ingersoll, Ont.*

A PURE-BRED Light Brahma cock should have comb, face, deaf-ear and wattles rich bright red; head, white; neck white, with distinct black stripe down the center of the feather; breast, underpart of body and thighs white; saddle, white striped with black; back and shoulder coverts white; wing bow and coverts white; wing primaries black; wing secondaries white on outside web and black on inside web; tail black; tail coverts glossy green-black; lesser coverts silvered on the edge; legs, scales bright yellow; feathers white, slightly mottled with black.

A pure-bred Light Brahma hen should have comb, face, deaf-ear and wattles bright red; head white; neck white, distinctly striped down the middle of each feather with rich black; breast and back white; wings white, the primaries alone being black; tail black, the two highest, or deck feathers, edged with white; thighs and fluff white; legs bright rich yellow, feathers white, slightly mottled with black.

Hens Can Swim.—A correspondent of the London Field furnishes the following statement:—"A common hen, on ducks' eggs, hatched two. These, after the manner of their kind, coming near a pond, took to the water. The foster-mother, after displaying every sign of anxiety, and calling in vain, deliberately plunged into the pond and swam across, pressing the little ones before her breast, and drove them ashore. Seen by two credible witnesses."



CARRIER PIGEONS—PRIZE BIRDS IN THE CRYSTAL PALACE RACE.

Lice on Fowls.—Another enemy of my poultry yard was lice. These little pests were so bad that the most persevering of my sitting hens were driven from their nests, seeming to have all the blood sucked out of them. I did everything I could hear and read of to get rid of them, yet they seemed to come as thick and fast as ever, until I was almost persuaded to give up raising chickens, or at least on so large a scale, when, either by chance or advice, I was induced to try "lard," which I applied well under the wings and body. These may seem simple cures, but nevertheless practical. Try them for yourselves. "Dixie" may also profit by these suggestions.—PUER AGRICOLÆ.

About the Savannah Fowls.—I have had an experience similar to that of your correspondent "Dixie," Savannah, Ga., in your issue of July 20th. I lost nearly all my fowls. Upon cutting open one of them I found the liver three times the natural size, and concluded that a disease of the liver was the trouble; since then I have given my fowls, upon the first appearance of their being sick, one one or two liver pills a day for two days, and have lost none. Please give "Dixie" this information; it may cure his fowls.—C. V. S. W., *Madison, Ga.*

Fowls as Ornaments on Grounds.—Fowls belong naturally on the lawns, among shrubbery, and in the kitchen and front garden. As objects of beauty in a landscape, some of the better type of fowls should be kept. They are consumers of insects, slugs, worms, etc., and can render the gardener great service if permitted to do so. They are features of domestic life which no really cultivated taste for rural pleasures will forego. There is nothing unrefined, in our judgement, in giving life to country places by stocking them with the more ornamental varieties of domestic fowls.

A Remedy for Chicken Cholera.—A sure remedy for this prevailing disease is. A lump of alum about the size of a hickory nut, dissolved in abont a teacup of water, a teaspoonful to be given twice a day until signs of reparation. This has proved to be a wonderful friend in my hennery. The number of my chickens was decreasing so rapidly before this remedy was given that but forty odd remained out of several hundred, eight having died in one night; but by a few doses of this anti-cholera medicine I soon realized its value.

Fowls for the South.—"What kind of poultry will produce the most eggs and best defend themselves against the attacks of the hawk, having an unlimited extent of territory to roam over and where chickens never have any disease?"

So asks a Southern correspondent. A dash of the larger sort of Game fowls upon Black Spanish, would fill the bill on the above proposition, making large sized, soldierly and prolific fowls.

"African Dorkings."—H. H. COLE asks us to give a description of the "African Dorkings"—color and size, adding:—"I have just purchased a pair, and they look so much like Brahmas I begin to think they are." Probably they may be; for we never saw nor heard of "African Dorkings." You have probably got badly sold by some highly imaginative chicken vender.

Gapes in Chickens.—A writer in The Poultry Bulletin says he puts a small quantity of carbolic soap in solution under the wings and on the breast of the hen as soon as she comes off with her brood, and repeats the application once a week, and thus prevents gapes, which disease, he claims, is caused by the larger species of the louse, which lays its young in the chicken's mouth.

How Ducks are Produced in England.—We find the following statement in an exchange:—"The early ducklings that realize such high prices in the London markets, are the Aylesbury variety, distinguished by their great size, white plumage and flesh-colored bills. If fed with an *unlimited* supply of oats, placed in a vessel of water, and not allowed much room to swim, the old birds will lay freely in winter, then the eggs should be hatched under hens, and the duckling liberally fed with slaked oatmeal and fine midlings, and afterwards with oats in water. Under this treatment they may be made ready for the table in less than two months."

Duration of Incubation.—Hens' Eggs hatch in from nineteen to twenty-one days. Turkeys—from twenty-six to twenty-nine days. Guinea-fowls—from twenty-five to twenty-seven days. Pea-fowls—twenty-eight to thirty days. Ducks—twenty-eight days. Geese—thirty days.

Dairy Husbandry.

CHEAPENING CHEESE.

MR. J. R. CHAPMAN, a very intelligent farmer and well known factoryman of Madison Co., N. Y., in a letter to the Utica Herald, gives a pretty plain statement in regard to the consumption of cheese in England and the policy of the governing classes of that nation in cheapening food for its workingmen. He also states the price at which New York dairymen cannot afford to produce cheese.

The Herald, it will be remembered, has been advocating low prices, saying that if "we put cheese at eight cents to ten cents per pound, it would double consumption." It complains that American consumers have paid too high a price, and that the English cannot afford to pay more for our cheese than they did last year. We quote the latter part of Mr. CHAPMAN'S letter bearing on these points. He says:

We are making cheese during the hot months, at ruinous prices, to feed the workingmen of England; but I imagine the workingmen do not receive the benefit of our losses. It may be interesting to some of your readers to know that during the months of May, June, July and August, our cheese has sole possession of the English market. I know that American cheese is retailed by the English cheesemonger at from 8d to 10d, or from 17 to 16 cents per pound. I have lately noticed that you are at issue with the RURAL NEW-YORKER in regard to the prices of cheese. My opinion may be worth something or it may not. I know that cheese cannot be made by New York State dairymen under twelve cents per pound. When the patrons of cheese factories receive seven cents per pound for cheese, despondency fills their minds and they have startling visions of johnny-cake, buckwheat and buttermilk.

Our cheese is consumed in England principally by the manufacturing operatives—not so much by the farm laborers, who live upon rat-tailings, bread and potatoes, and may be a little bacon twice a week. I profess to know something about what I state in relation to labor in England. I was raised on a farm in Lincolnshire, and my relations there to day are large farmers. I lived three years in Northamptonshire, one year near Aylesbury, in Buckinghamshire, three years near Leeds in Yorkshire; and I have had in my employ at one time as many as 700 men and boys.

The farm laborers in some of the midland and southern counties of England have been combining for a rise in wages, and they have succeeded in obtaining an advance of about one dollar per week; but the men who consume our cheese in England, Wales and Scotland are outside of the farm laborers. It is the settled policy of England to feed her workingmen cheaply, so that wages may be kept down and her manufactures produced at less cost than by any other nation. Her power and very existence depend upon cheap food; and as long as Americans are fools enough to supply her with food staples, at a loss, and buy her manufactures instead of manufacturing at home and making a home market for the products of her soil, just so long England will prosper, just so long America will suffer.

THE Herald thinks Mr. CHAPMAN "hits the nail on the head," and now urges the adoption of "a more diversified system of farming, encouraging home manufactures and building up of home markets instead of longer remaining dependent upon England." We have for years urged the necessity of building up and developing home markets as a means of obtaining good fair prices for cheese, and we have pointed out the foolish policy of glutting the foreign markets in hot weather by shipping so much cheese below the cost of production—(See back numbers of RURAL NEW-YORKER and our address before the American Dairymens' Association, January 12th, 1870). We are glad the Herald is getting to understand these points. But how the Herald's plan of "diversified farming and building up home markets" is going to benefit cheese dairying with cheese at the Herald's figures, "8 to 10 cents per pound in order to double consumption," the Herald does not tell us. Dairymen would doubtless be very glad to know how "good, palatable cheese" can be sold at 8 cents to 10 cents per pound, thus netting the producer, after paying for manufacturing, only 6 cents to 8 cents per pound, and yet realising to said producer a profit. That question just now it would seem could be made quite as important and interesting to dairymen as any side issues.

FORWARDING DAIRY PRODUCTS IN HOT WEATHER.

A CORRESPONDENT from the western part of the State asks in what way dairy products can be forwarded to New York, and other cities on the sea board, during hot weather, without liability of injury from heat. "Our shipments," he says," are often damaged from this cause while in transit. Is there any remedy?" Yes, there is a remedy, and it remains for shippers to inaugurate the proper movement with the railroads to have our butter and cheese secured from harmful influences of heat, while in transit to market. Refrigerator cars are now coming into use, and all perishable products that are liable to be affected injuriously by heat while being conveyed to market should be forwarded in such cars. The cheese and butter trade has assumed large proportions, and their freightage is an important source of income to the railways of New York, and we see no reason why all proper appliances for the delivery of these goods in sound condition should not be incumbent upon the roads. Dairymen of New York, certainly, are entitled to these improved methods for the transmission of their property; for whatever losses are incurred on account of shipping goods in hot weather, react upon the producer, since the greater the risk the lower the price to meet the contingency of such loss. The introduction of refrigerator cars, we suppose, may be credited, for the most part, to competing roads, which vie with each other in securing the freight of the great West. This competition often gives the West undue advantages over the East, not only in the carrying appliances, but in the relative cost of freights.

In regard to the shipment of perishable products the West is every year better able to compete with the Eastern producer in his own markets, as the following which we cut from an exchange will show:

The perishable products of the far-off Western prairies are now coming to Eastern markets in refrigerator cars, a device which The Country Gentleman thinks must have an effect on the value of Western lands something akin to that of steam itself. To send fresh meat, butter, fruits, &c., 1,500 miles in the hottest season of the year, and have them arrive to market in prime condition, is a feat of which our respected ancestors of half a century ago little dreamed. Yet that is now done every day between Chicago, Boston, and New York. The best cars of this description, as is claimed, are classed among freighters as "the Blue Line," constituting part of almost every freight train running from Chicago to Boston and New York. They are owned by the various roads over which they run, and, of course, move rapidly and make close connections, and their success is such that the companies guarantee the delivery of the articles in as good condition as when received. They are built double all around, with inside double doors, filled in with charcoal, and have a capacity for holding two tons of ice. They are also so arranged as to be furnished constantly with a current of cool, dry air. At the principal stations they are carefully examined, and ice added whenever it is deemed necessary, by means of which the guarantee of a safe arrival is made good. Very naturally, too, the business is growing rapidly, as twenty cars a week are now in demand where four sufficed a short time ago. Each car will carry 20,000 pounds. Cars are also furnished at points East of Chicago whenever there is freight enough to make up a load. Thus one by one are the difficulties mastered which retard intercourse between the producer and the consumer.

Eastern dairymen should see to it that their goods during hot weather be freighted in such cars as will deliver them in good, sound condition. A good deal of cheese from Central New York bought for export goes upon shipboard almost immediately after its arrival in New York. It not unfrequently, however, becomes overheated in the intermediate time of leaving the factory and being put upon the ship, and, as a consequence, becomes more or less touched with bad flavor. The use of refrigerator cars, we think, would obviate this difficulty in hot weather, since the cheese on its arrival in New York would be so cooled off as to take its place on the vessel and not be affected with heat, and hence would arrive in a foreign market in prime condition.

The question, it seems to us, is an important one at this time, and we call the attention of factorymen and cheese dealers to its consideration.

DAIRY NOTES.

Keeping Cream.—Next in importance to having milk perfectly pure and sweet, and free from all animal odors, comes the matter of keeping the cream after it is taken off the milk. In the first place, the less milk there is with the cream at the time it is set in the cream jar, the better. A great deal of carelessness is shown in this matter, for be it known that milk makes cheese, while the cream only makes butter; and the more milk there is in the cream at churning time, the more cheesy-flavored will be the butter, and, therefore, the more likely to spoil afterward, unless excessively salted. Really pure, good butter requires very little salt, while butter as ordinarily made will soon spoil, unless well salted or kept covered with brine.

The Herdsman.

TEXAS CATTLE TRADE.

A TEXAS cattle breeder, informs the Kansas City (Mo.) Drover that this season great numbers of Texas cattle, (which were formerly sent largely to Kansas City,) are being driven to Abilene, further West on the Pacific railroad, to avoid the excessive tax imposed on drovers who take their stock through the Indian Nation. The Osage Indians now collect a tax of ten dollars a drove upon all cattle driven through the country.

In Texas the price of cattle ranges from $12 to $16 per head. A drove of 100 stock cattle—25 each of cows, calves, yearlings and two year olds comprising the drove—can be purchased for $6 per head. The cost of driving cattle from Texas to Abilene is about $2 each. A stock car from Baxter Springs to Chicago costs $105, and will accommodate seventeen head of cattle. Texas sells to packers and others about 200,000 cattle every year. Large and numerous droves are now being driven northward. There are flattering prospects that one of the heaviest packing firms in the country will soon arrange a mammoth establishment at Kansas City for the purpose of slaughtering and packing thousands of the cattle of Texas. The location is such, and advantages for such an enterprise so great, that there is little doubt that Kansas City will in five years' time be known as doing a beef packing business second to none in the country.

There is no regular market value fixed upon cattle in Texas, but they are plentiful all through the State. In the Red River district cattle can be bought for from $10 to $15 per head, but further South they can be had for much less. There are somewhere near 30,000 cattle on the road, and driven off to graze from where the old trail crosses the Santa Fe road to Council Grove. It is very dry in Western Texas, and up to the 14th of May there had not been a good rain for about seven months, but the country seems to be full of cattle. At Red River, it was estimated that 100,000 had been driven past up to the 27th of May.

STOCK WANTED SOUTH.

ONE of the editors of the Plantation, Atlanta, Ga., writes:—"It would be a wise thing for Northern stock raisers to form partnerships with gentlemen at the South on the following basis:—The Northern man might find the stock and the Southern man the land and personal attention, and make an equitable division of profits. These profits, in a well-conducted establishment of this kind, would be handsome. The demand for certain kinds of live stock is eager. The writer is constantly receiving inquires as to where Merino sheep and Ayrshire or Alderney cattle can be bought, and is constantly compelled to say that he does not know. At the present moment, he doubts if there be a Merino ewe or ram, or an Ayrshire or Alderney cow or bull for sale in the State of Georgia. The Northern agricultural papers are full of stock advertisements. But they are, practically, of little use to us, as few persons can pay the freight in addition to the original price. The remedy is some such plan as that suggested by "Citizen." Or, if this be impracticable, then the formation of a joint stock company for the purchase and sale of thorough-bred animals of the kinds of live stock needed at the South. It is the opinion of the writer that one thousand Merino sheep could be sold in Georgia at $10 per head before the close of the year. At least $2,000 could be cleared upon this importation. But this company should buy stock and raise their produce for sale. The double purpose of a public and private benefit would thus be answered."

NOTES FOR HERDSMEN.

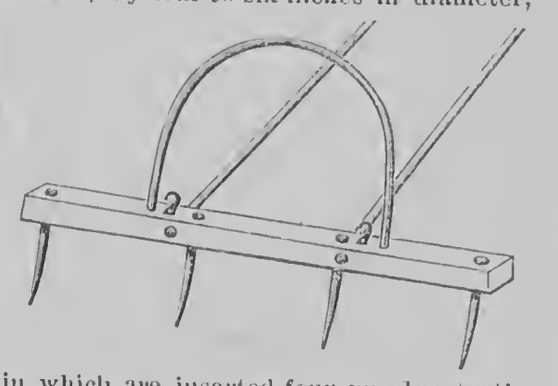
Cattle for the Mid-South.—A correspondent writes:—"What bred of cattle is best to cross with our native stock in a country as far South as 36 degrees, where pasturage is scant and cattle have to travel over a large extent of territory to get their living, and where ticks, musketoes and flies of every description are abundant in warm weather?" It is of very little use to put the line bred cattle of the North, upon the broom sedge ranges of Tennessee and North Carolina. Cattle which have been accustomed to the rich blue grass of Kentucky, and with skins sensitive to the bites of insects, will succumb to the hard fare of the South. The thick skinned Hollanders might stand it, but not the short-horns. We have seen a cross of Brahmin cattle upon the native stock of the South, to make a hardy and profitable variety. The first thing for Southern farmers to do is to get their lands into good grass and clover, and then they can raise cattle with satisfaction.

Beans a Remedy for Garget.—We had two valuable cows, which for a couple of years had been much troubled with garget in the bag, and last Spring it set in again, bidding fair to destroy them. I had read in your paper about beans as a remedy and prevailed on the men to bring some, which I boiled a few times, and I have heard no more complaint about garget. The disease had advanced so far in a new milch cow that the men said she had already "gone up;" but the beans brought her back again, and she has been an excellent cow all Summer. The beans used were what is called the butter bean, which are black when ripe, and as I cooked them for the cows, I found them to be very strong and beany. From our experience here with beans for garget, I had come to the conclusion that beans had hardly had prominence enough. It strikes me as being *the* remedy above all others.—A SUBSCRIBER.

Farm Economy.

MARKING GROUND FOR CORN.

A TEXAS correspondent (whose letter is just at hand) asks the cheapest mode of marking corn land in check rows. We give a sketch of a contrivance we have used. It is made of a square or round stick of timber, say four to six inches in diameter,



in which are inserted four wooden teeth, say two feet long. These teeth should be strong, round, and, not as the engraver has shown, sharp, but rather blunt at the ground ends. They should be wedged into the pole firmly the distance apart it is desired the corn rows should be. A pair of poles, cut from the woods, wedged into the stick at right angles to the markers serve as thills, and a couple of hooks to hitch to are nailed firmly on top of the pole; added a piece of sapling of a length that when bent it will come up about breast high, is bent as shown in the sketch, with which the operator guides the markers. The first rows being made straight by driving the horse to a stake, the tooth making the outer mark in the field, returns in its own mark. We know of no better or cheaper or more rapid way of marking corn ground. The marker may be weighted according to the condition and character of the soil in which it is used.

ECONOMICAL NOTES.

Wagon Axles.—J. W. H. asks:—"In the construction of axles (iron) for farm wagons, should they taper from collar to outside nut? or, should they be of uniform size, and the wheels have "pipe" boxes?" If the axle be made straight there will probably be less friction; but the axle will not be as strong as if it be made tapering, the weight of metal being the same in both cases. The subject requires and deserves careful practical investigation. It is not improbable that the best form would be a combination of two straight journals, the outer one being less than the inner one, and the junction of the latter with the collar being shaped so as to conform to SCAIELE'S Anti-friction Curve.

Sawing Down Lumber.—In RURAL NEW-YORKER, June 22, FRANK BACHELOR asks some one who knows to inform him how to saw down trees without injuring them. My method is the same as his, with one exception; cut the notch, apply the wedges, saw all around the tree instead of one side only; leave no place to break off. The trees I sawed were all hemlock; had no trouble in their gigging backward; cut the notch the side the tree is to fall.—OLD SUBSCRIBER.

Arboricultural.

BUDDING.

THE process known in horticulture as budding is simply the art of taking a bud with a small portion of the bark from one plant and inserting it into another. The plant into which the bud is inserted is called the stock, and there must be an affinity between the plant from which the bud is taken and the one upon which it is placed, and the nearer the relationship the more certain will be the union. Apples are budded upon apple stocks or some plant nearly related, also pears upon the pear, quince, hawthorn, mountain ash, or other plant belonging to the *Pyrus* family or genus.

In performing this operation it is important that the bark of the stock should be in a condition to part readily from the wood, because the bark adhering to the bud is usually slipped under that of the stock, where the assimilated sap as it descends from the leaves can reach and nourish the inserted bud, thereby aiding in forming a union between stock and bud. The process or art of budding is applicable to all kinds of woody plants, and is sometimes used in propagating the succulent or herbaceous, but is mainly used for multiplying trees and shrubs.

The time for budding most kinds of fruit and ornamental trees, as well as roses and other shrubs, is during their growth in Summer. July and August in the Northern States being the two months in which most of this kind of work is performed. The conditions necessary to success are, first, well developed buds of the present season's growth, and stocks upon which the bark will peel readily from the wood, admitting the inserted bud without wounding the wood underneath. Second—The operation must be rapidly and carefully performed. The materials required are some soft bass-bark, or any similar substance, with which to tie in the buds, and a sharp, thin-bladed knife, the end being rounded as shown in figure 1—this being the usual form of budding knife used by the nurserymen in this vicinity, and probaly elsewhere. Before proceeding to cut the buds, examine the stocks whether they are branches of trees, or seedlings raised for the purpose. By making an incision through the bark and passing the point of the knife under, slightly lifting, the condition of the stocks may be readily ascertained. If the bark parts readily from the wood the stock may be considered in a proper condition for budding.

The branches from which buds are to be taken should be of the present season's growth, the buds upon them plump and firm, but not so ripe that the leaves attached have fallen off. After cutting the branch, cut away the leaves, but not the entire leaf stem, and leave enough to take hold of, as shown in Fig. 2, which represents a twig from a pear tree. When a sufficient number of branches have been cut to supply buds for several hours' work, or less, roll them in damp moss, or paper, and carry to where they are to be used. Now, with the knife, make an incision through the bark, and crosswise of the stock, and from this incision another downwsrd, and about an inch and a half long—the two incisions making a wound resembling the letter T, as shown in Fig. 3. Lift the edges of the bark slightly with the rounded point of the knife, and the incision is ready for the insertion of the bud. The bud and a slight portion of wood is cut from the branch, as shown in Fig. 2 c, the knife passing in below the bud, and brought out about a half inch, or more, above. Those having experience in budding will usually cut a number of buds from the twig before making the incisions in the stock; but one at a time is the safest plan for a novice. Now, insert the lower point of the bark upon which the bud is situated under the two lifted edges of that on the stock, and thrust it down to the bottom of the incision.

If the upper end of the bark should not pass completely under, cut it off even with the cross incision in the stock. Then proceed to wind the stock above and below the bud, but up close to it. Draw the ligature firmly and tie or fasten in any way to keep it from unwinding. If very strong material is used for tying, it may be necessary to loosen the ligatures in two or three weeks after the buds are inserted; but where buds are inserted into branches of a half inch to an inch in diameter, this is seldom required. On small stocks it is well to examine the bud in two or three weeks, and if the stocks show a depression where the ligatures are, it is well to cut them loose.

The buds are not expected to grow until the following Spring, at which time the stock above the buds should be removed. The point of separation should be from two to three inches above the bud, and all other sprouts kept removed from the stock. Of course we are supposing that the stock is a small seedling; but should it be a branch on a large tree then the sprouts only on the branch budded need be removed.

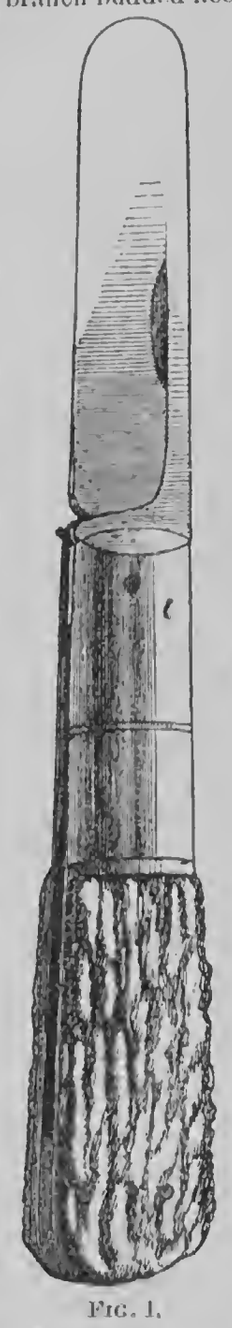


FIG. 1.

FIG. 2.

Ladies who have strong young suckers of common roses may bud them with the more delicate varieties, such as Tea or Bourbons. Choice varieties of fruits may be budded upon poor kinds, and a very little practice will enable almost any man, woman, boy or girl to perform this operation successfully, and with pleasure and profit to family and friends.

"SUGAR-PRODUCING TREES."

IN RURAL NEW-YORKER of July 6th, under the above caption, after mentioning the Sugar Maple (*Acer saccharinum*), the Ash-leaved Maple or Box Elder, and the Black Walnut, which has recently been added to the list, you say, "the three trees just named seem to be the only ones as yet that may be regarded as yielding sugar in profitable quantity among our native forest trees—at least that have been discovered."

I was surprised to see such a statement in the RURAL, which I had regarded as authority in almost everything. The Scarlet, or Soft Maple (*Acer rubrum*), is nearly equal to the Rock or Sugar Maple as a sugar-producing tree. In the year 1846 I tapped about 100 trees of each variety; I took 30 gallons of sap from each variety and boiled it down separately. The Sugar Maple produced 3 pounds 11 ounces and the Soft Maple 3 pounds 9 ounces of good sugar. This sap was taken from seven old trees of each kind. I then took 30 gallons from seven young thrifty growing trees of each kind, and the produce of sugar was 2 pounds 13 ounces from the Soft Maple and 2 pounds 11 ounces from the Hard Maple. Last Spring I tapped 101 trees in my Soft Maple grove, trees only 11 years old, and made between 80 and 100 pounds of sugar. From these facts I beg you to include the Soft Maple in your list of sugar-producing forest trees.

It has been known for more than forty years that both the Black Walnut and Butternut trees will produce nearly as much sugar as the Rock or Sugar Maple. I know they will produce sugar in nearly paying quantities; but it is not quite as white and good as that produced from the Hard and Soft maple; at least, I never could make as good sugar from them. The Butternut tree yields more sap than the Black Walnut, and the Soft Maple yields more than the Hard Maple. If any one proposes to test what I have stated, let them take trees located as nearly alike as possible, for a tree on high land will yield sweeter sap, but not so much of it as a tree on low or bottom land.—LYSANDER W. BABBITT, *Maple Grove, Council Bluffs, July* 12, 1872.

WE were not ignorant of the fact that sugar had been and could be made from many other trees besides those named; but whether profitably we had our doubts, and still have, especially as regards the Soft Maple, (*Acer rubrum.*) It certainly yields a large quantity of sap; but, so far as our experience extends (and we have made sugar from it more than once), it contains far less sugar than the Hard Maple. The Silver Maple (*Acer dasycarpum*), so plentiful at the West, and which resembles the Scarlet Maple very closely, we should think might yield a richer sap than the Scarlet Maple of our Eastern swamps. The Butternut and Black Walnut are also old acquaintances of ours in sugar making, but the first yields a sugar of very poor quality, and requires more than ordinary care to make it granulate. The Black Walnut is, perhaps, a little better. The Black and Paper Birch will also yield a little sugar, but the Yellow Wood of Kentucky (*Cladrastis tinctoria*) is, in our opinion, far better than either of the last half dozen named. We have not exhausted the list of native sugar-bearing trees by a long way, but the point we make is this, that the sugar or Hard Maple (and, perhaps, the Box Elder in the West) are the best, and will thrive where the others do; therefore, why not plant these in preference to inferior species?

TIME TO PLANT FRUIT TREES.

WILL you, or some of your subscribers, please inform me when is the better time for setting fruit trees, in the Fall or Spring? Also, how is the better way to keep trees (for Spring planting) through the Winter—heel them in, or bury them up?—*Sheffield, Pa., July* 15.

THERE are various circumstances to be taken into consideration in determining which is the better time for planting fruit trees, Spring or Fall. If the soil is light and moderately dry, and the locality not too far North, trees may be safely planted in the fall, provided they are of the most hardy kinds, such as apples, pears and plums; but taking all things into consideration, we prefer early Spring to Autumn. But the trees should always be dug up in Autumn and transported to the place where they are to be planted, and then carefully heeled-in. It may be well enough to cover the entire stem with earth, if received very late in the season; but this is seldom necessary or advisable, because mice will sometimes get in among the trees and feed upon the bark and young twigs during Winter. In heeling-in the roots should be covered quite deep, so that at least a foot or more of the stems will be covered.

If there is any danger of the stems or branches being injured by cold, shade them with branches of evergreens; or old coffee sacks may be used for the same purpose. Hay or straw might be used if it did not offer an attractive retreat for mice; but almost anything that will partially shade the branches during the Winter and not prevent rain and snow reaching them, will answer.

FIG' 3.

The principal objection to burying the trees entire in the soil is that the buds are often injured during thaws in Winter, or perhaps before they are taken out in Spring. If one could be certain that the soil would remain frozen from the time the trees were buried until within a few days before they were taken out in Spring, then we would prefer this system of preservation to any other; but we are not, hence it is not always safe in every locality.

The reason why we prefer to have all deciduous trees that are to be transplanted in Spring, dug up in Autumn, is to allow plenty of time for wounds on the roots to heal preparatory to producing new rootlets. This healing process will proceed quite rapidly, even in cold weather, if the roots are buried sufficiently deep.

Mulch the Trees.—JOSEPH RICHARDS should lose no time in mulching his Spring planted trees if he wants to save them from the effects of dronth. He should have done this in Spring; but it is not too late now.

Field Crops.

SOWING GRASS SEED ALONE.

I SEE a writer in your paper is opposed to sowing grass seed with other crops; and to sowing Timothy and Clover together. Now *I* should like to know *your* opinion on this subject. I know you, as an editor, do not hold yourself responsible for the opinions of your correspondents; but we have so much confidence in your common sense, as well as experience, that we are glad to know what the editors think.—R. Y. BRIGGS.

WE are not opposed to sowing grass seed with other crops, especially with those grains that have comparatively little foliage, such as wheat, rye and barley. We have never succeeded well with buckwheat, though its foliage is not greater than barley. We think too little attention is paid to this matter of seeding for meadows and pasturage, however, among farmers. We have raised good crops of Clover and Timothy by seeding with spring wheat, rye or barley. We have always raised better crops—that is, got a better stand—by sowing our grass seed early in March, upon land in winter wheat or rye, rolling it in and plastering it well. We have, however, tried sowing Timothy in the fall on land that had borne a crop of winter grain, harvested in July or August, plowed and harrowed and the Timothy brushed in. We always got an excellent stand of Timothy—and, we thought, enough better stand to pay for any loss we might have sustained from not sowing again with grain, either in Fall or Spring. This, however, depends upon the character of the season.

Now, about sowing Timothy and Clover together. Our experience is that if the land is to be kept for a meadow, we would never sow Timothy with Clover. We would rather sow Orchard Grass with Clover, and Red Top (if anything) with Timothy. But if the object in seeding with Timothy is to get grass for market, we should seed it with Timothy alone; for pure Timothy hay, baled, brings, as a rule, a better price in market—perhaps not justly, but in most cases it actually does. If we mix anything with Clover for meadow, we should sow Orchard Grass, because it is fit to cut about the same time. If we sowed Timothy alone, we should double or treble the quantity of seed usually sown with clover.

But if the object of seeding was a pasture, we should not care how much we mixed our seed. We should sow the Red and White Clovers, Orchard Grass, Timothy (which we do not esteem of much value, however, as a pasture grass), Red Top, Blue Grass, and as many more varieties as we could obtain that we knew were good forage grasses. And we would sow them with or without seeding to grain, according to circumstances and the richness and strength of our land.

PLOWING UNDER GREEN BUCKWHEAT.

LONG experience and close observation have convinced me that buckwheat is the best and cheapest plant known to turn under to enrich the soil. Clover is much better to fertilize land than any other crop, but it will not grow in poor land, or if it does grow will amount to a meager crop—not one-fourth as much as buckwheat—consequently not so profitably adapted to the purpose of promoting fertility. Buckwheat is only the best crop because there is no other plant that will grow so luxuriantly on very poor soil. In the list of plants to plow under in a green state for manure, besides buckwheat and clover, we might name oats, rye, corn, turnips, &c., any of which will answer a good purpose; but not so reliable as the two above named, owing to the superabundant saccharine matter they contain, which is apt in certain stages of growth, and the circumstance of too much moisture or coldness of the earth when plowed under, to make the land sour and do more harm than good.

My plan would be to plow and harrow the land fine and mellow, then saturate the buckwheat seed with stale chamber-lye or greasy pickle from the mackerel barrel, then dry with hickory ashes, a peck or a half-bushel to every bushel of buckwheat, which will be pabulum to the infant germ, directly in contact to give it a vigorous start. After the buckwheat is a few inches high sow a bushel of gypsum to the acre as late in the evening as possibly can be sown; or sow a compost over it made with slacked lime and swamp muck or road scrapings, three parts of the earth to one of the lime, either of which will make buckwheat grow on poor land. In case the soil is very dry at seeding time, it is best not to sow the prepared seed in the hot earth in the morning or middle of the day, but wait till the evening and let it lie all night, then harrow it and roll it with a heavy roller very early in the morning while the soil is wet with dew.—*Cor. Germantown Telegraph.*

Pomological.

FRUITS FOR LOUISIANA.

THE Fruit Growers' Association of Louisiana have adopted and recommend the following list of fruits for general cultivation in that State:

Apples.—Early Harvest, Red Astrachan, (Carolina), Yellow June, Bevan, Red June, Early Strawberry, Julian, Mercer, Horse, Bachelor Taunton, Rome Beauty, Carter, Shockley, Yates, Roxbury Russet. For further trial—Watkin's Sweet June, Hagan's Seedling, Pride of the South

Pears.—Madeleine, Doyenne d'Ete, B. Giffard, B. Goubalt, Doyenne Boussac, Howell, Bartlett, B. Superfin, Onondaga, St. Michael Archangel, Duchess d' Angouleme, B. Clairgeau, Lawrence, Winter Nelis.

Peaches.—Yellow St. John, Early Tillotson, Stafford's Rareripe, Chinese Cling, Crawford's Early, Oldmixon Free, Oldmixon Cling, Susquehanna, Columbia, Heath Cling, Baldwin's October, Lady Parham.,

Apricots.—Moorpark, Early Purple.

Plums.—Wild Goose, Brill. For further trial—Columbia, Lombard.

Grapes.—Delaware, Concord, Warren, Scuppernong, Promising—Emmelan, Ives, Israella.

Strawberry.—Longworth's, Wilson, Mary Stewart, Imperial, Triomphe de Gand.

Quinces.—Apple, Chinese,

Figs.—Smyrna, White Genoa, Celeste, Brown Turkey, Brunswick, Green, Ischia.

Pomegranates.—Sub-acid, Sweet, Sour.

Raspberries.—Mammoth Cluster, Davidson's Thornless. For further trial—Philadelphia, Clark, Seneca Black Cap.

Orange.—Creole Sweet Seedlings, Large China, Mandarin.

Japan Plums.—At New Orleans and South.

Pecan.—Large soft shell.

POMOLOGICAL GOSSIP.

Morgan Co., Ill., Seedling Apple.—The Prairie Farmer figures and describes an apple, with the above name, which was born on a tree fifty years old, and is vigorous and healthy. With no more than ordinary care the fruit keeps until July. Its good qualities are indorsed by the Jacksonville Horticultural Society. It is thus described by the paper above named:

Origin—Farm of HART H. MASSEY, four miles west of Jacksonville, Morgan Co., Ill. Date of parent tree about 1820.

Form—Roundish conical, flatish, the specimen sent being 2⅞ inches high by 3⅜ in breadth.

Calyx—Rather open, with pretty strongly marked sepals.

Stem—Medium length, somewhat slender.

Skin—Rather thin, but not easily broken; color dull red upon a greenish ground, (suggesting a highly-colored Rawles' Janet, of which this may be a seedling), with small, scattered, blackish-brown dots.

Capsule—Not very open. Seeds dark, plump and diversified in form.

Calyx tube—Somewhat open.

Flesh—Yellowish white, rather coarse grained, sub-acid and rather negative in flavor at this time; not juicy at this late season, but quite as much so as could be expected. Quality good to very good.

We have no description of the tree, but judge from its age that it is vigorous.

This apple we think, is worthy of trial in other localities. If an old variety we do not recognize it. It has some points of resemblance to the Rawles' Janet and the Willow Twig.

Apples in Minnesota.—MARK T. BERRY, Minneapolis, Minn., writes to the Western Pomologist as follows:—"I have a few of the following kinds of standard apples that I have had from two to four years, and they have come through the winters all right:—Red Astrachan, Fameuse, Ben Davis, Haas, Colvert, Perry Russett, Red June, Red Romanite, Tallman Sweet, Wagner, Yellow Bellflower, (large red apple, name unknown,) Duchess, and six of the Minnesota Seedlings that have proven good; also Hyslops and Transcendants that are bearing; also Montreal Beauty, Soulard, and the smaller kinds of the Crabs. Of the above kinds Red Astrachan, Ben Davis, Fameuse, Perry Russett, Haas and Duchess have blossomed. I think the following have proved the hardiest thus far here:—Haas, Colvert, Ben Davis, Fameuse, Red Astrachan, and Duchess.

Varieties of Pears Attacked by Blight.—Pres. OHMER of the Montgomery Hort. Soc., O., recently stated that his experience had taught him that the most thrifty trees were the first attacked, such as the Vicar of Winkfield and the Lawrence. The Seckel and Tyson seemed to escape altgether, and the Bartlett stands well. His remedy was, after five or six years' cultivation, to sow clover in the orchard—grass was too thick and prevented the air from getting to the roots. J. H. PIERCE said his Seckel and Lawrence had not been affected. He has trees which have been six or seven years in grass, and were but little troubled with blight. FRED. BOYER has pear trees seventeen years old in clay soil that have never been affected with blight. During that time he has known two orchards on a rich soil destroyed by it.

The Matilda Strawberry.—The Home, Farm and Orchard, Newburgh, N. Y. says:—"With us the 'Matilda' does not grow so strongly as the 'Seth Boyden,' although the fruit of the former on this year's planting is all that could be expected. We must wait another year for the fruiting qualities of these varieties. The largest single berry we raised this year was on the Matilda vines which had been planted only six weeks."

The Wagner Apple is making a good reputation as an early fruiting variety, handsome marketable fruit, upon hardy, compact trees. We read of large orchards in Michigan eighteen years old which have borne every year since planted, good crops of fruit.

The Garden.

"DR. HOGG" PEA.

MR. LAXTON of England, by skillful cross-breeding continues to produce new varieties of peas which the Cottage Gardener says have the great merit of opposing qualities far superior to old ones with every stage of earliness. The Gardener says of the pea we herewith illustrate:

One of the best of these new varieties bears the name of "Dr. Hogg." It may be described as a dwarf and early Ne Plus Ultra. No higher recommendation could be given to it than to introduce it as a competitor of Ne Plus Ultra. The plant grows about 4 feet high. In dry seasons it will not, perhaps, be taller than 3 feet, and in wet ones, such as the present, it will reach 5 feet. The stem is simple, and well covered with pods, which number from nine to ten. These are 4 inches long and over three-quarters of an inch wide, of a dark blue green, like those of the early Green Marrows and Ne Plus Ultra, much curved like Auvergne, and containing nine very large Peas, which are of a deep green color. The ripe seed is green and wrinkled.

The seed was sown the 23rd of February, and the plants were in full bloom on the 24th of May. The pods were fit for use the 16th of June. Or, to sum up the whole, it is a fine Ne Plus Ultra coming in one week after Dillistone's, the earliest of all Peas, and thirteen days earlier than the old Ne Plus Ultra. This is a valuable acquisition.

GARDENERS' NOTES.

Growing Summer Lettuce.—A correspondent of the Massachusetts Ploughman talks of his lettuce thus:—"I thinned it out, then carefully slipped a cotton twine under the lowest leaves of each plant, and gently raised them a few inches from the ground and tied them loosely; then I placed a shingle upon each plant and a small stone to keep it firm. Every evening I removed the coverings, watered each head, and placed the protective covers in the morning, as I found the sun's rays had a tendency to cause the lettuce to run up to seed, and removing the cover at night allowed it a sufficiency of fresh air, so that neither mold nor decay made their appearance. I was rewarded by large, solid heads of superior quality, and the hearts were white, sweet and crisp. Not a single plant failed of heading, and none decayed or bore seed."

To Get Early Rhubarb.—We are asked by a country correspondent whether the rhubarb found so early in market is grown under glass; if not, how. In some cases it is grown under glass; in others it comes from the Southern truck gardens. But we know a gardener who has early rhubarb obtained in this way: In the fall, late, he sets a barrel over the crown of his plant and covers it and the earth about the roots with manure, so that neither ground nor plant can freeze. He keeps this on till Spring, when he removes the manure from the barrel, lets in the light and air, keeping the manure about the roots; and he speedily has early and excellent Rhubarb, and great quantities of it from few plants.

Keeping Melons 'till Winter.—I have the Persian watermelon, for which it is claimed it can be taken off the vines to ripen, and will keep 'till winter. Will any one who has tried to keep that or any other kind, report their success through the RURAL NEW-YORKER, and how they kept them?—L.

Floricultural.

Wild Orange Lily.—Will you please name the enclosed lily? It grows wild in this vicinity, going about one foot high.—R. B., Jr., *Marblehead, Essex Co., Mass.*

THIS is not a very common lily in the Eastern States, but abundant in the Northwestern States. Its botanical name is *Lilium Philadelphicum*. It is a variable species, like all of our native lilies, and several varieties have been from time to time introduced. The leaves are lanceolate in shape and produced in whorls, the flowers erect, bell-shaped and of a reddish-orange color, spotted on the inside with dark purple. This is a very pretty lily for garden culture, succeeding in any good soil.

Wild Turk's Cap Lily.—If not too much trouble could you name the plant of which I send you inclosed a leaf and flower. For a wild plant it is quite ornamental. The hight of the plant is about five feet. H. L., *Sheldon, N. Y.*

IT is a very common plant in low meadows, and is known as the American Turk's Cap lily, or Superb Lily, *Lilium superbum*. We have cultivated this and other species of our native lilies, and find that they succeed as well as any of the foreign kinds, and are improved by culture.

Carnation Blooms.—A correspondent of the Garden says:—"In order to preserve the bloom of pinks, picotees, and carnations for exhibition purposes, a fine, plump bud just on the point of opening is selected, and drawn through an inverted six-inch pot so as to leave the bud resting above the hole. In order to ward off heavy rains and strong sunshine, another smaller pot is inverted over the bud so as to keep all secure. In this way the blooming period is considerably lengthened, and the quality of the blooms preserved.

Poppy Culture in France is steadily increasing, occupying, now, 50,000 acres of the value of 1,500,000 francs and yielding opium to the value of 2,000,000 francs annually. This is one indication of the increasing extent of opium consumption, and of the profits derived from its production.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

A Succession of Gladioli.—*July 22.*—Almost every one who cultivates the *Gladioli*, plant their entire stock at one time, consequently they all come into bloom together and last but two or three weeks. Now, a succession of blooms from early in Summer until late in Autumn is very desirable, especially with choice kinds of flowers; and it is easy enough to secure this by planting at different times; beginning with a few bulbs forced in pots, then putting out a few bulbs as soon as the weather will permit, and others later in the season. My first Gladiolus flowers appeared more than a month ago, and now the second planting are in bloom, while the third, or last, will not show flowers until late in August. When one has a number of bulbs of each variety, it is much the best way to divide them into two or three lots, planting at different times, and thereby secure a succession of blooms.

The Oak Pruner.—*July 23.*—During the past two or three weeks small withered branches have been falling from the black and pin oaks about my office. Upon examining these branches to-day, I find they contain grubs (larvæ) of the Oak Pruner. (*Stenocorus villosus*, FABR.) The parent of these grubs is a beautiful, slender, long-horned beetle, about an inch long, of a dull brown color, sprinkled with gray dots. It appears here in June, the females laying their eggs upon the small twigs of the various species of the Oak and occasionally upon the Chestnut, where they soon hatch, the grubs penetrating to the pith, burrowing lengthwise of the stem, and in the smaller twigs it consumes the entire wood, leaving only the bark as a covering for themselves. The destruction of the woody portion of the twigs would of course cause death, and the leaves to wither; but to make sure of this, the little grub, before it bores any considerable distance in the twig girdles it from the center outward, thereby cutting off the supply of sap from below which hastens the death of the wood, and insures the falling of the branch before winter. At this time these withered branches, with leaves still adhering, can be found in abundance under oak trees wherever this insect abounds. I have gathered a quantity of these infested twigs and shall put them in boxes covered with a wire netting in order to secure the beetles when they appear next spring. To prevent an increase of this oak-pruner we have only to gather the branches containing the grubs and burn them.

Cutting Out Raspberry Canes.—*July 24.*—Just as soon as the raspberry crop is gathered the old bearing canes should be cut out and burned, and the young canes intended for next season's crop neatly tied to stakes. I do not suppose that the old bearing canes draw any great amount of sustenance from the roots after the fruit is gathered; but they certainly do no good. The young canes are also crowded by the old, their full development impeded thereby, to say nothing of the loss which frequently occurs by not having the tender shoots carefully tied to stakes before the heavy Autumn rains begin. Sometimes there are more young canes produced than it is advisable to leave for fruit; and these should be cut out at the time of removing the old canes. The earlier this can be done in the season the better; and I usually endeavor to do this as soon as possible after the last picking of fruit, and think I gain something by the operation. I know that many small fruit growers put off this work until late in fall or early winter, but I am certain that they lose more than is gained by the delay.

Top-Dressing Strawberry Beds.—*July 25.*—There are very few strawberry plantations in our old soils of the East that are not benefited by a top-dressing of manure, ashes, or some similar fertilizing substance, after they are done fruiting in summer. My men have just finished cleaning up the old beds to-day, preparatory to giving the remaining plants a dressing of ashes and well decomposed manure. The greater part of the two-year-old plants have been hoed out and only the most vigorous left for producing runners and fruit another season. When the plants are cultivated in rows it is very easy to go over the plantation and cut out the weak plants and save the strong ones, the latter soon producing runners that will fill up all vacant places. By adopting some such renewal system beds may be retained for several years on the same ground and still produce a good crop of fruit, provided, of course, that the soil is rich enough or the beds top-dressed every season.

The Swine-Herd.

NATIONAL SWINE BREEDERS' CONVENTION.

Report of Committee Appointed to Prepare Work for the Adjourned Convention to be Held at Indianapolis, Ind., Nov. 20, 1872.

THE committee appointed by the National Swine Breeders' Convention, held at Cooper Union, May 14th, to name committees to prepare reports upon the history, characteristics, and a scale of points for the respective breeds of swine, and upon the question, "What constitutes thorough-bred swine?" also to name the time and place for holding the adjourned meeting of the Convention, respectfully report to the swine breeders of America:

1. The adjourned meeting will be held at Indianapolis, Ind., Wednesday, Nov. 20, 1872.

2. It will consist of one delegate, at large, from each State, and of one delegate from each State for each breed of swine raised therein.

3. These delegates shall be named by the State Swine Breeders' Associations, where such organizations exist. Where they do not exist it is recommended that the Executive Committees of the respective State Agricultural Societies, or the State Boards of Agriculture, call Conventions of the Swine Breeders of their respective States at the time and place of the State Fairs, for the purpose of naming delegates to this Convention. In the absence of any such call the committee recommend that the exhibitors and breeders of swine at the State Fairs meet, name and accredit such delegates. In case any States neglect to do this, breeders from such States present at Indianapolis, will be recognized and received as delegates, so far as is necessary to secure just representation from each State.

4. The Committee think it proper to assert that the gentlemen named on the following committees are selected from lists of names furnished and recommended by prominent swine breeders in the different States and Canada, with a view to securing the most impartial representation upon said committees and the most carefully and intelligently prepared reports upon the respective breeds to be submitted to the convention for its action.

5. A circular letter was sent to the chairman of each of the committees named, asking whether he would accept the position and duty. Responses have not been received from all. Only two have declined, naming, however, men who would act in their respective places. These names have been substituted. The near approach of the Fairs renders it impracticable to delay this report longer in order to receive further responses. It is, therefore, recommended that the members of the respective committees place themselves in communication with each other and act as they may mutually agree — or that each member prepare a written report prior to the convention, and mail it to ALEXANDER HERON, Secretary of the State Board of Agriculture of Indiana, at Indianapolis, Ind.

6. The committee respectfully urge upon the swine breeders of the country the importance to them of the work it is the object of this Convention to accomplish; and that since it is to be a delegated and, in a sense, a legislative body, their representatives should be their best posted, most intelligent and impartial breeders; that if the work projected is well done, it will inaugurate a new era in swine breeding, and help to protect both swine breeders and buyers of swine in their mutual relations.

7. The following are the Committees named to report upon "What constitutes thorough-bred swine," and upon the history, characteristics and a scale of points for the respective breeds:

On "What Constitutes Thorough-bred Swine?"—JOHN P. REYNOLDS, Chicago, Ill.; Fred. Wm. Stone, Guelph, Ontario; S. L. Goodale, Augusta, Me.

On Berkshires.—A. B. ALLEN, P. O. Box 376, N. Y. city; J. T. Hudson, Kansas City, Mo.; Daniel McMillan, Xenia, O.

On Improved Cheshires, or "Jefferson Co."—C. V. MAXON, Adams, N. Y.; J. H. Sanders, Sigourney, Iowa; J. J. De Forest, Duanesburg, N. Y.

On Chester Whites.—THOMAS WOOD, Doe Run, Pa.; Dr. Calvin Cutter, Warren, Mass.; W. W. Thrasher, Groves, Ind.

On Essex.—JOSEPH HARRIS, Rochester, N. Y.; Dr. A. C. Stephenson, Greencastle, Ind.; George Roach, Hamilton, Ontario.

On Neapolitan.—M. W. PHILIPS, Memphis, Tenn.; F. D. Curtis, Charlton, Saratoga, Co., N. Y.; Mason C. Weld, Closter, N. J.

On Magic or Poland China.—JOHN M. MILLIKIN, Hamilton, Ohio; Rankin Baldridge, Hagerstown, Ind.; Shepard (of Shepard & Alexander), Charleston, Ill.

On New Jersey Reds.—DAVID M. BROWN, Windsor, N. J.; David Petit, Salem, N. J.; John C. Tatum, Woodbury, N. J.

On Suffolks and Other Small White English Breeds.—JOHN WENTWORTH, Chicago, Ill.; John Snell, Edmondton, Ont.; T. L. Harrison, Morcley, N. Y.

On Yorkshire and Other Large White English Breeds.—O. P. COBB, Aurora, Ind.; James Brodie, Rural Hill, N. Y.; M. H. Cochrane, Compton, Quebec.

On Victorias.—CHARLES LELAND, Albany, N. Y.; W. S. King, Minneapolis, Minn.; Geo. S. Lounsbury, Aiken, S. C.

Any inquiries with reference to this Convention or the Committees may be addressed to the Secretary of the Committee, CHAS. D. BRAGDON, 5 Beekman St., New York City.

Committee { HENRY STEWART, M. C. WELD, FRANK D. CURTIS, L. A. CHASE.

Land Department.

"SHALL WE GO SOUTH?"

I AM a reader of the RURAL NEW-YORKER, and in the issue of July 13 saw an article headed "Shall we go South?" from a correspondent of a Chicago paper. It says several farmers from St. Lawrence Co., N. Y., went to Virginia a few weeks ago land prospecting, with a view of settling there, but came home and reported unfavorably, and have given up the scheme. Their reasons were that they met with no cordiality, and instead of meeting with a warm reception were given the cold shoulder. Now this would give the general impression that it is the same all through the South, which is the very thing I wish to correct. I would say to those same St. Lawrence farmers, and to all the readers of the RURAL, that the above is not true of all the Southern States; but that if they will go to North Carolina, particularly in the vicinity of Raleigh, Wake Co., they will be as well received by both Northern and Southern people as they could wish; and there are good inducements for the capitalist or emigrant. I found there a great many Northern farmers that were doing well and did not wish to go back North. The soil is good; it produces all the grains, grasses and fruits of the Northern States and a great many that cannot be raised in the North. The climate is all that a person can wish. The western counties of the State are very good for stock raising; from Raleigh west to Greensboro, thence south on the line of the N. C. Railroad, through Salisbury to Charlotte is all on the same ridge of land, and is about midway between the sea coast and the mountains.

Many Northerners are going to Columbia, South Carolina, and also to Aiken, sixty-five miles further south from Columbia. Aiken is on the South Carolina Railroad, 17 miles east of Augusta, Ga., and 120 miles west of Charleston, S. C. It is a noted health resort, fine climate, good fruit and cotton country, and well represented with wealthy Northern people. Lands very cheap.

Augusta, Ga., is a fine city of some 25,000 or 30,000 people. The country around it is very good and healthy, but perhaps the best farming lands in the State are in Green Co., in the vicinity of Greensboro. A great many farmers from Pennsylvania and New Jersey have settled in Green Co., within the last two years. It is about midway between Augusta and Atlanta, 75 miles to each place; the Georgia Central Railroad runs through this county. I think Northern people, farmers in particular, will be as cordially received as in any of the Northern States.

I have traveled through most parts of the State of South Carolina and Middle and Northern Georgia, and through some seventeen counties in North Carolina. I went first for my health and that improved so fast that I then began to look up a place for a home; that is why I took so much pains to look the country over thoroughly. I think of settling near Augusta, Ga., as soon as I can make my arrangements to do so.—J. P. HODGES, *Grand Haven, Mich.*

IN the "Land Department" of your issue of the 13th inst., page 27, I notice a quotation from the New York correspondence of the Chicago Tribune, as follows:

"A few weeks since thirty families in St. Lawrence Co. decided to form a colony and migrate to Virginia. * * * A few weeks since they dispatched several of their number to select a locality. The latter, after prospecting extensively, have now returned and counsel an abandonment of the scheme. Their principal ground for so doing is the fact that they were received with no cordiality. Instead of meeting with a warm reception, they report the Virginians gave the cold shoulder to them. They found many Northerners scattered through the State, who generally complain of isolation and social ostracism. The scheme has accordingly been given up."

This is one of the old political schemes, in a new dress, intended to intensify the old hatred towards the South, of the more sincere portion of the Northern people. It must be plain to every one, who has ever observed the flood trash that is always floating about among the newspapers, some little time previous to a Presidential election. If by chance or any other means—it matters not to the schemers what—they can get such things copied into a useful paper like the RURAL NEW-YORKER, it is a great acquisition to them. This will no doubt make many votes for the war party in the coming election.

I have many friends in St. Lawrence Co., N. Y., the pretended location of the colony spoken of, and having lived there some fifteen years myself, I can speak understandingly of a great many of the people.

There are a large number of the best people in the world, some of whom, however, were misguided with regard to the character of the Southern people; and, as the old truism will have it, some of the worst people in the world were to be found in the same county, who were ready to take advantage of the circumstances by which some of the other extreme were misguided. It is well known how bitterly the late PRESTON KING was supposed to have hated the Southern people. Whether he acted according to his own individual feelings or not I shall not raise the question here; I will only say what I know—that he faithfully represented his constituents. He and myself were schoolmates in our younger days, and personal friends until his death. Our intimate acquaintance enables me to say this much, that his apparent hatred toward the South had no place in his heart. It was those of his constituents he represented, who never had seen the South or the Southern people, only through the eyes of such talking emissaries as were sent here, and paid by designing men, to come and receive all the abuse their ingenuity would enable them to merit, and at a convenient and proper time stump the country, with an enlargement upon "the outrageous character of the Southern people, from personal knowledge."

I do not say that the representatives of this colony are designing men of this sort; and if they will publish their names and establish the opposite fact, I shall be very glad to apologize for the seeming inference. But, as the matter stands, I have good grounds for supposing such a probability. I have not only seen emissaries before and since I came here to reside (about three years ago), but, I presume, I prospected the State, before I located, more than these men spoken of (if there ever were any such men), and universally met with extremely opposite treatment from what they represent. D. S. HOWARD.

Richmond, Va.

Entomological.

ENTOMOLOGICAL NOTES.

Eggs on a Cucumber Leaf.—Mrs. C. G. S.—If you wish us to name the eggs of insect try and pack in some way that will insure their safe arrival. When placed loose in a bottle they are sure to be destroyed. Let us have the eggs in a condition for hatching, and then we will try to name the insect that laid them.

New Way of Killing Cut-Worms.—The Prairie Farmer says:—MR. BOYNTON, St. Joseph, Mich., had a field of tomatoes much affected by cut-worms. Thinking they might be baited, he cut some green clover, wadded it up into small balls and distributed them among the hills of tomatoes, and found that the worms would collect about them, eat, and go into the ground near them. In this way he took from the locality of these balls the numbers of 37, 68, 70 and 82. He has experimented with various poisons mixed with the clover to destroy them and at last took boiling water pouring it over and about these wads, in that way destroying 15,000 in a single day.

Sheep Husbandry.

DOGS KILLING SHEEP.

THE greatest drawback to the business of wool growing, or sheep husbandry in any form, is the devastation of the sheep flocks by sneaking dogs, which come upon them when least expected and in a single night so destroy and demoralize a flock as often to take the entire profits of a year's growth out of it, if not more than this.

Sheep-killing dogs are generally great cowards until they become eager in the chase of a timid flock. The cunning of these curs, both in planning their thievish work and in concealing the evidence against themselves, is a thing quite remarkable, as they usually go a long way from home to find their prey, and after the mischief is done they return in season and put on such a look of innocence that a person would hardly suspect they had been engaged in the bloody work; and often their guilt can only be proven by finding shreds of wool between their teeth. Death without benefit of clergy is the only effective punishment of these convicted felons.

But the preservation of the sheep flocks from maranding dogs must lie mainly in prevention before the act rather than in vengeance after the mischief is done; and we know of no means so effective in the prevention of the mischief as the use of a good number of bells upon the sheep. The value of a single sheep would purchase quite a number of bells, so that this sort of protection is comparatively a cheap one, as the bells once purchased would last a lifetime. The bells should be of the noisy, rattle-te-bang kind, not little tinkling things, full of pastoral, poetic melodies. A mistake is often made by putting bells only on the largest, leading sheep of the flock; some bells should be on such sheep, of course, as they can lead off and make a prodigious noise in a stampede; but bells should also be put upon the weak and slow ones of the flock, whose legs cannot carry them so fast in a race for dear life, as the noise they make would be some protection against the enemy which came upon the rear to catch the belated fugitives.

SAVING STOCK RAMS.

IT is customary with most wool growers at the time of trimming lambs, to save a number of the most promising males with a view of their possible capabilities as stock getters. Afterwards, when time has developed their real qualities, they are used or rejected as their merits become apparent.

"The first and most important qulification of a stock ram is constitution. No matter how perfect he may be in every other particular, if he is defective in this one point he is worthless. His stock will be feeble, short-lived, poor breeders, and always ailing. Constitution is to be determined by the full, robust, physical development, the deep, full chest, giving ample room for the vital organs; a uniform development of all the parts, giving a look of strength and vigor. The ram should not only be all right himself, but he should come from healthy, vigorous families on both sides, else he may have lurking in his system the germs of weakness and disease, to be developed in his stock."

In size, a stock ram, like that of a bull or stallion, should not be over-large, but of the most perfectly ripe and symmetrical form of his kind. He should exhibit a masculinity of appearance, in both form and fleece, quite distinct from a female of the same breed. A ram with a ewe's fleece or a ewe's face, would soon run a flock of sheep into the ground.

NOTES AND QUERIES.

Weak in the Hips.—What ails my sheep? The first indications of disease are shown by their refusing to eat, not chewing the cud, and lying down as often as they are started up. While standing, they show a tendency to bear down or forwards, as though there were a weight on the hips. Nothing passed that we can see. Death ensues in three or four days, to a week. They are in good condition.—W. WOOD, *Yorktown, N. Y.*

Sheep on a Rye Field.—My sheep have been on a rye field—pretty old now. I notice a bad cough in several. Can it be caused by the beard of the rye? I took them off the rye two days ago, but see no improvement.—M. S. P., *Bolivar, Tenn.*

Domestic Economy.

PRESERVING CIDER.

In the RURAL NEW-YORKER, July 20, a subscriber desires to know the best mode of preserving cider; also the quickest method of converting cider into vinegar. Having obtained some valuable information from the experience of others, published in the RURAL, I attempt to contribute what little I know about cider and vinegar.

The great difficulty in getting a good article of either of the above, every one is aware; and the reason why it is so, is because both are *doctored* so extensively that we are obliged to swallow a *great deal* of foreign matter to get a little cider, or vinegar, as the case may be—in short, we get a fixed-up mess of stuff intended to represent one or the other of these two articles.

I get my cider pure, right from the press, and I desire it made the last of the season, in cold, frosty weather. To a barrel of cider add seven pounds of brown sugar; let it ferment until you think it safe to drive in the bung perfectly tight. Rack off into a clean cask in March (if you wish good cider, the cask that holds it must be as clean as your milk pitcher), and take about two quarts of the cider and put in one-quarter pound of gelatine, and let it soak two or three hours; then warm and stir it till the gelatine is all dissolved (I use COOPER'S). Set away until perfectly cold, and mix with cider, and stir it well with a stick, through the bung-hole, long enough to reach the bottom of the barrel; agitate it thoroughly, and bung up tight; bottle in April or May. If it presses the corks too much, stand it up. The corks must be tied. If it has not life enough, lay it down.

Vinegar.—Sometimes cider is too strong to make vinegar, and will remain in a state too sour to drink and not sour enough for vinegar. In such a case, add about one-third warm water, in which stir in two quarts of molasses to a barrel, and in two or three months you will have sharp vinegar—as sharp as you want! I cannot say this is the *quickest* way, but I know it makes *good vinegar*. N. S.

ODDS AND ENDS.

What I Know About Packing Eggs in Salt.—Since the year 1856 I have had experience in putting away eggs for family use. I commence the 20th August, and pack none except those I gather from the nests daily; *then I know they are fresh.* I take boxes, kegs, or half barrels for the purpose. Put one inch salt on the bottom of the vessel you desire to pack in, then put a layer of eggs, (*little end downward, always,*) and as close to each other as you please, provided they do *not* touch. When this space is filled put another inch of salt on top, and so on until the box is filled. I have pursued this course for the past sixteen years, and have fresh eggs the entire Winter, and if I have a surplus when they are about 30 cents a dozen, I sell them and give the money to my wife; as she claims all the edibles in the cellar. Sometimes when Christmas comes eggs are very scarce and it is quite convenient to have a hundred dozen fresh ones in your cellar. The salt is not lost, (as salt is always salt) and I've made good use of it in the spring of the year on my asparagus bed.

In my next, I intend to stand by Mrs. BEDELL of Crown Point on the "*Cat question,*" as I have had much experience of their beneficial qualities in keeping rats from eating up chickens.—C. S. S. TODD, *Plymouth, Ind.*

How to Fry Potatoes.—In reply to Mr. BROWN'S inquiry how to fry potatoes, I can recommend the following:—Boil potatoes nicely with the skins on. When cold, peel and slice, chopping the slices slightly; have ready a pan with a small quantity of butter—about one teaspoonful to six potatoes; put in the potatoes, and brown slightly, seasoning with salt and pepper. Just before serving turn over them half a cup of good cream, stir, and send to the table hot.

Saratoga Potatoes.—Take raw potatoes, slice and lay in cold water for a short time; have ready some fresh lard, boiling hot. After seasoning with salt and pepper, lay them in as you would to fry fritters; when a lovely brown, turn; when soft, remove to a clean napkin. This dish, when nicely done, I think would please the palate of an epicure, and I imagine I see Mr. BROWN doff his hat.—MRS. H. J. JOHN, *Elizabeth City, N. C.*

To Make Cider into Vinegar.—Add half rain water and a little molasses, and set in the sun or where it will keep warm. Before the days of fruit in the West I have made excellent vinegar by taking a gallon of molasses with four of soft water, mixing, then spreading some molasses on a piece of brown paper as large as your two hands and putting in.—AUNT SALLY.

Domestic Inquiries.—Mrs. M. asks some of our readers for a good method of canning, or preserving for Winter use, string beans. She has eaten them in mid-winter apparently as nice as when first taken from the vines . . . J. L. PRATT asks if there is any good way to can or preserve melons.

To Pickle Cucumbers in Whisky and Water.—Take three parts water to one of whisky; lay a cloth over the top of your pickles, loosely; every day (throw in your cucumbers as you gather them) take it off and rinse it, stirring them up; that is all.—H. M. G.

To Preserve Cider.—It is a common practice about here to bring the cider while new to a scalding heat, then put it up in bottles or jugs, and cork tightly.

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

To Cure Chronic Sore Throat.—A correspondent of the RURAL NEW YORKER inquired for a remedy for chronic sore throat. Rather poor health must be my apology for not responding sooner. I was a teacher several years in which business I overtaxed my throat so much that it resulted in what is called, "Clergyman's Sore Throat." I suffered severely from it the three winters following my closing school and it commenced the fourth autumn earlier and severer than ever, when I met a friend who advised me to moisten my throat several times a day with a sirup made of loaf sugar and lobelia. The lobelia she gathered from her own fields, consequently it was genuine. She gave me a vial of her own preparation which benefited me much more than everything combined that I had previously used. I am not positive about her directions for preparing it, but I should think a good way would be to bruise the seed and steep it in water, making it very strong, and take that same lobelia tea to moisten the sugar with for the sirup. Care must be taken not to swallow more than enough to moisten the throat nicely. —A SUBSCRIBER.

Caked Breast—Remedy.—I have seen remedies given in the RURAL NEW-YORKER for this source of suffering to mothers. I send mine:—Take equal parts of butter and beeswax; melt together; spread the salve thus made on a cloth and apply it warm to the gathered breast. It will afford almost immediate relief. It causes the breast to sweat freely, extracts the soreness and eases the pain. The remedy is simple and effectual —MATTIE.

To Prevent Discoloration from Bruises, HELEN W. P. is informed that the application, repeatedly, of cloths wrung out in hot water, or the tincture of arnica, is recommended.

The Vineyard.

VINEYARD NOTES.

No Varieties of Grapes Free from Rot and Mildew.—GEO. HUSMANN after stating that Concords, Clintons and Nortons are showing rot in the vineyards of De Soto, Mo., says:—We are inclined to consider no variety free from rot or mildew, let the owners of new varieties prate about the non-rotting qualities all they may: whenever the disease commences it does not respect the pet of any one, but seems to prey upon a variety that years before it had never disturbed. It was but a few years ago when the Concord was considered proof against all disease and capable of sustaining the hardships of the severest winters; now its constitutionality is greatly impaired. It rots in many localities, mildews in others, and winter-kills in a few locations where it was considered hardy a few years ago. The Eumelan and several of the "educated" pets of foreign seedlings or parentage do not succeed at all in this vicinity. When the Concord and its offsprings, with the Clinton family and the Norton, rot, there is little use for the other varieties.

☞ Any Books desired, not named in this List, will be furnished on receipt of price.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, Its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential Journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **516 Large Octavo Pages,** is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is Illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Prest. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

D. D. T. MOORE, 5 Beekman St., N. Y.

MONEY IN THE GARDEN: A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening, and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Pear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely Illustrated work of 208 12mo. pages. Sent, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.
By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely Illustrated, and printed and bound in extra style. Contains 224 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

RURAL NOTES AND QUERIES.

Printing, Engraving, &c., for Everybody.—Recent additions and arrangements enable the RURAL NEW-YORKER to execute all kinds of Book and Job Printing, Wood Engraving, &c., in superior style and at the most reasonable rates. The large number and variety of Engravings (several thousand) which we have on hand enables us to furnish Illustrated Posters, Catalognes, Circulars, &c., in better shape and at lower prices than can be obtained elsewhere. Our facilities for supplying Agricultural Societies with Illustrated Show-Bills for Fairs are such that we are confident of giving satisfaction. If applicants will designate the character of engravings desired (whether animals, fruits, flowers, etc., or a combination,) for border, or otherwise, our printers can probably "fill the bill" so as to please. As regards Catalogues for Nurserymen, Seedsmen, &c., we can illustrate and print in best style, furnishing fine engravings of such Trees, Plants, Flowers, Vegetables, &c., as may be designated. We can also print Circulars, Leaflets, Cards, &c., very tastefully, (using one or several colors,) at as low rates, at least, as they can be done elsewhere. We are also prepared to do Lithographing in excellent style, and furnish blank books with or without headings. Lithographic or other diplomas for Agricultural Societies furnished to order. Friends at a distance will please note this announcement, and if they govern themselves accordingly will be dealt by "on the square." Our friends of the Country Press can have their imprints upon mammoth illustrated or other posters, etc., whenever desired. All work will be done as promptly as possible. Estimates sent by return mail.

New Hampshire Commercial Fertilizer Law.—New Hampshire has a law which requires that all commercial fertilizers offered for sale shall have a label attached on which shall be stated the date of its manufacture and the percentage it contains of ammonia, soluble phosphoric acid, insoluble phosphoric acid, and of its other constituent parts. It also requires manufacturers of such fertilizers, before offering them for sale, to file with the State Treasurer a bond, with sureties residing in the State satisfactory to the Governor and Council, in the sum of $10,000, payable to the State with a condition that it shall be void upon the payment of all penalties, fines, costs, &c., which may be imposed upon the manufacturer for violation of the act. A fine of $200 is imposed upon any one keeping or offering for sale or selling any commercial fertilizer prior to the filing of such bond. The law provides that any one keeping or offering for sale or selling any commercial fertilizer which does not contain the fertilizing constituent parts specified in the label, in the proportion specified, shall be punished by a fine of $500 for each offense, to be recovered in an action of debt upon his bond, to be brought by the Attorney-General or a solicitor of any county. The State Assayer is to make all analyses upon which prosecutions are based. Some other States need similar laws.

"Careless Reports."—The Kansas Farmer calls attention to a "disjointed statement and unjust criticism" of the National Agricultural Congress in St. Louis, which, it avers, appeared in the RURAL NEW-YORKER, June 13. We copy the paragraph:

"INSTRUCTION" FOR AGRICULTURAL AND HORTICULTURAL SOCIETIES.—The National Agricultural Congress is reported to have adopted a resolution "instructing all Agricultural and Horticultural Societies to offer premiums for the best agricultural and horticultural papers, and to do all in their power for the extension of their circulation." If this report is correct, we may be permitted to say that the same object would be better accomplished by offering the best agricultural and horticultural papers *as* premiums, and thus not only extend their circulation, but stimulate the respective publishers to make their papers the most desirable for such offering.

Commenting on the above paragraph, the Kansas Farmer says:

"Those present, or who have read the reports of the National Agricultural Congress, need not be told that it did not assume to *instruct* Agricultural and Horticultural Societies, as claimed, or in any other manner; but that it did *advise* them to do the very thing the above article censures them for not doing. This loose statement and wild criticism of the RURAL NEW-YORKER may be credited to the want of an editor at home, as we find "An Editor Getting Fresh Air," and another "Going a-Bugging" in the country, reported in the same issue."

Now, in reference to this very important (!) matter, we may say that "the loose statement" was copied from a report of the Congress in some one of the Western (we think, though we are not positive, one of the St. Louis) agricultural papers, made by its editorial representative. We said, "If this report is correct," as preliminary to our modest, temperate, respectful amendatory suggestion following. We did it with the utmost respect for the body of men composing the Congress. But, judging by the entire report to which we referred, and which was the first that came under our notice, there was a deal of wild talking and writing done there. We believe we have printed the resolution referred to, as it was offered, since. We simply want the Kansas Farmer to know we are not responsible for the "careless reports" in the Western journals, and that the editors were all "at home" when our criticism upon the "careless report" was made.

Sending Samples of Soil.—R. WOOD writes us that he sent us in June a sample of soil of his farm, with a view of obtaining our opinion as to how he should manage it, kind of manures, crops, etc., etc., best to be applied and grown on such land. But he has never heard from us concerning it. We do not remember to have received such sample, for we aim to treat all our correspondents alike—that is, to respectfully notice their requests in some manner. On this subject of sending samples of soils, with the expectation or hope that we will give directions for its management, in a climate wherein we have had no experience, is much like sending us a bottle of water from the east coast of Africa, and asking us to tell what kind of fish will thrive best in it. If we were analytical chemists, we should not have time to analyze the soils sent us; if we did, we could no give our opinion as to its power of production, under all circumstances. A knowledge of the meteorological conditions which prevail where this soil is, is as essential to a knowledge of what treatment it should receive and what crops would thrive upon it, as to know its chemical constituents. We should be glad to aid our Virginia friend, but there is both a limit to our knowledge and to our power to give advice that would be of service to him.

Horse Importations.—The increasing demand for heavy draft horses in this country has induced considerable importations of Percheron stallions and a few mares from France. At the stables of ROBERT STODDART, in Greenwich street, N. Y., near the dock of the Havre steamships, we learn that already this season there have been received forty-two of these horses, which have mostly gone to Illinois. Last week we saw a lot of four Percheron stallions debarked from a Havre steamer, the importation of M. D. COVELL, of Delaware, Ohio, all carefully selected in Perche, of the best blood and make-up. STODDART, who is an old horse-dealer, says one of these is the best Percheron he ever saw, and as we looked upon his mighty and beautiful form, and saw his splendid action, we could not dispute it. We hope these horses of Mr. COVELL'S will not be allowed to be taken beyond Ohio for a market, as were a lot of the same breed which he brought from France last year. From the same steamer, we saw another lot of two splendid trotting Percheron stallions, a Percheron mare, and a draft stallion, selected and imported by J. J. PARKER, of West Chester, Pa. A valuable stallion of this lot died on the passage, which was a long and rough one, from which all the horses suffered severely.

National Swine Breeders' Convention.—We call the attention of our contemporaries and of the gentlemen named on committees, and of Swine Breeders generally, to the report of the committee appointed by the National Swine Breeders' Convention held in New York City in May last, published in another column. Copies of this report, in proof, have been sent to our Agricultural contemporaries, to each member of the respective committees named in the report and to the Secretaries of State Agricultural Societies, State Boards of Agriculture and State Swine Breeders' Associations so far as they are known to the members of the committee. It is hoped that the manner in which the delegates to the Indianapolis Convention are to be elected, or named, will receive the attention it deserves—that each State at all interested in breeding pure-bred swine will be fully represented by delegates—that each member of each committee will regard it a duty, and take pains to discharge it, to add something to the fund of information and exact knowledge of the breeds of swine it is the object of this Convention to elicit and crystalize. We trust every swine breeder will aid in furnishing facts and making the action of the projected Convention reliable and satisfactory.

American Steam Plows.—There is a good deal of interest manifested in regard to steam plows and plowing in this country—not as much as there should be, we are satisfied. We do not expect that steam plows will enable our farmers to plow their lands much cheaper per acre, but the application of steam power may enable them to stir the soil (invert it, or otherwise, according to its needs) deeper and more thoroughly, at the same cost. This will not require to be done here every year, but, as in England, every three or five years. We notice that ALEXANDER CAMPBELL, Washington, Yolo, Co., Cal., has invented a steam plowing apparatus. It involves two stationary engines, with plowing apparatus. It is claimed for these engines that they are capable of cultivating from thirty to sixty acres per day of ten hours, from seven to twelve inches deep; or of cutting one mile of ditching, three feet wide at the top, one foot at the bottom, by two and a half feet in depth. Added, the engines are available for threshing, pumping, sawing, hoisting, or for traction service. It is claimed that by direct traction land can be plowed at about one dollar per acre, while by rope traction (engines stationary) it can be done for seventy-five cents per acre.

Purchasing Churns, Etc.—An "Afflicted Correspondent" writes us:—"I wish you would advocate a law which would compel these churn peddlers, and others of like ilk, to pay so heavy a license fee that we farmers would not see one of them once in six months. It might be stretching a point a little if I were to say that I have to purchase a churn (or something else) a month in order to get rid of these leeches and save my valuable time. An emphatic NO! in the strongest tone at my command, only causes them to stick the tighter and worry the life out of me. What's to be done?" We used to encourage them to talk, but kept right straight at our work, minding our own business, and in no case purchasing unless we found they had something we needed and that was worth purchasing. After two or three hours' talking they managed to get away from us; but meantime our work always went straight on.

Damage to the Cotton Crop.—We learn from the local papers of the southwest cotton States, that a wide-spread damage has befallen the cotton crop of Alabama. Heavy storms of rain flooded the lowlands on the river bottoms, and the boll-worm attacked the crop on the uplands, so that between the two the crop has sustained immense damage, and the picking will fall far below the estimates made during the previous high promise of a full crop.

Entomological Statistics.—Some Entomologist says insects rob American farmers of $10,000,000 per year; but he does not tell us how much insects save American farmers by preying upon each other, and by furnishing food for birds that would otherwise depredate farmers' crops. We believe in compensation, and that the insects earn all they take and have a right to it.

Miss Mary A. E. Wager—("Mintwood") of this journal, sailed for Europe July 31, to be absent a year or two. Our correspondents will miss her services in the Modes and Manners Department of the RURAL NEW-YORKER, but we expect letters from her, which will, in part, compensate for the lack of service to our readers at home.

August Meteors.—August 10, according to the calculations of astronomers, the earth will pass through a ring of meteors, the remains of the comet of 1862. So look out for the meteors, if you want to see them.

THE SEASON, CROPS, PRICES, ETC.

St. Johns, Clinton Co., Mich., July 29.—We have had some thorough showers for the last week which have put an end to the somewhat severe drouth. Early potatoes will be a very slim crop, but we hope the late ones will be better. Potato-bugs are on the decrease. Corn and oats look well. Farmers are mostly done harvesting. Wheat will be a short crop in this vicinity. Some pieces are very good while others are very poor, and some will not pay to harvest. Some pieces were plowed up last Spring and the ground put to Spring crops. But we have a better crop than was expected three months ago. Hay is a fair crop and mostly cut and secured in good order. Weather very warm for the last three days, and cool nights. Commenced threshing in this vicinity last week. New potatoes, 75c. per bushel; harvest apples, 50c. per bushel; eggs, 18c. per dozen; butter, 18c.; wool, 50c. to 60c.; hay, $10; sheep, from $2 to $3.50 per head.—J. E. D.

Oregon, Mo., July 27.—We are having a great amount of rain, making it quite difficult harvesting the oats crop, which is the best we have had for several years. Wheat is mostly cut, but is damaging some in the stock by sprouting; the quality is good. Barley is harvested and was the best harvest crop we have had for many seasons. Corn is quite promising. Fruit not so plenty as we anticipated; apples coming into market. Grapes promise well with but few exceptions. Wheat, $1.50 per bu.; oats, 18c. to 20; corn, 25c. to 35c.; barley, 37c. to 41c.; apples, $1; butter, 8c. to 12c. per pound; cows, $25 to $35; horses very low with but few buyers; money scarce.—W. M.

Ghent, Carroll Co., Ky., July 27.—This has been the wettest summer we have had for many years. The wheat crop was very light, from seven to ten bushels being an average crop. Corn looks well and promises a good yield. Early potatoes were very fine. All kinds of vegetables in abundance; also all kinds of fruits except peaches. There is the largest crop of tobacco in this county this year that ever was planted in it, and if the farmers save it well it will bring more money in the county than has been since the war. Every farmer has in from three to fifteen acres, according to his force to work it, and it nearly all looks well.—A SUBSCRIBER.

Whittlesey, O., July 30.—The dry weather has been quenched with fine showers, and the parched earth presents a more healthy appearance. The wheat crop is better than anticipated it would be, although some will lose by sprouting, occasioned by the late rains. Corn is coming rapidly forward. Oats and flax are good; wool is changing hands at 60c; but only a few lots have been sold at that figure, while many are holding for a higher market. Cheese is selling at 9@10c.—S.

Florence, Ala., July 19.—Crops of all kinds are better than they have been for years in this part of Alabama; for a week we have been having continual rains which, it is feared, may somewhat impair the cotton crop. Corn is worth 60c.; wheat $1; oats, 50c.; apples and peaches plenty; stock of all kinds low; health of the country never better—as healthy as anywhere in the United States; people generally contented and satisfied with this part of the world.—J. W. B.

J. P. & M. R. R., Florida, July 20.—Crops are very good, and promise an abundant harvest. We have had plenty of rain, though we had a long drouth in the latter part of the Spring. The cotton fields are filled with blossoms and bolls; and one stalk in my father's field has a hundred bolls on it. We have plenty of delicious fruit, such as pomegranates, grapes figs, peaches, plums, etc. Peaches do not grow as nice down here as they do in Northern climes.—ROSALIE.

Clear Water, Sedgwick Co., Kansas, July 2, 1872.—Wichita is our County seat, situated on the east bank of the Arkansas River. It is a great shipping point for the Texas cattle. This is a good agricultural country, the best in the State, plenty of Government land to be had at $1.25 per acre. We have had a great deal of rain this season and crops are looking very fine. Texas cattle are worth here from $5 to $16 per head; horses from $25 to $60.—S. W. S.

RURAL BREVITIES.

REED & BARTON'S ELECTRO-PLATED SILVER-WARE can be relied upon as a genuine article of its kind; as we know by personal use.

IF JOHN L. LATHROP will address W. C. OASTLER, 43 Exchange Place, he will be likely to obtain the information he seeks.

R. JEFFERIS is informed that the American Educational Monthly is published by J. H. Schoemerhorn & Co., 14 Bond street, N. Y. City.

SIDNEY S. STAUNTON is informed that the editorial referred to was based on facts; and that a letter addressed to "Daily Rural Life," at this office, will reach the author of the Diary.

THE LIST OF AGRICULTURAL FAIRS which we publish this week has been collated with great care, and though deficient in some of the States, is as near perfect as our means of information could make it.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

Social Topics.

A HUNDRED YEARS AGO.

ONE hundred and ten years ago there was not a single white man in Kentucky, Ohio, Indiana and Illinois. Then, what is the most flourishing part of America, was as little known as the country around the mysterious mountains of the moon. It was not until 1776 that Boone left his home in North Carolina to become the first settler in Kentucky. The first pioneer of Ohio did not settle until twenty years after that time. A hundred years ago Canada belonged to France, and the population did not exceed a million and a half of people. A hundred years ago the great Frederick of Prussia was performing those grand exploits which have made him immortal in military annals, and with his little army was sustaining a single-handed contest with Russia, Austria, and France, the three great powers of Europe combined. Washington was a modest Virginia colonel and the great events in history of the two worlds, in which these great but dissimilar men took leading parts, were then scarcely foreshadowed. A hundred years ago the United States were the most loyal part of the British empire, in which, within a score of years thereafter was established the great republic of the world. A hundred years ago there were but four newspapers in America. Steam engines had not been imagined, and railroads and telegraphs had not entered into the remotest conception of man. When we come to look back at it through the vista of history, we find that to the century just passed has been allotted more important events, in their bearings upon the happiness of the world, than almost any other which has elapsed since the creation.

GERMAN REGARD FOR WOMEN.

G. MONOD, a French writer, in his book entitled "Germans and French," makes the following remarks:—"The regard of the Germans for women is the most remarkable trait of this war, for it is a national virtue, and one of the sources of the strength of the German race. Crimes may have been committed; but, during a seven-months' experience in war, I did not hear of a single one that was vouched for by trustworthy witnesses. On the contrary, I have seen women treated with the greatest respect, exciting the astonishment of the French soldiers. 'We would not have acted so,' they frequently told me. The children were the especial favorites of the Germans. When there was no food in the house, and the mother would complain that she could not give the children anything to eat, the soldiers found food for the whole family. They played with the children, took walks with them, learned French from them, and often the fact that there were children in the house made friends of foes. They spoke of their own children at home, counted 'un, deux, trois,' by their fingers saying fall 'comme ca, comme ca, et comme ca,' showing the hight with their hands. The author makes a distinction between the different army-corps, more from hearsay, however. According to him, the rudest were the Mecklenburgers, Pomeranians, Poles, Silesians, Eastern Prussians, and Bavarians; the politest were the Brandenburgers, Saxons, Hanoverians, Rhenish-Prussians, and Schleswigers."

MOTHER AND CHILD.

A PRETTY picture of happiness, content and health embellishes this week's RURAL. The mother has dropped her work for a moment and is tossing in her arms her little boy, who is happy, healthy and handsome. There is no more enchanting sight in the whole domestic world than this; no occupation is so crowded with maternal happiness. The mother holds in her hands the embryo man who may some day become the President of the United States; who at least is destined to exercise much influence in the course of a lifetime either for good or evil. The possibilities wrapped up in a child are beyond estimation. How important that all children should have early correct training!

A VERY little girl was learning to read, and a part of her lesson ran:—"The cat has a rat." She thought for a moment, and then exclaimed: "Cats don't have rats; cats have kittens. But sister Susan has rats in her hair."

HOW ENGLISH LABORERS LIVE.

THE London correspondent of the Boston Post says:

A very important meeting was held in London recently, pursuant to a published call, to consider the condition of the laboring classes, and discuss other questions affecting the nascent agricultural unions. The audience was of a composite character, and included several members of Parliament, as well as representatives of the middle and lower classes. The most remarkable feature of the session was a statement made by Canon Girdlestone. He said that in his own parish there were cottages unfit for housing cattle. There was scarcely a whole pane of glass in the windows; the mud floors had holes in them so deep that, to prevent children falling in, planks had been laid across them. The buildings were ill-ventilated and badly drained. The men's wages were from nine to ten shillings a week, with two quarts of sour cider a day. Nothing could be more uncertain than the mode of payment; for one farmer gave good privileges, another bad, and another hardly any at all. The hours of labor were nominally from six to six; but he had visited the laborers' cottages at eight and nine o'clock in the evening and found them still at work. What they obtained for extra exertions might be a mouthful of bread and cheese, or only another quart of sour cider.

His remedy for this evil had hitherto been migration, but after removing, through his own exertions, as many as three or four hundred families to the North, he was sorry to confess that no permanent progress had been achieved. The removed families were vastly benefited by the change; in fact, they were now living in comparative affluence, but those who remained in North Devon enjoyed no benefit. Their wages were still as low, and their cottages as bad as before. He concluded, therefore, that nothing could be done for laborers, as a class, while they continued isolated. Other and similar statements were made, all the participants being thoroughly convinced of the necessity of some decisive and immediate action for the relief of the sufferers.

THE rays of the sun shine upon the dust and the mud, but they are not soiled by them.

LITERARY ITEMS.

J. B. FORD & CO. will soon publish H. W. Beecher's "Lectures on Preaching," delivered at Yale.

THE Inland Monthly for June, St. Louis, has a fine portrait of Gov. B. Gratz Brown, and much interesting reading matter.

RAND, MCNASHBY & CO. publish a monthly railway guide, which is a complete travelers' hand-book. It is like other railway guides, with the exception of containing no maps.

SAMUEL R. WELLS of New York has started a new magazine, called "The Science of Health." It is devoted to health on hygienic principles, and is filled with short articles from unknown writers.

THE Sixth Annual Report of the American Society for the Prevention of Cruelty to Animals has been issued from the office at 696 Broadway. It has some good illustrations and contains many valuable facts.

THE Nation says Mr. Alexander H. Stephens, professor-elect of History in the Georgia University, signalizes his accession to a post in which he may yet do considerable harm by writing a "Compendium of the History of the United States."

GAIL BORDEN AND HIS RELATIONS TO SOME FORMS OF CONCENTRATED FOOD is the title of a pamphlet by S. L. GOODALE, Secretary of the Maine Board of Agriculture, in which is given a record of his efforts, discoveries and inventions in the line of supplying the country with concentrated food, together with his claims as a first discoverer. It is an interesting record.

VERY breezy and rustic is the Dolly Varden hat, a broad brimmed gipsy, faced with rose-tinted silk, caught coquettishly up at the back with loops and scraps of ribbon, and with a branch of cut roses, full blown, perfect, and perfumed at the side.

HONEYMOON trips to Europe are quite the thing this summer, many couples being booked for the steamers every week. They are half-seas over in bliss at starting, but it is *sic transit* long before the voyage is completed.

HAIL TO THE HORSE!

BY GEO. W. BUNGAY.

ARE there not hundreds and thousands of gentlemen who like a good horse, and who count it no inhumanity to test their speed, who still refuse to bet, or put their nags into a formal public race, where the whole business is organized on the recognition of betting?—*Rev. H. W. Beecher.*

HAIL to the horse, he bears his master,
In peace or war, with flying feet,
Into the light, or from disaster,
Through quiet lanes, or leaden sleet.
O give him the sweetest of grasses,
Cull the choice strands of hay for him,
Scare him not with whips as he passes,
With his waving mane and dainty limb.

His arching neck is "clothed with thunder,"
And his nostrils are open wide,
He paws the yielding ground asunder,
In his unconquered strength and pride.
He champs his bit, and he prances
Impatiently when the trumpet sounds,
He leaps at the sight of the lances,
And off to the front he bounds.

He heareth the sound of the battle,
And his trained ear knoweth well
The startling ring and the rattle
Of the cannon shot and the shell.
He seems half brute and half human,
So light let his race and burden be,
A merciful man is a true man
To his horse so fleet and so free.

Now risk no money in betting
On the speed of the courser gay,
There's always a curse in the getting
Of something for nothing that way.
Hail to the horse that is fleetest,
Spare him the curse of the lip,
Give him the grass that is sweetest—
Spare him the spur and the whip.

Our Story-Teller.

THE MASON'S CHILD.

CHAPTER I.

FASTER and faster spread the flames, and now the ship was enveloped in a fiery sheet. Men and women rushed madly over the side to meet a quicker but less painful death. The boats, with one exception, had been overladen and capsized. There were hasty prayers, and heart-rending cries of misery and distress. Death hovered, vulture like, over his victims; some clung desperately to the vessel's side, some supported themselves in the water by articles snatched hastily from the burning ship, and with which they had leaped wildly into the sea. The captain sang through his trumpet:—"Take heart, and sustain yourselves as long as possible. A ship is coming to our relief."

James Durant stood upon the almost deserted deck with his only child, but four years of age, folded closely in his arms. He discovered it at last, but it was at least four miles off. Before the ship could arrive they must be burned to death; or if he sprang, as others had, down into the water, both he and the child would be drowned, for he was no swimmer.

The little arms were twined about his neck, the pale cheek rested confidingly against his own, but the brave child did not tremble.

"O my God, is there no help?" cried the despairing father, as the flames swept nearer, and he felt that his present position could be held but little longer.

"Here, give the child to me, and I will save her," and turning quickly Mr. Durant stood face to face with a stranger who had a life-preserver in his hand.

"Quick! there is no time to be lost! The child can have my life-preserver, and it will float her easily. Yonder is another ship; I have been watching it for the last five minutes. It will reach us in half an hour at the most. There, that is fastened securely. Now, little girl, I am going to throw you into the water. You are not afraid?"

"No, no, but father?"

The father caught her frantically in his arms.

"My darling Eva, you may never see your father again; but do not fear—God will guard you, and somebody will find you and take care of you. If you never see papa again, remember he is in heaven with mamma."

"Has she no relatives?" asked the stranger.

"None in this country; I am from England, and travelling for her health."

"Take that pin from your bosom and fasten it to her clothing."

"Heaven help you for the thought," said the father; and in a moment the square and compass was glistening on the bosom of the child; and the stranger took her from her father's arms, saying:—"I am stronger than you, and she must be cast beyond the reach of these poor drowning wretches, or they will rob her of her life preserver."

The white drapery fluttered through the air, and sank below the waves; then rising, floated lightly on the water.

James turned to the stranger with tearful eyes.

"May God bless you and preserve you, noblest of men. But you, as well as myself, must be lost."

"No, I am a good swimmer, and here is a piece of board with which you can sustain yourself until relief arrives."

The father cast another glance at the white speck floating rapidly away, and with an inward "God preserve her," sprang into the sea, followed by the stranger; but the two floated in different directions, and they saw each other no more.

Two hours later, James Durant awoke, as from the sleep of death, and found himself in the cabin of a strange ship, with kind and sympathizing faces all around him. In a moment he realized all that had passed, and said eagerly, though feebly, "My child, little Eva, is she safe?" There was no response, and a low moan escaped the father's lips.

"Courage, sir," said a lady with tearful eyes "some of the passengers were saved by another ship."

The father's countenance lighted. "God grant that she may be safe."

Mr. Durant recovered his usual strength in a few hours, and sought among the saved for the stranger who had proved himself so true a Masonic brother, but he was not to be found.

"He must be in the other ship," said Mr. Durant, "and he will care for Eva."

Both ships were at port on the following day, but although Mr. Durant found the stranger who had befriended him, and who proved to be a Mr. Wadsworth, from a southern city, Eva was seen by no one and given up as lost.

CHAPTER II.

"Here, wife, is a child that has just been washed upon the beach. She is cold and stiff, but I think she is not dead. Let us have some warm flannels immediately, and tell Thomas to run for Dr. Hunt."

It was long before the quivering lashes and feeble fluttering of the heart gave token that success would crown the efforts of Eva's rescuers; but by and by the lids parted and revealed two large, liquid, sky blue eyes, that wandered from face to face in a bewildered way, and then closed wearily.

"I fear she will not recover very rapidly," said the doctor. "She has a delicate constitution and will require the best of care."

"Poor child!" said Mrs Turner, "I do not wonder she is nearly dead; but who can she be? Some terrible accident must have occurred at sea."

"You had better examine her clothing," said the doctor. "Perhaps you may find some clue to her relations."

Mrs. Turner lifted the gossamer white dress and turned it over and over. The square and compass placed there by Mr. Durant flashed upon the eyes of all at once. The doctor and Mr. Turner looked at each other, but neither spoke, and Mrs. Turner did not notice the tear that glistened in her husband's eyes.

The doctor's fears that Eva would not recover rapidly proved to be well founded; days and weeks of fever succeeded in awakening her to life, during which she talked incoherently of "papa," and "poor mamma," and of the burning ship, and of hunger. She finally awoke to consciousness, and asked many questions as to where she was and how she came in the dark room, and who were those who attended her, but Dr. Hunt forbade her being questioned till she was stronger.

How interested were all in the little convalescent whom the elements had cast into the little seaboard town. The ladies declared that never before did a child possess such lovely eyes or such beautiful curls, while the gentleman seemed no less interested, and brought her gifts of everything that might please her childish fancy.

"My dear little girl," said Dr. Hunt when Eva was at length able to ride out, "will you tell me your name?"

"Eva," said the child. "I thought you knew it."

"Yes, I know your name is Eva, but I want to know the rest of your name—your father's name."

"Eva Durant. Mr. Durant is my papa."

"Yes, but I want you to tell me all you can remember about your father and mother."

Eva's eyes filled with tears. "Oh, sir, my mamma died and went to live with the angels. And I do not know where papa is. He said if I never saw him again I must know he had gone to mamma."

"Where were you when he told you this?"

"On the ship; and oh, the fire burned me so; and papa held me in his arms until a strange man took me and tied something under my arms and threw me into the water, and I have not seen papa since. Oh, sir, can you tell me where he is?"

"No, dear child; but perhaps we may yet find him."

And this was all that Eva's new friend could discover. It was plain she had come from the ship which had been burned a few weeks before; that she had been cast upon the sea, and floated to shore; but where was her father? Had he been saved, and was he searching for his child? Every possible effort was now made to find him. The circumstances of the case, with the statement of the child, were published fully in the newspapers of the neighboring cities, but the grief-stricken father, believing his child to be lost, had sailed a week before for Europe, and it soon became settled in the minds of Eva's protectors that he had perished. But the little one still prattled about her "papa" and said he would come by and by. Those who believed differently would not pain her by contradiction.

The square and compass that had been found upon her clothing was regarded as a powerful appeal from a Mason to his brethren to care for his child. So it came to pass that Eva became, as it were, the special charge of Hiram Lodge No. 93. Mr. Turner would gladly have taken the entire care of the little waif, and the wealthy Senator W——requested to be allowed to adopt her as his daughter, but the brethren in lodge assembled, declared by a vote that Eva should be reared, educated and protected by the lodge, and that as Providence had placed her in Brother Turner's house that should be her home.

And so years went by, and Eva became a healthy, joyous child, flitting here and there, and everywhere meeting the warmest of welcomes. The Masonic Hall was but a few rods from Mr. Turner's residence, and Eva often went with him as far as the door, and then returned alone always bidding the Tiler "take good care of Pa Turner, and send him home early."

CHAPTER III.

The six years that followed the death of his wife and the loss of his child passed wearily to James Durant. He visited nearly every country in the Old World, seeking among scenes of natural beauty and grandeur as well as of historic interest, for the mental rest which could never be found. Once more he turned his steps toward America, and sought his Masonic friend Wadsworth. Finding that gentleman about setting out with his family on a journey to the Atlantic coast, Mr. Durant accepted the invitation to accompany them to Saratoga and Niagara, then to New York where leaving the ladies, Mr. Wadsworth and Mr. Durant wandered from town to town along the coast, enjoying the beauty of the scenery and the quiet hospitality that greeted them more than the crowded hotels and the fashionable style of the popular watering places. Fancy and the kind hand of Providence at length led them to the little town of H——, and the second evening after their arrival they visited the Masonic Lodge. A warm welcome was extended to these brethren from such distant homes, and both were invited to address the Lodge. Mr. Durant said:

"Brethren, I have traveled much and long. I have found Masonic sympathy in every part of the globe, and everywhere is Masonry substantially the same. I can hardly tell where I reside. The world seems to be my home, as I remain but a short time in any town or country, but my English brethren, for they first brought me from "darkness to light," and I love English soil, for with it sleeps the wife of my youth. But I love American soil, also, for here I have found the warmest of welcomes, the kindest of brethren. And here, too, my own child is sleeping in American waters, even beneath the very waves that wash the shores of your beautiful village.

"Six years have passed since this dear friend and brother robbed himself of his life preserver that my little Eva might perhaps escape, and we hoped that the elements might be kind, and that heaven would send her relief, but she was never heard of more."

The voice of Mr. Durant was quivering with emotion, and unable to speak further, he seated himself and covered his face with his hands.

Glances of surprise and pleasure were cast from one to another among the brothers of Hiram Lodge. No one spoke, however, but all eyes turned upon the Master, Mr. Turner. For a moment he seemed reflecting, then taking a slip of paper from the Secretary, he wrote:

"Mrs. Turner—Do not allow Eva to retire until I return home; tell her I am going to bring a strange gentleman who wishes to see her." And calling the Junior Deacon, Mr. Turner gave him the note, saying in a low voice, "Take this note to Mrs. Turner, immediately."

"Why, Eva," said Mrs. Turner, when she had read the message, "you are going to have company. A strange gentleman is at the lodge who wishes to see you."

"Who can it be?"

Eva looked perplexed and thoughtful. Suddenly her cheek flushed, her eyes lighted, and clapping her little hands, she sprang to her feet and exclaimed: "Oh, it must be papa! no one else would wish to see me, no one in the world," and before Mrs. Turner comprehended the child's interpretation, she had passed the threshold and was flitting through the moonlight toward the lodge room. The Tiler looked amazed when Eva burst into the ante-room, her cheeks burning and her eyes flashing with joy and excitement."

"Do not stop me; I am going in!" she exclaimed. But the inner door was fastened, and the impatient Eva nearly cried with vexation.

"Wait a moment," said the Tiler, who having heard nothing of what had transpired within, was at a loss to account for the strange conduct of the child; "wait a moment, and I will send your request to Mr. Turner. He will come out and see you."

"I shall not wait. I do not want to see Mr. Turner; I want to see my papa."

"The child is crazy, that is evident," said the perplexed Tiler to himself; but calling out the Deacon, he bade him say that Eva was there and had determined to get into the lodge room.

The Deacon went to the East, and delivered his message in a low tone, and in a moment afterward moved "that the craft be called from labor to refreshment."

"Now," said Mr. Turner, "tell the Tiler to let her come in."

And Eva did come, or rather bounded into the hall, more beautiful in her excitement than ever before. She advanced to the center of the room and stood by the altar; half poised upon the tiny foot, she scanned rapidly the faces of all. Her eager eyes soon detected the strangers, who were seated behind the rest, and for a moment she seemed irresolute; then darting forward with a glad cry, she threw her arms about the neck of Mr. Durant, crying, "Oh, papa, my dear papa, you have come home at last! You were not burned in the ship?"

We will not attempt to paint the scene further, but will leave our readers to imagine the joy of the fond father, and also leave them to decide whether the tears that wet the cheeks of the brethren of Hiram Lodge were caused by sympathy with the happiness of their little charge, or grief that they should lose one whom they all loved.

Sabbath Reading.

THE STATELINESS OF TRUTH.

Too stately is the form of truth
For walls of earth to hold!
Howe'er the master plan and smooth,
Howe'er the mason mold.

No temple of high honored creeds
Confines that creed most high;
Which issues, matching human needs,
From God's free treasury.

But friends conjoined in Jesus' name,
By high example led,
The worship of the heart may claim
For their illustrious head.

And, should they in a prison meet,
Their place shall noble be,
And if a palace is their seat,
They meet in modesty.

Blest be the faith that thus transcends
Our common measure small,
That grandeur to the meanest lends
Humility to all.

This highest glory may our hearts
And these fair walls enshrine;
The crown of doctrines and of arts,
Man's humao—God's divine.

RELIGIOUS ITEMS.

IT is no disgrace not to be able to do everything; but to undertake, or pretend to do what you are not made for, is not only shameful, but extremely troublesome and vexatious.—*Plutarch.*

IT is the grandeur of all truth which can occupy a very high place in human interest that it is never absolutely novel to the meanest of minds; it exists eternally by way of germ or latent principle in the lowest as well as the highest, needing to be developed, but never to be planted.—*De Quincey.*

I THINK that to have known one good old man—one man who, through the chances and mischances of a long life, has carried his heart in his hand, like a palm branch, waving all discords into peace—helps our faith in God, in ourselves, and in each other more than many sermons.—*G. W. Curtis.*

WE hear much of martyrs and confessors—of those who were slain by the sword or consumed in the fire; but we know little of that still larger number who, by the mere threat of persecution, have been driven into an outward abandonment of their real opinions, and who, thus forced into an apostasy the heart abhors, have passed the remainder of their lives in the practice of a constant and humiliating hypocrisy. It is this which is the real curse of religious persecution.—*Buckle.*

THE heart of GOD lies about our lives as closely as the air. There is no smallest act or thought that does not echo itself in Him, and this divine presence is infinitely sympathetic. It is not the mere oversight of a judge, registering praise and blame. It is the companionship of one who rejoices in all our joy, and suffers in all our pain. There is no glad heartbeat in the world that the Almighty heart does not beat with gladness in response. There is no little child's cry of sorrow over its broken toy that a more than mother's love does not catch.—*Christian Union.*

JESUS declares; "He that will lose his life shall save it;" and tells his Father: "Now come I to Thee." Friends, taken from flood or fire, are found locked in each other's arms. Was that quenched or burnt which prompted the last embrace? The scholar's manuscripts lie like white thunder round him—a concentric battery against old forts of error and sin. Shall the moral cannoneer perish? The spotless boy could remember nothing to repent of, but that he had once whistled on the stairs when, his grandmother was sick. Is that tender conscience extinct? The heart will bleed. As we say of a flesh wound, let it bleed, and so not fester! But its love abides.—*C. A. Bartol.*

I REMEMBER watching, last summer, spiders that burrowed in the crevices of a trellis, where the wind had borne much dust. I noticed that the hole where they lay lurking looked dark and ugly. I also noticed, as I sat one day watching, a vagrant spider take a morning glory in full blossom, and spin his web over the mouth of it. And there never was a prettier nest in the world—a nest more richly gemmed with beauty—than his was. But after all it was the same spider, whether he lay in the dark hole at the corner of the trellis, or in the blossom of that exquisite flower. Now, selfishness may weave its web in the dusky places, or in the hideous-looking recesses of a man's disposition, or about the mouths of graces and sweet affections; but it is the same selfishness after all. The place is changed, and the appearance of the surroundings is changed, but the spider is not changed.—*H. W. Beecher.*

SHORTLY after her arrival in Ireland, where Mrs. Hemans died, she was extremely unwell. When among the mountain scenery of the fine county of Wicklow during a storm, she was struck by one effect in the hills. It was produced by a rainbow diving down into a gloomy mountain pass, which it seemed really to flood with its colored glory. "I could not help thinking," she remarked, "that it was like our religion, piercing and carrying brightness into the depths of sorrow and the tomb." All the rest of the scene around that one illuminated spot was wrapt in the profoundest darkness.

Ladies' Port-Folio.

GROWING OLD.

BY EMMA BURT.

YES, the hair is white as winter,
Thoughtless laughter 's gone away,
Taking with it witching dimples,
Leaving only smiles at play
'Mongst the shadows, and the tracery
Delicately cut in clay.

Flashing eyes no more discover
What the pulsing breast conceals;
But they look with quiet wonder
On the ways one life reveals—
And they ask a silent question—
And they say a word that heals.

They perceive the outer changes,
And they say, "I'm growing old;"
And a sudden wail of sadness
Sweeps the harp-strings of the soul—
A certain boundless yearning
For the things one may not hold.

Then there comes a strain of gladness,
"Age is riches manifold—
Riches not of years, or beauty—
Hearts that reach the world are gold;
Mighty thought and great endeavor
Are the things that make us old."

WOMEN OF BOMBAY.

IN private, the native treats the female members of his family with as much regard, kindness, affection and respect, as son, father, husband, as the men of any country, but in public disregard them entirely, as a matter of custom and etiquette. I have seen women stumbling in and out of ferryboats, in danger and discomfort, while their companions strolled quietly forward, without even turning to glance to see how matters were. I have seen men riding journeys, and women trudging behind them; men smoking, women grinding the churn; a Beloochee girl holding the stirrups for her lover, as he mounted for a foray; a Kuffuck wife pitching her husband's tent of black goat's skin. Such things are common, create no surprise, elicit no remark; but the reverse of the picture was altogether so new, so unexpected, that when I one day saw a man of rank sheltering a native woman with an umbrella, my start of surprise at the novelty of the action was very great.

I met the woman often afterward; for she was a neighbor, and accustomed to stroll toward the Bombay sands for air and exercise. She smiled when we met, and her dress being rather peculiar, as she was a Madrassee, I took a sketch of her one afternoon, in her pretty violet-colored silk saree, while she was good humoredly nursing and playing with a little rosy English baby, that the ayah had brought down for the benefit also of the fresh sea breeze.

These sands, on fine evenings, are a favorite resort of the Hindoo women in the neighborhood, who walk down with their servants and children to enjoy the cool refreshment; leaving their delicate little footprints on the damp sands, to the envy of the female shoe-wearers who may be present—for Cinderella's slipper would soon have found a wearer, had the trial been made on Oriental beauties. The bright, clear colors of their sarees, too, are admirable; and the glossy braids of their fine hair, decorated with rich gold ornaments, or fragrant blossoms; and the figures of the younger women are so slight, graceful and elastic, so much like those we see cut on the cameos of old Rome, or on the fresco-printed wall of beautiful Pompeii—and the saree, stirred by the evening breeze, floats in such graceful resemblance to the draperies with which the ancients loved to adorn their nymphs and graces, that when the chill air causes the rich crimson cashmere shawl to be cast around the head and form, one cannot but regret that so much natural grace must be concealed, however admirable in itself is the fabric that enfolds it. Many of the women of the Parvoe caste, whom I have met here, are very handsome, with an expression of intelligence, also, on their fine countenances greater than is usually seen in the face of a native woman, where softness and amiability are generally more apparent than intellect. These women, however, have a brightness of eye, a smile that sympathizes with it, and a general lighting of the countenance, when engaged in conversation with each other, pleased, or amused in any way, that is very attractive; and we forget the beauties of costume, the brightness of color, the richness of the ornament, and the brilliancy of contrasts, while gazing on countenances often so expressive and so charming as those of the Parvoe women of Bombay.

A BEAUTIFUL EXPERIMENT.

THE following beautiful chemical experiment may be easily performed by a lady, to the great astonishment of a circle at her tea party. Take two or three leaves of red cabbage, cut them into small bits, put them into a basin, and pour a pint of boiling water on them; let it stand an hour, then pour off the liquid into a decanter. It will be of a fine blue color. Then take four wine glasses; into one put six drops of strong vinegar; into another six drops of solution of soda; into a third the same quantity of a strong solution of alum and let the fourth glass remain empty. The glasses may be prepared some time before, and the few drops of colorless liquids that have been placed in them will not be noticed. Fill up the glasses from the decanter, and the liquid poured into the glass containing the acid will quickly become a beautiful red, the glass containing the soda will be a fine green; that poured into the empty one will remain unchanged. By adding a little vinegar to the green, it will immediately change to a red, and on adding a little of solution of soda to the red, it will assume a fine green, thus showing the action of acids and alkalies on vegetable blues.—*The Methodist.*

THE FEMALE DICTIONARY.

IN this valuable work the signification of a word is given in a feminine sense, as under:

Marriage—The only habit to which women are constant.

Lover—Any young man but a brother-in-law.

Clergyman—One alternative of a lover.

Brother—The other alternative.

Honeymoon—A wife's opportunity.

Horrid, Hideous—Terms of admiration elicited by the sight of a lovely face anywhere but in the looking-glass.

Nice, Dear—Expressions of delight at anything, from a baby to a barrel-organ.

Appetite—A monstrous abortion, which is stilled in the kitchen that it may not exist during dinner.

Wrinkle—The first thing one lady sees in another's face.

Husband—A person who writes checks, and dresses as his wife directs.

Duck (in ornithology)—A trussed bridegroom, with his giblets under his arm.

Brute—A domestic endearment for a husband.

SELECTED PARAGRAPHS.

THE man who would shine in conversation must possess original ideas and strong sympathies—be able both to communicate and to listen.

THE holy thoughts and memories that cluster around the name of mother can never be so well expressed as in the calm utterances of the name itself.

THE Superintendent of Public Instruction in Harvey county, Kan., is Mrs. Ellen Webster. She is the first woman ever elected to a county office in Kansas.

A LADY excused her extreme love for diamonds and other precious stones by saying, "They are the only bright things which never fade on earth."

THE Princess of Holstein-Hoer, who is an American woman, has sued the relatives of her deceased husband for $20,000,000, on what grounds is not stated.

THE Mormon women dress so simply and neatly that odious comparisons are made by the unprejudiced between their attire and the comparatively flashy costumes of their Gentile sisters.

THE Bastrop (Texas) Advertiser announces that the ladies of that town have accomplished the substantial enclosing of the cemetery, and in a gust of gratitude exclaims:—"The women of Texas are better than the men, by all odds. God bless them."

WOMEN, under any circumstances, can scarce do more than dip the foot in the broad and deep river of thought; they have not the strength to contend with the current. It is easy for women to be heroic in action; but when it comes to interrogating God, the universe, the soul, and, above all, trying to live down their own hearts, they dart down to their nests like so many larks, and if they cannot find them, fret like the French Corbine.

ENGLISH GIRLS.—Taine says some very nice things about the freshness and modesty of the English girls, and one thing especially that all American mothers should hear, which is as follows:—"They love and endure exercise like their brothers; with flowing locks, at six years, they ride on horseback and take long walks. Active life in this country strengthens the phlegmatic temperament, and the heart is kept more simple, while the body grows healthier."

CONCERNING nothing do we come to more false conclusions and make more false steps, than concerning woman's cheerfulness. Ah! how many of these affectionate creatures are there who pine unknown, despond smiling and wither jesting; who, with bright, joyous eyes flee into a corner, as if behind a fan, that they may right gladly break out into tears that oppressed them; who pay for the day of smiles by the night of tears—just as an unusually transparent, clear and mistless day surely foretells rain.

THE five ladies with the Japanese Embassy, at the suggestion of their American hostess, recently consented to be laced up and tied down, ruffled, pantered, flounced, and bowed and trailed in the "style." Then they were powdered up from an orange-peel hue to a delicate lemon, and pronounced perfect, as far as dress goes. Half an hour later, however, their dismayed civilizers found them smiling and happy in their half-petticoat, half pantaloon dress, "Too muchee," said the gentle Japanese.

THE influences of home perpetuate themselves. The gentle grace of the mother lives in her daughters long after her head is pillowed in the dust of earth; and fatherly kindness finds its echo in the nobility and courtesy of sons who come to wear his mantle and to fill his place; while on the other hand, from an unhappy, misgoverned and disordered home, go forth persons who shall make other homes miserable, and perpetuate the sourness and sadness, the contentions and strifes and railings, which have made their own early lives so wretched and distorted.

Reading for the Young.

THE STORY OF THE RAT
Who Renounced the World.

FROM THE FRENCH OF LA FONTAINE.

'Tis told,
In a legend old,
How a certain rat, grown tired of strife,
And the cares that beset his ratship's life,
Wishing to meditate at his ease,
Took up his abode in a Holland cheese.

He found
This great round
Gave solitude, shelter, and plenty to eat,
And by diligent use of his teeth and his feet,
He soon had a hermitage quite to his mind.
Its walls and its floor with good victuals lined.

This rat
Soon grew fat,
And he said to himself:—"Can blesses his own.
My body would only be skin and bone,
If I had'nt turned hermit. I really must say
Renouncing the world is the better way."

To his cheese,
On their knees,
Came some representatives from the rats,
Saying:—"Ratopolis is besieged by the cats.
We are going for aid to a foreign land;
Old neighbor, do lend us a helping hand.

"We set out
Without
A dollar to pay the needful expense.
Do give us a shilling, or at least a few cents;
We'll be very grateful, we'll surely repay,
If we live to return, on next New Year's day."

The rat
Said that
He no longer had interest in worldly affairs;
But for sake of old friendship his two longest prayers
Were at their disposal; what could hermit do more?—
He gave them his blessing, and—closed his door.

"Oh the rarity
Of charity"
Among the rat family! If men live at ease,
And the world is to them a great Holland cheese;
When their friends are distressed and in sorry plight,
Do they give only blessings, then close the door tight?

HOW TO CATCH BUTTERFLIES.

"COUSIN JOHNNIE," in a recent number of the RURAL NEW-YORKER, expressed the wish that we would write of something else than where we lived, &c., so I will endeavor to tell you what I think is a great deal better method of killing butterflies and moths, than either crushing the thorax or wetting with any liquid. I take a common fruit jar for "collecting bottle," put two or three drops of chloroform upon a piece of cotton, and place it in the jar, instantly shutting the cover down to make it air-tight, so as to confine the fumes of the chloroform. When I catch a specimen, I take the thorax between my thumb and forefinger, and then unfastening the jar cover drop it in, instantly closing again to prevent the escape of the fumes.

Perhaps you think when one is put in it will flutter and harm those already in; but mine invariably *go to sleep* before arriving at the bottom, if the chloroform is strong enough. A few days since a friend and myself caught over thirty in about three hours. So far I have done up in papers one of each kind captured to send to the RURAL. I have not sent them yet, however, but will as soon as the box is full. I would like to have some of the young Ruralists, or old ones either, tell me how to make a case to put my specimens in; perhaps "Daily Rural Life" will. YOUNG RURALIST.

HOW GAS IS MADE FOR GAS LIGHTS.

IT must interest us to know the process of making an article so extensively used in our cities, and we herewith publish a sort of gas catechism, which conveys a good deal of important "light" to the juvenile mind on this subject:

"How do they make gas?"

"First, they put about two bushels of bituminous coal in a long, air-tight retort. This retort is heated red hot, and, of course, the coal is heated red hot, when the gas bursts out of it, as you see it burst out of lumps of soft coal when on the parlor fire. The gas passes off through pipes. A ton of coal will make 10,000 cubic feet of gas. The gas, as it leaves the coal, is very impure."

"How do they purify it?"

"First, while hot, it is run off into another building, then it is forced through long, perpendicular pipes, surrounded with cold water. This cools the gas, when a good deal of tar condenses from it, and runs down to the bottom of the perpendicular pipes. This tar is the ordinary tar which you see boiling in the streets for walks and roofs.

"They now wash the gas. They call it scrubbing it.

"This is done by filling a large vessel, which looks like a perpendicular steam boiler, half full of wood laid crosswise. Then ten thousand streams of cold water are spurted through this boiler. Through the mist and rain, and between the wet sticks of wood, the gas passes, coming out washed and cleansed. The ammonia condenses, joins the water and falls to the bottom."

"What next?"

"Well, next the gas is purified. It is passed through vats of lime and oxide of iron, which take out the carbonic acid and ammonia."

"What next?"

"The gas is now pure. It is passed through the big station meter, then through the mains and pipes, till it reaches the gas jet in your room. Then it burns, while you all scold because it don't burn better."

ROBINSON CRUSOE'S ISLAND TO-DAY.

ALL who have read the story of ROBINSON CRUSOE, will be glad to learn how that island looks to-day. Prof. AGASSIZ has recently visited it. He says:—The Island of Juan Fernandez is more celebrated from DeFoe's fiction than from Selkirk's history. Fernandez discovered the island in 1563, and introduced goats here. In 1771 an Indian was left here, and subsisted on the goats three years before he was taken off. In October, 1801, a Scotch sailor, Alexander Selkirk, was left here, and taken off in 1809, having lived here four years and four months in absolute solitude, living like his Indian predecessor, mostly on goat's flesh. He told his story to DeFoe, and out of it grew "Robinson Crusoe." The wild goats are still numerous here, and flocks of hundreds of them may be seen upon the mountains. The island is about ten or twelve miles long by four in breadth; the shores mostly precipitous, and the mountain ridges 3,000 feet in height. The water around the island is deep, and the whole appearance is as if there had once been an extensive island with a splendid rugged chain upon it; that suddenly the bottom had been knocked from under all except this patch of ten miles by four, and all but this patch had sunk into the sea. Valleys and mountain spurs and gentle slopes are all cut off by this precipitous edge, and there are but few places on the island where you can effect a landing. There are to-day twelve persons, including several children, living on the island. They have good poultry and vegetables, splendid beef, and can get goats by climbing after them. Other things they purchase with the proceeds of their beef, milk and poultry, for which they find a market in passing ships, especially in American whalers. We spent May-day in rambling on the island and about its shores, gunning, fishing, herborizing, and collecting generally. Sharks, crabs, crayfish, shrimps, mollusks of various sorts, star fish and sea urchins of divers kinds, a few insects, some humming birds, etc., were among the fruits of our labor. The plants of the island bore a general resemblance to those of the continent four hundred miles to the eastward, which surprised me, as both the prevailing winds and ocean currents are opposed to any transmigration from the southern part of the continent.

The Puzzler.

MISCELLANEOUS ENIGMA.—No. 3.

I AM composed of 109 letters:
My 1, 28, 7, 32, 15, 81, 23, 42 is a bird.
My 2, 8, 105, 70, 59, 29, 11 is a tree.
My 4, 14, 50, 71, 61, 106, 18, 68, 41, 20 is a mineral.
My 5, 12, 89, 26, 38, 17 is an animal.
My 10, 27, 3, 40, 36, 10, 56, 98, 73, 88 is a flower.
My 31, 62, 81, 21, 41, 16, 10, 63 is a fish.
My 11, 33, 91, 109, 65, 51, 70, 45, 76, 25, 102, 8, 60, 71 is a bird.
My 48, 61, 84, 91, 100, 97, 54, 41 is an animal.
My 55, 63, 43, 82, 90, 58, 40, 79, 37 is a bird.
My 66, 59, 25, 70, 83, 64, 39, 41, 47, 59 is a flower.
My 70, 87, 28, 13, 79, 72, 67, 31, 108, 50, 99, 85, 104, 35 is a plant.
My 78, 22, 53, 9, 30, 6, 35, 24 is an animal.
My 90, 43, 101, 93, 103, 21, 52, 77, 71, 6, 106, 86 is a flower.
My 102, 96, 80, 40, 12, 79, 63, 46, 91, 77, 75 is a bird.
My 106, 89, 69, 107, 29, 92, 70, 98, 17, 57 is an animal.
My whole is a poetical quotation. ISOLA.

☞ Answer in two weeks.

PROBLEM.—No. 2.

A. AND B. start from the same point at the same time, to walk in different directions around a circular park. A. walks 4½ and B. 4 miles an hour; when they meet for the sixth time they will be 1,000 feet from the starting point. Required, the area of the park.

WM. H. HULL.

☞ Answer in two weeks.

PUZZLE.—No. 3.

I HAVE nine letters:—My first three make an animal; my last four another; a mother's between them. My whole is a Grecian sculptor whose love bestowed the greatest gift on record. Who was it?

☞ Answer in two weeks.

PUZZLER ANSWERS.—July 27.

ILLUSTRATED REBUS No. 4.—Show us how divine a thing a woman may be.

MISCELLANEOUS ENIGMA No. 2.—Washing machine.

ANAGRAM No. 2.—

Remember well and bear in mind,
A constant friend is hard to find;
But when you find one kind and true,
Change not the old one for the new.

PUZZLE No. 2. The human body—eyelids, knee-cups, drums of the ear, feet, nails, soles, muscles, palms, lip (two lips, hips, calyces, limbs, heart, lashes, arms, blades, veins, insteps, eyes and nose (nyes and noes), pupils, tendons.

News of the Week.

CURRENT TOPICS.

The Comity of Nations.

THE relations of the United States to the rest of the world is subject for congratulation. We may be impatient that what seems to the partially informed public a lack of spirit and true American feeling on the part of those in authority exists; but it is always well to remember that a wise conservatism on the part of those in office always results from a knowledge of the facts in their entirety and of the responsibilities which are involved in the exercise of power. With our system of political appointments it is not astonishing that such men as Butler, who recently disgraced himself and dishonored this Government, get official place. But over against men, who are often appointed on Congressional recommendation, place Washburne in Paris, Adams and Evarts in the Court of Arbitration at Geneva and others equally worthy of name. The recent reception of the Prince and Princess of Wales by Commodore Alden at Southampton, and the exchange of courtesies there made, lead to this reflection. The fact that we are at peace with the great powers, that we command their respect, that our distinguished generals and citizens are received as American sovereigns, by the sovereigns of Europe, and that the representatives of the Great Powers, sons of Emperors and Queens, visit us and are honored by us, thus affording each a better knowledge of the other, we think should be cause for congratulation and rejoicing.

Romance and Reality.

THERE are a great many girls and boys, young men and women, in the city and country who need to be shown the difference between romance and reality—between their dreamy creations and the actual realities of life. Here is an instance which it will be wise for young folks to study, though we hope that the young readers of the RURAL NEW-YORKER are too well trained to act in a similar way. A Boston girl, fifteen years old, left her home, a few weeks ago, in search of adventure. Disguising herself in her brother's clothes and cutting off her long hair, she went to Fall River, where she found employment in a cotton mill. Three days' experience sufficed to show her the realities of this life, and she left the factory without calling for her wages, went to the country and engaged to a farmer as a boy to do chores. She liked farm chores no better than factory work, quickly left the rural felicities and returned to Boston, where she was arrested as a vagrant and sent to the State Reform School, where her sex was discovered. Although a reward of $500 had been offered for her recovery, no one had suspected she was not a boy, until she arrived at the Reform School. Such stories may read very romantic; but we doubt if the deluded girl who tried this experiment would advise any of her girl friends to repeat it.

The French Loan.

THE French loan of three milliards of francs has been quickly taken by European capitalists, and Pres. Thiers' financial policy is regarded as triumphant. So there is confidence in the most cautious and conservative circles of Europe—money circles—in the future of France. And the fact that this loan has been so generally distributed among the money centers of all nations is rightly regarded as assurance of the peace of Europe. P. S.—The latest news from France is that the subscriptions to this French loan aggregated *forty-one milliards of francs*, or more than *eight thousand millions of dollars in gold!* What country has a better credit than France? This shows how vast is the accumulated wealth of Europe, and how little use there is there for it compared with the nervous activity of capital in this country: and this indicates why our own bonds were so eagerly taken abroad.

Whose Ox is Gored?

IT is not a little amusing that the papers on each side of the political fence are accusing Members of Congress of aiding their respective parties by franking campaign documents at the public expense. As if it had never been done before! As if it were a new and unexampled political horror! As if the people were being taxed to aid in keeping or putting in power politicians who care more for themselves than the public interest, for the first time! No doubt politicians of both parties are now honest in wishing the franking privilege abolished—for the other! No doubt the people would be just as wise, the public treasury in a healthier condition, and the country just as safe the next four years, if the franking privilege were abolished.

The Tariff on Worsted Goods.

IT has been an unsettled question whether the tariff on worsted goods was reduced ten per cent. by the act of June 6, 1872. This has been finally settled through the efforts of John C. Hopper, Secretary of the National Revenue Reform Association of New York, he having obtained the opinions of the leading members of the Finance and Ways and Means Committees as to the intention of Congress, which were that worsted goods were included in the reduction; also that the ten per cent. reduction is to apply to the chief value of all mixed materials enumerated in the act. It is asserted that Secretary Boutwell's decision is in accordance therewith, though at this writing not officially promulgated.

North Carolina Election.

THE campaign in the State election of North Carolina has been most vigorous, both parties putting in the field their best speakers, and spending money freely. Each party has conceded the result to be the key note to the November verdict. Opinions will differ on this point however. We write Monday, P. M., Aug. 5. The news up to the hour of writing indicate a small Democratic majority for Governor—or a verdict in favor of Greeley. But there is still some reason to doubt, as there are several Western counties to hear from, where the Republicans claim they will at least reduce the Democratic majority to 200 or 300, if they do not succeed in obtaining a majority for their own candidate.

What the Cuban Insurrection Has Cost Spain.

NOTWITHSTANDING the attempts steadily made on the part of those in the Spanish interest to depreciate the magnitude and success of the Cuban war, we have at last a Spanish confession, by Senor Becerra, late Colonial Secretary of Spain, which he uttered in the Cortes, to the effect that the Cuban war has cost the Spanish Government sixty-four millions of dollars and thirty-four thousand men. If that is what it cost to put down an "insignificant insurrection," what will it cost when it becomes formidable?

Has Stanley Seen Dr. Livingstone?

THIS vexed question is settled. He has. Lord Granville, and Viscount Enfield of the British Foreign Office, acknowledge the receipt of letters from Livingstone through Stanley. Dr. Livingstone's son also acknowledges the receipt of Dr. Livingstone's diary, sealed and directed in Livingstone's own hand, and letters from his father beside. So all doubts are set at rest. The Herald has prosecuted a legitimate enterprise to a triumphant conclusion, and Stanley is the hero of the hour in London.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Aug. 5, 1872.

SINCE our last report the Secretary of the Treasury has published the first of August Schedule of the Public Debt of the United States. It shows a further reduction of the Principal of the Debt, since July 1, of $3,427,000, notwithstanding the Customs revenue of the month fell off upwards of six and a half millions, as compared with July, 1871, owing to the delay in the operation of the new Tariff. This Tariff is now in full force, and for the three days of the present month of August over $4,000,000 in Gold have been taken in for duties at the Port of New York, and trade in Foreign Imports is decidedly more active.

The changes in the Public Debt since March 4, 1869, when the present Administration came into power, and the reduction of the annual Gold Interest charge thereon, is thus marked

FUNDED DEBT OF THE UNITED STATES.

March 4, 1869	$2,107,840,000
August 1, 1872	1,786,554,000
Reduction	$321,292,000
Reduction in Circulation	15,113,000
Total decrease of Principal	$336,405,000
Gold Interest, yearly, 1869	$124,255,350
Gold Interest, yearly, 1872	103,047,573
Reduction in Interest	$21,207,777

There has been more business in Wall Street the week past. Gold has advanced to 115¼ per cent, on the continued exports and the demand from the Importers to pay into the Treasury for Customs. The Treasury is selling $1,000,000@2,000,000 per week, but this falls considerably short of the demand to pay Customs. Money is less druggish on call loan, and the rates in this way are 4@5 per cent., and discounts 6@7 per cent.

Stocks are generally lower on the Railroads and Miscellaneous Shares. The Government Stocks are steady.

The following are the comparative movements of the City Banks for the past fortnight:

	July 20.	July 27.
Capital	$87,151,000	$87,151,000
Loans	207,214,500	205,136,900
Gold and Greenbacks	82,067,000	81,250,000
Deposits	247,551,300	245,062,700
Circulation	27,376,000	27,350,000

PRICES OF STOCKS AND BONDS.

U. S. 6s of 1881	118	N. Y. Central	97½
U. S. 5-20's of 1867	115¾	Erie	48⅜

PRODUCE AND PROVISIONS.

NEW YORK, Monday, Aug. 5, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,450,365	Meal, bbls	3,360
Oats, "	360,500	Flour, "	38,280
Wheat, "	513,000	Eggs, "	4,380
Rye, "	41,500	Cotton, bales	5,339
Barley, "	9,783	Hops, "	77
Malt, "	38,000	Wool "	3,380
Seed, "	100	Butter, pkgs	11,760
Beans, "	370	Cheese, "	101,510
Meal, bags	1,130	Lard, "	1,783
Peanuts "	2,380	Dried fruits, pkgs	186
Pork, bbls	113	Cut Meats "	2,200

Butter.—There is a good, steady trade in fine grades, and the quality of most of the arrivals is good enough to warrant a quick sale. Buyers will pay 18@19c. readily for fine table Western, but anything below that kind, and the accumulation of poor and stale is offered at rates optional with the buyer, with the an extreme bid. State butter is still receiving its share of the demand, though, as before, there is not room for more than sellers write for. The country and Canada are reported as holding an unusual full crop. It is likely that considerable Canadian butter will be turned this way this year, as the investments of exporters last year failed to remunerate, some of the shipments yet remaining unsold in England. As regards State butter, it is useless at this early period to offer much advice or suggestions. We must wait until the regular, steady trade sets in and the stock of Western is diminished. If, as I reported, the general crop is in fine order, and there is no reason to doubt the assertion after the abundance of fine dairy weather that has attended the Summer, we may look for a steady though not high range of prices, and owners should confer with those who distribute largely before risking a swamping total.

The quotations are: State pails, choice, 28@30c. other, 23@26c.; State selections, 26@27c.; good to prime firkins, 24@25c.; do. half tubs, 24@26c.; do. Welsh, 23@25c.; other grades of State, 15@22c.; Western Reserve choice, 18@19c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.

Beans and Peas.—Stocks receive only light additions, but sales are made with difficulty and the tone of the market is in the buyers' favor.

The quotations are, for prime medium, $3.20@3.25 fair do., $2.75; prime marrowfats, $3.40@3.45; fair do., $3.10; prime kidney, $3.30@3.40; fair do. $3; red kidney, $2@3. Peas, for green, $1.70@1.80; Southern B. E., per two-bushel bag, $2.25@2.30.

Beeswax.—Prices are again lower, particularly for Western. Sites of 15,000 lbs, at 34@34½c. for Western, and 35@37c. for Southern, the latter price for strictly prime.

Cheese.—Receipts are again enormous, and although the export has again exceeded any previous week's business, there is considerable surplus on hand. Still the cable is quoted up to 56s. 9d., and prices are well supported, without any indications of further advance hereat present. A few fine factories in the London Market have realized 13c. We quote State factory fine at 12½@12½c.; good do. 11@12c.; common do. 9½@10c.; skimmed as low as 3c.; State dairy, 10½@11½c. for prime, fair do., 9½@10c.; Ohio factory 10½@11¼c.

Cotton.—The reports from the crop have been favorable and prices are lower; at the reduced prices exporters have been buying large lines. Holders offer a fair quantity of stock, but at the close insist upon a steadier range of prices. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16¼	16¼	16¼	16¼
Good Ordinary	18¼	18¼	19	19
Low Middling	20⅛	20¼	20¼	20¼
Middling	21⅛	21⅛	21⅜	21⅜
Good Middling	23¼	23¼	23⅜	23⅜

Dried Fruits—Small lots are selling and the stock is steadily falling off, but here and there a parcel is pressed for sale and lower prices accepted. Peaches dull and unchanged. New blackberries are selling at 8c.

We quote cherries at 20c.; raspberries, 30@32c.; blackberries, 11c.; apples, new State, quarters, 8½ 9½c.; extra sliced, 11½@12c.; Southern new, quarters, 6@7c.; do. fine sliced, 10c.; new prime Western, 7½@ 8½c.; common Western, 6@8c.; unpeeled peaches, 5@ 5½c. for quarters; 6@6½c. for halves; peeled peaches, 17@19c. for North Carolina, 13@14c. for Virginia, and 15@16c. for Georgia; plums, State, 27@28c.; raspberries 22c.@23c.; blackberries at 8c.

Eggs.—Trade has fallen off and it is with difficulty late prices are maintained. Sales of Western at 20@ 21c.; State and Pennsylvania, 21@22c.; Jersey, 22@24.

Flour.—The arrivals have been small, and with more call from exporters prices have advanced 20 to 50 cents per barrel, the improvement most marked in the higher grades.

Superfine State	$5 55	@	5 90
Common extra do	6 05	@	6 70

Good to choice do	9 05	@	10 75
Extra Southern	6 85	@	8 80
Good to choice do	8 85	@	12 00
Rye, common to fine	4 10	@	5 00
Corn meal, Brandywine	4 85	@	4 85

Fresh Fruits.—There is a good supply of peaches, though the qualities are not very attractive. Hull's Early and Troth's form the bulk of the supply. Delaware crates range from $2 to $3.50; do. baskets, $1@ $1.50; New Jersey do., 50c.@$1.12. Pears are in good supply, and include Bartletts from California. These do not run as large as previous consignments, but unpack more evenly. Southern Bartletts quote $5@7 per crate; California do. $8@9 per box; Bell, $1.50@ 5.50 per bbl.; Sugar Top $3@4 do.; common, $2.50@2.75. Apples are not crowding the market so heavily. It hardly pays to send common sorts when prime can be had as low as they are quoted. Bough range at $1.50@2.50; Strawberry and Red Astrachan, $3@4; Southern Damson Plums, $4 per bush. Blackberries are growing scarce; Lawtons quoted 15@18c. per quart. Whortleberries, per bush., $2.25@3. Watermelons, Virginia, per 100, $12@20. Nutmegs, Southern and New Jersey, $2@3.50 per bbl. Grapes from the South are in, but do not sell. Peanuts have again sold freely and have advanced. Prime Virginia, $2@ 2.10 per bush.

Grain.—Prices of wheat have advanced a trifle. The inquiry is moderate, but the arrivals are light. We quote No. 2 in store at $1.47@1.49; No. 1 do., $1.50@ 1.52; winter red Western, $1.60@1.69; amber Western, at $1.70@$1.55; and white Western at $1.70@$1.85.

Rye is quiet at 73½c@74c. for Western. Oats are selling freely at firm prices, the demand is, in part,

speculative. Sales at 42½c.@43c. for Western; 44½@45 for Ohio. Corn has been sold more freely to shippers at firmer prices. Sales at 61c.@63c. for steamer lots of Western mixed; 63½@64c. for sailing vessels, lots do., 64½c. for yellow.

Hops.—The market is almost bare of stocks. Last year's growth is almost entirely cleared off the market. Brewers are supplying their wants from the crop of 1870. Prices will undoubtedly open high here for the new crop, but the opening prices, it is thought, will not be maintained in view of the prospects of the crop on the other side, as the indications are that England and Germany will have a considerable quantity over for export.

New Yorks, growth 1871, 22@25c.; Eastern do., 22@30c.; Western do., 22@30c.; Yearlings do., '70, 10@30c.; Olds do., '69, 10@15c.; Bavarians, 65@75c.; English, 60@65c.

Hay and Straw.—Trade is fair in new at steady prices. Sales at $1 for old shipping; $1.20@1.45 for retail qualities; salt, $1; clover, 80@90c. The best qualities of new sell at from $1@1.30. Straw at $1.05@1.10 for long rye, 85@90c. for short rye; 75@80c. for oat.

Provisions.—The advance in pork was short-lived. The past several days have shown a dull market; $13.50 for August round lots, and at the close that price was accepted for Oct. Jobbing pork sold at $13.62@13.65. Prime mess nominal at $12; extra prime do. $10.50@11. Beef in fair demand for coasting and shipping. Tcs. are very quiet. We quote plain mess, bbls., $8@10; extra mess, do., $10@12; prime mess, tes., $12@14; India mess, do., $17@20. Bacon is firm, with several large export orders filling. Long clear at 7¾@8c.; short do. scarce, 8½c.; short rib, 7¾c. Cut meats firm, with the advance in city hogs, and smoked meats of all descriptions are selling actively from store. We quote city smoked hams, 16@18c.; city smoked shoulders, 8½@9½c.; pickled bellies, boxed, 7@7½c.; do. loose, 7@7½c.; pickled hams, Western, 13@14c.; do. city, 14@15½c.; Western hams, in tight tes., 12@13c., according to brand; pickled shoulders, 8½@9c.; shoulders in dry salt, boxed, 5¾@6c.; fresh hams, 13½@13¾c. Lard has quite broken down since the 1st, and 8¾c. for contract for August, and 8¾c. for September, are full prices at the close. New lard, 8¾c.; City, 8¾@8¾c. Tallow, city prime at 9¼c. ₱ lb.; country bbls. and tes., 8¾@9¼c. Stearine steady at 10½c. ₱ lb.

Poultry and Game.—There is very little dressed coming in. Live are in good supply and lower. Geese are plenty and declining. Woodcock scarce and higher. Spring chickens, Western per pair 45@60c.; do. Jersey, ₱ lb. 20@22c. Fowls—Jersey, 19@20c.; do. Western, 18@19c. Turkeys—Jersey, 18@22c.; Western, do., 18@20c. Roosters per lb., 11@12c. Ducks—Jersey, pair, $1@1.25.; Western, 75c. Geese—Western, $1.75@2. Woodcock $1.12½@1.25.

Seed.—A few small lots are selling to the home trade at steady figures. Michigan and Indiana 9¾@10c. State, 10½@10¾c. Timothy at $3.25@3.50.

Tobacco.—The low grades of Kentucky are wanted at full prices. Seedleaf is moderately active; current arrivals are placed to home consumers at very steady figures. Virginia common to good lugs, 7½@8¾c.; low to medium leaf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.	Heavy Grades.
Lugs	8½@ 9 c.	9 @ 9½c.
Common to medium leaf	9½@10	9¾@10¾
Good do	10½@11	11 @12½

fair	15	@17
fine	18	@22
Ohio, running lots	10½@15	
Wisconsin and Western	8½@10	

Vegetables.—There is a good supply of potatoes and prices are a shade easier. A few sweets from Florida quoted $6 per bbl. Garden stuff not materially changed.

New potatoes, L. I., bbl., $2@2.25; do. Jersey, $2@2.25 Southern, $1@2. Tomatoes, $1.00@1.50; Squash, ₱ bbl., $1.25@2.25, white and yellow. Cucumbers, ₱ bbl, $1. Onions, Bermuda, 50c. Turnips, ₱ bbl., $1@1.50. Cabbages, bbl., $3@7. Large Dutch cabbages, $10@12. Green corn, ₱ 100, 75c.@$1.25. Marrow squash, ₱ bbl., $1.50@$1.75 for Southern and $1.75@$2 for Northern. Onions, ₱ bbl., $2.25@2.75.

Whisky—Prices are steadily held. Sales are small at 95c. for Western.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., August 3, 1872.

THE market at Little Falls for the week ending August 3 was brisk, with a slight advance in prices above those of last week. The delivery of farm dairies amounted to about 400 boxes, and sales were made at 10a10½c., with a few lots extra at 11c.

The offerings from factories were large, amounting, in the aggregate, to 12,000 boxes, 7,000 of which were sold. We give quotations of leading transactions as follows:

Avery & Ives	12¾	Johnston Cross Roads	11¾
Bates	12	Keys	12
Billinger	11½	Klock & Nellis	12
Bethel	12	G. Ladue	12
Budlong & Schuyler	12¾	Manheim	12¾
Buell	12	Manheim Center	12¾
Canajoharie	12¾	Manheim Turnpike	12¾
Cold Brook	12¾	Mohawk Valley	12¾
Cook & Ives	12¾	Nash & Keeler	11¾
Crane's Corners	12¾	Newville Ass'n	12¾
Countryman	12¾	Nichols	12¾
Dairy Valley	11	Newport Hill	12¾
Dunkle	12	Root	12¾
Eatonville	12¾	A. Smith & Co	12
Euphrates	11¾	Smith Creek	12¾
Fairfield Association	12¾	Snell's Bush	11¾
North Fairfield	12¾	Sneyder & Maxfield	11¾
Old Fairfield	12¾	Spraker	11¾
Fays	12	Stratford & Salisbury (small cheese	12¾
Flat Creek	11¾	Switzer Hill	11¾
Fulton	11¾	Top Notch	12
Henderson Associat'n	12¾	Zhomerunun Creek	12
Herkimer Co. Central	12¾	Zoller	12
J. D. Ives	12¾		

The weather has been warm and showery. The wet weather interferes somewhat with the hay harvest, but the crop, so far, has generally been secured in good order.

LIVE STOCK MARKETS.

NEW YORK, Aug. 3, 1872.

THERE has been an increase in receipts of sheep and hogs, while cattle have run lighter, and many of them of poor quality. We are getting green Texans run right through. They sell at 8@8½c., and are hard to dispose of at all. The weather is cool and very favorable for trade. Fruits are abundant, and so are vegetables, but meats continue to have a good sale, especially when we take into account the absentees at the Summer resorts. There is a large out-of-town demand for meats to supply these very resorts.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,376	123	2,181	30,631	30,337
" last week	8,705	133	2,311	29,767	25,593
Corresponding week last year	8,125	95	2,563	30,000	23,685
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—The supply is still large, though a little below what it was last week. The demand has been and continues very good, so that owners have been able to advance the prices ½@¾c. per lb. It was not a difficult task to reach 13¾c. for fine beeves. The market rules the highest for months, and it is unlikely that we shall have many cheap markets this Summer. The crops promise so good, with tall grass now, when we oftener have dry weather, that farmers incline to hold on to their droves to eat up the abundant herbage. We look for fat cattle next Autumn and Winter. Some of the Kentucky steers are very good now, but Texans are too near of the scallawag order. Our cattle are now coming in the order named, viz.: largest from Illinois, then Kentucky, followed by Texas, Ohio and Missouri, Indiana and this State bringing up the rear. At the close there is a little weakness, and it is only possible to sell out by making some concessions. A full run is expected Monday.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb	13¼ @ 13¼	13 @ 13¼
Good to prime	12¾ @ 13	12 @ 12¾
Ordinary to medium	11 @ 12	10¾ @ 11¾
Lowest grade	8 @ 10	8½ @ 10
Average sales	12¼ @ —	11¾ @ —

Veal Calves. These are doing remarkably well, fat milk veals having reached 10½c. by the load. Several lots were sold at that price, with nothing really good below 9½c. Common veals sell at 8@9c., with grass calves at 7½@8c., or $8@12 each. One lot of 180 mixed calves averaged $11.26 per head.

Sheep and Lambs.—With about the receipts of the previous week, there is no change in fat sheep, but thin stock moves slowly and at a little decline. Several lots were sold at 5¾@5¾c., while choice 90 lb. O. went at 7¼c. The average for fair sheep is 6¾c. Lambs are very plenty and generally lower. They vary greatly in price. While a few choice Jerseys might still sell at 11c., 10¼c. is the top for good State, and 9½@10c. for Pa. and Canada. Some poor Western go as low as 7@8c. Prime Ky. or Ohio, 70 lbs. sold at 9¼c. The average of 8,225 sheep and lambs was $6.10 each.

Hogs.—With an increase in the supplies, the markets still rule strong and at better figures—viz., 6¾@7c. for city dressed. Higher gold, and active shipping demands for hog products have to do with this advance.

Milch Cows.—The past has been about the hardest week in the milk business, the price being about $1 per can most of the time. This made a dull fresh cow trade, and the pens continue to hold unsold stock. The offerings are quite too large for this season of the year, when milkmen are overstocked with animals. Prices continue at $30@50 for common to fair, and $60@70 for good to prime milkers.

LATEST.—Monday, August 5, 4 P. M.—Beeves.—Arrivals to-day, 157 cars at Communipaw, 107 at 100th St., and 41 at Weehawken, making 5,007 for the present market. Prime cattle were not plenty and held their own at 13c@13¼c., but medium were ¼c. lower, and poor fell off nearly ½c. Some thin, Ill., sold at 10c., and were as poor as any Texans. Stock barely sold off.

Sheep and Lambs.—Arrivals for to-day's market, 16 car loads at Communipaw, 18 at 48th St., and 18 40th St., making 10,397 on sale. Sheep are no lower, choice lots are selling at 6¾@7c., with a few at 7¼c. Lambs are more than ½c. lower, only very prime reaching 10c. Fat 61 pound Canadas, sold at 9¼c.

Hogs.—Receipts to-day, Sunday included, 37 car loads at Communipaw and 49 at 40th St., making 9,377. The market was weaker, dressed of 230 lbs. selling at 6c.; 200 lbs., 6¾@6¾c.; 180 lbs., 6¾@6¾c., and pigs, 6¾c.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS Co., No. 683 Broadway, New York.

New Advertisements.

Pure Water is a Great Blessing.

Every prudent man, careful of the health and comfort of his family, should see to it that his drinking water is conveyed through TIN-LINED LEAD PIPE, which is a perfect safeguard against lead poison, the too often unsuspected cause of disease and death. Tin-lined Lead Pipe is strong, durable, flexible, and easily soldered. It is a great benefit to the community, and enhances the real value of every house in which it is introduced. By its use lead and zinc poison and iron rust are all avoided, and general health promoted. Sold by THE COLWELLS, SHAW & WILLARD M'F'G CO., 213 Center St., New York. Price, 15 cents a pound for all sizes. Circular and sample of pipe sent by mail free. Also, Manufacturers of Lead Pipe, Sheet Lead, Block-Tin Pipe, Solder, &c. Orders filled at sight.

THE AMERICAN COLONIST AND HOMESTEAD JOURNAL, containing Maps, with full particulars as to the Organization of the Colony, the Lands, Productions, Climate, Wood, Water, etc., SENT FREE on application to S. R. WELLS, Secretary of the National Bureau of Migration, 389 Broadway, New York.

Musical Instruments.

DUNHAM & SONS,

(ESTABLISHED IN 1834,)

MANUFACTURERS OF PIANO-FORTES.

Warerooms, 17 Union Square, N. Y.

WEBSTER'S POCKET DICTIONARY, abridged from the great American Quarto, containing 18,000 words, with numerous proverbs, Latin, French and Greek quotations, and illustrated with nearly 200 engravings. Substantially bound, gilt edges, and sent by mail on receipt of $1. Address IVISON, BLAKEMAN, TAYLOR & CO., 138 & 140 Grand St., N. Y.

New Publications.

POPULAR MUSIC BOOKS.

Now select the Music Books needed during the next Autumn, and agreeably occupy your Summer Leisure in examining, playing and singing from them.

THE STANDARD! Price $1.50; $13.50 per doz. Destined to be the *Banner Church Music Book of the Season.* Singers, leaders, teachers! "Rally round" the banner!

SPARKLING RUBIES! Price 35 cents. For Sabbath Schools. None better.

THE PILGRIM'S HARP! Price 30 cents. For Vestries and Prayer Meetings. Unexcelled.

Take with you, for entertainment at Summer Resorts,

THE MUSICAL TREASURE. 225 pages of new and popular Songs and Piano-Forte pieces. Or,

SHOWER OF PEARLS. Full of the best Vocal Duets. Or,

OPERATIC PEARLS. Full of the best Opera Songs. Or,

PIANIST'S ALBUM. Full of the best Piano pieces. Or,

PIANO-FORTE GEMS. Full of the best Piano pieces.

Each of the above five books costs $2.50 in boards, or $3.00 in cloth. Has more than 200 large pages full of popular music, and either book is a most entertaining companion to a lover of music.

Specimens of the STANDARD sent, for the present, post-paid, for $1.25, and of the other books for the retail price.

OLIVER DITSON & CO., Boston.
CHAS. H. DITSON & CO., New York.

FREE!—SEND FOR A SPECIMEN. A full Catalogue of our Standard, Miscellaneous and Illustrated Juvenile Books, or specimen numbers of Oliver Optic's Magazine, sent by mail free. LEE & SHEPARD, Publishers, Boston, where all publications may be found.

ARE YOU MUSICAL?

If so, be also prudent. Do not throw away money on high-priced publications when you can purchase 10 or 20 pieces of excellent sheet music, arranged for the Piano, for one dollar. Call or inclose stamp for new Catalogue. BENJ. W. HITCHCOCK, Publisher, 139 Third Avenue, New York.

Societies, Etc.

NEW YORK STATE FAIR, 1872.
AT ELMIRA,
Sept. 30, Oct. 1, 2, 3, 4.

COMPETITION OPEN TO ALL COMERS.

☞ ENTRIES may be made at any time until Aug. 31st, after which no entries, except of Fruits and Flowers, will be received.

☞ PREMIUM LISTS are now ready, and will be forwarded by mail to all applicants.

The Society having been enabled, by the liberality of the citizens of Elmira and Chemung County, to enter (under an arrangement by which the Fairs are to be held at that city once in three years) upon permanent grounds, with permanent buildings, can this year offer better and more ample accommodation to Exhibitors than ever before.

An increased number of Prizes is offered, and the List in general has been liberally revised. Address
STATE AGRICULTURAL SOCIETY,
T. L. HARISON, Sec'y. Albany, N. Y.

THE ANNUAL EXHIBITION
OF THE
Pennsylvania State Ag'l Society,
For 1872,
Will be Held at the City of Erie,

Commencing Tuesday, Sept. 17th, to continue Four Days.

The competition is coextensive with the United States and Provinces, and the citizens of the several States and the Dominion are cordially invited to compete for our prizes. There is no Entry Fee charged. For Premium Lists, and other information, apply to either of the undersigned, at Harrisburg, until August 20th, after which date headquarters will be at Erie.

JACOB R. EBY, President.
D. W. SEILER, Recording Secretary.
ELBRIDGE McCONKEY, Cor. Secretary.
Harrisburg, Pa., June 1, 1872.

REED & BARTON,

MANUFACTURERS OF

ELECTRO-PLATED WARE.

The above illustration represents one of their many patterns of

ELECTRO-PLATED ICE PITCHERS,

made with the Patent Seamless Lining.

The lining is made of a fine quality of Nickel Silver, and from one piece, without seam or joint. The advantages possessed by Pitchers made with this lining are their *Purity* and *Strength*.

The linings being made from one piece, there are no seams or joints of solder to corrode or leak, and the Nickel Silver of which they are made being a very hard and strong metal, they can be made very strong without being heavy. They are made of different sizes, in a great variety of patterns.

REED & BARTON also manufacture every variety of TABLE WARE, of the finest quality.

Factories established 1824. Salesrooms at Factory, Taunton, Mass., and No. 2 Maiden Lane, New York.

Implements, Machinery, &c.

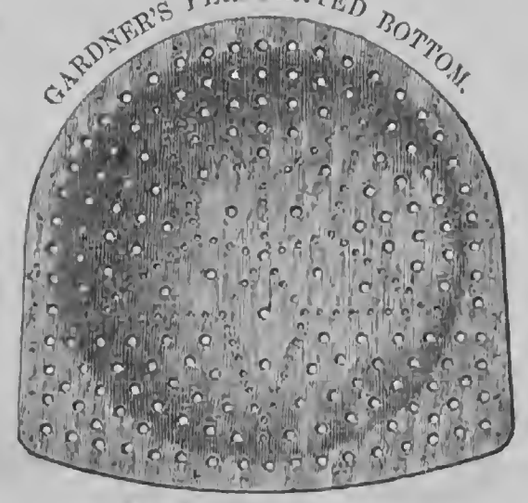
Treasurer, Indianapolis, Ind.



Patented May 21, 1872.

GREAT IMPROVEMENT IN CHAIR SEATS.

Various have been the efforts of men to produce a seat which should be comfortable, light, comely, durable, and also admit of universal application. The degrees of success have been as varied as the effort; but within the last year the long-sought was revealed to an observing, practical genius, and is hereby offered to the public, in full confidence of its instant appreciation.

The seat is composed of three layers of veneer (boards as thin as a knife blade), the grain of each lying in an opposite direction to its neighbor, all glued firmly together in a slightly dishing form, adapted to the person. The entire thickness slightly exceeds one-sixth of an inch. We thus have moderate cost, little weight, neatness, great bounty if desired, and a lasting quality which, in usual service, may properly be called eternal. *While it is especially adapted to executive chairs by any one who can melt down a carpet*, it is coming rapidly into use for the better class of chairs for sumptuous apartments. The slightest observation will convince the most skeptical of its unequaled merits.

$1,000,000

SECOND
GRAND GIFT CONCERT
IN AID OF THE
Public Library of Kentucky,
AT LOUISVILLE, KENTUCKY.

BY authority in the act of the Legislature incorporating the PUBLIC LIBRARY OF KENTUCKY, the Trustees will give their
SECOND GRAND GIFT CONCERT
In the great hall of the Public Library building, in Louisville, Ky., on
Saturday, September 28, 1872.

This magnificent hall, known as Welsiger Hall, is the largest, most centrally located, and best arranged for large and fashionable audiences of any in Louisville, and is fitted up in superb style. The building has a front of 168 feet on Fourth street by a depth of 260 feet, four stories in height, and was recently purchased for the Public Library at a cost of $210,000. Three large rooms are now fitted up for a library, and contain about 20,000 volumes and a museum of 100,000 specimens, now open and free to the gratuitous use and enjoyment of all citizens of every State in the Union. It is the purpose of the Trustees, by the GRAND GIFT CONCERT now announced, to raise the money with which to pay the balance of the purchase money due upon the Public Library building, to enlarge the library, and to so endow the institution as to make it self-sustaining and forever beyond the necessity of calling upon any individual who uses the books for the contribution of a single cent toward its support.

100,000 TICKETS OF ADMISSION
will be issued at $10 each; half tickets, $5; quarter tickets, $2 50; 11 whole tickets for $100; 23 for $205; 56 for $500; 113 for $1,000; 285 for $2,500; 575 for $5,000. No discount on less than $100 worth of tickets at a time.
Tickets will be sent, when requested, by registered letter. The money for them may be sent by Adams Express Co. and its connections, P. O. money order, registered letter or bank draft.
The holder of each ticket, or fraction of a ticket, (a half or quarter), is entitled to admission to the concert and to the gift awarded to it. During the concert the sum of
$500,000 IN CURRENCY
will be given to the holders of tickets by distribution by lot of **ONE THOUSAND GIFTS,** as follows:

Total, 1,000 Gifts, all Cash, -			$500,000	

This Concert, like the first of the 16th of December last (which was so decidedly successful, and at which the first grand gift was drawn by and paid to Mr. John R. Durfi, of Memphis, Tenn.), is for the benefit of the
PUBLIC LIBRARY OF KENTUCKY.

The Farmers' and Drovers' Bank is Treasurer, and the corporators and supervisors are all representative men, and are among the most respectable and distinguished citizens of the State. Should any tickets be left unsold on the day of the drawing, they will be destroyed, and the one thousand gifts offered will all be drawn and paid, but diminished in value in proportion to the percentage of unsold tickets. For instance, if only three-fourths of the tickets are sold, the capital gift will be reduced to $75,000, and all the others in proportion.
The Hon. THOS. E. BRAMLETTE, late Governor of Kentucky, has consented to represent the Trustees in the management of this second Grand Gift Concert, and he will personally see that the money from the sale of Tickets is deposited with the Treasurer, that the drawing is fairly conducted, and the gifts justly awarded and promptly paid.
The drawing will take place in public, in full view of the audience, and under the immediate supervision and direction of the officers and Trustees of the Public Library of Kentucky and the following named eminent and disinterested citizens, who have consented to be present and see that all is fairly done:
Hon. M. R. HARDIN, Judge Court Appeals, Ky.
Hon. J. PROCTOR KNOTT, late M. C. Lebanon Dis.
Hon. H. W. BRUCE, Judge Ninth Judicial Dis., Ky.
Gen. ELI H. MURRAY, U. S. Marshal, Dis. Ky.
Hon. T. R. COCHRAN, Chancellor Lou. Chan. Court.
Hon. E. D. STANIFORD, Pres. Farmers' & Drovers' B'k
Hon. JNO. BARBEE, Manager Royal Ins. Co., Liverpool.
Col. PHIL. LEE, Com. Att'y Ninth Judicial Dis.
Dr. C. GRAHAM, founder Graham Oakhurst.
Col. JILSON P. JOHNSON, Manager Galt House.
Dr. T. S. BELL, Prof. Medical University, Louisville.
Hon. J. G. BAXTER, Mayor Louisville.
Hon. T. L. BURNETT, City Attorney.
HENRY WOLFORD, Treasurer Louisville.
A. O. BRANNIN, Pres. Manufacturers' Bank.
PHILIP JUDGE, of the Louisville Hotel Co.
JAS. BRIDGEFORD, Pres. 2d National Bank.
W. C. D. WHIPS, Prop'r Willard Hotel.
J. C. JOHNSON, Pres. Traders' Bank.
H. VICTOR NEWCOMB, firm of Newcomb, Buchanan & Co.
HENRY DEPPEN, Pres. German Bank.
ANDREW GRAHAM, tobacco and cotton merchant.
Dr. NORVIN GREEN, Pres. L. & C. Short-line R. R.
VOL ROSE, Agent Adams Express Co.

OFFICERS OF THE LIBRARY.
R. T. DURRETT, President.
W. N. HALDEMAN, Vice-President.
JOHN S. CAIN, Secretary.
FARMERS AND DROVERS' BANK, Treasurer.

Those who desire further information, or who wish to act as agents for the sale of tickets, as well as those desiring to purchase tickets, should address

(*P. O. Box* 5643.) 31 & 33 Vesey St., New York.

30 CENTS ONLY

for two Fine Steel Engraved Portraits for framing, of either GREELEY AND BROWN or GRANT AND WILSON. Best out. Mailed promptly. Dealers supplied. GEO. E. PERINE, Engraver, 93 Reade St., New York.

WICKES' ECLECTIC OIL

Is designed for use in ordinary kerosene lamps wherever good light and perfect security from accident are required.

J. H. WICKES, 120 Maiden Lane, N. Y.

MONEY Easily made with our Stencil and Key-Check Outfit. Circulars free. STAFFORD M'F'G Co., 66 Fulton St., N. Y.

THE NATIONAL COMPOSITE PAVING COMPANY

Will contract to lay **Engan's Improved Macadam Pavement** in any city or place in the United States. Contracts taken to make sidewalks, line cellars, lay sea walls and abutments for bridges, and also to furnish roofing, and drain, gas, water and sewer pipe. Rights to use this Patent will be sold.

Address SAM'L N. PIKE, Pres't, No. 78 Broad St., New York City.

RUPTURE

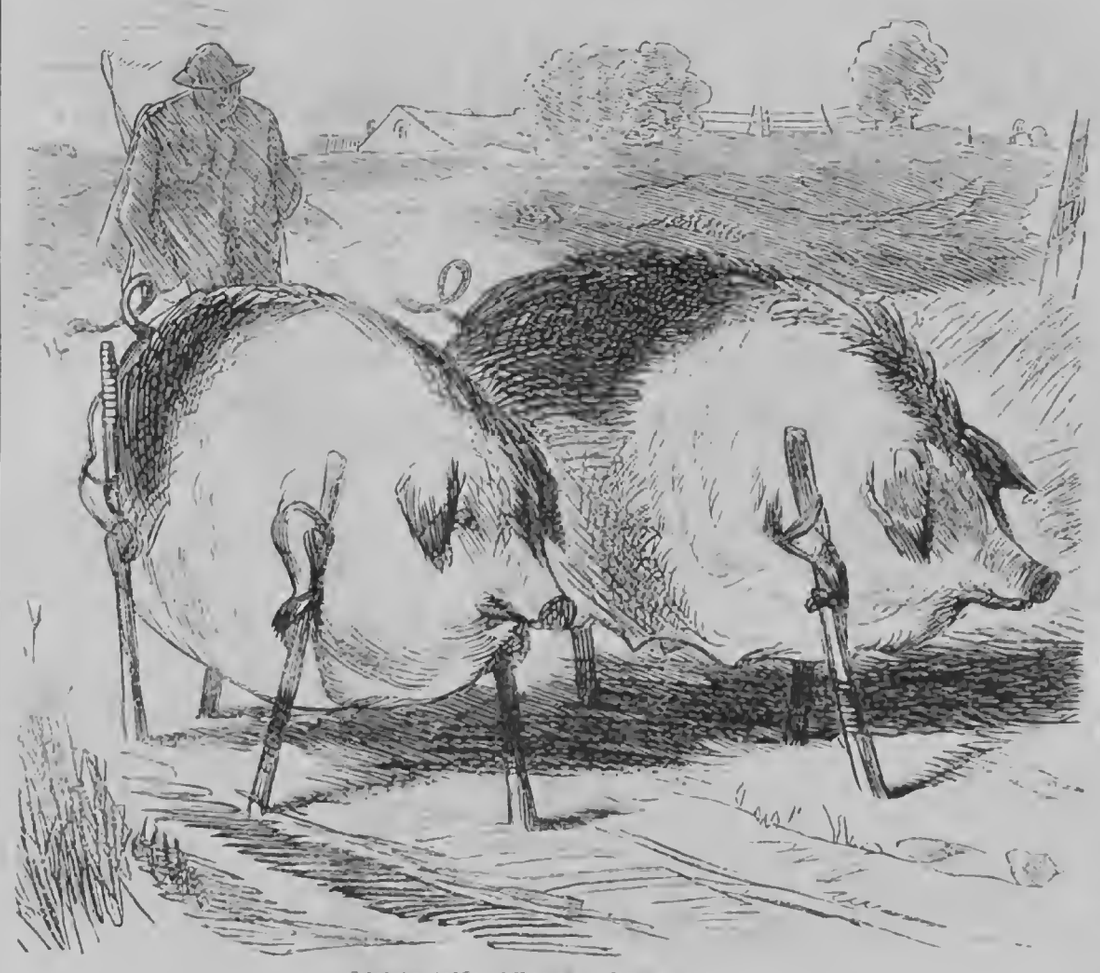
Relieved and cured by Dr. Sherman's Patent Appliance and Compound. Office No. 337 Broadway, New York. Send 10 cents for book with Photographic likenesses of cases before and after cure, with Henry Ward Beecher's case, letters and portrait. Beware of traveling imposters, who pretend to have been assistants of Dr. Sherman.

BUY THE

Iron Clad Milk Can

The only one ever manufactured that will stand the hard usage to which they are subjected. For sale by all can makers. Stock and Trimmings for sale only by the IRON CLAD CAN CO., Send for Circulars. 51 Dey St., New York.

☞ All genuine are stamped I. C. C. Co.



STILTS FOR SWINE:

OR HOW FARMER JONES GETS HIS PIGS TO MARKET WHEN TOO FAT TO WALK.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and completness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO., HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

AGENTS WANTED WHERE NOT ALREADY ESTABLISHED.

TARRANT'S SELTZER APERIENT. Trade Mark. Patented

Medicinal Torpedoes,

In the shape of fierce cathartics, are falling into disrepute.

TARRANT'S EFFERVESCENT SELTZER APERIENT

is driving them out of use. It is the mildest and most genial of all laxatives. Instead of weakening the stomach and bowels, it gives them tone and vigor. Other purgatives leave the excretory passages in an unnatural condition, and new concretions gather there, often more difficult to remove than those that have been violently expelled. The Seltzer Aperient, on the contrary, establishes a regular habit of body. As an appetizer and exhilarant, it is far superior to any "Bitters," and its purifying influence on the vitiated animal fluids excels that of any blood depurient in the Materia Medica. And then, how delicious! Sold by all Druggists.

TRUCKING LANDS IN VIRGINIA.—A tract of land, well adapted to gardening, at Gloucester Point, on the York River, and overlooking the Chesapeake Bay. 10, 20 or 40-acre lots, $20 per acre. Address ELIJAH SMITH, Clyde, N. Y.

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz.:

It is cheaper, more durable, more easily and perfectly repaired, is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flag-stone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flag-stone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY,
ST. LOUIS, Mo., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORR, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

Floricultural.

MADAGASCAR ORCHIDS.

ORCHIDS are among the most interesting of vegetable phenomena; but their requirements are such that they are rarely seen in our green-houses and conservatories. They (most of them) require too great a degree of moisture and heat to be grown successfully with the commoner plants of the green-house; they also require shade, which is less difficult to secure than the requisite degree of moisture. We have seen them growing, successfully, however, on the North walls of conservatories attached to some of our city houses, the proprietor preferring them as curiosities to the more common and showy flowering plants. It will, however, interest our readers to peruse the following paragraphs from a work entitled "Madagascar Revisited," recently published, which tell us something of these curious plants as they were found in their native *habitat*:

"Orchids were abundant, and often occupied positions in which the growers of these plants in England would little expect to find them, but in which they gave an indescribable singularity and charm to the landscape. The limodorums were numerous in parts of the road, and formed quite a ball of interlaced roots at the base of the bulbs. A small species, resembling in habit and growth the *Cumarotis purpurea*, but quite unknown to me, and bearing a vast profusion of white and sulphur-tinted flowers, often enlivened the sides of the road along which we passed. But the *angræcums*, both *A. superbum* and *A. sesquipedale* were the most abundant and beautiful. I noticed that they grew most plentifully on trees of thinnest foliage, and that the *A. sesquipedale* was seldom, if ever, seen on the ground, but grew high up among the branches, often throwing out long straggling stems terminating in a few small, and often apparently shrivelled, leaves. The roots also partook of the same habit. They were seldom branched or spreading, but long, tough, and single, sometimes running down the branch or trunk of a tree, between the fissures in the rough bark, to the length of twelve or fifteen feet; and so tough and tenacious that it required considerable force to detach or break them. Many of these plants were in flower; and, notwithstanding the small, shrivelled appearance of the leaves, the flowers were large, and the yellow color strongly marked. On more than one occasion I saw a splendid *Angræcum sesquipedale* growing on the trunk of a decaying or fallen tree, as shown in the accompanying engraving, and sending its tough roots down the trunk to the moist parts of the vegetation on the ground. I found one decayed tree lying on the ground almost overgrown with grass and ferns, on the rotten trunk of which the *A. sesquipedale* was growing most luxuriantly. The roots which had penetrated the soft trunk of this dead tree were white and fleshy, while the leaves were longer and comparatively soft and green. There were neither flowers nor flower-stalks on any of the plants growing in the rich vegetable mold furnished by this old, dead tree.

"The habits of the *superbum* were quite different. Of these the fleshy roots formed a sort of network at the base of the bulb.

During the journey I occasionally noticed both kinds growing not only on the branches of living trees, but very often high up on the bare barked trunks of the dead trees. Sometimes in the angle formed by the junction of an arm with the trunk of a large naked tree, apparently without a fragment of bark adhering to the trunk, a bunch of moss, or a cluster of orchids, or both mingled together, would be growing apparently with great vigor, and often in full flower. More than one tall bare trunk, twelve or eighteen inches in diameter, and thirty feet high, stood surmounted, or surrounded near its summit, by a cluster of *angræcums*, with their long, sword-shaped, fleshy leaves; or, what was more beautiful still, a fine specimen of some species of bird's-nest fern.

The contrast between the white, shining, barkless trunk, and these verdant clusters of plants on the top, was sometimes very striking; especially as the orchids were often in flower, and by their growth altogether suggested the idea that by the decay of their own roots a receptacle was formed for the moisture or the rain by which the plant was nourished. This combination of life and death, growth and decay, presented one of the most singular among the many, to me, new and curious aspects of nature which my journey afforded."

MADAGASCAR ORCHIDS.

FLORICULTURAL NOTES.

Centranthus Macrosiphon, it has been discovered in France, makes an excellent salad. It is an annual well known to cultivators of annual flowers. Our seedsmen have it for sale. The flowers are long-tubed, pale rose, and it is pretty in masses. Make a note of it.

The Pinks to Grow.—CHARLES D. COPELAND, in the Horticulturist, advises the more inexperienced cultivators "To procure the seeds mixed of the German, Italian, China and Japan varieties. By skillful cultivators, pinks have been greatly improved, both in form and diversity of coloring, within a few years past. Surely no yard should be without these; for while the beautiful dress they put on more than compensates all outlay, flowers act like magic in the formation of character with all the household, refining the sensibilities, and promoting domestic contentment and happiness."

Pomological.

POMOLOGICAL GOSSIP.

Grapes Received.—We acknowledge the receipt of a box containing two bunches of grapes in a demoralized condition. One is a light green grape, bunch shouldered, not compact; berry, medium in size, sweet, with a strong, astringent, but not unpleasant flavor. It was labelled "Peter Wylie, No. 1." If in prime condition we should think it might be classed "good." As near as we can make out, the other is labelled "Black Hamburg. Concord, No. 1." It is a medium bunch, not very compact, nor shouldered; berry, about the size, shape and color of Concord, with abundant bloom; quite sweet, fleshy, but pulp soft, juicy and delicious flavor. We call it "very good." We have been unable to decipher a name accompanying those grapes and do not know who sent them, nor where grown. "Peter Wylie, No. 1," is described in the transactions of the American Pomological Society, by Mr. WYLIE, as follows:

Parentage, female, Halifax and foreign; male, Delaware and foreign. A very vigorous, short-pointed, rapid-growing vine, with thick native leaves. Holds its leaves and ripens its wood thoroughly. Bunches and berries between Delaware and Concord; round, white, transparent, becoming golden yellow when perfectly ripe.

Ives Grape in the South.—The editor of the Rural Alabamian says:—"We have had the Ives in full bearing only two years, but from that short experience, we consider it a grape of very great promise. The vine is remarkably healthy and vigorous; bunch large and very compact; fruit large, black, sweet and vinous, with a peculiarly tough skin. This latter quality makes it valuable for transportation to distant markets. It commences ripening with the Concord, but does not attain perfection until the Concord is gone, and should be permitted to hang many days on the vine after appearing ripe. It is not equal to the Concord in size and beauty of appearance, nor is it so good for the table; but it is superior in keeping qualities, and for distant transportation, and probably for wine."

Nectarines Falling.—I have some Nectarines that will not hold their fruit. Fruit and trees both become very gluey and the fruit falls. What is the remedy?—J. C. N.

The fruit is probably stung by an insect. The only way to prevent it falling is to prevent the insects stinging it. We suspect that the insect is the well-known plum curculio, which also attacks the nectarine and many other kinds of fruit. By jarring off the curculios once or twice a day, catching them on sheets or any kind of cloth spread under the trees for the purpose, a portion of the fruit may be saved. This jarring process must be commenced as soon as the fruit appears, and continued until it is nearly full grown.

Field Crops.

NEW ENGLAND AGRICULTURE.

The Tobacco Crop Compared With Other Products.

RECENTLY, Mr. LAWRENCE of New Hampshire, published some sound views and many valuable suggestions respecting New England farming, and President CLARK, of Amherst College, gave us the experimental knowledge and profitableness of growing beets for sugar; for all of which, New England farmers are, no doubt, much obliged; but at present, there is little prospect of much practical heed being given to the information of either.

Mountain sides, hill tops and elevated fields, susceptible of cultivation by the plow can, and no doubt will be made, to some extent, more available by the LAWRENCE treatment; but the fertile lowlands—the "Intervales"—will not make much acquaintance with *beets*, so long as another, if not a better, by far a larger paying crop can be grown. I mean *tobacco*.

Farming, like every business now-a-days, is prosecuted for profit; and the Yankees, not unlike other people in this respect, will grow those things that pay best. There was a time with them when broom corn was most remunerative, when hops were most profitable and onions did well; but as the seasons of high prices passed away, so these productions diminished. Now, hardly a stalk of broom corn is to be seen, hop poles have disappeared and onions have become an indifferent crop.

The climate and soil of New England do not seem peculiarly adapted to an extra growth of any one of the ordinary productions; grasses, cereals, leguminous and bulbous plants do equally well; if there is an exception, it is onions, on the rich alluvian of the Connecticut valley.

With their limited number of acres of good arable soil, the productions of New England farmers have been necessarily limited; comparatively, not much has been raised beyond the wants of home. But little of New England wealth has been made by farming. The sturdy yeoman, with the strictest economy and untiring industry, has not often been able to exceed a fair living; and what is termed a competency, has been attained only through a long life of care, labor and anxiety, attended by few luxuries. The last thing a New England farmer thinks of now doing, is to get rich by hard work, producing the ordinary crop of hay, grain or vegetables; or, going a step further, investing in cows, and depending on milk, butter and cheese. But in the tobacco-plant he has found a "ready relief." Whether owing to the soil or climate, or both, the variety of plant, superior culture or kind of manure, it is an established fact, that for quality and quantity, the bottom-lands—the "intervales"—and some of what are called "the plains" of New England, excel, with the exception of Florida in quality, all the old tobacco-growing States of the Union. The statistics of the year 1870 are to the point.

While other States produced only five to ten hundred pounds to the acre, and received for it ten to twenty-five cents per pound, the New England crop, mostly of Connecticut and Massachusetts, yielded an average of some fourteen hundred per acre, and sold at an average of twenty-seven cents per pound; Florida only excelling in quality and price (twenty-nine cents per pound) but failed in quantity, averaging only some eight hundred pounds per acre.

Before our great rebellion, the profits of growing tobacco in New England were small—a little only here and there was grown by way of variety. But the scarcity in the North, consequent upon the war, raised the price exorbitantly, and induced the experiment here of growing it generally and profitably. The effort has been crowned with success. Few, if any, engaged in its cultivation think of abandoning it; the producers have multiplied as the seasons have rolled round.

Of their good, arable soil, the best is given to tobacco. None grow largely—one to ten acres is the extent of individual investment, corresponding to the help at command, and the facilities in barns and out-buildings for hanging it up, drying, and curing. Most of the townships, especially of Connecticut and Massachusetts, are in the business—many towns cultivating from fifty to sixty acres.

Besides paying well, far better than any other crop, it does not go begging for a market; nor is it attended with the delay, expense, care, and loss often had in shipping other products. It sells on the farm. The market is at the producer's own door. The demand for it is so good that plenty of buyers are around in due season, often before it is ready for sale, to take it off their hands, and, what is more, and best of all, give them the ready cash.

There are no statistics yet of the crop of 1871. Only a part has been sold, and it is not expected to excel the crop of the preceding year, owing to the Summer drouth, which was alike injurious to most productions of the Eastern States. The ratio of profitableness, however, will still hold good, the tobacco paying far better than any other crop.

What are the maximum quantities and prices per acre? On hay, 2¼ tons, at $30 per ton; corn, 75 bushels, at $1 per bushel; rye, 30 bushs., at $1 per bush.; oats, 50 bushs., at 65c. per bush.; beans, 50 bushs., at $3 per bush.; onions, beets, and carrots, 500 bushs., at 50c. per bush.; and so on through the whole catalogue of grasses, grains, and vegetables, compared with the *average* quantity and price of tobacco, some fourteen hundred pounds to the acre, at 27c. per pound.

It may be thought that its seeming profitableness is much reduced by the expenses attending its production. Not so. It costs but little, if any more, than is necessary to grow a large crop of corn. The same good soil, with free manuring, requisite to obtain a full crop of ordinary productions, will give, with the light addition of mineral stimulants used, a large yield of tobacco. Any one who can grow cabbages successfully can prevail with tobacco. The process of cultivation is similar throughout. Its treatment from the time of cutting up, and until it is ready for sale, requires more care, skill, and judgment. The leaves must not be torn or bruised, and it needs to be so suspended as to allow a free circulation through all its parts. If dried too rapidly, the volatile elements, instead of condensing, will pass away in the evaporation. If cured too slowly, and is in any way confined, compacted, it will become mildewed, blackened, and spoiled. The cute Yankee, however, soon gets "the hang of it," and is well rewarded for his care and attention in maturing the plant.

When tobacco is sufficiently dried, the process of stripping the leaves from the stalk, and separating them into two or three grades, reminds one of husking and assorting corn. Compared with most other crops, it is not extra hazardous; like them, it suffers from protracted drouth, or excessive moisture, and grown in season, escapes the frost.

At first some were "loth" to engage in the enterprise, thinking for a time, as some alleged, that tobacco would kill their land and leave their fields a "barren waste;" but renewing their acquaintance with agricultural chemistry, their fears were soon dispelled; they soon found out that there was no irremediable deterioration of land having produced tobacco. They feed their soil, especially with the chief elements required in the formation of the plant—potash, lime and phosphates, which, with the ordinary general manuring, keep the land in good heart, and it is ready at any time for rotation to other productions. They know full well that two successive crops of tobacco from the same field, like any other crop, will not do well in the repetition; so, after one crop of tobacco, they "lay down" the land to grass and take another piece for the coming year. In this way some have gone over most of their "intervales," and the land is none the worse for having tasted tobacco.

In a growing state it has but few enemies and requires but little protection. To be sure, for a time, it has to be defended from the incursions of the "tobacco worm;" but that duty is now largely shared by broods of young turkeys and chickens wonted on the fields, which devour the worm greedily. It has no attractions for man or beast, and there are no fears, even without fences, of destructive depredations. Neither wild nor domestic animals will touch it, unless it is the goat (New England is not much on goat), and man does not use it unless doctored with liquorice, molasses, &c. In growing this crop the farmer is not kept awake nights worrying lest his own or his neighbor's quadrupeds "break through and steal." "Unruly Brindle," the leader of the herd, in the pasture adjoing a field of corn, snuffs its sweet odors, looks wistfully at its spreading leaves and spends half her time hunting a weak barrier; and woe to the corn if she finds a toppling wall, a dislocated or broken rail. It is not so with tobacco. It is no use to her and other domestic animals, save in decoctions applied by man to rid them of vermin.

Inexperience and fear of killing the land have been not the only impediments to a more general cultivation; conscience intervened and, to a certain extent, has stayed the innovation of the weed. But the growing sentiment of this avaricious age, "Get rich honestly if you can, but be sure to get rich," is proving too much for the weak conscience and feeble morality, and tobacco is steadily gaining ground. Maine grows none, because the season is too short; Vermont and New Hampshire grow it sparingly because too much endangered by frosts; "Little Rhody" is as yet uncontaminated, but the States of Connecticut and Massachusetts are deeply involved; already they are producing some fourteen million pounds per year and receiving therefor above three and one-quarter millions of dollars. This business has not yet culminated. The erection of cold frames for raising the plants, improved implements for cultivation, the building of new drying-houses and the extension of old ones, indicate progress and the faith of the husbandman. What gold has been to California, oil is to Pennsylvania, tobacco may be to New England. Maple sugar still bids fair to be her prevailing native sweet, and beets for sugar will have to wait while "tobacco is king."

A. H. THOMPSON.

FIELD NOTES AND QUERIES.

The Irish Cup Potato.—If the Irish Cup potato which the Editor of the New England Farmer says "upon the whole, is the best potato he has ever known," is the same "Irish Cup" we used to grow twenty years ago, it is the poorest in flavor, smallest in size, and meanest to dig we ever grew. We should like to have a description of our brother editor's Irish Cup.

Alfalfa in California.—A California paper makes the following statement of the yield of this forage plant: "We saw one piece of twelve acres of meadow which had just been mowed the second time this year. The first mowing in April yielded forty-two tuns, and the last, fifty; thus making ninety-two tuns of good alfalfa hay from twelve acres of land! It will, probably, be mown twice more, and may yield an equal amount. If irrigated, it would undoubtedly yield more, thus making over fifteen tuns of hay to the acre in one season."

Arboricultural.

UPAS TREE.—Antiaris toxicaria.

WILL you, or some of your readers who know whereof they affirm, tell us about the Upas Tree? I have often seen it referred to, but don't recollect ever to have seen any account of it otherwise, and thought perhaps it might be a fabled tree.—C. J. S.

WE cannot do better than to quote what LOUIS FIQUIER says of this tree in his great work, the "Vegetable World." "The half fabulous poison tree of Java was said to be a large tree growing in the middle of a desert produced by its own pestiferous qualities, and causing death to every other plant and animal which came under its influence. To approach the tree for the purpose of wounding its stem and carrying off its juice was said to be the task of criminals condemned to death. There is a measure of truth in the fable. There is the Upas Tree in Java, and its juice, taken internally, is speedy death to any animal; and there is a tract of land where neither plant nor animal can exist; but the two circumstances have no connection. The poisoned tract is the crater of a volcano which emits carbonic acid gas continually—a spot where not even the Upas Tree can grow. The Upas Tree is one of the *Artocarpaceæ*, which abounds in milky juice; and this juice, as we have said, is like many of its congeners, a deadly poison when mingled with the blood."

Upas trees have been grown in European conservatories for many years, and are no more poisonous to the touch than a fig tree. We have in our own forests, trees and shrubs which are a hundred times more poisonous than the famous Upas, which we, as boys were taught to believe was a death-dealing demon of the vegetable world. The lies told in books given to young people to read are enough to make us a nation of liars; but, thanks to the truth-telling scientists of this age, falsehood is rapidly getting its deserts. As men and women have been taught in years past, it requires one-half their lives, and many a pang, to uproot the falsehoods from their minds—that is, with those who seek truth. The number of persons who do this, we are free to confess, very small indeed; hence the scarcity of true knowledge.

ARBORICULTURAL NOTES.

Wash for Trees.—C. C. COOLY gives the Country Gentleman what he calls "the best wash for trees to be found in the world:"—Take *sal soda*, which can be had at retail at from 3 to 6 cents per pound; place it in a skillet on the fire. It will soon go to what seems to be water, evaporate, and leave a white powder. Keep it on the fire till it becomes a light brown, when it is done. Use a fourth of a pound, or, if the trees are much covered with moss, or are very dirty, use half a pound to the gallon of water. Wash the trunk and large limbs, using a sponge or cloth. It can be used at any season of the year. I prefer in Winter. This wash will not injure the foliage of the most delicate plant. In a few weeks after using the trees will look as clean and sleek as though they had been varnished, and the trees will astonish you by their growth and healthy appearance.

Seed for Name.—Inclosed you will find a seed which I would be pleased to know the name of, etc. It was found among my flower seeds. I planted it but it fails to grow from some cause.—A. L. JENNINGS.

THE seed is one of the papaws (*Asimina*), but of which species we cannot determine as the specimen was badly crushed. Papaw seed must be planted soon after being gathered or they will seldom grow. Plant as soon as ripe is the rule to follow with all kinds of trees and shrubs.

Unfruitful Cherry Trees.—I have a number of very thrifty looking cherry trees which blossom beautifully every Spring, but have entirely ceased to bear fruit. Will some one tell me whether I can do anything to restore fruitfulness.—J. A. FOX.

IF your trees are healthy and have borne fruit we cannot understand why they should not continue to do so. It may be that there has been unfavorable weather at the time of blossoming for several years past, and that this is the cause of failure. Keep the trees growing by manuring and pruning and we think you will discover the cause of non-fruiting.

About Hedges.—I want to set a cedar or spruce hedge. When is the time to do it?—D. A. S., *Lewis Co., N. Y.*

IN the Spring, as soon as the ground is warm and dry enough to work easily. Do not, as some recommend, wait until the trees begin to grow.

The Garden.

HOW TO KEEP CELERY.

FOR the benefit of those of your readers who have never succeeded in keeping celery in eatable condition throughout a winter, (and I know of several) I will give a rule by which I have preserved celery, free from rot or rust, as late as the last of March. Never work at celery in any way, except the plants be perfectly dry. Earth up, never before 10 o'clock A. M., or after 4 P. M., and then only on a very dry and sunshiny day. In the fall, as soon as the ground begins to freeze enough to make the slightest crust in the morning, select a dry and sunshiny day, and as near noon as possible, pack your celery in boxes, (I use soap or starch boxes), placing first a layer of earth, about one inch deep; then a layer of celery, placing the plants just far enough apart to not lay against each other, and thus, alternating earth and celery, until the boxes are filled, having the first and last layers of earth. Place the boxes where the celery will not freeze, (but not in a heated room), and your celery will keep splendidly and always convenient for use. W. R. S.

Marquis of Lorne Cucumber.—Some time ago we gave an engraving of this new cucumber, and had several inquiries for seed, but found that the high price of the seed had prevented its introduction here. An English gardener writes:—"I can recommend this to every one. I have this season cut three (only three of this sort), and they were respectively 20 inches, 20½ inches, 21½ inches long, perfectly even in size from point to stem, and hardly a seed in them, the flavor also excellent. Their great fault with me, however, is that they are very late."

Dairy Husbandry.

COST OF MILK IN ENGLAND.

THE London *Milk Journal* gives an account of a farmers' meeting recently held in Manchester, with the view of placing the relations between the producers and consumers in a better position. From statements made at the meeting, we get some idea of the cost of producing milk, a matter of some importance to American dairymen who are now furnishing so much cheese for the British people. In comparing the cost of producing milk with what it was two years ago, the Chairman observed that cows were £7 ($35) dearer now than then. Two years ago cows could be bought at £21 ($105) each, and now they could not be purchased under an advance of 33 per cent. As to the wages of cow-men two years ago, he paid fourteen shillings sterling per week, but now he trembled to think how long it would remain at eighteen shillings. That was an increase of 21 per cent. As to the cost of utensils, he was assured by one of the leading firms in Manchester, that they would not take an order now under 20 per cent. advance of what the price was two years ago. There was a corresponding increase in other departments, so that the average increase in the cost of production was 28 per cent. He also pointed out that he had not reckoned the increase in taxes and the rent of the land. On the whole, the Chairman thought the price of milk should not be less than four pence (eight cents) per quart.

Manchester is on the borders of Cheshire, one of the largest dairy counties in England, and we presume the statement of the increased cost of milk is very fairly represented.

We are told that American cheese is in sharp competition with English make, and that in order to ensure a ready sale of our goods we must put them down low enough to command the situation. In other words, we must sell cheaply if we wish to hold the English market, and if we cannot sell as low as last year's prices, we had better stop making cheese for export altogether. Now, according to official reports sent in to the American Dairymen's Association, the average price received for New York factory cheese last year (1871) was $11.73 per hundred pounds; and, deducting two cents per pound for manufacturing and furnishing, the net receipts to the farmer were not quite nine and three-quarter cents per pound. Allowing four and a-half quarts of milk to make a pound of cheese, which is only a fair average, the farmers receive for their milk delivered at the factory only a fraction above two cents per quart — or, to be exact, two and one-sixth cents. The price of cheese during the Winter, it is true, advanced to high rates, but as it was nearly all in the hands of buyers, the farmers were not benefited by the rise.

We think the great bulk of New York cheese last year was sold lower than it ought to have been sold, and that in regulating prices some regard should have been had to the cost of producing milk, not only at home but in England. We are not in favor of exorbitant prices for any farm product; but our farmers are entitled to a fair living profit; and when they send their products into the markets of the world, prices should be regulated somewhat upon the values of the goods with which they are competing. The great bulk of English cheese is held until Fall or early Winter, and fine English cheese always brings a good price,

The American cheese interest is now very large, and shipments, we are aware, are very difficult to be controlled; but the great fault of our system of selling is in keeping the markets glutted during hot weather. An overstocked market in hot weather, when an article like cheese is almost sure to deteriorate on the holder's hands, must, of necessity, break down prices below real values; whereas, if our factories furnished only what could be easily handled and go into consumption, better prices would be maintained. We are not in favor of any system of marketing which, during a considerable portion of the year, forces prices down below actual values, and, during the other portion, puts them up extravagantly above real values. Dealers deserve to be fairly remunerated for their labor, and we are glad when they are *more* than remunerated; but we are sorry to see the cheese trade made a vehicle for wild speculation where fortunes are won or lost, as "on change." Prices on the 1st of June at Little Falls this year have reached 14⅜c.

If these rates can be maintained as an average for the season, if the season be one of ordinary make, farmers will, perhaps, feel themselves remunerated, as it gives them net, about three cents a quart for their milk. Last year the highest price paid for cheese at Little Falls for the same time, was twelve and three-quarter cents; and yet American cheese was quoted in London two shillings higher during the last half of May, than for the corresponding time this year.

We cannot see how it is possible to produce milk in England less than four cents gold per quart. Assuming this to be the cost, we could send our cheese to England, underselling the English make on the basis of the rates named, and allow from three to four cents per pound for transportation and commission to dealers. But whether the prices named be maintained or decline during hot weather, to the rates of last year, our dairymen will do well to study the cost of producing milk here and compare with what it costs abroad. They will then be able to say whether they are able to make cheese for export or not.

[It is proper to say that this article has been deferred some time, because of the pressure upon our columns, of what we regarded more important articles.—EDS. RURAL.]

TROUBLE IN THE MILK VATS.

I HAVE charge of a small factory of about 200 cows. We began making cheese the 14th of May. I had perfect success until the 8th of June, when I perceived a kind of taint in the milk, which has troubled me ever since.

Up to the 8th of June I had used only one vat; the 8th of June I used, and continue to use, two vats. I have had one floating curd in the time. I managed to get along with that very well. I have tried every way that I know to prevent the milk from tainting, but so far without success. I know the cheese made from such milk to be inferior in quality to that made from good milk, and therefore crave information from a more experienced person than I am. We use an agitator, and have used ice in the milk until I became convinced that it was a damage to tainted milk and so left it out. At first I thought the trouble was in cleansing the milk things of the factory, and took great pains in having them kept sweet, and believe they were.

I have tested the milk of the patrons by changing from one vat to the other. I did not know but they might neglect their pails and strainers, as their cans were clean and all right as far as I could see; when they were dirty I spoke to them about it and they would come better. Some of the cheese, after being taken from the press, seemed inclined to leak whey about the next day after taken out, and continue to ooze from the sides for a week or ten days, though but very little—just enough to show and make them look bad; and I had to scrape most of them with a knife, some of them twice, and then grease them. This is the third year I have worked in the business and I never saw anything like it before. There are no whey vats, or anything to make an impurity in the atmosphere nearer than thirty rods, where there is a hog pen where the whey goes. I have kept the spouts cleaned out as well as possible, and strewed ashes under the factory, and done everything which I think will prevent the taint that shows itself. The cheese that were made first of the poor milk being about ready for market, taste strong, and are of bad flavor. If you can give me any information on this subject it will be gratefully received.—ROLLIN STAFFORD, *Orford, N.H.*

THE questions raised by our correspondent are very important, and cover a great deal of ground. The troubles complained of are by no means isolated or confined within narrow limits; for they exist, more or less, over the whole dairy region wherever the factory system has been introduced. The causes producing tainted milk and floating curds are various, and have been a fruitful theme for discussion at the meetings of Dairymens' Associations for years. Some of these causes have been found out, and others are imperfectly understood; but it may be of some satisfaction for our correspondent to know that these troubles are not always, or, indeed, generally, to be charged to want of skill in manufacturing—though skill and experience in handling such milk may often modify, to a large extent, bad influences, and save the product from loss.

Tainted milk and floating curds are much more prevalent during hot Summers than during cool seasons; and the hot, sultry weather of June of the present year was so favorable for their development that we hear of their "cropping out" in many localities, and often at places where in previous years no such troubles obtained. It is true, the causes may sometimes be traced to neglect at the factory, in keeping utensils and surroundings clean and sweet, or from bad rennet; but the most general cause lies back of the factory—in other words, the milk has been damaged before it reaches the manufacturers. In the case detailed by our correspondent, the fault, we should say, lies in the milk before it reaches the factory. Still it would be well to examine the rennet, and be sure that the taint does not come from this source. Great care should be taken at all times, but especially in hot weather, in selecting good, sweet rennets. In soaking the skins and preparing for use, stone crocks should be used, as wooden vessels are liable to taint; and when once tainted they are difficult to cleanse, and will not unfrequently spoil a good batch of rennets before suspicion is aroused that anything is wrong. We have often seen tainted milk and floating curds from the use of tainted rennet; hence, manufacturers should look sharply that taints do not come from this source.

Nothing is said concerning the water at the factory; but as an agitator is used, it is presumed that the milk is cooled by water running under the vats during the night. If the milk room is well ventilated and everything is kept sweet and clean about the premises, we may reasonably conclude that the cause of the trouble is in the milk before it reaches the factory.

Of course, from a brief description of the facts as given, it would be mere guess work to hit upon the real cause of the trouble. It may possibly come from the milk of one, two, three or more patrons, but we can suggest some of the leading causes by which our correspondent may investigate, and possibly discover, where the trouble originates. Perhaps the most common source of injury to milk during hot weather, is in shutting the warm milk closely in the can and hauling to the factory. Milk should be cooled and aerated at the farm before it is started for the factory. There are various devices for this purpose, some of which are advertised in the RURAL NEW-YORKER. At all events, the ARNOLA ventilator, costing only a few shillings, should be attached to every carrying can.

Inquiries should be directed concerning the herds and their treatment. Perhaps some patron is adding the milk from a diseased cow, or a cow with broken udder. Dogs may be used to some extent in racing the cows from the pasture, thus overheating the milk in the udder. Some patron's cows may be taking their drink from stagnant pools, from sloughs or frog ponds. Perhaps carrion has been left exposed in the pasture. All these are capable of producing tainted milk. It is presumed of course that the pails and cans of patrons are kept scrupulously clean, and that the milking is performed in a neat and cleanly manner. There are other causes which might be named, but we feel quite certain the trouble will be found among those enumerated.

A word now may be offered in regard to the treatment of tainted milk. Such milk requires the use of more rennet than sound milk, as the coagulation should be hastened. Then, after the curd is cut sufficiently with the knife, the mass should be heated quickly to a temperature of 96°, and when the acid is slightly developed, draw the whey, and heap the curd in the vat, allowing it to take on considerable more acid. It then should be passed through a curd mill, and salted. The curd from tainted milk should have a long and free exposure to the atmosphere, being repeatedly stirred and turned before it is put to press. We give here only some of the leading outlines of the process; but for the minutiæ and best manner of treating floating curds and tainted milk see Practical Dairy Husbandry, a work to be had of the Publisher at the RURAL NEW-YORKER office.

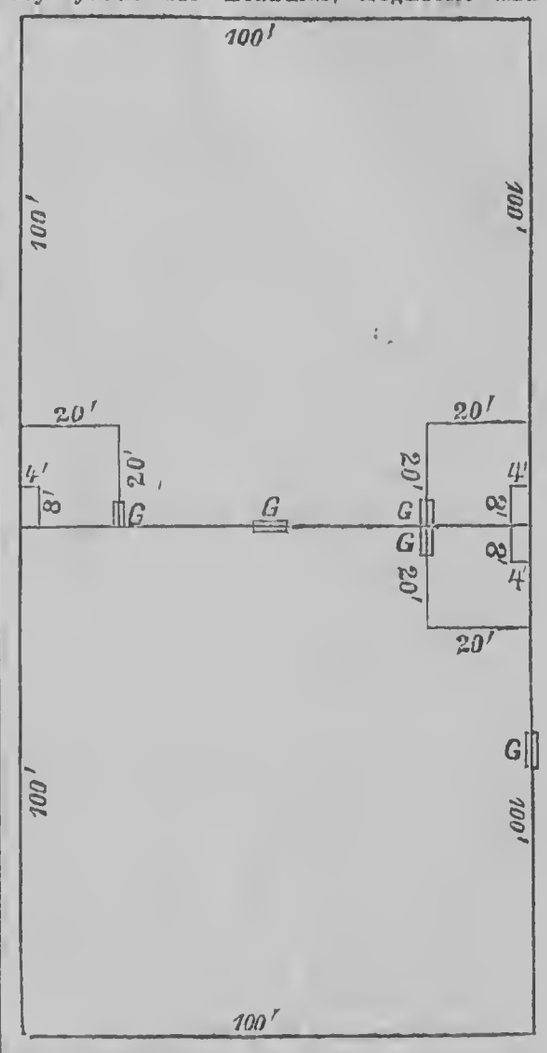
Patent Skipper Extractor.—The Osseo, Mich., Farmer, says, D. GREEN, A. M. GREEN and S. D. MCNEAL, of that place, have applied for a patent on a device for ridding cheese of skippers, that works like a charm, and describes it as a box of sufficient capacity to hold the cheese, and so constructed as to exclude the air from the cheese by the use of water or any like fluid which causes skippers to come out and drop into the bottom of the box, where they are found on opening the box. The process is simple, and the work effective, and will be of great service to grocery and factory men.

Gilt-Edged Butter in Pound Boxes.—Some of the Greenfield, Mass., farmers are said to market their butter in Boston, put up in one pound tin boxes. These are packed in ice, and arrive at the Hub as fresh and nice as they leave the dairy. It is the gilt-edged butter that receives this treatment, and it brings seventy-five cents or more per pound.

The Poultry Yard.

FOWLS IN GEORGIA.

ENCLOSED I send you a statement showing what I have done with poultry since January 1. My common fowls I gave the run of the farm, but fed them regularly three times a day, same as fowls confined. My yards for Brahmas, Leghorns and



Cochins, were built as per inclosed plan. I intended at first to keep four varieties, but could not get the games I wanted, and therefore only built for three lots of fowls. In the lot where there are two small yards (twenty feet each) I gave each variety equal time to run on the hundred foot lot, shutting them up alternately at noon each day. The yards and houses cost $17.50, being built entirely of split boards—both houses, and fences, and gates, all hung with wooden hinges, having done all the work myself. I intended to have sent you a statement at the close of the year, but shall sell out this month preparatory to moving to Florida, where I intend to raise poultry on a larger scale, as I know there is money in it. I will also mention, that I lost over one hundred chickens (most of them eight weeks old or over,) by rats, having tent coops without plank floors. See page 3.

POULTRY ACCOUNT FROM JAN. 1 TO JULY 20, 1872.

Macon, Ga. W.

POULTRY NOTES AND QUERIES.

Feeding Turkeys.—S. E. MCNAIR does not find it easy to raise turkeys, and asks some one of experience to tell him what to feed them with to make them strong and hearty. Another correspondent sends us a letter advising that young turkeys be kept on the nest a day or two after they are hatched, and then kept in a small yard for a few days, where they cannot run far, for that injures them. Feed with wheat middlings or flour bread, soaked in milk; also a little curd now and then. Don't give Indian meal to young turkeys.

Disease Among Ducks.—A correspondent says his Rouen ducks often get very stiff and remain so for several days, so that they can scarcely walk around, and some die without getting better. He asks experienced readers to give the cause and a remedy.

The Herdsman.

AILANTHUS FOR MURRAIN.

An observing gentleman of McNairy Co. Tenn., says that after a series of careful tests and experiments, the people of that region have become fully satisfied that the Ailanthus (*Ailanthus glandulosus*), is a sure preventive to murrain in cattle. He says the cattle commence eating the leaves of the tree about the time in the season when murrain would appear; and that none having access to it have ever been known to take the disease, while others all around have been seriously afflicted. As proof positive he refers to a case where a gentleman had, under the impression that it injured the milk, stopped his cattle from feeding on the Ailanthus by keeping them closely penned at night, and driving them beyond the range of its growth every morning. As a consequence they all sickened and died of murrain, while the cattle of his less fastidious neighbors escaped.

NOTES FOR HERDSMEN.

Salt for Farm Stock.—Prof. James E. Johnson of Scotland says that half the saline matter of the blood (75 per cent.) consists of common salt, and as this is partly dissolved every day through the skin and kidneys, the necessity of continued supplies of it to the healthy body is sufficiently obvious. The bile also contains soda (one of the ingredients of salt) as a special and indispensable constituent, and so do all the cartilages of the body. Stint the supply of salt, and neither will the bile be able properly to assist digestion, nor the cartilages to be built up again as fast as they naturally waste. It is better to place salt where stock can have free access to it, than to give it occasionally, in small quantities. They will help themselves to what they need, if allowed to do so at pleasure; otherwise, when they become salt-hungry, they may take more than is wholesome.

Black Leg.—One of my yearlings died with what my neighbors called black leg. It was well to all appearance in the morning—eat its food with the rest; in the afternoon I found it down; it could neither get up nor stand up. On examination I found one of its hind legs swollen. On pressing it it would rattle as though filled with wind and water. In the course of two hours it had extended over the whole of its hind parts and along its back to its shoulder, when it died. The swollen parts were filled with very black, stagnant blood. Is there any cure or preventive? The animal was in good condition.—B. E. Keep, *Albion, Pa.*

This disease is known as black-leg, black-quarter, or joint murrain, and is usually fatal. Early treatment with bleeding and active purgatives, followed by cold linseed tea and sedatives, will sometimes save life.

Cow With Three Teats.—A Pennsylvania correspondent—J. N. Redmond, Crawford Co.—has a very nice cow, five years old, which has had two calves, and, in consequence of a caked bag with her first calf, lost use of one teat. He asks the Rural New-Yorker if such a cow will give as much milk as if she had the use of all her teats. To which we reply, that if everything else is right about the cow, the loss of one teat will hardly make any difference in the quantity of milk which she will give. She will be more liable to have trouble in the bag at the time of calving; but otherwise, a good cow with only three teats need not be discarded from the dairy for that fault.

Jumping Cattle.—A man who had been troubled with jumping cattle, and who had tried every plan imaginable, with the worst cases of jumping cattle, found nothing would succeed in keeping them in their place, but to put a board over their face. Take an inch board, about fourteen or fifteen inches square, or large enough to cover their eyes, and let it come down within four inches of the end of the nose; tie this to their horns, by boring two holes to correspond with the width of the horns, and they wil not jump.

To Fasten Cows' Tails in Fly-Time, L. Winne recommends: "Take a string or cord about the size of a shoe lace, two feet long. Attach a small wire hook to each end; place one end around the cow's tail, just above the brush, and hook it over the cord: it will immediately tighten up; then, in the same manner, hook the other end around the cow's leg above the gambrel joint. It is easily made, and very easily put on and taken off. It can be carried in the pocket of the milker, and thus be always at hand ready for use."

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Striped Blister Beetle.—*July* 30.—We have not as yet received a visit from the Colorado Potato Beetle, but the Striped Blister Beetle (*Lytta Vittata*, Fabr.), which is almost as destructive, has appeared upon some few fields of potatoes in my neighborhood, and is doing considerable damage. This beetle is about three-fourths of an inch long, quite slender, its wing covers striped with yellow and black; hence the specific name *vittata*, which is only another word meaning striped. It is an old enemy of the potatoe, and common in all the Southern and in most of the Western States; at least, I have good reasons for thinking so, because nearly every box of insects I have received during the Summer, from any of the localities named, contains more or less of this species of *Lytta*. There also several other species of Blister Beetles that feed upon the potato, but, with one or two exceptions, I believe this stripped back fellow is the most destructive.

Fig. 2.

As this beetle takes to its wings when disturbed, it can be driven out of a field by using a branch of some tree or shrub, with the leaves upon it, for a brush to sweep over the vines. Several persons should work together, passing along within a few feet of each other, sweeping the vines on each side of them. If some dry straw be spread along on one side of the field, the beetles driven in that direction, they will alight upon it; after which, set on fire, and burn up both beetles and straw. This method of destruction has often been tried with success. Sometimes merely driving the beetles from the vines, without destroying them, will answer, for they seldom return to the same field. Of course, by this driving process you may send them to a neighbor's field while you save your own vines, therefore, it is best to try and kill them, instead of scattering the pest over a wider extent of country than they would occupy if not disturbed.

The Pigeon Tremex.—*July* 31.—I have received the following letter addressed to me, care Moore's Rural New-Yorker:

Daily Rural Life:—I inclose you an insect whose name I would like to learn. I perceive that it belongs to the Hymenoptera, but further than that I have no means to trace it. I never saw one like it before, although it may be very common. It was found on a hickory tree. Is Packard's Guide the best manual for the study of entomology?—H. W. Young.

The four-winged fly, about an inch long, with a body nearly the size of a common lead pencil, having a stout piercer at its extremity, is a female—*Tremex Columba*, Linn (see Figure 1). The insect is injurious to various kinds of forest trees; also occasionally attacking the fruit on ornamental trees in our gardens, as the larva, which hatches from eggs deposited by the female, bores into the stems and feeds upon the wood.

The elm is a favorite resort for this insect, especially old trees, and it would, no doubt, become quite numerous were it not for its two great enemies, the *Pimpla alrata* and *Ichneumon*, of Fabr. (see Figure 2,) two ichneumon flies, which deposit their eggs in the larvæ of the *Tremex*, while feeding in the trees, by thrusting their long ovipositors through the solid wood and into the grub, as it is hidden safely from all other enemies except that of this wonderful insect. The *Pimplas* are two-winged flies with a body longer than the *Tremex*, and the female possesses an ovipositor (egg placer) fully three inches long,

Fig. 1.

and not larger than a fine cambric needle, surrounded by a thin sheath divided lengthwise into two segments or parts. These three minute thread-like organs combined, form an implement with which the insect is enabled to penetrate through the bark and two inches or more into the solid wood of almost any tree. Sometimes, one of these ichneumon flies will be found dead upon the tree, with its ovipositor thrust into the wood, and some naturalists have supposed that the cause of death was owing to its inability to withdraw the ovipositor from the wood; this may be true in regard to the specimens found in such positions, they being old and exhausted at the time of depositing this, their last egg; but nature does not provide such traps for her creatures, so long as they remain young and able to propagate their kind.

I have watched some of the largest species of ichneumonidæ, not only when they were thrusting their ovipositor into the trees, but while withdrawing it; the latter operation was far the more simple and easy of the two. As I have said, the ovipositor is surrounded by a sheath in two parts. Now, when the insect wishes to withdraw it she first pulls out one side of the sheath, then the other, after which the ovipositor is liberated. The sheath not only protects the ovipositor, but strengthens it while being thrust into the wood; the two divisions being somewhat wedge-shaped, they are readily withdrawn.

Packard's Guide to the Study of Insects is an excellent work for the beginner, as well as those somewhat advanced in the study of entomology.

A Birth-Day Surprise Party.—*Aug.* 3.—A year ago to-day I wrote in my Diary among the mountains of Vt., Mrs. Ruralist having to remind me of the fact that it was my birth-day. Probably one of the principal reasons why I have taken so little interest in this annual event which interests my individual self more than any one else (except the lady named above), is, that I never considered my birth of any great importance except to my nearest relatives. The world would have revolved the same if I had never been born, and mankind just as happy; with, of course, the few exceptions which are always found to every general rule. It is an old saying that women cannot keep a secret, but I know of at least one exception to that rule, which was fully demonstrated this evening as my friends came pouring (yes, that's the word, for it wasn't a dropping, but a regular stream of young folks and old folks) in, all wishing me many happy returns of the day. When I found out what was going on, I felt like scolding Mrs. R., because she had not given me a chance to invite Farmer Garrulous, whom I had visited only this morning; but my scolding would have done no good, for in a few minutes the Farmer drove in with his wife and daughter, having been in the secret for several days. Old as I am, the jokes played on me in the way of presents this evening, were quite enjoyable. I shall not be in want of slippers for some time to come, and the elegant memorandum-book from Farmer Garrulous will save me from forgetting many items for my Diary. The young folks seemed to take special delight in poking fun at my bug-hunting habits, and New York City must have been ransacked to find specimens of art that would hit me entomologically. Mr. Publisher of the New York *Sun* and family, dealt me some heavy blows in brief notes and accompaniments like the following:

Miss Ida, without wishing to remind him of the flight of time, or incur the displeasure of Mrs. Ruralist, begs to present her friend, Daily Rural Life, with a couple of house flies that may be more serviceable than the usual specimens of such creatures."

Accompanying this note was a pair of sleeve buttons made in the form of a house fly. Miss Lizzie's compliments were presented with an elegant metal paper weight, in green and gold, made in the shape of an immense gadfly; while Master Andrew presented what his note said was a "*Scarabeus shorticornis*, or a fine specimen of Yankee Coleoptera." This was a match safe in the form of a big beetle. Master Willie's note, accompanied by a bronze bootjack in the shape of a long-horned beetle, ran thus:—"*Scarabeus longicornis*, or horned-bug, a cross between the crocodile of the Nile and alligator of the Mississippi."

But I am making a longer story of this personal matter than I intended, my main object in mentioning it at all was to urge fathers and mothers everywhere to remember their children's birthdays, and never let one pass without making some demonstration that will fix the date in the minds of the entire family. Let each birthday be a holiday to the entire family, and little presents may be given and received to the gratification of all. Within the family circle the presents may be as costly as circumstances will allow; but outside of this, those of an expensive character are entirely out of place, and not in good taste, inasmuch as it places the recipient in a position which is sometimes anything but pleasant. It is the good feelings exchanged upon such occasions, and the kind wishes for the prosperity and happiness of the person to whom we give our congratulations, which makes the natal day one worthy of being remembered. I never knew a family wherein the natal day of each member was celebrated (no matter how humbly) that did not remain steadfast and true to each other through life.

Sheep Husbandry.

SHEEP IN EASTERN VIRGINIA.

A correspondent of the Southern Planter (Richmond, Va.,) says there is no other branch of husbandry that presents greater inducements to the farmers of that region, than feeding sheep. "I have every year, since the war, fattened a lot of sheep purchased either from drovers or from parties living west of me in the mountains of West Virginia, and I have never failed to make a heavy per cent. on the investment—rarely ever failing to double. My own is not an isolated case. The same is done by many persons in the Valley of Virginia.

Some farmers say that sheep are injurious to land, and will not keep them on that account. I believe just the reverse, as they always leave their droppings on the highest part of the field, which is generally the poorest. You will always find the sheep at night on the highest point in the field.

"I find it very profitable to breed sheep. I keep a few thoroughbred South Downs. I usually have more lambs than ewes. The lambs I have sold in June as high as $3.50 per head, and have sold them when three years old as high as $12 per head. The wool will invariably pay for the keep of the sheep, and the increase is clear gain.

"My plan is to employ an agent to purchase for me, limiting as to quality, size, and price. My directions are about as follows:—Buy no sheep that will weigh less than one hundred pounds, and get them as much heavier as they can be had—no deliveries to be made before the 1st day of October. When delivered, I graze them, and by December I have my sheep ready for market. If my grass is deficient I feed a small amount of grain daily—say one ear of corn to each sheep. From December until I sell I always feed grain. I usually sell in January or February; the time of selling depends upon the markets. Parties should keep themselves posted in regard to the markets, and ship whenever the markets will justify."

Difficulty in Breathing.—My sheep have a difficulty in breathing, catching their breath very quickly, and making a kind of snorting noise.—R. W. Wade, *Clarendon, N. Y.*

Rural Architecture.

CHEAP CONCRETE HOUSES.

THE RURAL NEW-YORKER has frequent inquiries concerning the building of concrete houses. We have published several articles upon this subject, but here is another from the Aberdeen Journal describing the latest mode of concrete building as practiced in Scotland:

The whole process of building houses of concrete is so exceedingly simple that the employment of skillful labor is quite unnecessary. A foundation having been laid, a double framework of wood, or paneling, 9 inches apart and 18 inches high, is placed above the foundations round the entire building, forming a kind of box. This paneling consists of pieces of wood, varying in breadth from three to four inches to over 1 foot, with a bead on the upper edge having an aperture by which the pieces are slid on to an iron rod. Being thus telescopic in construction, the pieces of wood can be lengthened or shortened according to the extent of the building. At intervals between the panels are placed upright bars, called separating posts, several feet high, through which the iron rods supporting the panels pass and are secured. At equal distances of 18 inches, ascending upwards, there are apertures in the posts for the insertion of the iron rods, and the paneling round the entire structure can be raised with ease as the building advances.

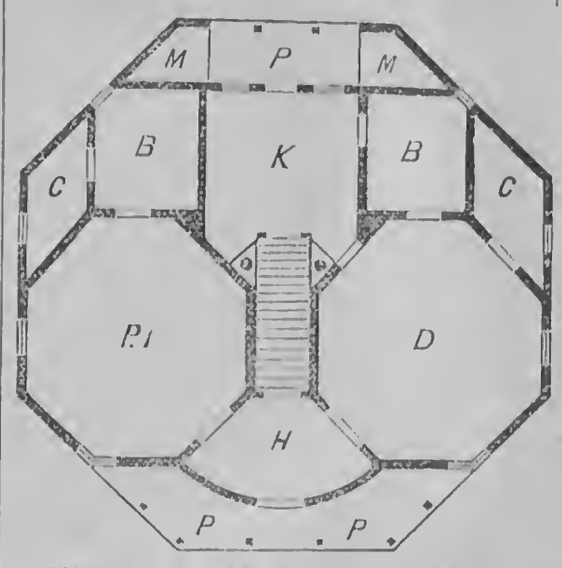
When operations are to be commenced, a quantity of packing, which may consist of rough stones of any shape, the more rugged the better, which forms the first layer of the building, is thrown in, care being taken to keep the packing 1 inch from the face of the work, so that it may not show through it. When the 18 inches of packing are filled up, the concrete, which is in a semi-liquid state, like mud, is poured into the box and percolates down through the stones, thoroughly filling all cavities, and binding the stones and rubble together so tightly that the whole forms one solid mass. For a day, the portion of wall thus made lies encased within the paneling. By that time it has become quite dry, and the paneling or frame is taken off and lifted up other 18 inches, the bottom of the frame resting where the top was before. Thus another box is formed above the piece of finished wall, and identically the same process which we have described is repeated, stones and rubble being thrown in, and the liquid cement being poured over them. In this way 18 inches of building are finished each day if the weather be good, so that in the course of a week the walls of a cottage 8 or 9 feet high are strongly and firmly built.

When the paneling is screwed together to the separating posts, it is so mathematically exact, owing to its careful structure, that the wall is built as straight as if tested with a plumb line. Indeed, it cannot fail to be so, and it is interesting to note that the whole building is finished without the aid of a plumb line, which is quite unnecessary.

A noteworthy feature in connection with the building of these concrete houses is that the usual cumbrous and often dangerous scaffoldings which are used in erecting ordinary buildings is superseded by a much better, more secure, and much less unwieldy arrangement, by which ropes are entirely dispensed with. Little hollow iron tubes, called cores, are placed in the walls, through which iron rods are inserted, connected with brackets which are securely attached to the wall, being firmly screwed through the building with nuts. The brackets are just similar in form to supports used for shelving, and on the top of the brackets are laid the planks for the scaffolding, forming altogether a neat and strong support.

Two cottages, which are built as one, are 32 feet in length by 22 feet, and 8 feet high. In each cottage there are three rooms, those in the front being about 12 feet square, and the back rooms measuring about 7 feet by 12. The cottages are lighted by two windows in front, and four in the back. The flooring is of concrete, which, being thoroughly impervious to moisture, makes the apartments very dry and comfortable. It is intended to have the roof built in the ordinary way with rafters and slating, but it is not uncommon for concrete to be used as a roofing material, for which purpose it answers very well. The outside walls, when built, are finished with a coating of concrete, about a ¼ of an inch thick, a little finer in the quality than that used for the ordinary building, which gives a smooth finished appearance to the structure. No supports are requisite for the lintels of the doors or windows, because after the concrete is hardened, it is stronger than any support of wood or stone. When the building is in progress, spaces are left for the joists, which are temporarily filled with sand, which is easily removable at any time with a trowel. The spaces for the joists are made, alternately 3 inches and 6 inches in depth, on each side of the building, which diminishes the pressure on the walls considerably.

Houses finished in the way we have described are much cheaper than those built in the ordinary way, the saving being from 35 to 40 per cent. The buildings, at the same time are more comfortable, because, being impervious to moisture and heat, they are warm and dry in winter, and cool dur-



OCTAGONAL HOUSE—PLAN OF FIRST FLOOR.

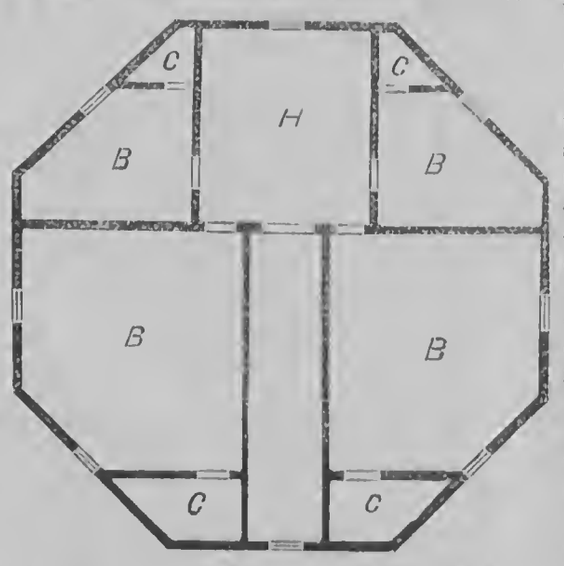
ing summer. The rooms can be papered over the bare walls, no lath or plaster being required, though a coating of plaster in no way affects the concrete, if it is preferred.

An important element, of course, in the process of building is the concrete or cement itself. It is burnt down from stone somewhat in the same way as lime, but, of course, is of an entirely different nature.

When the cement is to be used, it is mixed with rough sand, generally for ordinary purposes in the proportion of eight pailfuls of sand to one of cement. The two are mixed simply in the ordinary way, water being poured over the sand and cement until they are in a semi-liquid state. When the sand is very sharp and shelly, the concrete can be made in proportion of nine pailfuls of sand to one of cement; while in other cases again, where the sand is of a soft, inferior description, one pailful of cement is necessary to seven pailfuls of sand.

OCTAGONAL HOUSE.

HERE is a plan of an eight-square house, roughly drawn, which I shall be glad if some of your readers will improve upon. I am no architect, but am convinced that eight-square houses are better than four-



OCTAGONAL HOUSE—PLAN OF SECOND FLOOR.

square houses, for the wind will not have so much pressure upon them as to crack the plastering. I should like one that would cost $1,500 to $2,000. This is the best plan I can devise, but I think it may be improved by some one who understands it. You will see that in the ground plan I have a piazza back of the kitchen; but I do not know but it would be better to have the kitchen run back and have a pantry and cupboard where the plan is marked M, M, for reference.

In the ground plan P, 1 is parlor, 16 by 16; D, dining-room, 16 by 16; K, kitchen, 12 by 13; B, B, bedrooms, 4 by 10; H, hall; P, P, P, piazzas; C, C, closets. The chimneys are each side of the hall, represented by the round dots, and are to be united in the garret.

In the chamber plan H, is hall; B, B, B, B, bedrooms, and C, C, C, C closets.—S. H. MOON.

WE do not see that our correspondent has made any provision for a pantry. We should use the bedroom out of the dining-room as a pantry and the closet also for a store-room or china closet. But we commend the plan to our readers for their criticism.

Scientific and Useful.

RAINFALL AND CISTERNS.

THE rainfall in the States East of the Mississippi, for a series of years, at different places, will average about forty inches per annum, which is nearly twenty-five gallons per square foot of level surface. But as there is generally more or less waste before reaching the cistern, we will call it twenty gallons per square foot, and base our calculations accordingly.

Hence, a roof thirty by forty feet, will catch 24,000 gallons per annum; one of ten by ten feet, 2,000 gallons, and so in proportion. But the cistern supply is not only governed by the regularity of the rainfall, the size of the roof or watershed, but also by the dimensions of the cistern, which last should be sufficiently large not to allow too much to run to waste, yet it will be no harm to let it waste, provided an ample supply is saved.

A filtering cistern, twelve feet diameter, and ten feet deep below the waste pipe or outlet, will hold, independent of the filter, about 7,500 gallons; one of ten feet diameter and eight feet deep, about 4,100 gallons; one of eight feet diameter and eight feet deep, about 2,600 gallons; one of seven feet diameter and seven feet deep, about 1,800 gallons. Of course, without the filter and inside walls, each would hold considerably more. A good filtering cistern eight feet in diameter and seven feet deep, holding about 2,000 gallons, having but one pump, pipe, etc., could probably be built for $150; and if the proprietor should do the excavation and some other work, and furnish such material as usually is at hand, the cash paid out would probably be less than $100, and the cistern would, in most cases, be large enough for an ordinary family for house purposes, as some families use much less water than others of the same size. When we consider that it would be better to live in a small, cheap dwelling than be without pure air or pure and wholesome water, it would be cheap enough.

But some say cistern water is apt to be roily, dark colored, or greasy; yet, water that is properly filtered will be clean, nice, and nearly white, and of excellent quality. There is no reason of unfiltered water being dirty or greasy, for, if the roof is kept clean, and the cistern be of fair size, sunk well into the ground, with an inlet, an outlet, and the air between the water and the curb, the little dirt will settle to the bottom, and with daily use the water will be lively and clean. Of course, the pump or pipe through which the water is raised must not rest on the bottom, but on something 8 to 10 inches above it; and if the roof catches much dirt, then put a sliding joint into the conductor, 4 to 6 feet up from the ground, so that it can be raised, an elbow put on to the lower end, and the water turned into a cask until it runs clear; then take off the elbow, slip down the joint, and let the balance into the cistern. There is no economy in building 300 to 500 gallon cisterns; never build one less than from 1,000 to 1,500 gallons, and larger is better. For plans and specification for filtering and purifying cistern, see RURAL NEW-YORKER of Sep. 9th, 1871.

But a cistern to supply stock with water should be much larger and located near the barn, stock-yards, or stalls. It need not have a filter in it, although filtered water is better for stock as well as for man, especially for milch cows, as the milk, butter and cheese, will all be of finer quality. The partition walls may also be dispensed with, unless the cistern be quite large, and they are needed to give strength to the work. The outside wall of a large cistern should be twelve inches in thickness. If a very large cistern is needed for a large amount of stock, build it fifteen to twenty feet in diameter, and twelve to fifteen feet deep, holding 15,000 to 31,000 gallons, the outside wall twelve inches thick, with two center partition walls crossing each other at right angles. When these walls are three to four feet high from the bottom, then only carry up the sides, each about four feet in width, along the outside wall to the arch, so as to support the top, strengthen the bottom and outside walls and make the whole work substantial, leaving an open space in the center of the cistern, so as to get in and out more easily, should it become necessary.

But perhaps it would be better to build two or more smaller ones, as they would cost little if any more, and in case of accident to one the others could be relied upon. But in all cases the foundation must be smooth, level and substantial. Should it be preferred, instead of the planks laid crosswise, grout may be used on the bottom. Grout it over two or three times thoroughly; on this lay two or three courses of hard burned brick in good cement, on which commence the outside and inside walls, with hard burned brick well laid in good cement; and when high enough, give the arch a proper turn, and carry it to its place in a proper manner; the walls to be well plastered with good cement both inside and out, and the outside wall well puddled with clay. (See RURAL NEW-YORKER of September 9th, 1871, page 155).

Of course each person knowing his own need and circumstances, can best decide how and where to build, so as to supply his wants and make it convenient. A few brick may be left out of the center walls, one and two feet above the bottom, so that the water can circulate around in the cistern. Put in as many pumps as are considered necessary to carry the water to all the cattle stalls, or water them at a large trough in the yard, each consulting his own convenience and circumstances. If the work is well done, the money will not be wasted; the farm and dwelling will be that much more valuable. ISAAC ESMAY.

South Bend, Ind., Aug., 1872.

SCIENTIFIC AND USEFUL NOTES.

How to Destroy Mosquitoes.—A correspondent of the Scientific American writes:—The strongest crystallized carbolic acid should be placed in a bottle and covered with the same quantity of strong red cod liver oil; shake the bottle thoroughly until a whitish colored foam appears; if such foam does not arise, however, a small quantity of powdered lime should be added, with a little water. Pour the mixture into a dish or other convenient article, and place directly under the open window, as it is from this quarter the mosquito enters.

The moment the mosquito enters, it loses the scent of blood; for, as the combined odor of the oil and acid is much more powerful than that of blood, it follows, as a consequence, that the mosquito becomes suddenly perplexed. The consequence is, that after scrambling and skirmishing about in the dark, the mosquito is led, as it were, instinctively into the mixture, where it is either drowned in the oil or burned to death by the acid.

I have slaughtered more mosquitoes with the article explained above than ever I could have done with my fists or any other dangerous weapons.

Excellent Varnish for Harness.—Pulverize and put in a jug or bottle half a pound to a pound of gum-shellac, cover with good alcohol, and cork tightly. Put the mixture in a warm place. In about two days, if shaken frequently, the gum will be dissolved and ready for use. If the liquid appears as thick as thin molasses add more alcohol. To one quart of the varnish add one ounce of good lampblack, and an ounce of gum camphor. An occasional coat of this is also good for rendering boots water-proof.

Varnish for Plaster Casts.—R. M. COTRELL is informed that the following is recommended as a varnish for plaster casts: White soap and wax, each a half ounce, two pints of water; boil together a short time in a clean vessel. Apply the varnish cold, with a soft brush. It dries quickly, and is not absorbed. Its effect may be improved by rubbing lightly with a silk handkerchief.

To Paint Straw Color, take white lead, chrome yellow, raw umber and lampblack; mix a small portion at first until you get the shade desired, then you can mix a larger lot in similar proportions. Take the white lead, mix in some yellow, add a small portion of umber and a few drops of the black. If at first you get it too dark, add a little white lead.—H. C. C., *Meadville, Pa.*

Cement for Cisterns.—J. J. D.—We know nothing of the durability of the composition you name. Stone and cement are the best lining for a cistern, in our judgment.

To Remove Hard Putty from Sash, take a hot iron and rub over it.

The Horseman.

HORSE STABLE FLOORS.

I FULLY believe that there is no advantage in the use of bedding of any description on plank floors for horses unless they are sick or very low in flesh; in the latter condition the skin is liable to be abraded by attrition against the planks. I have never known this effect upon an animal in proper flesh, except in cases of nervous animals that are restless even when asleep. In such cases I have known the prominent portions of the knee and hock to be chafed so as to be unsightly; but I have a much better, more effective and more economical mode of protecting these parts than can be effected by the use of a bed of straw, or any other material that I have tested. I use a pad made of two or more thicknesses of old blanket or carpet, buttoning or buckling it around the knee or hock, placing one fastening above and the other below the joint. The pad need only be applied at night; it will last years, and if to be renewed monthly would cost infinitely less than straw bedding, even on the farm where straw is abundant. The labor of keeping horses cleanly, and of grooming is less when no bed is used, and the stable is less offensive, especially if the provision for drainage is as it should be.

It is common for the horse to wet his bed as soon as it is supplied, as every groom knows, and I have never known it to be removed at once and a fresh, cleanly bed furnished; but I have often heard an intelligent animal having this habit called a fool, and not unfrequently have I heard the most profane adjectives know to the groom addressed to the poor brute, and impressed with the fork handle, and with no good effect.

It is equally well known to all observing grooms that, perhaps, a majority of horses have the habit of pawing the bedding back, and lying on the bare floor, and I have yet to see any harm result from the habit.

Having long since observed this habit of horses, of pawing the bedding back and lying on the plank of choice, and having also decided that in a properly drained stall bedding was not only useless but injurious, I set about the improvement of the mode of construction of stall floors. In this effort I was so successful that I patented my mode of constructing horse stalls, and for the past three months have done nothing else but build stables, and alter those already built, introducing in all my patent stall.

I construct the stall floor level lengthwise, and give it a slope from each side to the center, at which point I provide a slot in it, of suitable width and length, under which I place an iron gutter having a fall in it toward the rear of the stall, where it discharges into a gutter under the floor, which extends the length of the line of stalls, and discharging into the manure pit.

In the ordinary condition of the atmosphere, the stall floor, as I arrange it will, where no bedding is used and the stable is ventilated properly, be dry in two hours after the horse has urinated. The amount of filth on the belly, thighs, tail and blanket is not a tithe in my arrangement that it is in the ordinary stable, and the purity of the air in the stable is proportionate.

The use of the stables of animals for the purposes of a stercorary, or for the manufacture of manure should have long since been abandoned. It is claimed by many, and even by those of general intelligence, that there is economy in passing straw and other refuse under animals to absorb the urine. Material thus used only retains the wet and fetid matter in the stable, which is rapidly vaporized and volatilized by the animal heat of the body when in contact with it, by which the lungs and eyes are excessively irritated, resulting frequently in blindness and lung affections, unknown in stables properly drained and ventilated, and where no absorbents of the liquid excrement are used, but it is conducted directly out of the stable.

The advantages of this mode of constructing the floor of horse stalls are numerous. The very objectionable slope to the rear in the floor, by which curbs are frequently produced, by undue stress on the back tendons of the hinder limb, and the liability for the animal to slip in rising; the very imperfect surface drainage to a surface gutter in the rear of the line of stalls, and the excessive filthiness unavoidable with such an arrangement, are all removed and superseded in the use of the improved stall floor. The necessity for the use of bedding is removed, and a degree of dryness and cleanliness secured that it is impossible to effect in the old arrangement; and I may safely say, by any other system yet discovered.

All persons familiar with the properties of ammoniacal substances, know that their volatility depends in a great degree on their temperature—the higher it is the more volatile; hence the temperature of the blood of the horse at 98°, given off to moist, fetid matter in the bed, will rapidly eliminate the unwholesome products, and the nose of the animal being near the floor, the amount of noxious gases inhaled is enormous in quantity and very destructive.

The importance of pure air in apartments where animals sleep, whether human or brute, is so great that the ventilation of the subject frequently and thoroughly through so effective a medium as the RURAL NEW-YORKER cannot but be productive of good to some of its many thousands of readers.

I have had an experience of over thirty years in designing and constructing stables for both cattle and horses, during which period I have tested a great variety of modes of drainage and ventilation, and I have become satisfied that I cannot further improve on my present system of effecting both. J. WILKINSON.

Baltimore, Md.

MR. WILKINSON'S long experience in stable economy, as well as other matters pertaining to the farm, entitle his opinions to consideration, and although we are not prepared to fall in with all his ideas in the foregoing article, they may be worth examination as hints towards a reform in stable floors. The comfort of a good bed upon a plank floor, is too obvious to need argument; and it has the further merit of inviting a tired horse to lie down while at rest instead of sleeping on his feet, in which position his rest is only partial. That a horse often wets his bed when it is first put under him, arises partly from the mistake of the groom in laying the bed too soon after the horse has been put in his stall. We do not believe that a horse paws back his bedding that he may lie on the bare floor; the pawing is an act of uneasiness, and is done the same when no bedding is present. As to the slope of the floor, Mr. WILKINSON'S plan of a double slope towards the center would be more likely to cause trouble than a slope towards the rear, as the horse makes a side push with his hind feet in the act of rising. These are our objections to Mr. WILKINSON'S plan.

A WICKED PONY.

THE Rocky Mountain News (Denver) relates the exploits of a pony in that place:

Three herds in company were passing down town when the pony of one became suddenly possessed of the devil of contrariness, and began the manifestation of the same in the most positive and determined manner. Gathering his feet together he humped upon his back and shot his rider some feet into the air, then stood still with head down, looking stubborn and sulky, and then lay flat down in the gutter. When the rider arrived on earth from his aerial pilgrimage he began the futile task of making this perverse equine cuss walk Spanish in the regular way of an ordinary accomodating horse. But it was no go; he was stricken with the idea that his "calling and election" were to lie blissfully beneath the swinging sign of the neighboring grocery store and down by the babbling gutter waters that flow swiftly towards the Platte. He hesitated and objected, and suddenly rearing in the air snapped and rattled his hind feet in the faces of the crowd in a manner that made all stand back in good order. They got a rope into his mouth and twisted his jaw out of shape; they hitched him to another horse and tried to tow him down the street; they jammed several inches of spur promiscuously into his rump; they flayed him with blacksnake whips; they poured water into his nose, but, the tough little beast withstood all the torture and persistently held out for his own way.

After a half hour of alternate beating and coaxing, during which time about two rods of ground had been gained the owner concluded to take off the saddle, bridle and lariat, and it was no sooner done than the broncho sprang to his feet and trotted off as unconcernedly as though he had been free all the time and had only been indulging in his regular *siesta*. Whenever you get a broncho carry the saddle on your back, and walk, besides, and your horse will go along without bucking or putting you to any trouble whatsoever.

Entomological.

INJURIOUS INSECTS.

Why the Cotton Worm Thrives South.

IN a private letter received a few days since from WM. H. WILLIAMS, Galveston Co., Texas, there occur some statements in regard to the increase of noxious insects which we consider worthy of being more widely disseminated; therefore we beg the writer's pardon for placing them before our readers. In speaking of the ravages of insects he says:—"I have always contended that if the agriculturist would gain control of the injurious portion of the insect world he must re-establish, if possible, the antagonism of races as nature designed in organizing its orders of such creatures. In making specialties of a few plants, thereby affecting the conditions of soil to suit them, man has interrupted the order of things and produced other disproportions than those sought, *i. e.*, millions of bales of cotton are produced and millions of millions of cotton moths and their progeny are the consequences. It is the same in a degree with all or many other species of insects. In perceiving this disorder man has generally thought of some specific for the soil and exhausted all his resources in search of it, but to little purpose. The plain marked way he could never be induced to enter upon. Farmer BROWN would try this, that, anything, everything, but in vain; for the creatures he sought to destroy were a mult. Now Farmer BROWN and all his brother farmers must unite to oppose the *united* common enemy. A general systematized movement alone will meet the onward roll of the tide that yearly reaches higher and further, and more surely towards man's chiefest interests, threatening to futilize his efforts to live. Incredulous BROWN may doubt this, and smoke, eat, sleep and die, his children be no better off than their parents. In a great work like this faith is essential, and intelligence and oneness of purpose needed.

"Years ago, I studied the habits of the cotton worm, which is such a devastator of our plantations; the lamented SAY had left the subject incomplete. He said the moth that produced the worm must be poisoned, and suggested poisoned flowers, as sometimes practiced with the Hawk-moth or Tobacco Sphynx; but the cotton-worm moths do not eat of the sweets of flowers. I reared several generations of these insects and studied their habits, and found the musk-melon to be the most attractive food. I was planting cotton at the time and my house was in the center of the plantation, affording me an opportunity of investigating the peculiarities of this insect; but it is sufficient to say that a piece of cantaloupe melons attracted the moths, and that various poisons, cobalt, for instance, sprinkled on the bait, did the business, and I destroyed myriads. I then believed, as I do now, that if every planter would commence in early Spring, and persistently keep poisoned bait of some kind, where the first moths that appeared would find it, we could keep the cotton-worm within proper limits if we did not entirely annihilate it. It is through this stupidness of our planters, who not only want faith, but intelligence, to pursue some such practical method of staying the ravages of this great pest, that we annually lose four-fifths of the labor bestowed upon land planted with cotton."

Of course we do not pretend to know anything of the plan mentioned by our correspondent for destroying the cotton-worm; but this we do know, that the same spirit which permits its increase at the South is wide-spread, and a curse to our country. Farmers at the North as well as in the South, will permit noxious insects and weeds to increase to an alarming extent without lifting a hand to stay their progress. Canada thistles have ruined hundreds of farms in localities that we might name, while the value of one acre of land would entirely eradicate them from fifty. But there is no concert of action, and the industrious, intelligent man becomes completely paralyzed in the midst of shiftless, indolent neighbors.

CURCULIO CATCHER.

DR. HULL, Alton, Ill., has invented (and applied for a patent) a new curculio catcher which is thus described in the Prairie Farmer:—"The general shape of the frame is much the same as that of the wheelbarrow machine, illustrations of which have already been published in the American Entomologist and in the transactions of the Illinois State Horticultural Society. But the new machine instead of being mounted on a wheelbarrow, is suspended from the shoulders of a man standing in its centre. A slit a foot wide in the canvass before him enables him to carry the machine under and about a tree, when the slit is covered by a strip of cotton easily and quickly, and the tree struck with a covered mallet or maul. The machine weighing only 8 or 10 pounds and the operation rapidly performed. Dr. HULL tells us he has been able to go over 960 of his younger trees, now three years planted, in 3½ hours; which is at the rate of nearly 275 trees per hour. In this case the ground is clean and the trunks clear to a considerable hight, which facilitates rapidity of work; but (and this seems to us a special advantage of this machine,) almost any tree, however low-headed, can be got under and its insects caught. We regard this, after the brief examination made, as far in advance of any of the methods yet devised for catching the curculio."

COLORADO POTATO BEETLE.

I discovered, in my potato patch this afternoon, some singular looking bugs which were preying on the leaves of the potatoes. Desiring some information concerning them I will mail with this a box containing specimens of both kinds. Can you tell me what they are, and whether they are likely to increase (if not disturbed) so as to seriously damage the crop next year. The potatoes are Garnet Chili. The bugs are numbered in the box respectively 1 and 2. No. 1 appears to be the most numerous.—S. C. HALL, *Cattaraugus Co., N. Y.*

THE beetles are the much dreaded Colorado potato beetle, of which so much has been said in the RURAL NEW-YORKER for the past two or three years. No. 1 is the larva, and No. 2 the perfect beetle. Look over your file of the RURAL and learn how to destroy them. Begin now, for you have no time to lose, as they will be far more abundant next season.

Farm Economy.

INFRINGEMENTS ON THOMAS' HARROW.

THOMAS G. ORWIG, editor of the Industrial Motor, and, it is asserted, an authority on patents, writes to the editor of the Iowa Homestead as follows:—"In response to your inquiry, "can a farmer make a harrow and set the teeth slanting without infringing on the Thomas Patent?" I submit the following:

"The claim of J. J. Thomas' patent issued Sept. 22, 1868, No. 82,451, is expressed in these words, to wit:

"A land brush or spiked harrow, constructed of pieces of plank, hinged together as described, and provided with numerous inclined teeth pointing backwards at such an inclination as to cast off or slip over any stalks of weeds, straw, or other refuse matter, substantially as described.

"It will be observed that the broad claim of setting harrow-teeth at an angle is not made. If such a broad claim appeared in the original application it was undoubtedly properly rejected. A slanting or bent harrow-tooth is shown in patent No. 9,747, issued in 1853; also in patent No. 10,803, issued in 1854; and in patent No. 12,059, also issued in 1854, a means is provided for adjusting the teeth 'from a vertical to a horizontal position.' Simply changing the degree of angle is not such a new and useful invention as the patent law desires to protect. Mr. Thomas has protection for his particular form of harrow, but his claim, so far as it relates to inclined teeth, is anticipated, and too indefinite to prevent others from setting harrow-teeth slanting in common harrows."

Guano Prospects.—The Augusta (Ga.) Chronicle says the reports of large deposits of guano on the coast of Peru are said to have been exaggerated. The stock in the Chincha Islands is almost exhausted. The stock of guano of good quality on the Guanape, Macabi and Lobos Islands does not exceed one million tons, and is of very inferior quality in the Lobos Islands. Another million tons is the outside quantity. In the south the only deposit of any consideration is on Pabellon de Pica, and this does not amount to half a million tons. The same quantity of guano which remains on the Balestas Islands is of an inferior quality. Should no new deposits be discovered the present stocks will not last more than four years.

Domestic Economy.

FRIED POTATOES.

JOSH H. BROWN is likely to have business enough doffing his hat to the RURAL housewives. We give a few examples of the way they propose frying his potatoes for him.

Mrs. E. E. LARKES writes:—"Take some smooth, medium-sized potatoes, pare carefully, wipe with a towel (don't use a drop of water), slice thin and evenly. Have ready a kettle of hot, sweet lard, or fried meat fat (it should be hotter than you would have it to fry cakes in), drop in your potatoes—not so many as to crowd when they come to the top. Cook till a light brown; skim out, sprinkle with salt and pepper, and place in an oven to keep hot; let the kettle stand till the lard smokes a little; then put in more potatoes. If Josh has grumbled about his potatoes till he has to wear false teeth, the potatoes should be a very light *brown*."

M. L. TUTTLE writes:—"Take some potatoes, pare, and slice them very thin. Fry some pork; when done, take it out, and then add some lard to the pork fat, and put in the sliced potatoes and fry them, like doughnuts, until they are a light brown. Skim them out as free from the fat as possible, and salt to the taste. A very pretty way is to cut them in thin strips, instead of slices. Try it; I know you will think them delicious—we do."

C. O. D. writes:—"Slice the potatoes even and thin (with a slicer is best); soak them in a little salt and water over night, or a few hours; turn them on a cloth or colander to drain. Have a kettle of lard hot, as for cakes; put in a large handful or two, according to the size of the kettle. With a wire skimmer stir them occasionally, and when the white look is gone, or the edges turn up, skim them out and sprinkle on a little salt. If these do not suit, go to Saratoga and practice in one of the large houses a while. I fry cooked potatoes, and turn them as I do griddle cakes."

A. R. R. writes:—"Wash the potatoes clean before peeling, not afterward; have hot in a frying pan about one-half teacupful of drippings from good fried pork—no ham gravy or lard from the tub. Into this slice, thinly, three layers of potatoes; salt and cover; keep them just hot enough to cook without the least bit of scorch; yet they must not cool, as that would cause them to soak with fat. Fry till a reddish-brown on the bottom, removing the cover very often, and with a thin knife raise the edges and see that they are cooking all right. Now turn the frying pan over, on a platter larger than itself, that no grease may drop; slip the potatoes back, the other side up, to fry that side. Cover a few moments at a time, but watch closely, and carefully move the hot pieces to the bottom, that one side of each piece may brown. Do not break any. When all are tender, remove to a covered dish, to keep hot while you cook the rest."

WASH and pare the potatoes and slice them thin, not an eighth of an inch thick; have ready a frying-pan with a little hot fat (I always fry them after having fried some kind of meat, and have fat just to cover the bottom of the pan); put in the potatoes and spread them evenly over the pan, but not more than three or four slices deep. Pepper and salt to taste; pour in a half tea-cup of water; cover tightly, and cook until the water is gone; then remove the cover and stir carefully so that they will brown evenly, and if you call them abominable, why, much as I desire that honor, JOSH can doff his hat to some one else.—C. I. S.

TELL W. R. S., who gives the directions for "potato-fry," in RURAL NEW-YORKER, July 27th, that if she would use *good cream*, and fry well in it, she will have a "fry" that Mr. BROWN would have a great deal more reason to take off his hat for than to use milk. This makes a "fry" fit for any epicure, whether his name be BROWN, SMITH, JENKINS or JONES.—FLORETTA.

TAKE the requisite number of raw potatoes, pare and slice thin; and if the potatoes are old, let them stand five minutes in cold water after being sliced. Take equal parts of fresh lard and butter, each, half the size of a large hen's egg, and let it become hot in the frying-pan, then add the potatoes, sprinkle a little salt over them, and *cover tightly*. Fry fifteen or twenty minutes over a moderately quick fire, stirring them two or three times with a wide-bladed knife, so they will brown evenly. If proper care is taken in stirring and keeping the heat steady and constant, they will come to the table crisp and tender, and will have the merit of being genuine *fried* potatoes, not "boiled ones hashed up." If Mr. BROWN finds this method a success, and I know he will, he need not take off his hat to me, but may pay his best respects to Mrs. BROWN, as a good husband should.—MRS. N. A. PARKER.

ODDS AND ENDS.

To Make Pop Corn Balls.—While popping your corn put some sirup on the stove, the nicer the better, and boil it down quite thick. Put your corn, while hot, in a dish-pan, or any large vessel convenient, pour the sirup over it and stir it well with a spoon. It only needs enough to make the corn stick together. Butter your fingers and make up the balls quickly any size you wish. Lay on a plate until cool, and they are nice.

To Make Whisky Pickles.—In these degenerate days we often get hold of whisky that will eat up cucumbers speedily. Better leave such liquor for the human stomachs which crave it, and buy alcohol pure. It is just as cheap, for it can be reduced with water according to its strength. I have used a gallon of alcohol to five or six of soft water. Pick your cucumbers, wash carefully, so as not to bruise them, and put them in as fast as they are collected. Stir them up from the bottom every day, and stir in the scum that rises as they work. This process soon makes good pickles and sharp vinegar. The sun or fire hastens the process. The pickles are nicer if small.

To Preserve Siberian Crabs.—I have preserved them, a pound of sugar to a pound of fruit, the old fashioned way, leaving on the stem and skin; and if one does not mind the sugar, they are nice; but another way that some manage is to cook the fruit in just enough water to keep from burning till soft enough to rub through a sieve fine enough to keep the seeds and skin from passing through; then put a pound of sugar to a pint of pulp and boil down until quite thick. It takes a careful hand to keep it from burning. If it is to be used up immediately, less sugar will do. If well done this is very nice.—AUNT SALLY.

Elderberry Wine.—In answer to a correspondent we give the following recipe, contributed to the Cincinnati Gazette, pronounced good:—The berries (which must be thoroughly ripe) are to be stripped from the stalks, and squeezed to a pulp. Stir and squeeze the pulp once a day for four days; then separate the juice from the pulp by straining through a sieve. To every gallon of juice add half a gallon of cold spring water; then boil nine gallons with six ounces of hops for half an hour; strain and boil again with three pounds of sugar to each gallon for ten minutes, skimming all the time. Pour it into a cooler, and when lukewarm put in a little toasted bread with a little yeast on it, to set it working. Put it into a cask as soon as cold. When it is done working cork it down and let it stay six months before bottling.

Yeast from Grape Leaves.—We do not know the origin of the following. We find it in an exchange uncredited, but it may be of practical use to some:—Last summer I discovered that grape leaves made a yeast in some respects superior to hops, as the bread rises sooner and has not the peculiar taste which many object to in that made from the hops. Use eight or ten leaves for a quart of yeast; boil them about ten minutes and pour the hot liquor on the flour, the quantity of the latter being determined by whether you want the yeast thick or thin. Use hop yeast for raising it to begin with, and afterward that made of the grape leaves. Dried leaves are equally as good as fresh. Sometimes the yeast has a dark film over its surface when rising, but this entirely disappears when stirred.

To Remove Iron Rust From White Goods.—A remedy which I have tried and found effectual, is this:—One ounce of oxalic acid dissolved in one quart of water. Wet the iron-rust spots in this solution and lay in the hot sun; the rust will disappear in from three to twenty minutes, according to its depth. I have just experimented by holding a rusted cloth, wet in this solution, over the steam of a boiling tea-kettle, and the rust disappeared almost instantly. In either case, the cloth should be well rinsed in water as soon as the rust disappears, to prevent injury from the acid. Many use this acid to remove fruit and ink stains from white fabrics. When diluted still more, it may be used to remove fruit or ink stains from the hands.

Miscellaneous Advertisements.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages**, is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Pres. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

D. D. T. MOORE, 5 Beekman St., N. Y.

MONEY IN THE GARDEN: A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening, and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Pear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely illustrated work of 268 12mo. pages. Sent, post-paid, for $1,50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.

By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely illustrated, and printed and bound in extra style. Contains 224 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

A GREAT PAPER.—The RURAL NEW-YORKER, published by D. D. T. Moore, 5 Beekman street, New York, is the Great National Illustrated Agricultural and Family Journal of the Nation, sixteen large double quarto pages, devoted to the Farm, the Garden, the Orchard, Live Stock, Dairy Business, Household Affairs, Markets, General Intelligence, and Choice Reading for the Family Circle. The RURAL has long been the favorite farm and fireside weekly of America, and is undoubtedly the cheapest and best journal of its class now published. We have expressed ourselves freely and often, that it is the greatest paper in all this land. Terms, $2.50 a year. Gazette and RURAL $3.50 a year.

Fashions for Fall and Winter.

1170

GODIVA. This Polonaise is one of our latest Paris Novelties. It contains many new and very valuable features. Without looping it can be worn as a long tight-fitting basquine, or looped (as shown in cut) it is a most elegant Polonaise. The ornamental back piece passes over the shoulders and forms a pant lust cape in front and is "adjustable;" may be worn or not as fancy dictates, thus constituting *two* entirely different Polonaises in appearance. The back piece is sometimes made in velvet or satin, and richly trimmed, and completes a brilliant toilet when worn with a house dress. Besides its beautiful variations it is well adapted to any material. Takes six yards of 24 inch goods. Price of pattern with cloth model ONE DOLLAR. See PREMIUM OFFER below.

1165

NEW FALL WRAP. Is a sacque and cape, with a thribble box-pleat laid on the under side in the back, and in place of the broad pleat of last season; just the three edges are visible from each side, giving the appearance of six round folds, the cape slopes gracefully to the back, and is left open, to trim. The sacque has a large sleeve, which can be used or not, as weather or comfort demand.

We give this as one of the very best for fall and winter cloak made in either velvet or cloth. The original is of dark blue ladies' cloth. Scolloped and bound with velvet and velvet buttons. Takes three yards of ladies' cloth. Pattern, with cloth model, 50 cents. *See premium offer below.*

762

FRESTO. Chemise for lady. Its great success in leading all other styles is owing to its perfect fitting band and sleeve. The curved arm size is an improvement of *much* value, as it will not cut the shoulder or bend the arm, and also avoids the homely, perplexing gusset. Takes three yards linen for medium-size. Pattern, with cloth model, 25 cents. See Premium below.

We give a CLOTH MODEL with each pattern which SHOWS every seam, pleat, gather, loop, etc., how to put the garment together by the pattern, and how it will look when completed. By the use of our Cloth Models any person who can sew can FINISH the most difficult garment as easily as the plainest. They are PERFECT GUIDES.

Premium Offer!

If you write the following, viz.:

[RURAL, 1170, 1165, 762,]

and sign your name, giving your P. O., Co. and State, and then inclose it, with *One Dollar* and *Ten Cents*, to us, we will make you a *yearly* subscriber to *Smith's Illustrated Pattern Bazaar* (begin with the present No.), and send to you by return mail *all* the patterns, with cloth models complete, of the *three* above engravings, *as premium*. *Now* is the time to *Subscribe!*

Either of the above patterns sent by mail upon receipt of its marked price.

SMITH'S

ILLUSTRATED PATTERN BAZAAR.

ONE DOLLAR A YEAR.

Premium! See above "*Premium Offer.*"

It is the *best* and *cheapest* fashion *magazine* in the *world*. It is the *New York City* ladies' *authority* in *all* matters pertaining to toilets. It is the *only* fashion publication in this country that *imports Styles* and *sells* patterns of them.

The present number contains a large double-page *fashion plate*, 11 by 22 inches, printed on beautiful, heavy, rose-tint paper; Foreign Correspondence; Criticisms; Stories; Hints, Etc., Etc.—with information in detail upon all parts of ladies', misses' and children's dress and dress making.

Also a *Half-price Check*, which entitles each holder to select any pattern contained in this number by sending half price.

Single Copy 25 Cents.

The American News Co. supply the Trade.

☞ *Catalogue* of *Fall* and *Winter* Styles mailed upon receipt of *stamp* and address.

Be *particular* to address, very *plainly*,

A. BURDETTE SMITH,
Smith's Pattern Bazaar,
914 Broadway, New York.

OUT-OF-DOOR NOTES.

An Editor Getting Fresh Air.

WE see a marked difference in the ways of farmers, from year to year, as we travel among them. And this change is for the better, for it indicates a disposition to shake themselves loose from the old traditions and the ways their fathers trod, and adopt whatever is good on its merits. For instance, look at

The Sowed or Drilled Corn

that is to be seen in all directions, in many localities acres of it, where three years ago there were not as many square rods. I have to-day seen, in a ride of twenty-five miles, a hundred acres, more or less, of corn, most of it of excellent growth. This suggests another innovation, which is sure to come as soon as the advantages and profits to be derived from it are more generally and thoroughly understood. We refer to

Soiling Stock.

This business of soiling involves extra labor, of course, and that is the chief obstacle to its more general adoption. But it brings ample compensation, for it diminishes the area of land needed to produce the same crops and support the same stock, thus diminishing the first and permanent investment, which is often, as many farms are managed, almost wholly unremunerative. If the investment in land is less, that in labor can be greater, the culture given better, fertilizers used more freely, and the profits more certain, because these three elements in agriculture present, diminish the chances of failure always.

Again, it is enough to put a man in a shooting mood to witness what we have witnessed to-day, to see work-horses turned out into pastures that will not afford a good meal per acre for once a week, even if he forages over the whole acre. Think of keeping a horse in such a place in fly and mosquito time! and then expect him to do a good day's work beside! But this is scarcely more barbarous and unprofitable than keeping cows in the dry pastures of clay hillsides, as many do, without a bite of green forage, or the shelter of a stable—often not of a tree—from the first of July to the first of October. Talking of

Trees in Pastures,

reminds us of what a dairyman, who had a fine farm, without a tree in meadow or pasture, said to us last summer, when we asked him what had become of his shade-trees and why he did not plant some for his stock. He replied that it was all nonsense to talk about the humanity, and especially the profit, of shade in pastures. He had shade trees in his pasture, but he cut them down. He found cows spent too much time standing in their shade whisking their tails when they should be feeding. Now they had nothing else to do but feed. Just then we called his attention to his herd chasing and goring each other in the liveliest manner; asked him what that meant. He didn't know! We did. The cattle were almost mad with the heat and wild from the torments of the gad-fly, from which they were trying to escape. Of course they became more heated from this lively exercise, and the milk, when drawn, was not in a healthful condition; nor was the quality of his cheese anywhere near first-class in reputation among buyers. And no wonder!

Accuracy of Observation Among Farmers.

We were spending a night in the country with a friend, not long since—a friend who is a close and far more accurate observer than most men; also a practical man. His neighbor came in, and in the course of the conversation said;—"Some insect or other is destroying my cabbages. I cannot find what it is, though I have hunted them all over."

Our friend said, "What sort of work do they do?—how is the cabbage eaten?"

The neighbor described the condition of the cabbages, when my friend told him it was not an insect at all; it was his fowls. Examination proved it to be a fact, that the fowls were eating the cabbages. A little watching settled the question.

So we farmers too often jump at conclusions, without taking into account all the circumstances. Our observations are not systematic, critical, and continuous. We do not value *facts* enough. And we do not enough consider the relations of isolated facts to each other. Our observation and thinking are both superficial and inadequate.

Farming a Dull Business.

Talking with a very bright and ambitious young woman, a farmer's daughter, where we stopped over night, she said farming was a dull sort of life. "Yes," said a young man of twenty-two years, "there is no incentive to work; it is all hum-drum, routine, and hard work no relaxation of effort, and nothing to stimulate the mind."

"What nonsense," we replied. There is everything for a stimulus. Each farm is a world in itself, about which those who have lived upon it know little or nothing, comparatively. Suppose, for example, we were to ask you how many kinds of grasses—*real grasses*—grow on your farm—could you tell us, with their correct names, habits and history? Suppose we ask you how many species of plants are indigenous on your farm, and the names of these plants, time of flowering, color of flowers, soil and locality in which they grow—could you tell us? Suppose we were to ask you how many species of birds visit your farm every year, the time of their arrival and departure, their habits while with you, their names and their habits while absent from your locality the balance of the year—could you tell us? Suppose we ask you how many species of insects are to be found on your farm—their names, history, habits, whether injurious to you or not, upon what trees or plants they live, when and how often they appear, and how long they stay—could you tell us? Suppose we ask you to show us specimens of the grasses and other plants, the birds, insects, &c., which may be gathered within your boundary fences, could you show them to us? And yet, if you were to undertake to acquire the knowledge we have suggested by these inquiries, you would find your life too short; yet the knowledge you would gain, the interest you would soon take in it, and the knowledge of your own impotency you would acquire would prove to you that it is not the *farm* that is a dull place, but is *you* who are dull!

RURAL NOTES AND QUERIES.

The American Institute Fair has become a prominent Fall feature in this city, and affords amusement and instruction to thousands of our citizens. One cannot help wishing as he walks through it of an evening, amid the throngs of intelligent, well dressed visitors, that every inventor and manufacturer in the country were represented. Each year's experience adds to the facilities afforded the visitor for inspection and for the acquirement of a comprehensive knowledge of the purposes of inventors and the practical ends to be subserved by their inventions. We learn from the officers that the Fair to open September 4 promises to be the most interesting yet held. This is not strange. For nowhere else can inventors and manufacturers reach so great a number of the most intelligent observers of all nations; nowhere in this country is there such opportunity for a cosmopolitan advertisement of the uses and merits of any machine or manufactured article. It will be seen by reference to an advertisement elsewhere that all who desire space for articles they desire to exhibit should apply at once for it. The building will be ready for the reception of articles for exhibition Aug. 20.

Hoopes—Quinn—Bliss.—Some time ago we announced the fact that Messrs. HOOPES, QUINN and BLISS, had left on a tour of observation in Europe. One of the Editors of the RURAL NEW-YORKER has just received a letter from Mr. HOOPES, dated at Rotterdam, Holland, July 22, which will interest their many friends among our readers:

MY DEAR B.;—If it were not for a *sacred* promise made you before leaving the land of the "Stars and Stripes," I really think I could not find time to write, notwithstanding we have all frequently spoken of you, and in a bumper of pure old English ale, drank to your memory with all the honors. We have had a delightful trip, so far, through portions of England, Southern Scotland, (QUINN in Ireland,) and have now just arrived in "*Deutchland*." Horticulturally we have seen so much to admire—so different from anything in our own country—that, really, I cannot give you even an outline, or a mere sketch of the leading features. A man insane on the subject of evergreens, finds here much to gratify him, and at Messrs. VEITCH'S, Chelsea, near London, I saw the finest collection, possibly, in the world. You are doubtless aware that this firm are the introducers of all the novelties from Japan, consequently they have growing by the acres many novelties not yet (or possibly a few) introduced into the United States. The *Sequoia* or *Wellingtonia*, does admirably here, even better than in California, and the rarer Firs and Spruces are really examples of perfect health and luxuriance. We can never hope to equal this, as we need the moist, cool climate necessary to their health. Well, I forgot you were not an enthusiast on this point, and I am apt to be a bore on the tree question. We have seen acres of flowers grown for the seeds—Arboretums by the score, ribbon-gardening until we are satiated—and yet the cry is "*Still they come*." We go to the "*bulb-farms*" of Holland, then the seed-farms of Prussia, thence to Belgium to see flowers, then to France for nurseries, a short stay in and around London, and home again. QUINN and BLISS unite with me in kindest regards to you and all inquiring friends. As ever,

Truly yours,
JOSIAH HOOPES.

The Report of the Commissioners of Agriculture for 1871, it is asserted by a circular just received, will be issued the last of August, some three or four months in advance of the usual time for publication. Two hundred and fifty-five thousand copies of this volume have been ordered printed by Congress, the Department, however, receiving of this number but 25,000 copies—scarcely sufficient to supply its regular correspondents, Agricultural Associations, the press, and foreign exchanges. Since Senators and Members of Congress receive between 600 and 700 copies each, we advise our readers who desire the volume to write to their respective Congressional representatives therefor. Of course, they desire to make political capital out of this distribution; but remember you have to pay the expenses, and are entitled to consideration.

The St. Louis Ag. and Mech. Association is noted for the beauty of its grounds, the completeness of its arrangements for exhibitors and visitors, and for the general liberality of its management. Its fairs are great events in the live West. A new feature of the coming fair is to be the competition of county, district and State fairs for prizes offered for the best and largest collection of fruits, vegetables and grains. Thus an entire State can compete with any other State in a general exhibition of its resources; so of counties, districts and townships. It is plain that the object and results of this liberality will be to enable each district of each State, or each State as a whole, to exhibit the indices of its resources and progress. It is a good idea, and broad and comprehensive and catholic in its conception and purpose.

Young Women Keeping Farm Accounts.—"My daughter keeps my farm accounts, sir; and she is as systematic and particular as ever Boy was, who kept them before he left home. I tell you it does girls [and he might have added boys also] good to give them some responsibility, and set them to watching things about the farm and household. They learn, I find, economy by it, and soon discover that their respectable old father is not necessarily a crabbed old curmudgeon because he don't loosen his purse-strings whenever they see something they happen to fancy; for they discover the real reason why the purse should not be opened." So said a progressive farmer, a kind, appreciative, and proud father, and a big-hearted man on general principles, to us the other day. We think what he said worth recording.

Iowa Stock Law Unconstitutional.—Judge BENSON, of the Circuit Court of Scott Co., Iowa, has decided the Iowa stock law unconstitutional, in that it submitted its adoption by the several counties in the State to the people. The Supreme Court of the State had previously held that, "The General Assembly cannot legally submit to the people whether an act shall become a law or not, the people having no power in their primary or individual capacity to make laws. They must do this by their representatives."

THE SEASON, CROPS, PRICES, ETC.

Simcoe, Norfolk Co., Ont., Aug. 5.—We are having another very dry Summer, in fact, we are suffering worse than we did last. It has been nearly two years since the ground has been thoroughly wet, and in consequence, nearly everything has become parched up. The oat crop (which is being cut) is the shortest I ever saw, consequently the greater share of it has to be gathered without binding. Wheat was an average growth of straw, but the grain is somewhat shrunken; barley was very good; hay was very light, and meadows and new seedings have dried up so, that I fear we shall have a scarcity of hay next year as well as this. The hop crop promises a good growth of vine, and appears to be loading well; as yet, the lice have not made their appearance in any quantity; the prospects are that hops will be a good price, as there is but a small breadth of land devoted to them in comparison to what there was two years ago. The market seems to be better cleared of the old stock than for a number of years.—P. G.

Crops in Southern Canada.—The hay crop on the north shore of Lake Ontario and the Upper St. Lawrence was light in some instances, but on the whole was fully an average. Wheat, an extra crop this season on the shore of Lake Ontario. Barley, about the usual breadth sown; the grain is good and will yield well. Oats never looked better; peas are good and seedsmen have already contracted for large quantities of the early kinds at $2 and upwards per bushel. Wages of farm hands, first-class, $160 a year for eight months; summer season, $15 to $18 a month; for the harvest season we pay $25 per month. For the last twelve or fourteen years we have manufactured our own reapers and mowers; factories have sprung up all over the country and we can purchase our own farm implements at from 20 to 30 per cent. less than in the States.—T. H.

Put-in-Bay, Ohio, Aug. 5.—The grape crop promises finely thus far. No rot or mildew as yet. The berries and clusters are large and fine for this date. Other fruits, as apples, pears, peaches, &c., are also good. Small fruits have done well until affected by the extreme dry weather, of which we had many weeks. Latterly it has rained abundantly and crops of all kinds have improved much; also feed, of which we were getting very scarce. The grass was as dry and dead in all appearance as they ever have it in California, but is now green and fresh as in early Spring time. Our hotels are full and it is lively here as Saratoga or Long Branch.—S.

Monroe, Benton Co., Oregon, July 28.—Harvest has begun in earnest; the grain is good but very light on the ground. The yield will be very light for Oregon, no grain yet threshed. Meadows are very light on account of a very dry season. Late grain looks well. Fall sowing looks well—ready to harvest. Wheat, 75c.; oats, 62½c.; potatoes, $1; hay, $10 per ton; butter, 20c.; eggs, 25c.; cows, $30@40; sheep, $2.50; mutton, $3; hogs, 3c. per pound, gross; chickens, $3 per dozen.—S. A. H.

Waverley, Mich., Aug. 8.—The fruit crop bids fair to be abundant; peaches are beginning to ripen; crops of all kinds are a fair average; wheat is turning out well; some farmers have a yield of 32 bushels per acre; potatoes will be injured by bugs; Paris green is in good demand for them; have had beautiful harvest weather, just rain enough to make corn grow and renew the pastures. We have a splendid farming country.—W. W. B.

Macon City, Mo., July 29.—Crops look splendid. Rain plentiful. It has rained nearly every day, much or little, for the last two weeks. All kinds of vegetables are plentiful and cheap. Very hot between showers.—H. H. S.

RURAL BREVITIES.

MINNIE W. is informed that we cannot comply with her request—have no right to do so.

HERBERT EVANOR will find "Hand-Book for Home Improvement" a useful volume. For sale at this office; price $2.25.

J. J. DE LAND is informed that we have never seen the book he names; hence have no knowledge of its contents or merits.

JOHN ANDERSON, Lockhart, Texas, wants a man capable of taking care of fifty cows. Let such address him for particulars.

WE cannot advise L. W. B. of Elbridge, without seeing his invention. The firm he names is reliable, and may be consulted with confidence.

THE Fifth Annual Report of the Ohio State Horticultural Society is issued and received by us. It can be obtained of the Secretary, M. B. BATEHAM, Painesville, O.

"RURAL READER," Marion, Ind., can obtain the Transactions of the American Pomological Society by remitting $4 to the Treasurer, THOMAS P. JAMES, Cambridge, Mass.

J. WILLIAMSON is informed that the definition Webster gives the abbreviation he names is that generally understood in business; what the Amherst boys meant we have no means of knowing.

MRS. C. A. JAMESON is informed that we know nothing about sawing with platinum wire other than the facts published in RURAL, July 6. Nor do we know anything of the seed-sower she names.

J. J. W. BILLINGSLEY has become associated with J. G. KINGSBURY as editor and proprietor of the Northwestern Farmer, at Indianapolis, Ind. He is reported a practical and successful farmer.

J. R., Long Island City, is not advised to go to farming in any Western State until he has learned how. A new beginner can do about as well in one place as in another, and not well anywhere until he has learned how.

W. S., Landisburg, Pa., is advised to send a sample of his "Mineral," addressed to "Chemist, Department of Agriculture, Washington, D. C.," with a statement of the facts concerning it. In our judgement, it has no commercial value.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

Social Topics.

RICH AND POOR.

I WAS rich. Not so rich as ancient CRŒSUS nor modern ASTOR, with millions at command, but the balance at my bankers was largely in my favor, and, what was better, I owned a flourishing business, which yielded me a good profit over all expenses. Yes, the candle of the LORD shone upon my head; the Almighty was with me in prosperity, and my happy children were about me. Young bowed to me with respect, and old men hastened to do me honor. The blessings of Him that was ready to perish came upon me, and the degraded yielded to my influence. I was esteemed worthy a place in the Legislature of my Nation, and municipal honors were forced upon me.

The wealthy and honorable even from strange cities thought it an honor to be my guests, and when I wished to travel, I had no difficulty in obtaining a free pass over the roads, and was the welcome guest of the honored and great, and all the privileges of the cities I visited were at my command. Our clergyman was a frequent visitor at my house, and his proffered counsel was sweet to my spirit. His amiable wife showed her affection for mine by a loving embrace when they met, and often passed the time together in pleasant and profitable converse, or singing while they played our melodious organ, or discussed the popular books and magazines on my table. My counsel was sought in matters secular and religious; in committees, social, civil, or in church, my name was first mentioned, and I was unworthily exalted to the highest in church and in friendly societies. Strangers deferred to me, and relatives fawned upon me. Mechanics and tradesmen praised me for my promptness and generosity, and begged a continuance of my favors.

But I am *poor*. Not by any criminal conduct. A trap was set for me and I was blindly drawn into it—drawn, I am sorry to say, by the silken cord of church fellowship. Brotherly confidence was abused, and I was caught. My signature was craftily obtained before I suspected the treachery. What a change has passed upon all my former relations! How I am now shunned by my former friends! I must have become demented, that my name is never mentioned for office in Church or State. The minister has not opened my door for months, and his wife has now no soft kiss nor word of consolation for my afflicted companion. Ah! my organ has been sold, and my walls have been robbed of those pleasing pictures, to help meet my obligations. My daughter and my sons have parted with their ornaments for the same purpose. My scores of acres and numerous dwellings have been reduced to a small property which my eye easily surveys. My horses and carriages have passed to other hands, and my carpetless floors and hard-bottomed chairs are outspoken evidences of the great revolution. My daughter is never invited to meet with her young acquaintances, and when my sons appear in society, they are insulted.

Instead of being urged to accept a seat in high places I often hear such expressions as "careless fool;" "stupid;" "lost his money;" "going down hill;" "scarcely worth a dollar;" etc. Am I then looked upon as a criminal? I have paid my debts to the last cent. Every creditor is satisfied in full and I can lie down with the pleasing assurance that I owe no man any thing but love. I can but notice that my neighbor DEMAS, who settled with his creditors at fifteen cents on the dollar, still commands the same respect. Visitors still tread his Turkey and sit upon his plush. His rich equipage still stands at his door, and the chimes of his piano float into my window; his daughters sally forth in rustling silks to the gatherings of the gay, and no one seems to consider if this is at their own cost, or if they are using property justly belonging to another. But I am looked upon with scorn; yea, they that are younger than I have me in derision. Is it true that the highest virtues are regarded by man with contempt!—that honesty, fidelity and justice are regarded as crimes, so that a poor man's burden becomes greater than he can bear? But enough. Shall we complain? GOD is not unmindful. He does not forget to be gracious. From the earliest period the complaint has been "The rich hath many friends while the poor is forsaken by his own neighbor." But a divine sentiment throughout that heavenly treasure, GOD'S Word, is very comforting to the honest poor. The Omnipotent is their friend, their shield and their guide, while they confidingly say, "Choose thou our inheritance for us."

P. H. S.

HISTORY OF THE CENT.

IN a late number of your beautiful RURAL I noticed a brief sketch of the old-fashioned red American cent, and, knowing there is a large number of young collectors of coins that read your paper, I thought it best to correct and add to your article a few items of interest connected with our earliest copper coinage. As most of your readers are aware, previous to the United States Government, there was another known as the Colonial Confederation. These colonies were without any local coins for a long time, when different colonies were authorized to issue copper pennies for the convenience of trade. Connecticut was one of the first to avail itself of this privilege, and a larger number of dies or varieties were issued by this State than any other. Massachusetts issued a penny and half-penny. Vermont, New Jersey and New York also issued pennies struck in this country; Kentucky and the Carolinas, as they were then called, had theirs struck in the mother country.

SMALL HANDS DOING AN ACT OF KINDNESS.

In addition to these, there was a number struck in the old world for circulation in this, which bore a connection with the colonies. The penny known as the Confederation, was one of this kind, and for some time the Franklin, a "mind your business" penny, was classed among them, but now it is generally believed to have been struck in Boston. This penny had on its obverse a sun-dial over the above motto, and on its reverse a chain formed with thirteen links, to represent the original number of colonies that formed the whole. The so-called Washington pennies were not used for general circulation, owing to a request made by WASHINGTON to have them suppressed, in consequence of their bearing his images in accordance with the monarchs of the old world, which custom he did not approve of for a republic. These are now considered as medals, and so classed by numismaticians.

There was also another penny struck in England which I had overlooked; it is called the Rosa Americana, and is extremely rare. The first United States penny was struck in 1793; these are the ones referred to as possessing the liberty head, with flowing hair, and liberty cap resting on the end of a pole projecting over the shoulder. Those with the thirteen links on the reverse were only one variety of this date, the others having the wreath referred to. During the latter part of this year, the die was altered to the same as the 1794, which continued in use until the latter part of 1796, when it was again altered to the one known as the Knot die.

For the benefit of young collectors, I would state, that among the scarce dates are, 1793, 1799 and 1801, with some variations in dies of other common dates, and that no specimen much worn or defaced possess much value even in these dates.

It is the pride of American collectors to secure the finest and most perfect specimens for their cabinets, and will pay fabulous prices for them. There is nothing among the whole range of series that rank up to the American coins, and the old fashioned American pennies stand at the head of this.—C. W. J.

THE wealthy women of Hartford protest against paying taxes without the right to vote.

THE MARRIAGE OF THE CHINESE EMPEROR.

PENDING the selection by the proper officials of a "lucky" day in October next for the marriage of the Emperor of China, the arrangements for the festival are, as concerns dresses at least, in a very forward state. So far back as the year 1869 the province of Chekeang was privileged to receive an edict directing it to present for the occasion 3,350 pieces of silk goods, 400 catties of silk thread and embroidered velvet, and 1,800 pieces of fine cotton cloth. These were delivered in due course, and in response to subsequent orders the favored province has sent to Pekin 48,000 pieces of brocaded silk, 200 pieces of plain green silk, and 2,000 of what are referred to in the record as "silk articles of attire" for the household and guard of the Empress-elect. Further, Chekeang has furnished 8,000 silk dresses, and 800 pieces of plain silk for the reserve wardrobe of the Imperial body guard, and 5,000 silk dresses and 500 pieces of plain green silk for the Imperial chair bearers and escort. The impetus given to trade by this extensive demand for home products must be considerable, and the youthful Emperor has by his first public act on issuing from his minority indirectly founded a claim upon the gratitude of his subjects. It is true that the people of Chekeang, who furnish these supplies gratuitously, complain of the burden thrown upon them, and have even gone so far as respectfully to hint a doubt as to whether there was not a mistake in the estimate of necessities of the Imperial body guard in the matter of "reserve wardrobe."

SUCCESS in life is very apt to make us forget the time when we weren't much. It is just so with a frog on a jump: he can't remember when he was a tadpole, but other folks can.

THE following politicians are, or have been, editors of papers:—Henry Wilson, Colfax, Gratz Brown, Senator Anthony, Speaker Blaine, and Congressmen Brooks, Cox, Roberts, Kinsella, Roosevelt, Brownlow, and Getz.

AMONG the new appointments in the Post-office Department we find the following:—Jacob Allender to be postmaster at Oxford, Dodridge County, West Virginia, vice Miss Elizabeth Gray, married.

NEVER pay a boy to look after your shadow while you climb a tree to look into the middle of next week.

DANIEL WEBSTER'S farm, in Marshfield, Mass., which used to contain 4,000 acres, has now less than 400.

VINES OVER A COTTAGE.

ONE of the greatest improvements to a small cottage is the prevalence of vines clambering over it so as to almost entirely conceal its outline. For this purpose nothing can be better than the American Ivy (*Ampelopsis*) and Golden-vined Honeysuckle (*Lonicera aurea reticulata*), closely intertwined, so that during the autumn months the effect of the golden and crimson foliage is beautiful beyond description. Over the front of the house, especially if there should be a porch, the effect will be heightened by a rampant growing Clematis, either *C. Vitalba*, the European Travelers' Joy, or *C. Virginia*, our native Virgin's Bower. The abundance of pure white, fragrant bloom on each of these, aided by a dense mass of foliage, is productive of good results.

The Prairie Roses, owing to their entire hardiness and free-flowering habits, are also worthy of due consideration as cottage runners; but there is an air of stiffness and primness about them which never harmonizes so well with their surroundings as do the vines before mentioned. When the cottagers of America are willing to receive a lesson in floriculture from the Paisley weavers of England, we may then date an era of progression which is sadly needed through our land to-day. The few hours spent during the evening or early in the morning on a bed of choice flowers will return compound interest in pleasure on a capital invested in labor; and my reputation for veracity will never be questioned when I state that, when men are once induced to feel an interest in plants, it increases with their years so that rarely is it ever forsaken.—*Journal of Agriculture.*

THE LIBRARY OF THE LOUVRE.

AMONG the losses sustained through the burning of the Library of Louvre during the Communist insurrection, one of the most important appears to be that of the Motteley collection. It occupied an entire room in the Louvre Library. Bequeathed to the nation by M. Charles Motteley, it was conspicuous for the number of volumes it contained that were clad in rare and precious bindings. Many of these had belonged to the kings, queens, princes or princesses, of France, from Louis XII. to Charles X. There were books showing the arms of Diana of Poitiers, of Francis I., Henry III., IV., etc. There were books belonging to Grollier, with his device, "*Grollierii et amicorum*;" there were the "Memoires" of Martin du Bellay, the copy that had belonged to Catharine de Medicis, with her devices in widowhood, painted in enamel on the covers.

Among the curities were also a manuscript Bible of the sixteenth century on vellum, and adorned with numerous miniatures; a manuscript containing the funeral procession of Anne of Brittany; two Books of prayers written by the celebrated caligrapher Jarry; a "Portolano" of the sixteenth century on vellum, drawn up by the master pilot of Dieppe, and some maps of the same period, prepared for the use of the French admiralty.

THE influence of temper upon tone deserves much consideration. Habits of querulousness, or ill nature, will communicate a cat-like quality to the singing, as infallibly as they give a quality to the speaking voice. That there really exist amiable tones is not an unfounded opinion. In the voice there is no deception; it is, to many, the index of the mind, denoting moral qualities; and it may be remarked, that the low, soft tones of gentle and amiable beings, whatever their musical endowments may be, seldom fail to please; besides which, the singing of ladies indicates the cultivation of their tastes generally, and the embellishment of the mind.

THE spider was an earlier student in pneumatics than Galileo, and actually demonstrated the principles of the barometer long before Torricelli. And while men were laboring to work out the barometer from Torricelli's discovery of an almost perfect vacuum our little philosopher was quietly and confidently practicing the same principle in the construction of her web—making the threads which support the net invariably short when the weather was about to be wet and stormy, and invariably long if fine days were coming. Hence the name, Barometrical Spiders.—*Scribner's Monthly.*

THERE is no more potent antidote to low sensuality than the adoration of beauty. All the higher arts of design are essentially chaste, without respect of the object. They purify the thoughts, as tragedy, according to Aristotle, purifies the passions. Their accidental effects are not worth consideration. There are souls to whom even a vestal is not holy.—*Schlegel.*

"MOTHER," said little Ned one morning, after having fallen out of bed, "I think I know why I fell out of bed last night. It was because I slept too near where I got in." Musing a little while, as if in doubt whether he had given the right explanation, he added, "No, that wasn't the reason; it was because I slept too near where I fell out."

Our Story-Teller.

SUNSHINE AND SHADOW;

OR, AGNES LINDSAY'S TRIAL.

BY DE FOREST P. GUMMERSON.

CHAPTER I.

"I'm so tired, mother!"

"Yes, darling, I know; but we have only a little way to go now, and then you shall have a good long rest."

"I'm so tired, mother," was the reply.

Five years since AGNES VAIL left the old homestead to which she was coming back again.

When WALTER LINDSAY came into the village of Froudwell, he had no obstacles to overcome to insure a position. The LINDSAYS had been known for years as the proudest and wealthiest family in the town that lay just beyond the hills, and their fame had long been a theme for Froudwell gossip; so when one of these great ones deemed Froudwell worthy of a Summer's sojourn, every door opened at once to bid him enter and abide.

Whether it was because he had grown tired of the grandeur of his parental home that he chose the plainest and simplest of the farm-houses for his abode, I do not know, but that he did, much to the wonderment of those who lived in more pretentious homes, is certain.

Old farmer VAIL was the owner of the home in which WALTER LINDSAY had chosen, for the time, to become one of its members.

Farmer VAIL had but his wife and the children, so there was room enough for even so grand a stranger as WALTER LINDSAY.

His wife had been an invalid for some years, and was unable to do much of the work, and that which she did was of the lightest kind, so that the harder part fell upon the farmer's fair-haired daughter.

AGNES VAIL possessed no small amount of beauty, and that of no ordinary kind. She had hair of that indescribable color which the sun gives to the heavens at the last moment before it sinks behind the hills. Eyes of as bright a blue as the Myosotis, and which once seen said quite as plainly as that flower, "Forget me not."

Her hands were small and beautifully formed, with the most taper of fingers. To be sure, they bore the unmistakable marks of hard work; but she always took a certain delight in showing them, and indeed once said, "that if she had any pride it was in her hands," and called them her "pride marks."

One accomplishment of this girl's I must not forget to mention, her "horsewomanship." As this is an age in which women are determined to have every right that belongs to them, I shall readily be pardoned for calling things by the right name; why, I verily believe the girl could, and would undertake to break any colt that was ever foaled.

Once, I remember, when her father had spent nearly four days in trying to catch a wild fellow that had been turned out in the meadow, seeing her come up in front of the door seated on the colt's back with only a halter to guide him, and halloa lustily that "she'd conquered him."

And conquered him she had, and from that hour the colt was as virtually her's, as though she had counted out the gold into her father's hand, and received a receipt in full.

She named him "Wildfire;" and I have heard people say, the handsomest sight to be seen in Froudwell, was old VAIL'S daughter seated upon the back of "Wildfire," and tearing like mad down the road."

WALTER LINDSAY was something of a horseman, and he had not been long in Froudwell before the villagers noticed that AGNES VAIL rode no longer alone, but that young LINDSAY was always by her side.

That these rides would end in no good, there were many ready to predict. The difference in position of the two could only bring about ultimate sorrow.

"I should have thought that EGBERT VAIL would have known better than to have taken this young patrician into his house," said one old dame noted for her wisdom.

The Summer did pass very pleasantly, notwithstanding all the predictions that it would not. And when Autumn with its wealth of variegated beauty crept softly into the place which Summer had so well filled, WALTER LINDSAY wandered one day with AGNES VAIL down to a grove of chestnuts, and there seated on a mossy stone, while he wove amid her hair a cluster of crimson sumac, told her how that he had grown to love her, and asked her to be his wife. AGNES VAIL was no coquette. She had not learned the art of playing with men's hearts, as though they could not be marred or broken. To her, the love of any human being was too sacred a thing to be thrust aside lightly. And then she did love WALTER LINDSAY, in spite of the great gulf of caste that she knew lay between them.

For some moments she did not speak. Then, placing her hand in his, she said:—"If it is your wish that I should become your wife, and you can take me out of my position, believing me worthy to come up to yours, then will I be your wife. I know that I do love you, and to refuse you would but make me wretched."

That night, when the candles were burning dimly, and they sat around the table holding pleasant evening converse, WALTER LINDSAY told EGBERT VAIL of his love for his child, and asked his consent that she should become his wife.

For some time the old man seemed unable to speak, so great was his emotion at the suddenness of this announcement. Many had told him what would be the end of these wild rides and rambles of WALTER LINDSAY and his child. But he had only laughed at their fears, and jested the matter away.

To EGBERT VAIL the thought of his child marrying one in a higher position than her own was not a pleasant one. There arose in his mind the vision of a time when her mother and himself should want to visit her, and she in her elegant home and among her husband's friends, arrayed in robes of silken sheen, would blush and feel ashamed of them in their simple garbs of homespun.

At last he spoke. "It seems to me, young man, that this is no trifling matter," he said. "If my daughter had been of the same social position as yourself, I should not have hesitated for a single moment with my answer. She should be your wife. But as the matter stands, I would rather you would wait until the end of a year before you plight your troth."

Of course, neither of the twain would listen to this proposition, and thus it was, somewhat in anger at their decided refusal, that EGBERT VAIL forbade their marriage, and ordered WALTER LINDSAY from the house.

In anger only; for when the next morn's rising sun shone warmly into the old man's chamber, he awoke, repentant of his rashness of yesterday, and resolved to bid these two loving ones God-speed on their journey through life. But when he came out from his room and down to where his family were wont to gather for prayer, he found that in the night WALTER LINDSAY and AGNES VAIL had gone out into the world, and without his blessing.

CHAPTER II.

WHEN WALTER LINDSAY had asked AGNES VAIL to be his wife, he could not have foreseen the manner in which his parents would receive the news of his marriage, else he would have hesitated long ere he took so decided a step towards its consummation. To him life was all brightness. He had always had his own way and he could not have been made to believe that when he took my woman as his wife to his father's home that the doors would be closed against him.

Somehow old Mr. LINDSAY had heard of his son's marriage two days before that son came in person to apprise him of it, and present his fair-haired bride to him. And in these two days he had nursed his anger to such an extent as to make it something really terrible.

In vain did his wife attempt to soften down his wrath. In vain did she shed tears, and plead that he would forgive their boy, for the sake of the old time when his childish ways and prattle had been the comfort of their lives.

"I tell you, 'No!'" he said in the angriest of tones. "He is not worthy of forgiveness. It was not enough that to gratify his wishes, I gave him money with which to spend the Summer in the country in idleness, but he must needs repay me by marrying some one beneath him in station, and thereby bringing disgrace upon his family name. "No! no! no! I can never forgive him. Never! never! never!"

And the old man was true to his word, for when WALTER LINDSAY rung the bell at his father's home, the servant came from the basement door and handed him a note which he hastily opened and read. When he had finished, he cast one withering look of scorn back upon his father's house, then turned to his fair young wife and took her arm within his own, saying as he did so, "The world lies all before us, my beloved, and my love for you is strong enough to brave even death. I have no longer a home, save that which I shall in the future earn."

I think it was well for AGNES LINDSAY in that hour that she was brave, and loved the man she had married. Most women would have fainted by the way. But she did not; she only looked her husband in the face, and said:—"Whithersoever thou leadest me, will I follow, even to the end of the world."

Days and days of wandering passed ere these two loving ones found an abiding place. Try as hard as he would, it was no easy matter for a man to find work, for a man who never had known how to work. In vain did he plead a willingness to learn, and dire necessity as a reason why he should be given employment. Sound as was his logic, there were men who fancied themselves better logicians than he, and it was to such as these to whom he applied.

But one day when the great black cloud of despair had nearly wrapt its folds about him, there came a soft glimmer of light about its outer edge, that bade him hope on.

A man had promised that on the morrow he would give him a trial, and if he should suit, permanent employment.

Oh! the plans that were formed on this promise. A possible home of their own in the future, in which they should be as happy as the birds in Spring.

And it is well for us poor mortals that the sorrows, like sharp rocks, lie all along our pathway, are hidden from sight, else might we, bruised and blinded by them, fall too easily by the way. They who build castles in the air are happy for a time, if their creations do crumble easily, and fall into pieces when they would inhabit them.

The morrow came, and WALTER LINDSAY presented himself bright and early at the shop. The work that he was to do certainly loomed up as something beyond his power to conquer. But the fair face of the woman he loved, and had promised to cherish and protect, was before him, bidding him for her sake to faint not, or else he might have shrank from the apparent great undertaking.

It is easy for a man with others depending on him for support, to do what seem improbable things, than for one whose self is all he has in the world.

So WALTER LINDSAY grew stronger and stronger with each day, until the work was to him no longer hard, but made light and easy by the success which came to him with it.

He had rented a neat cottage, and with his earnings had been able to furnish it nicely. In front was a piazza, and around this AGNES had trained the graceful madeira-vine and convolvulus. Here, at evening, they would sit and plan for the future.

Ah! how useless is man's planning. When he is strongest, and life seems all brightness, the simoon of death sweeps across his path, and blasts all that but a moment before he had fancied himself to be.

* * * * * * *

Five years have nearly passed since WALTER LINDSAY and his fair young wife came to dwell in Glendale.

In that time the cottage which at first they had rented, had become their own. They had one child, a lovely little bud of future womanhood on which both parents doted. WALTER LINDSAY had, by careful attention to the duties that were his, risen from the position which he had at first accepted, and now was foreman.

It was a lovely morning in early Spring. He and his wife were standing upon the piazza enjoying the wealth of golden sunshine that lay everywhere about them. The tiny crocus peered forth from its Winter bed, moved by the soft warmth of its rays, and opened its beauteous eyes upon the new life that for a brief season it was to enjoy.

Not unlike the life of man is that of the crocus. It comes into life in the fullness of a great beauty. While yet its blossoms seem brightest, a passing storm sweeps them to the ground and it is gone. But when the Spring-time of the year shall come again, it will bud and blossom into a new beauty, like the soul of man cut down in his pride and strength, and laid in the grave, will rise again to dwell forever in the Master's kingdom.

This loveliest of mornings, WALTER LINDSAY lingered longer than usual by the side of his wife. Was it because some inward prompting bade him enjoy that which was his, as though it was the last time he should see her in this world? I know not. But when he turned and traced his steps down the walk and through the gate, out into the long road that led to the shop, his eyes had looked for the last time into those of the woman he loved.

If one could foresee events, how much of the misery that most of us have to endure might be spared? If, on this particular morning, WALTER LINDSAY could have seen the grim monster, Death! as he strode in and about the shop, he might have remained at home, and then there would have been no broken-hearted woman and fatherless child in the cottage on which the sun shone so lovingly this morning.

It was to be a busy day at the shop. They had completed a huge engine, which was to be that day shipped to some place in the South. All hands were required to assist at this work, as well as an additional supply of men from a neighboring shop. It was about noon when they had got the pulleys adjusted, and were ready to raise the ponderous mass into a position from which it might be placed upon the car that was to carry it to the vessel.

When it was about four feet high it was found necessary to remove some of the attachments so that it could be swung around that it might be got endways on the car. To do this it was necessary that two or three men should go under the huge mass. WALTER LINDSAY was one of these. The breaking of a rope was the chosen weapon of death; beneath the ponderous engine lay three shapeless masses, and AGNES LINDSAY was a widow.

Of the dreadful agony of the young wife when the news was brought to her I do not need to speak. There is a sanctity about a woman's grief that should forbid the touch of unholy hands to lift the veil. What passes in that hour when the heart of a loving wife and mother is broken, is best known to GOD, who alone can heal.

I pass over the days during which WALTER LINDSAY lay in his coffin in the cottage home he had purchased for his darlings, and that also on which dust to dust he was laid to rest in the soft embrace of mother earth, and on to the day when the cottage had been sold and the last debt paid, and AGNES LINDSAY turned her face once more toward Froudwell.

During the five years that had passed she had heard but once from her father. She had never asked his forgiveness for the step she had taken. But she had heard that he was willing to receive her back again. It was no hardship for her to return, now that all that had made her life happy away from home was gone. As to forgiveness, I do not believe she ever thought she had need of any; nor do I.

It is a dangerous thing for even a parent to step between two souls that have learned to love, and attempt to rob them of their birthright. If there is ever one who needs forgiveness, it is the one who, by opposing that which is as natural to the human as to die, drives the white-winged bird of love away from where it would gladly have rested to seek another and more peaceful abiding place.

AGNES LINDSAY felt this in her soul. "I have done no wrong," she said. "I only acted up to my sense of duty. Now that my duty in the direction of my husband is done, I will go back to my father and live for him."

CHAPTER III.

AGNES LINDSAY arrived at the hotel in Froudwell, just as the sun was going down behind the hills, about one month after the death of her husband. From the hotel to the home of her childhood the distance was about one mile.

After all the debts had been paid, her husband's funeral expenses among the rest, she found that her purse contained but a scanty supply for the support of two, even though one was but a child. Economy was to her then not a thing of choice, but of necessity. Had she felt able to consult her feelings, she would have hired a conveyance to take her to her father's house, both for her own sake and that of her child. But she did not know how carefully she might have to husband her means, so she resolved to make this the starting point from which, if need be, she would practice a rigid economy. So, tired as both she and the little one were, she determined to walk to her father's home.

They had reached a point from which the light could be seen streaming from the windows, when the words which open our story came from the lips of the child:

"I'm so tired, mother!"

And the mother, wearied as she was, could not resist the appealing look, and took the little one in her arms; nor did she set her down until the door was reached. A knock quickly brought a woman to the door, who bade AGNES LINDSAY enter.

"I am seeking EGBERT VAIL. Is not this his home?" AGNES said, in hurried words. She had expected to meet her mother at the door, and the sight of this stranger had filled her bosom with fears that she dared not shape into words. Was her mother dead? or too ill to attend at all to the house?

She did not remain long in suspense, for the woman, perceiving the frightened look she wore, and recognizing in AGNES a strong resemblance to Mrs. VAIL, readily divined that she was the long absent daughter for whom she had grieved so much, and told her "that her mother was very ill, and that her father was at her side."

"Will you bear this message to him for me? Say to him that AGNES LINDSAY waits without for his permission to see her mother."

The woman left the room at once to do as she was bid, and AGNES, wearied and worn out as she was, sank into the nearest chair for rest. She was indeed so weak as to almost swoon. She did not hear the hurried footsteps that came into the room, nor, until her father's arms were around her, did she heed his presence.

When she could speak, she turned to her father and asked him "if he could welcome her into his home again?"

He sat down by her side and placed her tired head upon his shoulder and said:—"After all the years that have gone since you left our home, I thank GOD that He has permitted you once more to return. Since the day you left this house has been under a cloud, but now there will be sunshine once again ere your mother and I shall have crossed over the dark valley."

Mrs. VAIL was indeed almost there now; but the joy of once again meeting her loved one prolonged her life several months. But one day in early Autumn, when the evening sky was tinged with crimson and gold, and the sun was slowly sinking behind the everlasting hills, with her eyes fixed upon it as it passed slowly from the view of earthly eyes, hers were not removed from where it had disappeared, and when AGNES spoke to her there came back no answer. With the bright, golden sun for a guide, her spirit had passed over and entered into the promised land.

The evening after the funeral, EGBERT VAIL sat by the window near his child. He was speaking of the past and of what had caused the separation which had made them all so much sorrow. He said:—"It was a folly of which I have a thousand times repented my giving you cause to go in the first place. But there are moments in our lives when our eyes are blinded as to what is for our good, and in that moment we oft-times cast from us all that would have made our lives happy. Later, when our eyes are opened once more to the light, we see the rugged rocks over which our past folly has doomed us to walk, even though we are bruised at every step. And in that hour we would give all that we possess if we could undo the past."

After the death of her mother, AGNES took full charge of her father's home. As the years rolled on and her child grew up, AGNES LINDSAY became happier, and more at peace within.

When her child had reached the age of seventeen, a piece of good fortune came to her. WALTER LINDSAY'S mother had been dead for some time, but the old man lived on, harder of heart and greater in pride than ever. When old Mrs. LINDSAY lay dying, she had begged her husband to find their child and do justice to him. He had partly promised that he would; but when the face of his wife was shut from his sight by the coffin-lid, he remembered that promise no more.

He became a sort of wanderer about this time, and would often be gone from home for weeks, leaving no word as to where he might be found. Sometimes he would go on horseback, and often on foot. Perhaps the better part of his nature was at work at these times, and a longing once more for the sight of his son caused him to seek him out in the great world into which he had gone. I know not. But if such was his desire, let us be glad that his gold had not quite turned his heart to stone. One day, when he started out on one of these journeys, his horse took fright just after he had mounted, and threw him to the ground. His head struck upon a stone, and he was borne into the house insensible. For three days he lay in the mansion, amid all its elegance and splendor, and then, without one look of recognition, closed his eyes on his earthly home forever.

He was buried in the old family lot where for years had slumbered his ancestors, proud even in death. In his will he gave all he possessed to his son, WALTER LINDSAY. As his whereabouts was not known, an advertisement was inserted in the papers. Some friend of AGNES LINDSAY saw it and brought it to her. Of course, it was an easy matter to establish her claim; and early in the Autumn after old Mr. LINDSAY died, AGNES LINDSAY took her father and her child to her new home.

Time in its onward march makes many changes. Since then old Mr. VAIL has died. ETHEL LINDSAY has married, and reigns as mistress in the mansion in which her father was born; a beautiful woman among beautiful women.

But, great as is the beauty of ETHEL, there is another and lovelier presence than hers. A grand old woman with locks of silver whiteness and whose face wears that serene look that comes only to those who, having passed through deep affliction, anchor their hope at last on the loving kindness of the Father who giveth His beloved rest.

AGNES LINDSAY, once heart-broken, is the grand old woman we have seen. On this side of the river she is only waiting now until the boatman shall come to row her over to the other side, where, amid green fields and verdal bowers, she knows that forevermore she and her beloved and early lost may roam at will.

So we see that out of great sorrows come often greater joys. Parting with those we love is sad. But, oh! does not the magnitude of the joy the meeting on the other shore fully compensate?

Ladies' Port-Folio.

PLATO vs. CUPID;
Or, Art and Nature.

I HAD sworn to be a bachelor, she had sworn to be a maid,
For we quite agreed in doubting whether matrimony paid;
Besides we had our higher love—fair science ruled my heart,
And she said her young affections were quite bound up in art.

So we laughed at those wise men who say that friendship cannot live
'Twixt man and woman, unless each has something more to give;
We would be friends, and friends as true, as e'er were man and man—
I'd be a second David, and she, Miss Jonathan.

We scorned all sentimental trash—vows, kisses, tears and sighs;
High friendship such as ours, might well such childish arts despise;
We liked each other, that was all, quite all there was to say,
So we just shook hands upon it, in a business sort of way.

We shared our secrets and our joys, together hoped and feared,
With common purpose sought the goal that young ambition reared;
We dreamed together of the days, the dream-bright days to come;
We were strictly confidential, and we called each other "chum."

And many a day we wandered together o'er the hills,
I seeking bugs and butterflies, and she the ruined mills
And rustic bridges, and the like, that picture-makers prize,
To run in with their waterfalls, and groves, and summer skies.

And many a quiet evening, in hours of full release,
We floated down the river, or loafed beneath the trees,
And talked in long gradations, from the poets to the weather,
While the western skies and my cigar burned slowly out together.

Yet through it all no whispered word, no tell-tale glance or sigh,
Told aught of warmer sentiments than friendly sympathy.
We talked of love as coolly as we talked of Nebulæ,
And thought no more of being one than we thought of being three.

* * * * * * *

"Well, good-by, chum!" I took her hand, for the time had come to go—
My going meant our parting, when to meet we did not know;
I had lingered long, and said farewell with a very heavy heart,
For although we were but friends, 'tis hard for honest friends to part.

"Good-by, old fellow! don't forget your friends beyond the sea,
And some day, when you've lots of time, drop a line or two to me."
The words came lightly, gally, but a great sob just behind
Welled upward with a story of quite a different kind.

And then she raised her eyes to mine, great liquid eyes of blue,
Filled to the brim and running o'er, like violet cups of dew;
One long, long glance, and then I did, what I never did before—
Perhaps the tears meant friendship, but I'm sure the kiss meant more.

ENGLISH DOMESTICS.

LADY BERNARD here gave me the story from her point of view; but Roger's narrative being of necessity the more complete, I tell the tale as he told it me.

At the time of the occurrence, he was assisting Mr. F., the well-known sculptor, and had taken a share in both the modelling and the carving of a bust of Lady Bernard's father. When it was finished, and Mr. F. was about to take it home, he asked Roger to accompany him, and help him to get it safe into the house and properly placed.

Roger and the butler between them carried it to the drawing-room, where were Lady Bernard and a company of her friends, whom she had invited to meet Mr. F. at lunch, and see the bust. There being no pedestal yet ready, Mr. F. made choice of a certain small table for it to stand upon, and then accompanied her ladyship and her other guests to the dining-room, leaving Roger to uncover the bust, place it in the proper light, and do whatever more might be necessary to its proper effect on the company when they should return. As she left the room, Lady Bernard told Roger to ring for a servant to clear the table for him, and render what other assistance he might want. He did so. A lackey answered the bell, and Roger requested him to remove the things from the table. The man left the room, and did not return. Roger therefore cleared and moved the table himself, and with difficulty got the bust upon it. Finding then several stains upon the pure half transparency of the marble, he rang the bell for a basin of water and a sponge. Another man appeared, looked into the room, and went away. He rang once more, and yet another servant came. This last condescended to hear him; and, informing him that he could get what he wanted in the scullery, vanished in his turn. By this time Roger confesses to have been rather in a rage; but what could he do? Least of all allow Mr. F.'s work, and the likeness of her ladyship's father, to make its debut with a spot on its nose; therefore, seeing he could not otherwise procure what was necessary, he set out in quest of the unknown appurtenances of the kitchen.

It is unpleasant to find one's self astray, even in a moderate sized house; and Roger did not at all relish wandering about the huge place, with no fingerposts to keep him in its business thoroughfares, not to speak of directing him to the remotest recesses of a house "full," as Chaucer says, "of crenkles." At last, however, he found himself at the door of the servants' hall. Two men were lying on their backs on benches, with their knees above their heads in the air; a third was engaged in emptying a pewter pot, between his draughts tossing *facetiæ* across its mouth to a damsel who was removing the remains of some private luncheon; and a fourth sat in one of the windows reading "Bell's Life." Roger took it all in at a glance, while to one of the glants supine, or rather to a perpendicular pair of white stockings, he preferred his request for a basin and a sponge. Once more he was informed that he would find what he wanted in the scullery. There was no time to waste on unavailing demands, therefore he only begged further to be directed how to find it. The fellow, without raising his head or lowering his knees, jabbered out such instructions as, from the rapidity with which he delivered them, were, if not unintelligible, at all events incomprehensible; and Roger had to set out again on the quest, only not quite so bewildered as before. He found a certain long passage mentioned, however, and happily, before he arrived at the end of it, met a maid, who with the utmost civility gave him full instructions to find the place. The scullery-maid was equally civil; and Roger returned with basin and sponge to the drawing-room, where he speedily removed the too troublesome stains from the face of the marble.

When the company re-entered, Mr. F. saw at once, from the expression and bearing of Roger, that something had happened to discompose him, and asked him what was amiss. Roger having briefly informed him, Mr. F. at once recounted the facts to Lady Bernard, who immediately requested a full statement from Roger himself, and heard the whole story.

She walked straight to the bell, and ordered up every one of her domestics, from the butler to the scullery-maid.

Without one hasty word, or one bodily sign of the anger she was in, except the flashing of her eyes, she told them she could not have had a suspicion that such insolence was possible in her house; that they had disgraced her in her own eyes, as having gathered such people about her; that she would not add to Mr. Percivale's annoyance by asking him to point out the guilty persons, but that they might assure themselves she would henceforth keep both eyes and ears open, and if the slightest thing of the sort happened again, she would most assuredly dismiss every one of them at a moment's warning. She then turned to Roger and said—

"Mr. Percivale, I beg your pardon for the insults you have received from my servants."—*George MacDonald, in "Old and New" for Aug.*

THE POPE TO THE WOMEN.

THE pope gave some very sound advice to certain devout Roman ladies who waited upon him lately with an address and an original ode, written by one of themselves. His holiness said: "Beloved daughters, I have received with pleasure all that you have done and spoken, and I recognize the good-will by which you are actuated to labor always for the glory of God. At the ascension of Jesus Christ two angels upbraided those who remained in astonishment and motionless, with their eyes turned up to heaven. Jesus Christ had gone up to heaven to open its gates to us. He had ascended, all radiant in His brightness, and attended by the souls of the just whom He had just delivered out of prison. It was, indeed, natural that those who had seen a man go thus miraculously up to heaven—that those who had come thither with Jesus should remain fixed in wonder, gazing upward in their amazement. But the angels came and said to them, 'Why stand ye thus looking idly up toward heaven?' Go rather to the upper chamber—the angels seem to have meant—go there and pray with the others. You see, then, dear daughters, that it is always wrong to stay still in idleness—yes, even when we are looking up to heaven to see wonders. In a word, we ought rather to act—rather to act than gaze. This is what you have to do always and everywhere you can—whether at your country-house, or among your friends, or in the midst of your families. Yes, there is good to be done by you in your own house. Even in your own houses you may have some little disorders to cure—some of those belonging to you need setting right. If so, set them right charitably, and strive to bring them to a good life. Keep on praying fervently; keep on working and setting a good example in all times and in all places, and then you will not have to be upbraided that you, too, 'stand looking up to heaven.'"

A UTICA girl at the proper hour pulls a string which reverses a picture on the back of which appear in huge characters the words, "Ten o'clock is my bed-time," and her admirers take the gentle hint and depart.

BOSTON women pay taxes on $34,000,000, but the proposed new English High School building when completed, will cost the city about $700,000, yet no woman is to be permitted to enjoy its advantages.

Reading for the Young.

THE ROBIN'S STORY.

I BUILT me a nest
On the great beech-tree—
As cosy a nest
As ever could be.
I wove it with threads
To the beech-tree bough:
And three little birdies
Are sleeping there now.

One day as I sang
My "cherry-chee-chee,"
A spry little squirrel
Sprang up in the tree.
I thought he was coming
Right up on the bough:
It makes my heart tremble
To think of it now.

I flew like an eagle
Straight down through the air;
And soon he was running,
He could not tell where.
I pecked him and pecked him,
And flew in his track:
He'll stop to think twice
Before he comes back.

MISTRESS MOUSE.

MISTRESS Mouse
Built a house
In mamma's best bonnet;
All the cats
Were catching rats,
And didn't light upon it.

At last they found it,
And around it
Sat watching for the sinner;
When, strange to say,
She got away,
And so they lost their dinner.

[*Youth's Companion.*

OUR LETTERS FROM BOYS AND GIRLS.

A Wren's Nest.

J. FRANK L., of Genesco, Henry Co., Ill., writes:—Now I am going to tell you about a wren's nest that we found in one of our evergreens. It had three eggs in it and it hatched its young undisturbed, but the other day after I had come home from school, I went to see the little birds; they were gone. The old cat had got them. Mr. MOORE, won't you please tell me how long it takes for a wren to hatch?

Fishing in Canal Ponds.

CHARLIE C. of Keepville, Erie Co., Pa., says: "Cousin JOHNNY" wants the boys and girls to write something new. I live near the Erie and Beaver Canal; but it has gone into disuse, and the water is only left in ponds. The bottom of the canal is covered with shells of several different sorts; these the ladies gather up and make beautiful frames of. My aunt and I went fishing the other day. There were so many of them in so small a space that they bit finely. We caught mud-pouts, suckers, bass, pumpkin seeds and a horned ace. It is fun to catch them, but hard work to clean them, and they are so bony that I do not like to eat them.

Indian Curiosities.

H. W. S., a little boy of eleven years, tells us of his home in the Far West. He writes from Riverside, Dakota Territory, Clay Co.

Dear boys and girls of the RURAL—My Grandpa takes the RURAL NEW-YORKER and I read your letters and thought I would try to write one; I live in Dakota Territory. There is not much timber here, but there are wild plums and grapes and flowers of all kinds. The Indians lived here but a few years ago; we find pipes and arrow points and many other curious things. The Vermillion River runs close by our home. I have a garden of my own. I like to live on the farm and pick wild flowers. I like to ride horse-back.

Skeleton Flowers.

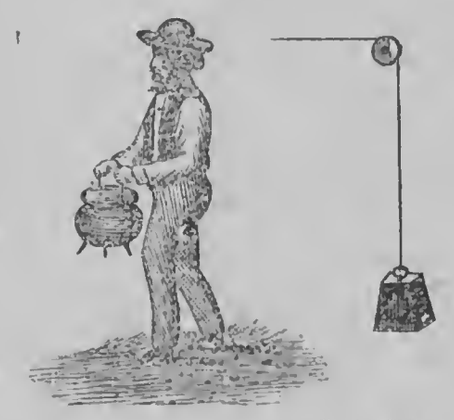
DEAR RURAL:—I will write to you again, although you rejected my last letter. Papa says that when I go home to Iowa I can take your nice paper. I always watch for it Saturday evenings. I take the —— —— also, but do not like it as well as the RURAL. I am pressing a book of mosses, ferns, flowers and leaves, and they are very pretty. I am going to make a skeleton bouquet as soon as all the leaves get out, and if it proves successful, I will send the recipe for making one. Cousin JOHNNIE'S letters are so interesting that I hope she will keep on writing. I should like to get acquainted with WILD ROSE, and correspond with her, if she is willing. I am staying out of school so as to take music lessons. I fear my letter is getting long, so will close it.—MAY M., *Fredericktown, O.*

THE STORY OF THE POUND.

ON page 113 of this week's RURAL our young folks will find a pretty picture of children feeding with fresh grass a horse and a donkey. These animals had strayed away from home, had lost themselves, when the pound-master came along and locked them up in the pound, a place of confinement, so-called, for animals which are found at large or trespassing upon the fields. You will see the big padlock hanging from the gate. Well, he put the key in his pocket and walked off, leaving the poor old horse and the little donkey fastened into the pen, with nothing to eat. They might have remained there all day, waiting for their owners to come and take them out. By that time they would have grown as hungry as a bear. The old horse looks honest enough, and we don't think he meant to run away, but the donkey strikes up his ears just as if he was full of mischief and liked the fun of getting lost. Just after dinner the children, who lived up in the big house in the woods, went out to take a walk. As they were passing by the pound the old horse put his nose over the rail and asked, as plain as he could, for some of the fresh flowers and grass growing just outside. The little donkey did the same thing, for he hadn't had any dinner either, so CHARLES and GEORGE and WILLIAM and MARY all commenced to pull some of the sweet, green grass for the hungry animals. CHARLES has a black velvet coat on, and is feeding the horse; GEORGE has a white linen suit on, and is feeding the donkey; little WILLIAM is pulling grass with all his strength, and MARY stands behind CHARLES with her hands full. When the horse and donkey get done eating, they will feel "thank you" if they are not able to say it. The moral to this story is, that small hands may do an act of kindness.

The Puzzler.

ILLUSTRATED REBUS.—No. 6.



C. A. SPROAT.

☞ Answer in two weeks, with the names of those sending correct answers up to the time of going to press.

CROSS-WORD ENIGMA.—No. 2.

My first is in woman but not in girl,
My second's in diamond but not in pearl;
My third is in hearing but not in sight,
My fourth is in morning but not in night;
My fifth is in iris but not in flag,
My sixth is in mountain but not in crag;
My seventh's in robin but not in wren,
My eighth is in seven but not in ten;
My ninth is in lattice but not in bower,
My whole is the beautiful name of a flower.

Rockford, Ill. FOURTEEN.

☞ Answer in two weeks.

DECAPITATION.—No. 1.

WHOLE, I am to daub with water; behead me, and I am a puddle; again, and I am a stroke with a whip; behead me again, and I am a tree. What am I? FRANZ.

☞ Answer in two weeks.

ANAGRAM.—No. 3.

ESE eth alsnrperuat swerat fo het giplipu sokrob,
Ohw yeth raseeh het dehind acslep fo eth teseret koons,
Tharppe ot indf semo dofunun obpelb,
Yet boyden het archo fo reith ritgunln creat.

☞ Answer in two weeks. J. H. SIGHL.

SQUARE WORD ENIGMA.—No. 1.

A BEAUTIFUL flower.
A prince of Midian.
An ancient country of great wealth.
A mountain of Palestine. ISOLA.

☞ Answer in two weeks.

PUZZLER ANSWERS.—August 3.

ILLUSTRATED REBUS No. 5.—

Check not the swelling tear
That does unbidden start
When friends of many years
Are called upon to part.

BIBLE QUESTION No. 1.—Zaphnathpaaneah. (See Genesis 41: 45.)

BOTANICAL RIDDLE No. 1.—[We have the following contributed answer to Botanical Riddle No. 1—RURAL, July 20—which is worth giving.]

1. What's a more sociable tree than the Tea?
2. And a Hop we know is a dancing tree,
3. And the Beech is nearest to the sea.

4. $10,000 yields the Indian Plum;
5. A Bee tree may be known to some;
6. Into the Bay do noble ships come.

7. The tree that languishes is the Pine;
8. To sacrifice self for you is fine;
9. And Cain received a curse and sign.

10. Chronologists dearly love a Date;
11. A fisherman for a Bass will wait;
12. To Honeysuckle is Biddy's fate.

13. How oft do tell-tales Peach we see;
14. The traitor is shown in Judas tree;
15. Warm Fir need never from Zero flee.

16. The Sick layman* reclines in his room,
17. And fears, as the housemaid wields her broom,
18. The Cypress will soon wave over his tomb.

MYRA FORREST.

News of the Week.

CURRENT TOPICS.

The Newly Discovered Diamond Fields.

CALIFORNIA is in an excited state over the rich diamond fields said to have been discovered somewhere—it is not definitely known to the public, whether in Arizona, Utah or Kansas. The asserted richness of those fields, the high character of men interested in the sale of the stock has given some confidence, and the stock is being rapidly taken, it is reported, in San Francisco. But there is not a little incredulity. It is difficult to reach the truth and we have no advice to give. If the stories are half true, the country is to be congratulated; for with the enormous exportation of gold and other products to meet foreign indebtedness, we are still in debt, and some new resource is needed to help to put the balance on the American side of the ledger.

The North Carolina Election.

AT the time of our last issue it was believed that the Democrats had carried North Carolina, and it was construed as a rebuke for the Administration and as an omen of a Democratic triumph in November. But later returns give the triumph to the Republicans, much to the discomfiture of those who had thrown up their hats, shouted, sung, and fired salutes in honor of the conservative or "reform" victory. Of course, the partisans, defeated, cry "fraud!" just as it would have been if it had been *vice versa*. And it would have been true, doubtless, in either case, that frauds were perpetrated; for iniquity is not peculiar to politicians of one side more than to those of the other.

Tweedle-dum and Tweedle-dee.

THE political world is agitated as to the fact whether President Grant slighted Fred. Douglass by not inviting him to dinner with the other San Domingo Commissioners. Senator Sumner says he did, and that Douglass felt the slight keenly. Andrew D. White, one of the Commissioners, says he didn't, for Douglass was out of town. Senator Sumner retorts that Douglass was not out of town. What is the purpose of this discussion? To prove that Grant has a prejudice against color, and thus prejudice colored men against him on the one hand, and to counteract such prejudice on the other. And yet, if it is true that President Grant did so slight Douglass, the latter heaps coals of fire on the President's head by supporting him for the second term. Important matter, isn't it, for eminent men to fight about! But it is like too many of the political "issues" the people are called upon to decide by ballot.

Miss Nilsson's Husband.

M. AUGUSTE ROUZAUD, the husband of Christine Nilsson, was born on the Isle of Bourbon and is a half creole, his grandfather having married a creole woman. His mother was the daughter of Admiral Bosq. He has a fortune of about 500,000 francs besides his expectations. His grandfather was a poor locksmith; his father, from a humble beginning, became a prosperous merchant. He is the eldest of three sons; he has one sister. One of the brothers continues the father's business on the Isle of Bourbon; another is an agent and correspondent of the firm at Bordeaux; the sister is the wife of her cousin, M. Bosq. The bridegroom abandoned commercial pursuits for art, and was living alternately at the Chateau de la Dix Marie, his property, and in Paris, where he became acquainted with Miss Nilsson.

Foreign Importations and Custom Receipts.

THE first of August was the day when the new tariff law went into effect—affording importers of certain classes of goods reduction of duties. The bonded warehouses were full to overflowing—importers storing their goods until the new law began to operate. Then there was a rush. The first seven days of August importers paid into the New York Custom House, in the shape of duties, $6,720,000 in gold. This with the enormous balances due abroad and maturing the first of August, combined with the enormous demand for foreign exchange by visitors abroad, is what has placed gold at the premium it is, and where it is likely to remain until grain moves in greater bulk.

This Earth and the Comet.

IT has been widely published that Plantamour, an astronomer, has predicted that a comet is to strike the earth to-day (Aug. 12), and knock it into everlasting smash, or set it on fire and burn it up. Some people believe this, and are prepared to "witness the coming of the Lord." We write this in the morning (before the comet is due), while we can. It is said it will hit us about four o'clock P. M. But there are some facts that it will be well for the credulous to remember (if this reaches them while they exist) concerning the story of this prediction, and thus do justice to a scientist—that Plantamour denies having made any such prediction; that if he had, other astronomers would have seen some indications of the comet, which they have not; and that if they had, and it had been demonstrated to a mathematical certainty that it was making for the earth in a direct line, it would produce about as much effect upon the earth (and no more) as the contact of a thistle seed would upon a railroad locomotive running fifty miles per hour. At least so science says. P. S.—It is 1 P. M., and no one has seen the comet; nor has the telegraph informed us that the earth has been hit to hurt, anywhere.

German Immigration.

ONE of the results of the recent Franco-Prussian war and the creation of the German Empire, is an increased immigration of Germans to this country. During July there arrived at the port of New York 11,335 of these steady-going, industrious, economical, money-saving people; and since January 1, 1872 nearly 79,000 have arrived—37,000 more than during the corresponding period of 1871. They are welcome!

Prof. Tyndall Coming.

IT is reported that Prof. Tyndall is to arrive in this country in October. He is one of the living men who have helped to popularize science—taught us how to value facts, and where and how to search for them. He will be welcomed when he comes; and more people will welcome him than are supposed to take an interest in science. This country is furnished with a larger number of quiet, patient, unostentatious searchers for truth than it is generally believed to have. We shall be glad if the advent here of such a man as Tyndall helps to develop the fact. For science must become popular if it gets its needed sustenance from the masses of the people.

SEMI-BUSINESS PARAGRAPHS.

Dana Bickford, Esq., Pres't Bickford Knitting Machine Co.—*Most Esteemed Friend:* I write to inform you that it is now ten months since I purchased of thee a Bickford Family Knitting Machine, at our County Fair at Chilham. And after taking just that one hour's instruction, I commenced knitting on my machine for ten in family, besides a large circle of friends and neighbors, and I find no difficulty in knitting all sizes of stockings and socks for men, down to a child two years' old. I have knit heavy home-spun and factory-spun mixed yarn of all sizes; also Dexter's cotton, from Nos. 8 to 20. I find it a practical, working machine, both for men and women's wear. I can knit a pair of long stockings ready for use in one hour. I find it very durable and reliable, and think it will last me many years, with proper care; and would most cheerfully recommend it to all mothers and housekeepers as a great labor-saver. Only buy a Bickford Knitting Machine, and buy good yarn, and you will always have a plenty of good stockings, at half the expense you now have them. Most truly, thy friend—SARAH A. ROBINSON, Chatham Village, 8th mo. 1st, 1872.

Yeas and Neighs.—If horses could make themselves understood in human language, they would signify, by an universal "Yea," their assent to the statement that the Mustang Liniment is the best remedy extant for all these external ailments, and by a most emphatic "Neigh!" show their displeasure at any attempt to use any other preparation.

Most Wonderful Timekeeping.—Watch No. 1089—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by United States Watch Co. (Giles, Wales & Co.), has been carried by me from December, 1868, to January 17th, 1870, its total variation being only two seconds in the entire time.—L. E. CHITTENDEN, Late Register, U. S. Treasury.

Facts for the Ladies.—Mrs. Thos. L. Smith, Wellsville, New York, has used her Wheeler & Wilson Lock-Stitch Machine eleven years, without any repairs, and one needle—No. 2—for nearly five years. See the new improvements and Woods' Lock-Stitch Ripper.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Aug. 12, 1872.

THE Trade of the last week was active for the hot season. The importers are well employed, both in passing their Goods through the Custom House and in making sales to Jobbers and Country buyers. The Customs Duties since the first of August amount to $8,710,000, which, at the present average of the Tariff, reflects the sum of over $25,000,000 Foreign Merchandise marketed in ten days. Of course a considerable portion of this trade would have occurred in July, but for the postponement of the operation of the new Tariff.

The Exports of Domestic Produce from New York last week were to the value of $5,200,000. The Specie Export fell off to $377,000. The latter is now well over until next Spring, unless some unexpected disturbance occurs to financial affairs abroad.

The Bulls in the Gold Room continue to buy at 115¼ per cent., although without the support of an export demand. The large amount of Customs paid into the Treasury in Gold is their present reliance for keeping up the price. But of the receipts the Treasury has sold, since the first of August, $3,000,000, and paid out $2,100,000 Gold Interest on the Public Debt. Exchange on London has fallen ¼@¾ per cent. below the Gold shipping point. The Banks have lost over $10,000,000 Gold Notes since the first of the month, chiefly drawn by their Depositors to pay Customs, but no effect is felt on the general Money Market, which is easy at 4@5 per cent. on call loan, and 6@7 per cent. on short mercantile discounts.

The following are the comparative movements of the City Banks for the past fortnight:

	Aug. 5.	Aug. 10.
Capital	$87,151,000	$87,315,700
Loans	303,036,200	303,991,500
Gold and Greenbacks	78,977,600	72,709,600
Deposits	241,528,000	237,668,200
Circulation	25,357,200	27,313,000

PRICES OF STOCKS AND BONDS.

U. S. 6s of 1881	118¼	N. Y. Central	96¾
U. S. 5-20's of 1867	115⅞	Erie	47
U. S. 5-20s of '65 (old)	116¾	Lake Shore	89¼
U. S. 10-40s	113⅝	Rock Island	110¼
U. S. New 5s	112⅜	Northwest	73¾
U. S. Currency 6s	114	Do. Preferred	90
N. Y. Bounty 7s	109	St. Paul	54
Central Pacifics	102	Do. Preferred	78
Union Pacifics	88½	Ohios	43
Western Telegraph	10⅝	Union Pacific	34½
Pacific Mail	73	Adams Express	97
Tennessees	74½	United States Exp's	83
South Carolinas	28⅝	American Express	80
Virginias (new)	54	American Gold	115¼

There was a bearish feeling in the Stock Market through the week. Many of the Bull operators are in the country, and have left no one to take care of the market. The other party can sell prices down with some impunity while the hot weather lasts, but there seems to be no other reason why Railroad prices should go down. The crops throughout the country are highly prosperous, and the business over the Roads never larger than at present, in the Summer months.

PRODUCE AND PROVISIONS.

NEW YORK, Monday, Aug. 12, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,100,000	Meat, bbls	2,428
Oats, "	320,365	Flour, "	43,100
Wheat, "	200,000	Eggs, "	5,380
Rye, "	15,800	Cotton, bales	2,460
Barley, "	—	Hops, "	162
Malt, "	48,900	Wool "	1,485
Seed, "	220	Butter, pkgs	12,400
Beans, "	570	Cheese, "	71,200
Meal, bags	5,100	Lard, "	3,150
Peanuts "	500	Dried fruits, pkgs	213
Pork, bbls	278	Cut Meats "	2,540

Beans and Peas.—Sales are slow, and there is a weak tone to the market. Marrowfats are offered at important concessions, the stocks of this description being rather large for the season. There is considerable inclination to push off stock as rapidly as possible, and the indications are that a lower range of prices will be noted. For prime medium, $3.15@3.25; fair do., $2.65; prime marrowfats, $3.20@3.25; fair do., $3; prime kidney, $3.10@3.25; fair do. $2.30; red kidney, $1.90@2.80. Peas, green, $1.70@1.80; Southern B. E., per two-bushel bag, $2.25@2.50.

Beeswax.—The supplies of Western are larger, and it is with difficulty receivers are able to place them. Prices are easier and weak. Southern brings relatively better prices. Sales of Western at 35½@36c. and Southern at 36@37c.

Butter.—Fine Western express lots of butter have continued to sell, so to speak, briskly, and the few lots of State that would compare favorably with fancy

pails have also sold readily at full quotations. There is from various city sources considerable invitation to send us a more liberal supply of fine State stock. To prevent disappointment on the part of farmers who have small dairies that they do not wish to carry until Fall, we state that buyers who will pay the wide difference between choice Western and State butter, are quite as particular in their idea as to quality as they are in Winter months, and the simple fact of butter bailing as *State* does not alway give it the preference at this season. Common butter has been shipped to the extent of 400 firkins. Prices are not quotably altered since our last.

The quotations are:—State pails, choice, 28@30c. other, 22@26c.: State selections, 26@27c.; good to prime firkins, 24@26c.: do. half tubs, 24@26c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 18@19c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.

Cheese.—Shippers have been holding off during the week to watch the effect of the large supplies sent out. The arrivals here are less than one-half of those of the previous week, but the demand has fallen off even greater, and we are carrying over more stock than desired. At the close the cable quotes the price on the other side working down, and trade is also at a stand. There is no sale for common at any price, and for fine qualities for the few lots needed easier prices have been accepted. In the absence of animation in the market there are uniform prices, receivers have been very well satisfied with the way the market has ruled lately as in face of the largest supplies known here they have been able to carry unexpectedly full prices along and the little reaction at the close does not work so disadvantageously as in an ordinary run of the market. We quote State factory fine at 12½c.; good do. 11@12c.; common do. 9½@10c.; skimmed as low as 3c.; State dairy, 10½@11½c. for prime, fair do., 9½@10c.; Ohio factory 10½@11½c.

Cotton.—The market is ¼c. higher. The reports from the other side have been the main feature affecting it. Shippers have been able to take more stock. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16¾	16¾	16¾	16¾
Good Ordinary	19¼	19¼	19¼	19¼
Low Middling	20¾	20¾	21¼	21¼
Middling	21¾	21¾	22¼	22¼
Good Middling	23¾	23¾	24¼	24¼

Eggs.—The market is in the buyers favor. The demand is checked by the abundance of fruit. Sales of Western at 15@16c.; State and Pennsylvania, 20@21c.; Jersey, 21@22c.; Canada, 19c.

Dried Fruits.—Small lots of the new crop are coming in, but the prices obtained do not indicate the ruling prices. Small lots of new apples have sold at 5@8c.; blackberries, 7@9c. Trade in the old crop is unimportant, and prices are entirely nominal. Raspberries, 23@25c.; apples, State, quarters, 8@9c.; extra sliced, 11@12c.; Southern, quarters, 6@7c.; do. fine sliced, 10c.; prime Western, 7@8c.; common Western, 6@8c.; unpeeled peaches, 5@6c. for quarters; 12@15c. for halves; peeled peaches, 17@19c. for North Carolina, 13@14c for Virginia, and 15@16c. for Georgia; plums, State, 27@28c.; blackberries at 8@8½c.; apples, Southern, sliced, 1872, 8@10; new cherries, 19@20c.

Flour.—Prices have been steadily advancing. The rise for the week is 50c. per bbl. The outward movement has not shown any increase, but the position of the market is mainly due to the remarkably small arrivals.

Superfine State	$5 95	@	6 35

Rye, common to fine	4 10	@	5 00
Corn meal, Brandywine	5 —	@	—

Fresh Fruits.—Apples continue to overstock the market and the perishable nature of most of the varieties arriving at this time prevents any attempt at improved figures. Pears are in large supply, including a further invoice from California. A few fine plums are also in from the Pacific. Grapes are in market from the South and are in good salable condition. Peaches have been very plentiful during the past three days, the later receipts running small. Blackberries are hardly quotable in lots. Peanuts have advanced to $2.20 for prime Virginia, following another large movement. Apples, prime, $1.50@2.50; do., common, 75c@$1, Cal. Bartletts per box $3@6; Southern do., $2.50@3 per crate. Other pears, including Scooter, Bell and common, $2@1.50 per bbl. Ibex. Grapes, 15@17c.; other do., 10@12c. Peaches—Del., crates, prime, $1.75@2; fair, $1.37@1.50do.; do baskets, $1@1.25; N. J., do., 40@50. Whortleberries per bush. $1.50@2. Virginia watermelons per 100, $12@15; do. fancy, $25@50. Nutmegs per bbl., $2.50@3. Plums, common, $7@8 per bbl.; do. choice, $3@4 per push.

Grain.—Prices of wheat have advanced fully 15c. per bushel. The export inquiry has been good and the arrivals small. We quote at $1.62@1.63 for No. 2 Spring in store; $1.63@1.64 for No. 1 do.; $1.32@1.38 for Winter red Western; $1.60@1.63 for amber Western; $1.30@1.32 for white Western. Rye is quiet at 76c. for Western. Corn is firmer and moderately active. Sales at 64c.@65c. for steamer lots of Western mixed; 66c. for sailing do. Oats are quiet and firm, 44@45½c. for Western and 48@52c. for Ohio.

Hops.—The supplies are small, and high prices are ruling. The account from the growing crop are favorable in this State, but from other sections reports of fire-blight doing some damage.

New Yorks, growth 1871, 22@35; Eastern do., 22@30c.; Western do., 22@30c.; Yearlings do., '70, 10@30c.; Olds do., '69, 10@15c.; Bavarians, 15@75c.; English, 10@35c.

Hay and Straw.—The arrivals have been small the last week and prices have advanced. Sales at $1.10@1.15 for old shipping; $1.25@1.60 for retail qualities; salt, $1.05; clover, 80@90c. The best qualities of new sell at from $1.20@1.35 for retail, and $1.10 for shipping. Straw at $1.05@1.10 for long rye, 85@90c. for short rye; 75@80c. for oat.

Tobacco.—There has been an increased business from shippers, with prices very firm. Virginia common to good logs, 7½@8½c.; low to medium leaf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

Ohio, running lots	10½@15		
Wisconsin and Western	8½@10		

Vegetables.—There is an easy feeling in potatoes and $2 is extreme for loads.

Early Rose, bbl., $2@2.25; Jackson White, $1.20@1.50. Tomatoes, $1.00; Squash, ₱ bbl., $1.25@2.25, white and yellow. Cucumbers, ₱ bbl., 25c.@$1. Turnips, ₱ bbl., $1@1.50. Large Dutch cabbages, $10@12. Green corn, ₱ 100, 75c.@$1.25. Marrow squash, ₱ bbl., $1.25@1.50. Onions, ₱ bbl., $2.50@3.

Poultry and Game.—There has been a light trade in live poultry but at the close there is more doing, and prices are firmer. Woodcock continues scarce and sell readily at $1.28@1.31 per pair. Turkeys, N. J., 18@21c. ₱ lb; Western, do., 18@20c. ₱ lb; Spring chickens, Western, 40@50c. ₱ pair; N. J., do., 19@20c. ₱ lb; Fowls, N. J., 17@18c. ₱ lb; Western do., 15@16c. ₱ lb; Roosters, 9@10c. ₱ lb; Ducks, N. J., $1@1.25 per pair; young do., 75c.@1 per pair; Western do., 75c.@$1 per pair; Geese, N. J., young, $2.50@2.75 per pair; Western do., $1.50@2 per pair.

Provisions.—Mess pork is gaining strength, and a few sales have been made at $13.75 for round lots for Aug., and $13.80 for jobbing parcels, a fair trade in the latter way. Prime mess quoted with fall $12.50; extra prime, $10.75@11. Beef is quiet for tierce, and there is only a moderate trade in bbls. There are no beef hams in first hands. We quote plain mess, bbls., $8@10; extra mess, do., $10@12; prime mess, tcs., $12@11; India mess, do., $17@20. Cutmeats are selling steadily at very full figures Bacon firm, with good export orders, city sellers largely ahead. Long clear at 7¾ @8c.; short do. scarce, 8¾c.; short rib, 7½@. We quote city smoked hams, 15@18c.; city smoked shoulders, 8½@9c.; pickled bellies, boxed, 7@7½c.; do. loose, 7@7½c.; pickled hams, Western, 13@14c.; do. city, 14@15½c. Western hams, in tight tcs., 12@13c., according to brand; pickled shoulders, 8½@8¾c.; shoulders in dry salt, boxed, 5¾@6c.; fresh hams, 12½@13½c. Lard has reacted, and with a very moderate offering prices are firm at the advance. Contract is held at 9c. for Aug.; for Sept. 9c. is freely bid. *New*: Shipping quoted at 8¾@8¾c. There has been a large German demand for kettle rendered Western; sales, 2,000 tcs., at 9¾@9½c.; city is higher, selling, to be made, at 9¾c. at the close. Tallow is steady at 9½c. for city, and 8¾@8¾c. for common to prime country; stearine, in tcs., 10¾c.

Wool.—The tone of the market is a trifle better, with a fair inquiry. We quote fleeces at 65@68c. for New York, March; 63@68c. for Ohio; 60@63c. for Indiana and Wisconsin; 55@61c. for Illinois; 10@40c. for Texas fine, 30@35c. for do., coarse. Pulled, 61@68c. for extra.

LIVE STOCK MARKETS.

NEW YORK, Aug. 10, 1872.

THERE has been no excitement in live stock during the past week, the supplies being quite large. The peach season is now fairly opening in its greatness, and meats are usually lower during its hight. The weather has been hot during the past few days, necessitating much care in preserving meats. Trade is generally in a healthy condition, with good feed both here and at the West. Our stock has been largely of the "lean kine" during the week just ended.

Beeves.—We are having too many cattle to keep prices at the high figures of last week. And still there is not much decline on fat droves, but the market has been largely stocked with coarse Texans. That extensive shipper, N. Morris, who sent over 2,400 cattle here last week, had 577 Texans in one shipment of 1,020 head. Other parties sent in freely, so that the ordinary buyers of this class of cattle had the market very much to their own liking. Some of the rough Texans were sold on the scales at 7½c., and the fat ones only reached 9c., making a decline of about 1c. on this kind. There are comparatively few butchers who buy Texans, and they could not use all that were offered. New men had to be coaxed in, and the cattle were given them at low prices. Besides the large run of Illinois and Texan cattle, many droves are coming from Kentucky. They are mostly large and well fed steers, giving good satisfaction to the buyer. The market is rather weak at close, with a decline of ½@¾c. on natives and 1c. on Texans. Fair to good cattle generally sell at 12c@12¾c.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	Aug. 10.	Aug. 3.
Extra	12 @12¾	12¾@13
Good	11½@12	12 @12½
Fair	10½@11	11 @11½
Ordinary	9 @10	10 @10½
Poor	8 @8½	8½@9

Hogs.—With heavy receipts the market has fluctuated, with a downward tendency. Sales begin to be made all'ive again. One car line Ohio reached 5¾c., a few days ago, but 5c. would be a full price for them to-day. Two cars rough Michigan were sold; one at 4¾c., and the other at 4½c. Dressed are worth 6@6½c.

Milch Cows.—There is no change in the situation, nor can there be much improvement while so many are sent here for sale, and milk sells at only $1@1.25 per 40-quart can. Trade very slow at $30@70 as extremes, the average being about $50.

Sheep and Lambs.—Sheep are not over plenty, and are no lower, but sell rather slower. Still, all are worked off at 5@6c. for very thin to scarcely medium, and 6½@7c. for fair to prime, small sales of extras being made at 7½c. Lambs are lower, and it is not an easy matter to sell stock as fast as it arrives. Thin lots go at 7@7½c.; medium to good at 8@9c., and not many prime over 9½c. A few extra State, of 65@70 lbs., will bring 10c. One small lot of 70 lbs., very fine, even reached 10½c., but this is not a quotable price. Sales of 49 lb. Ohio lambs were made at 7c.

Veal Calves.—These reached the turning point soon after last report. The best are now selling at 9½c., with too few exceptions at 10c. to take note of. Fair milk calves are worth 9c., with common at 8c. There are many half fed veals sold at 6@7c., while the real grassers are only worth 3@4c. Sales were made at 2½c. They go hard, the bulk at 5@6 per head, and should be kept at home for the present.

LATEST. Monday, August 12, 4 P. M.—Beeves. Arrivals to-day, 171 cars at Communipaw, 18 at 130th St., and 31 at Weekawken, making 1,515 for the present market. Trade was very lively, and prices advanced 5@½c. from Saturday, 13½c. being easily reached for fat lots. Some good 4 cwt. Texans were sold at 10½c., with poor at 8½c. The close was very strong and stimulating to drovers.

Sheep and Lambs.—Arrivals for to-day's market, 5 car loads at Communipaw, 31 at 130th St., and 18 at 40th St., making 10,235 on sale. Sheep are rather weak, good lots selling at 6½c., and some poor at 5c. Lambs are still lower, the best 70lb. State selling at 9c. Extra Jerseys would bring 9½c. if on sale.

Hogs. Receipts to-day, Sunday included, 30 car loads at Communipaw and 32 at 130th St., making 6,867. There was a little improvement, dressed selling at 5¾@6¾c. One car line Ohio sold alive at $5.15 per cwt., and 2 cars rough Ind. at 4½c.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

The Indiana & Illinois Central

Railway Company's

FIRST MORTGAGE 7 PER CENT.

SINKING FUND GOLD BONDS,

FREE OF GOVERNMENT TAX.

An East and West Air Line of 152 Miles, Indianapolis, Ind., to Decatur, Ill.

This road passes through a belt of the best settled and richest agricultural and mineral country of Indiana and Illinois, averaging thirty miles in width, with no other East and West railway built or projected through it. Decatur, in Parke and Vermillion Counties, the rich

BLOCK COAL FIELD

of Indiana, which alone will supply an ample business.

Thirty miles through Hourglass County, Illinois, just completed, opened and paid for.

Whole Western Division, Montezuma to Decatur, eighty-five miles, to be finished in 1872. Grading nearly done and materials (except iron) already procured; bridge over Wabash ready for superstructure.

Eastern Division, sixty-seven miles, partly graded, and to be finished in 1873.

$1,200,000 IN CASH ALREADY EXPENDED ON THE ROAD, AND $1,500,000 REMAINING TO BE CALLED FROM TWENTY SUBSCRIBERS, AMONG WHOM ARE W. H. GUION, SIDNEY DILLON, JAY COOKE & CO., CLARK, DODGE & CO., J. SELIGMAN, VIBBARD, FOOTE & CO., AND PAUL S. FORBES OF NEW YORK; BENJ. E. BATES OF BOSTON; HENRY LEWIS OF PHILADELPHIA, AND G. M. PULLMAN OF CHICAGO.

Besides its right of way The Company owns 32,000 acres of land, chiefly in Indiana, of which 2,000 acres are the best BLOCK COAL LANDS. It has also SUBSCRIPTIONS IN BONDS AND CASH from counties, towns and individuals of $500,000.

The road connects at both termini with the most important THROUGH RAILWAY LINES of the West, and being by many miles shorter than any other line, will be indispensable to them, while its local business alone will insure good dividends on its stock.

Bonds $1,000 each, payable to Union Trust Company, Trustee or bearer, July 1, 1901, in gold coin. Coupons, also in gold, payable Jan. 1 and July 1, in New York, or at Union Bank of London, at fixed exchange of £ sterling.

SINKING FUND of 2½ per cent. a year on gross earnings, to be invested by Trustee in Bonds at not exceeding par.

For sale at 90 and accrued interest, by the Financial agents of the Company,

WALKER, ANDREWS & CO.,

No. 14 Wall Street, New York.

Money Found in the Sewers!

THE

Goux Fertilizing and Sanitary Co.

beg to call the attention of Farmers, Market Gardeners and others to their natural manure. This manure, manufactured from pure human excreta, collected by means of Goux's patent closet system, and mixed with the best fertilizing absorbents, is suitable for every kind of crop, and being remarkably rich in nitrogen (the basis of ammonia), and soluble phosphates, it affords the plant a liberal supply of natural food, in the most concentrated and readily available form possible.

For further information, apply to or address the Company, at their Office, corner of Varick, Vestry and Canal Sts., New York.

AMERICAN INSTITUTE EXHIBITION

NOTICE TO EXHIBITORS.

The Building will be ready for the Reception of Articles

ON MONDAY, AUGUST 26,

And will be opened to the Public

On Wednesday, Sept. 4,

At 12 O'Clock M.

☞ Circulars and applications for Space can be had at the Rooms of the

Institute, No. 22 Cooper Building.

The Managers especially urge that Exhibitors will have their articles located with as little delay as possible, so that the Exhibition will be complete on the day of opening.

NEW YORK STATE FAIR, 1872.

AT ELMIRA,

Sept. 30, Oct. 1, 2, 3, 4.

COMPETITION OPEN TO ALL COMERS.

☞ ENTRIES may be made at any time until Aug. 31st, after which no entries, except of Fruits and Flowers, will be received.

☞ PREMIUM LISTS are now ready, and will be forwarded by mail to all applicants.

The Society having been enabled, by the liberality of the citizens of Elmira and Chemung County, to enter (under an arrangement by which the Fairs are to be held at that city once in three years) upon permanent grounds, with permanent buildings, can this year offer better and more ample accommodation to Exhibitors than ever before.

An increased number of Prizes is offered, and the List in general has been liberally revised. Address
STATE AGRICULTURAL SOCIETY,
T. L. HARISON, Sec'y. Albany, N. Y.

THE ANNUAL EXHIBITION

OF THE

Pennsylvania State Ag'l Society,

For 1872,

Will be Held at the City of Erie,

Commencing Tuesday, Sept. 17th, to continue Four Days.

The competition is coextensive with the United States and Provinces, and the citizens of the several States and the Dominion are cordially invited to compete for our prizes. There is no Entry Fee charged. For Premium Lists, and other information, apply to either of the undersigned, at Harrisburg, until August 20th, after which date headquarters will be at Erie.

JACOB R. EBY, President.
D. W. SEILER, Recording Secretary.
ELBRIDGE McCONKEY, Cor. Secretary.
Harrisburg, Pa., June 1, 1872.

Northern Ohio Fair.

THE

THIRD ANNUAL EXHIBITION

OF THE

Northern Ohio Fair Association,

WILL BE HELD

On their Beautiful Fair Grounds, in the CITY OF CLEVELAND,

ON THE

9th to 13th days of September, 1872.

This is the largest Fair between Boston and St. Louis. For schedule of Premiums, &c., address

GEO. W. HOWE, Sec., Cleveland, O.

TRUCKING LANDS IN VIRGINIA.—A tract of land, well adapted to gardening, at Gloucester Point, on the York River, and overlooking the Chesapeake Bay, 10, 20 or 40-acre lots, $20 per acre. Address ELIJAH SMITH, Clyde, N. Y.

CINCINNATI
NATIONAL INDUSTRIAL EXPOSITION.

THE BOARD OF COMMISSIONERS ANNOUNCE THAT THE

THIRD GRAND EXPOSITION

WILL BE OPEN FROM

September Fourth, to October Fifth, 1872. Goods will be received from August 14th to 31st.

The Sixteen Grand Departments have been greatly extended, and the Exposition will be the

LARGEST EVER HELD IN AMERICA.

The extensive transportation arrangements for visitors will largely increase the unprecedented attendance of last year.

Exhibitors should make immediate application for space. Rules and Premium List furnished on application.

Agents Wanted, $75 to $250 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, cord, bind, braid and embroider in a most superior manner. Price only $15. Fully licensed and warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay Agents from $75 to $250 per month and expenses, or a commission from which twice that amount can be made. SECOMB & CO., *Boston, Mass.; Pittsburgh, Pa.; Chicago, Ill.; or St. Louis, Mo.*

TWO-CENT NOVELS ILLUSTRATED.

A GREAT SACRIFICE.

"ADORED one," cried DE MUGGINS, throwing himself upon his knees, "Behold at thy feet I lay my hand, my heart, my fortune!"

BANKING HOUSE OF JAY COOKE & CO.,

20 WALL STREET, NEW YORK.

We continue to sell at par, adding accrued interest, the First Mortgage Gold Bonds of the Northern Pacific Railroad Company. Track-laying on the Road is now progressing at the rate of two miles a day, through the most fertile prairie region of Dakota. On the completion of this season's contracts, there will be FIVE HUNDRED AND SEVENTEEN miles of the main line in operation, uniting Lake Superior with the Missouri River, and securing the large traffic of the Northwest. This amount of Road also entitles the Company to Ten Million Four Hundred Thousand Acres of Land, located in Central Minnesota, Eastern Dakota, and in the Columbia Valley on the Pacific Coast. The bonds are secured by a first mortgage on the Road, its Traffic and Franchise, and on the entire Land Grant received from the Government. The rate of interest is Seven and Three-Tenths Gold, equivalent to about Eight and a Quarter per cent. in currency. Believing the security to be ample and the rate of interest satisfactory, we recommend these bonds as a desirable investment. Holders of U. S. 5-20s and high-priced corporate securities may materially increase both their principal and their interest income by exchanging for Northern Pacifics.

JAY COOKE & CO.,

New York, Philadelphia and Washington.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

AGENTS WANTED WHERE NOT ALREADY ESTABLISHED.

TARRANT'S SELTZER APERIENT. Trade Mark. Patented.

Medicinal Torpedoes,

In the shape of fierce cathartics, are falling into disrepute.

TARRANT'S EFFERVESCENT SELTZER APERIENT

is driving them out of use. It is the mildest and most genial of all laxatives. Instead of weakening the stomach and bowels, it gives them tone and vigor. Other purgatives leave the excretory passages in an unnatural condition, and new concretions gather there, often more difficult to remove than those that have been violently expelled. The Seltzer Aperient, on the contrary, establishes a regular habit of body. As an appetizer and exhilarant, it is far superior to any "Bitters," and its purifying influence on the vitiated animal fluids excels that of any blood depurient in the Materia Medica. And then, how delicious! Sold by all Druggists.

MINTON'S ENCAUSTIC TILES, FOR FLOORS.

GARNKIRK VASES, for Lawns and Gardens.

CHIMNEY TOPS, Etc.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made in any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY, St. LOUIS, Mo., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

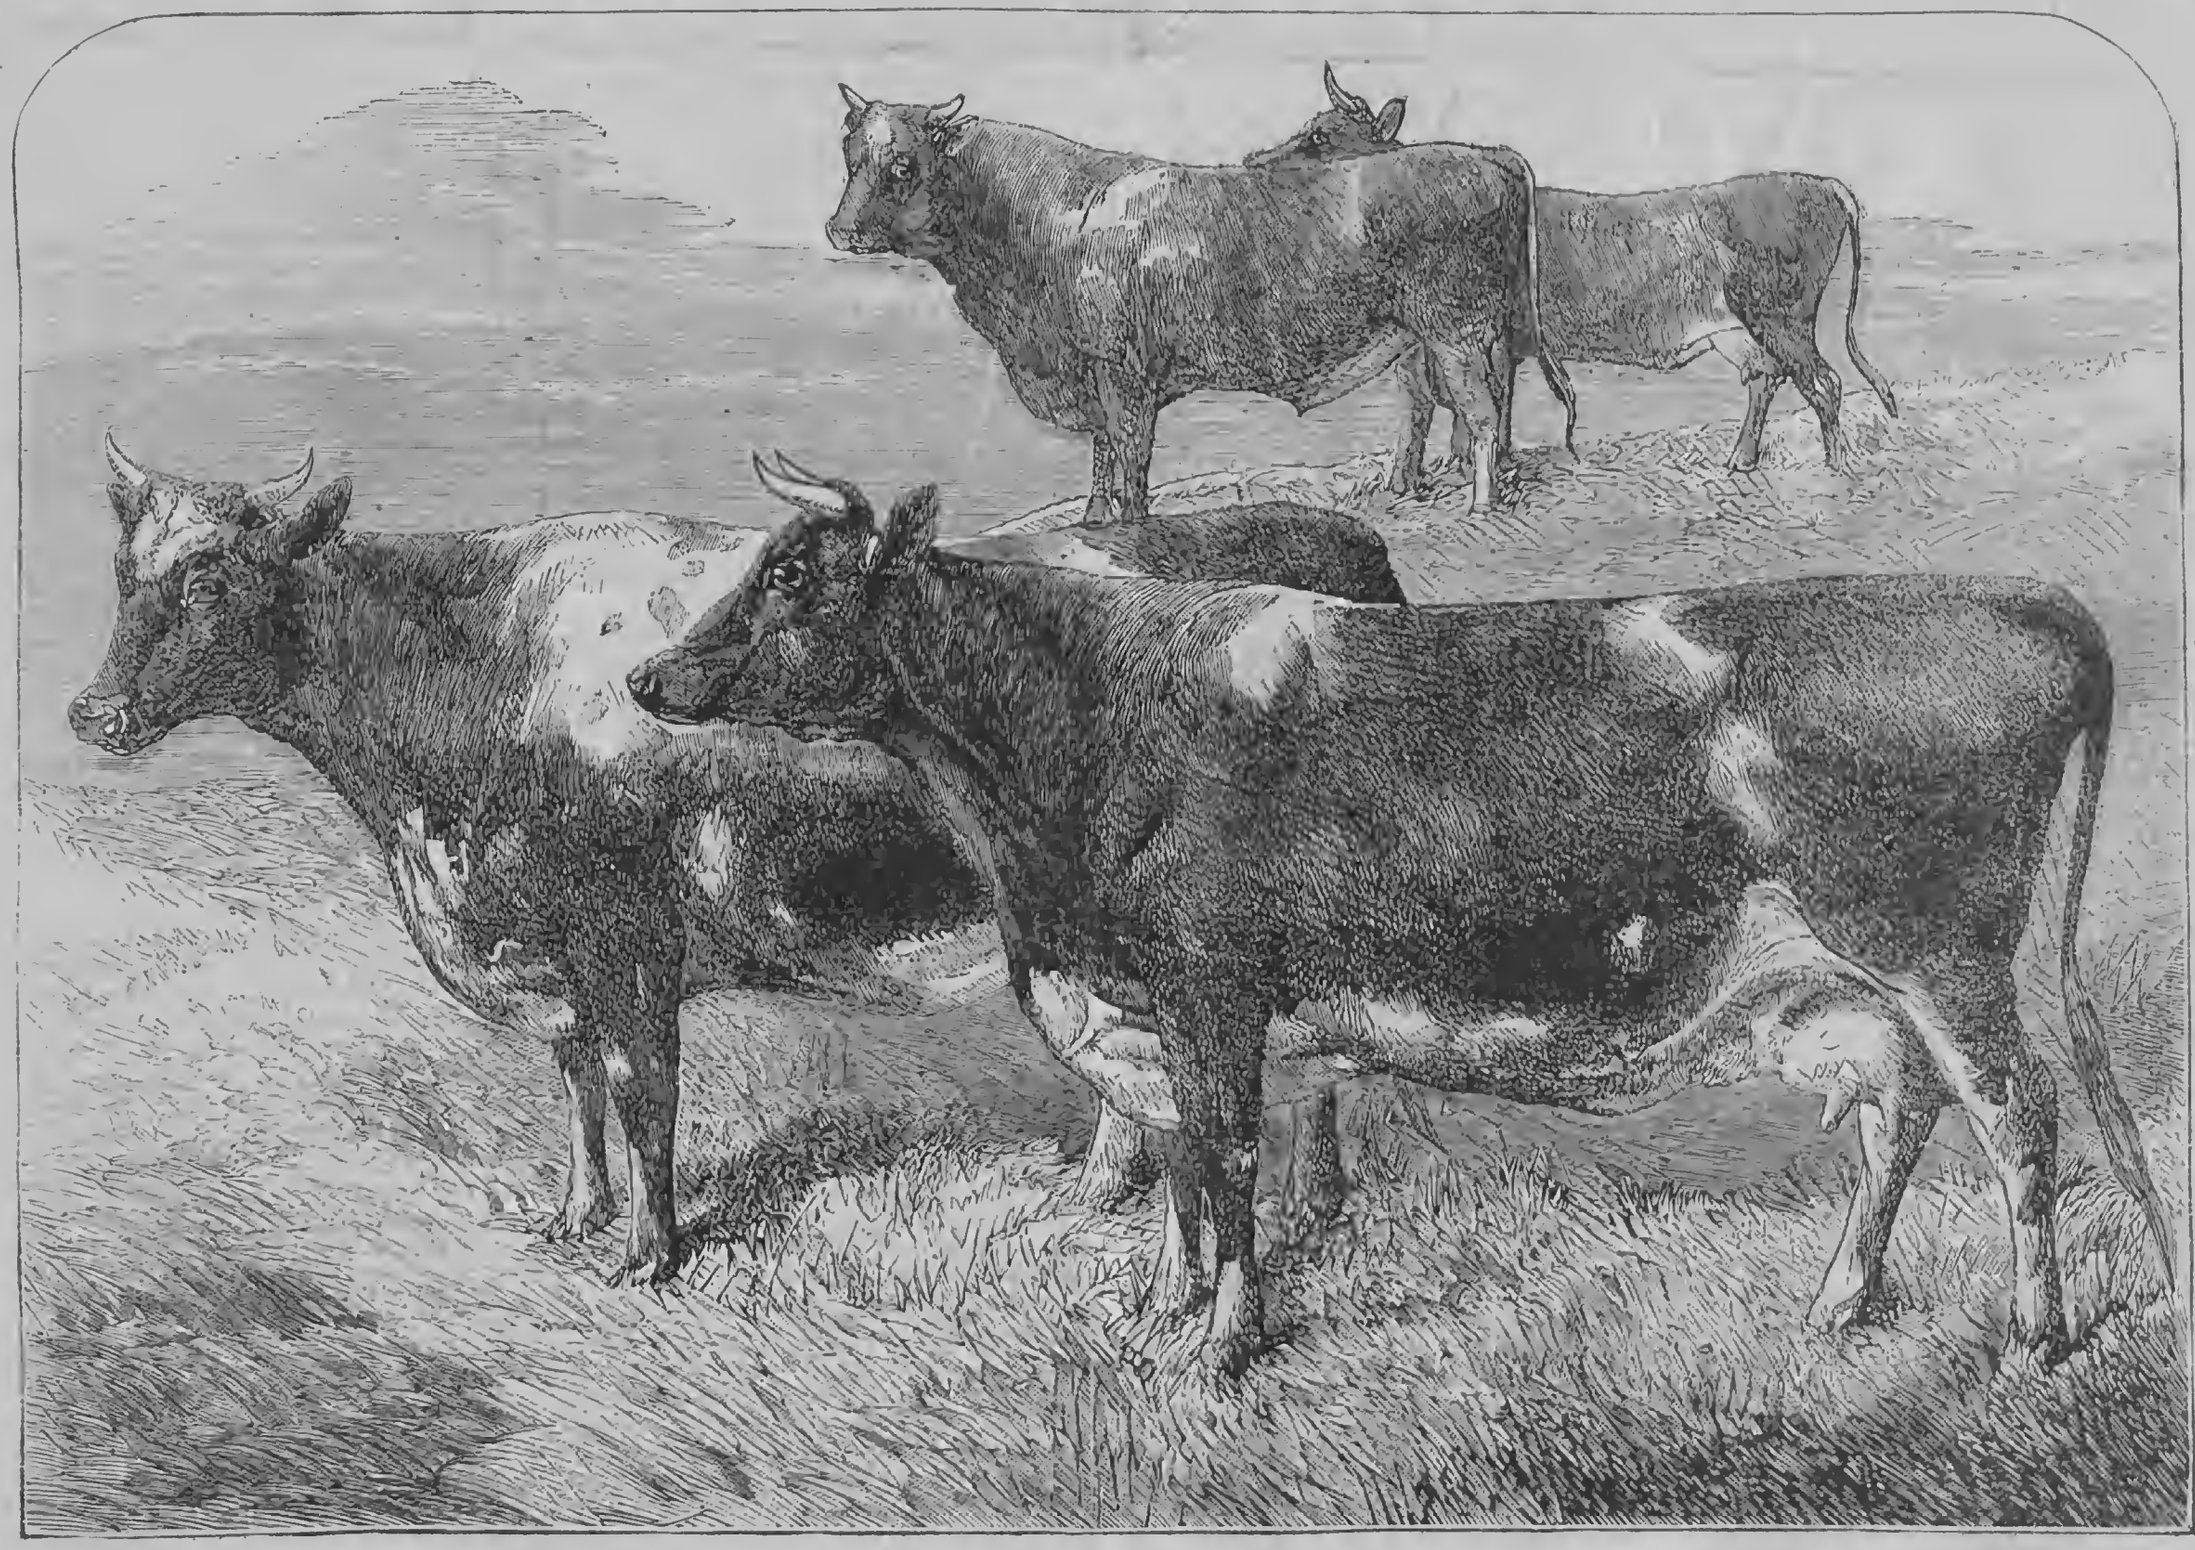
The Herdsman.

THE BRETON BREED OF CATTLE.

About ten years ago Breton cows were largely introduced into England by Mr. Baker of Chelsea, with the guarantee that they would suit small families better than the Alderney, from their superior hardiness of constitution and their requiring less food in proportion to the milk given by them. The number imported was quite sufficient to test the qualities of these cattle, and at first sight their almost total neglect in the present day would lead to the impression that their asserted superiority for the purpose of the small dairy was not founded on fact. We believe, however, that these two contradictory positions are reconcilable, and that the good qualities of the Breton cow have been little, if at all, overrated. In the first place, the cattle disease regulations have to some extent interfered with their importation; but we are inclined to believe that the true explanation is that there is always a great difficulty in procuring the male to carry on the breed, for the cow is too small to be safely crossed with any English bull, and consequently either both sexes must be kept by each gentleman who wishes to try the breed, or the milk must soon be lost. Hence it is not surprising that this little cow should now be rarely met with in England.

They are various in color, but all show their distinctive characteristics. They are extremely hardy, and can be well kept on hay and water in any small shed at a cost of 6d. a day. One gentleman who has carefully carried out the experiment finds that the keep of one Alderney is equal to four Brittany cows. They appear to have no vice, but are gentle and tame. They give from four to twelve quarts of milk per day, namely, from four to six quarts with their first calf, and six to eight quarts with their second, &c., and are at their best with the third calf; but in one case a cow two years old, with her first calf, only gave eight quarts of milk per day. The milk is rich in quality; the result of a test-glass gave 17 per cent. of cream, which is about one-sixth, or say six quarts of milk will give one quart of cream. Their qualities have now been well tested, and their purchasers express satisfaction and admiration. They do not vary in the quantity of milk they give, but hold on for some months with a good average quality. They are very docile, easily managed, and invaluable to any one that has a little grass. They are universally admired for their diminutive size, being from 36in. to 38in. high; and for all small farms from 2 acres they are specially adapted. They are doubtless the original stock of the Channel Islands breed, generally known as Alderneys. The latter have had the advantage of richer pasture, pampering with various kinds of food, and a more genial climate; and are proportionately more valuable, although little increased in size. Their yield of milk exceeds in quantity and quality, I believe, that of any other breed, certainly in proportion to their size. Extreme cases show that from sixteen to seventeen pounds per week of butter have been made from the milk of one cow. They are milked three times a day. Each cow requires about one and three-quarters English acres of grass land, and is fed during winter from the beginning of November on mangold wurzel, turnips, parsnips, and hay.

The average hight of the pure-bred animal from the sterile upland districts of this country may be stated at about 36 inches—sometimes as low as 32 inches—and occasionally, on superior pasture, up to 39 or 40 inches. As to their price, that of course depends on quality, state of markets, &c., and expenses of transport, whether in larger or smaller lots, and other circumstances. On an average, however, a useful, well-bred cow, carrying her second calf, could be delivered in England for £14 to £15. As to the probable result of crossing with other breeds of cattle, nothing but actual experiment could afford satisfactory reply. Crossing of breeds is nine times out of ten a mere lottery, and better avoided, unless in such a case as that of a given animal, possessing along with certain good qualities sundry defects, which it may be desirable to obliterate or diminish by admixture with some other breed possessing analogous good qualities, and a nearer approach to perfection in those other points in which the other is faulty. Such judicious crossing has



THE BRETON BREED OF CATTLE.

obtained for Great Britain the noted excellence of very many of her races of domestic animals; while on the other hand an absurd mania for promiscuous mongrelising has produced in France the lamentable yet ridiculous results that any practical man might have assumed as the consequence of mixing together breeds utterly different in nature, or habits, or specialty of production, and without consideration of the new blood infused being adapted or not to the climate, soil, or culture of the district into which the breed is to be introduced.

MARCHADOUR ZAOUT, a gentleman who lived in Brittany many years, says:—My own opinion—and I give it for what it may be worth—is, that this animal, defective only in size, is susceptible of all amelioration needful by a judicious selection of parents from its own pure blood, and thereafter good keep of the calf from its earliest age, instead of the all-but-starvation it has now to undergo at the hands of the near-sighted peasant proprietor almost up to the period of its maturity. My advice therefore would be to let well enough alone, so far as improvement of this breed goes, by any crossing whatsoever, and in fact, its smallness of size is a desideratum to many people—for from what other source can the owner of a mere plot of ground obtain a fair supply of home-produced milk and butter?

CATTLE RAISING ON THE PLAINS.

BY GEN. JAMES S. BRISBIN.

IT was late in the afternoon of a chilly day that DR. LATHAM took me in his wheezy old buggy, and we started for the grazing grounds south of Laramie City, Wyoming Territory. In an hour we were among the herds. First we came upon the warders or stragglers who, like sentinels, keep watch over the main body. Then we got among the families—groups of six, ten, a dozen, and finally the great mass of the cattle. Stalwart Durham calves raised their heads from the dry, crisp grass, and wondering what on earth so strange a thing as a buggy could be, gazed for a moment with staring eyes, and then, with head and tail erect, galloped away across the prairie. Ponderous bulls, that had cost their owners hundreds of dollars each, lumbered slowly out of the way, while mild-eyed and demure-looking cows gathered in circles around us. The young bulls roared, the heifers kicked up their heels and scampered away, while dams hastened to gather their little families together, as if fearful we had come to rob them of their pretty calves.

I noticed one monster bull, and near him a fine cow with four calves—one three-year old, one two-year old, and two little fellows, the latter evidently being twins. The bull, the Doctor told me, had been bought in Ohio at a cost of $500. He was a full-blooded Durham, and as fine an animal as I had ever seen.

So we rode on for miles and miles, and still the cattle stretched out as far as we could see. It was a grand sight—this herd of three thousand cows, eighteen hundred calves and fifty bulls! What an endless mass of beef for one man to own, and yet I was told that the gentleman who owned this herd had three others equally as large.

The cattle I saw on the Laramie Plains were all fat, and many of them fit for the butcher's block. They were of all sizes, from the great 2,000 pound bull to two weeks' old calves. We saw one little fellow just brought into the world, who was taking his first steps on the prairie, and I got out to observe him, but the Doctor hurried me back into the buggy, for the dam shook her head so resolutely and looked so wicked, we thought it time to be going. She was a half-breed Texan, with short, sharp horns, and the Doctor said these cows were very dangerous when with their young.

It was curious to observe the habits of these cattle—like buffaloes, they run in families, the cows keeping their calves with them until they are three or four years old. I saw a dam with sons and daughters larger than herself, but still she kept them under her care, and watched over them with all the solicitude of a mother. If they disobeyed, she punished them, and they submitted like well-trained children.

In the middle of the day they leave the high grounds, and go to the river bottoms for water, and at four o'clock, P. M., go back again on the hills to feed on the rich gramma and bunch grass. They run in families and little herds of six, eight, and ten, and these stick together like chosen friends. In traveling to water, they frequently go three or four miles, and, like the buffalo, march in single file, wearing deep ruts in the earth. At night they sleep in groups, and, if possible, find a sandy place for beds. When they go for water, the cattle, after drinking, always return to the point from whence they started out, no matter where they may go afterward.

It would be impossible to describe all the herds I saw during a two weeks' journey on the plains, and I can only give your their whereabouts, numbers, and, in some cases, the names of their owners.

On Laramie Plains are 15,000 stock cattle, 1,800 calves and 1,000 brood mares, owned by Edward Creighton & Co. of Omaha, making a total of 17,800 head owned by the one Company, and besides this stock they have 3,500 head at Horse Creek, and 800 head at North Platte. Dr. Latham and Captain Coates, U. S. Army, have 4,000 head of fine stock cattle and calves on the plains near Laramie. L. Filmore, Division Superintendent of the Union Pacific Railroad, has 300 stock cattle and 100 milch cows, on the Laramie Plains. Mr. Haley and Carmichael, have 300 American cattle and 700 stock cattle near Laramie. Clarence King and N. R. Davis of California, have at Lone Tree, Nebraska, 131 miles West of Omaha, 500 stock cattle. Mr. Bennett has at Elk Mountain, 400 head of stock cattle. Elk Mountain is above Laramie and near Fort Steel, 697 miles West of Omaha. Thomas and Hay of Cheyenne, have at Lone Tree, 150 head. J. W. Iliff of Cheyenne, has on Crow Creek and the Platte, 12,000 head. Of these, 4,000 are beeves, 2,000 milch cows, 3,000 calves and 3,000 stock cattle. Iliff has sold annually 3,500 beeves. He can put on the market 4,000 head per year and not decrease his herd. The average price of fat steers, at $20 per head, gives him an annual income from his herd of $80,000. D. & J. Snyder of Cheyenne have, at Crow Creek, 5,000 head of beef and stock cattle.

J. H. Durbin & Brother have on Horse Creek 600 head; F. Landon, at Pole Creek, 200; Tracy & Hutchison, do., 700; J. M. Carey & Bro., on Crow Creek, 700; Nuckolls & Gallagher, of Cheyenne, on the Platte, 3,000; Frank Ketchum, do., do., cows, 150; W. D. Pennock, do., do., do., 40; James A. Moore, do., Pole Creek, 1,300; W. G. Bullock, of Fort Laramie, on Horse Creek, 4,000; Texas Owner, on do., 1,50'; Milner & Davis, 200; Mr. Farrel, on Laramie River, 300; Mr. Tracy, on Muddy Creek, 500; Mr. Whitcomb, beef cattle, on Box Elder, 1,000; Duncan, Perry & Short, U. S. A., on Horse Creek, 2,400; Keith & Barton, on North Platte, 3,000; Mr. Brown, yearlings, do., 1,300; Major Walker, stock cattle, do., 500; Coe & Carter, do., do., 9,000; Taylor, Gayloid & Co., stock and beef, Cache L Poudre, 5,000; D. C. Tracy, of Pine Bluff, stock cattle, Pine Bluff, 700; E. Coffy & Co., stock cattle, Sabylle Creek, 350; Mr. Powell, do., North Fork of Laramie, 1,500; Benj. Mills, do., Chugwater, 400; R. Whalen, do., do., 250; John Phillips, do., do., 250; Mr. Simpson, do., do., 100; H. B. Kelley, do., do., 750; John Hinton, do., do., 125; W. G. Bullock, do., do., 125; F. M. Phillips, do., do., 2,100; Adolph Curry, do., North Platte, 1,000; Dickey & Sloan, American, Muddy Creek, 80; Mantle & Bath, stock cattle, on Little Laramie, 400; Patterson & Bros., on the Bijou (Platte River), 8,000; John Hitson, on the Platte, 900; Reed & Wyatt, do., 1,000; Mr. Baily, on the South Platte, 400; Mr. Geary, on the Platte, near Greeley Colony, 300; Mr. Lemons, do., do., 400; Mr. Ashcraft, do., do., 400; Mr. Munson, do., do., 800; Mark Boughton, at Junction of the Platttes, 2,500; Bent & Bros., on the Platte, near McPherson, 1,000. In addition to these vast herds, amounting, in the aggregate, to over 100,000 head, there are, on Big Thompson, five herds of various size.

I saw many flocks of sheep, the largest herds of these animals being at the following points:—Edward Creighton & Co., on the Laramie Plains, 10,000; Winslow & Co., do., 1,500; Sargeant, Thomas & Co., do., 2,000; Moulton & Co., do., 2,000; Dana & Boswell, do., 1,000; Judge Kingman, on Crow Creek, 3,000; James Moore, on Lodge Pole, 9,000; Mr. Maynard, at Lone Tree, 1,500; General King & Co., U. S. A., 1,000; Party from Socco, Mexico, 2,000: Emory Boston, 3,000; Mr. Carmichael, 200; Mr. Bailey, on the South Platte, 2,000; Mr. Munson, at Greeley Colony, 3,000. Making a total of 41,200.

In Mr. MOORE'S herd of 9,000 head on the Lodge Pole, were 3,000 lambs quite young. I was told the ewes of this flock would raise 6,000 lambs annually; that the flock would shear 65,000 pounds of wool each Spring, worth on an average $30,000. Mr. MOORE has already invested $300,000 in sheep, and is inclosing an immense ranche, having built over five miles of fence during the past year. Sheep raising on the Plains, North and West of Colorado, is as yet an experiment, and it is by no means certain it will prove a success. The number of cattle on the plains has more than doubled during the past year, and notwithstanding the late and unexampled hard winter, the herds seem to be doing very well.

Land Department.

PROGRESS OF THE NORTHERN PACIFIC RAILROAD.

AT this date (August, 1872,) regular freight and passenger trains have been running for six months on schedule time over the main line of the Northern Pacific Road, from Duluth to the Eastern border of Dakota, 252 miles; the track is laid and construction trains now run a considerable distance westward across Dakota; and about the middle of October the Road is to be completed and in operation to the Missouri river, 200 miles from the west line of Minnesota, and 452 miles west of Lake Superior.

On the Pacific coast, in Washington Territory, a finished section of 25 miles, has been in regular operation for some months, and an additional extent of 40 miles is now approaching completion—making 65 miles at the western end that will be in running order the present season. This will give a total of 517 *miles of Road* put in operation in a little more than twenty-four months from the date of beginning work, notwithstanding the necessary delays of the first year attendant upon the prosecution of thorough preliminary surveys and the selection of the best line through a densely wooded region.

A better idea of the real magnitude of the work accomplished, will be conveyed by stating that the portion of the Northern Pacific Road, now approaching completion, is considerably longer than the New York Central Railroad and its connecting lines, extending from Albany, New York, to Cleveland, Ohio.

Surveys.—In addition to this actual construction, the work of surveying and locating the entire line across the continent has been pushed with system and vigor, Summer and Winter; careful engineering, and the selection of the best of several possible lines, have in many instances reduced the cost of construction considerably below the original estimates. Continuous surveys and examinations have been made from Lake Superior to Puget Sound, with the exception of a short section on the Yellowstone river, which is now being surveyed.

Traffic.—The section of road now in operation across Minnesota already enjoys a very considerable local traffic, including the carrying trade of the British settlements in Manitoba and of the Hudson's Bay Company. Three steamboats, for the accommodation of this latter business, ply on the Red river of the North, between the railroad crossing and Winnipeg, in British Columbia.

The completion of this season's contracts will give the Road immediate and permanent control of the very large and profitable traffic of the Upper Missouri river, including the Government transportation in the Northwest.

Lands.—The portion of the Road now nearing completion will at once entitle the Northern Pacific Railroad Company to, and place in its possession, about Ten Million acres of the lands granted by the Government—an area exactly twice the size of Massachusetts. These lands are adjacent to either side of the track in Central Minnesota, Eastern Dakota, and Western Washington. They are mainly prairie farming lands, of excellent average quality, the remainder being covered with valuable forests of timber. They lie directly in the path of immigration and settlement, have a sufficient rain-fall, a climate of unsurpassed healthfulness, and, in the main, a singularly productive soil.

Settlement.—In connection with the Land Department has been organized a Bureau of Immigration to promote and hasten the settlement of the country tributary to the Road. Agencies are established in the older States of the Union and in Europe, through which information is diffused and every reasonable facility furnished to organized colonies and intending settlers. Settlement and cultivation of the country keep pace with the steady and solid progress of the Road.

The Horseman.

NOTES FOR HORSEMEN.

Horse Pawing in the Stable.—Having noticed inquiries in regard to preventing horses from pawing in the stable, allow me to say I have been very much annoyed and provoked at a valuable horse of mine in consequence of that bad habit, which seems to be the only bad trait of character he has ever manifested. I have tried a variety of meaus, among others the strap and chain, but all failed. Recently I devised a plan which has succeeded to my entire satisfaction. I made a frame four feet long and of sufficient width to reach nearly the top of the manger, from which I suspended it, allowing it to reach to within about ten inches of the floor. I boarded up the sash, or frame, in order that he could not get his feet over the lower bar, which was made of a round stick two inches in diameter. The act of pawing sets the swing in motion, causing it to strike against the shins, which so disgusted my animal that he very soon gave it up entirely.—E. W. S., *Otsego Co., N. Y.*

A Used-up Horse.—Mrs. H. S. NEELY of New Castle, Pa., asks if any of our readers know a cure for big head or mad staggers in horses. She says:—"We lost a horse some time ago. The symptoms were, first, he began to turn the sight of his eyes backward; then he became stupid; would shake his head; got stiff in his hind legs; his back appeared affected all along. He lived about a week after being taken, eating heartily all the while. The doctors could not cure him, and called the disease big head or mad staggers." The diseases called big head and mad staggers are very much unlike, but this horse had neither of them. The disease was probably an affection of the spine, which also affected the brain, and was practically incurable; or if relieved, the horse would never have been of any use afterwards.

Horses Chewing Bridles.—An inquirer asks how to prevent horses from chewing their bridles. Mix bitter aloe in a solution of gum arabic. Rub it on the part of the bridle that the horse is in the habit of chewing, and he will cease depredating.—D. T. R., *Pittsburg, Pa.*

The Apiarian.

BEE NOTES AND QUERIES.

How to Secure Luck and Profit.—W. F. DEWITT, Warren Co., N. J., writes the Beekeeper's Journal: "I desire to tell beginners how to have luck and profit in the apiary. Have your hives placed so you can get to the rear of them, and then, *never let the grass grow there.* You must *tramp* it out, however, and while you are doing this, work with the bees. Work intelligently, guided by some good journal and a good work on the subject. I winter in double hive, with a space of 2½ inches between walls, which is filled with straw. I have wintered this way for two years with perfect success. I consider the honey product one of the greatest blessings a kind Providence has given us. A few have the light to see it, but the many, through ignorance, trample it under foot.

Bee Culture in Oregon.—A. H. H. writes:—"Bees do well here; but they are left to take care of themselves. The climate of Williamette Valley is well adapted to bees. It requires but about fifteen pounds of honey to winter a swarm. They sometimes work until near Christmas, and begin again in February. There are about six weeks of dry weather here after the clover season, when they do not store much honey; but early in Spring they work on the willow, maple, fruit, and clover blossoms; in the Fall, on ripe fruits. Swarming time is about the last of April and first of May.

To Make Moveable Comb-Hives.—J. C. N. asks some one of our readers to tell "how to make a moveable comb hive without infringing on any patents." We believe it is claimed that patents cover all moveable comb frames; we have, as yet, seen no decision to the contrary. If any of our readers are better posted, we shall be glad to have them respond, only we do not want any discussion, in detail, of claims now in dispute.

Dairy Husbandry.

MILKING MACHINE.

WILL you please inform me if there is such a thing as a milking machine; and if there is, where one could be got?—ERNEST BECKERT, *Helena, Montana Ter.*

YES, there is such a device as a milking machine. The early inventions consisted of silver tubes, the upper parts pierced with holes and the point blunt and rounded off so as not to injure the teat whilst being forced up the orifice. These tubes when in place will draw the milk from the udder, and in case of inflamed udders, when it would be difficult to milk by hand, may often be employed with advantage. They are not to be recommended for steady milking, as a continued use is apt to make sore teats, while they have a tendency also "to dry up the cow."

Probably the most perfect invention in this line that has been brought out is the Colvin Cow Milker. It consists of a set of India rubber thimbles, or cups, with an arrangement attached for exhausting the air. It has handles by which it may be worked by hand. The four teats of the cow being placed in the India rubber cups, the handles of the machine are worked backward and forward which produce a suction, and the milk is drawn out similar to the action of the calf while sucking. It is claimed to closely resemble nature in its operation, inasmuch as the working of the handles of the machine produces a kind of bunting motion, like that of the calf at the udder, whereby the milk cells are emptied of their contents, and thus the whole process of milking is copied from nature. The machine is quite ingenious and draws the milk rapidly.

Some two or three years ago this machine was on exhibition at the American Dairymen's Convention, at Utica, and a committee was appointed to test its merits. The Committee, consisting of three well known practical dairymen, reported as follows:—

"Your committee, to whom was referred the investigation of the Durand & Colvin Cow Milker, beg leave to report:—That a high degree of mechanical skill is displayed in its construction; that it appears to be easily adjusted to a cow of any length or hight, to teats of any size, or distance apart; that it draws the milk by suction; will milk all four teats at the same time, and will milk a cow in about the same time that a good milker would require; but your Committee regret to report the fact that on the two trials made it failed, in its present imperfect condition, to milk the cows clean."

We cannot say whether the machine has been improved or not; but we do not hear of its introduction into the best dairy districts of New York. We presume, however, the machine may be obtained at any of the various dairy furnishing stores, but we cannot name price and place, as this information properly belongs to the advertising columns of the RURAL. We have had several other communications recently respecting milking machines, all of which, we hope, will be pretty fully answered in the above.

PROFITS FROM BUTTER MAKING.

WHEN the profits to be realized from butter dairying are figured, it makes a great difference whether the estimates are upon "a fancy," or upon an ordinary product. As an example of the former, take the statement of Mr. SARGENT in the American Agriculturist for February. He says our total yield of butter for the year was 1,812 pounds. Number of cows, ten. Of these "Anna" has not yielded one cent during the year, and supposing that the yield of two others has been consumed at the house in milk and cream, it leaves seven butter makers, or 258 pounds per cow. This at $1.15 per pound makes $296.70. He thinks the yield is not so good as it should or probably would be on account of the drouth and heat of the preceding year, from which the cows had not recovered.

Now in this statement the most extraordinary part is not the quantity yielded, but the *price received*. If ordinary butter had been made, perhaps 30 cents per pound would be all that could be reasonably expected. The seven cows would then have brought in $543.60, while the 1,812 pounds at $1.15 amounts to $2,083.80, a difference of more than $1,500. We are quite willing to admit that $1.15 per pound for butter is an extreme price, which many dairymen would not be able to obtain, even if they made a product every way equal to Mr. SARGENT'S, still the difference between the price of fancy and ordinary is always considerable, and it is this difference which will always make "fancy butter making" remunerative.

It may be all well enough in theory to talk about exorbitant prices paid for fancy butter; but when one comes to contrast the difference between the rich, perfect flavor of a "tip-top article," and the rank, oily taste of the great bulk of butter in market, the extra price asked for a fancy article does not seem of so much account. There are a greater number of people who are fastidious about their butter than is commonly supposed, and there is not much danger in overstocking the market with a fine thing. Hence we say to butter dairymen, look to the quality of your goods, for it is the extra price which such goods bring in market which is to make your business highly remunerative.

Dairy Factories in England.—The London Milk Journal says:—In England, the system of associated dairies steadily gains ground, and butter factories on this principle are being opened. The quality also of the butter is steadily improving, and bids fair to rival that produced in Holstein and Mecklenburg, which now stands first in that market.

Sheep Husbandry.

OHIO SHEEP AND WOOL.

THERE is quite an interest manifested in the growing of fine wool in this part of Ohio, the Merino being better adapted to our hill country than other breeds. Most farmers are convinced of the great need of improving their flocks as land increases in value; thoroughbred stock must take the place of the inferior mixed breeds that have formerly been kept. We are aware there are a few farmers in almost every community who are not convinced of the increased profit of keeping improved stock. A few facts might be of interest to your readers, showing some of the profits of keeping such stock.

The first week in May, 1872, the undersigned clipped from 80 head of American Merino sheep, consisting of 20 rams and 60 ewes, 1,080 pounds of wool, the greater part being unwashed, which sold for $536.80, averaging $6.71 per fleece, the heaviest ewe's fleece weighing 21½ lbs., and selling for $9.67; heaviest ram's fleece weighing 24½ lbs., and selling for $10.91.

Seventeen of these ewes, weighed Feb. 20th, averaged 120½ lbs. each; three rams averaged 154 lbs. each; six ram lambs, less than one year old, weighed at the same time 107 1-3 lbs. each. We give figures below showing the age of sheep and weight of fleeces of forty of our best sheep. This wool was sold to H. SMITH of this place, Agent for the Chambersburg Woolen Company, Pa., and was sent direct to that factory. They have bought two of our clips previous to this.

NOTES AND QUERIES.

Sheep and Wheat.—ELI STILSON, President of the Wool Growers' Association, has proved to a demonstration that his flock of 1,500 sheep has enabled him to produce eight or ten more bushels of wheat to the acre than is grown on the average lands of Wisconsin, where sheep husbandry is not an auxiliary to wheat farming.

Fruitful old Ewe.—The Tuscarawas (O.) Advocate says that JOHN MILLER, a farmer of that county, owns a blind ewe that is twenty-five years old and the mother of sixty-two lambs. This animal gave birth to two lambs when she was one year old, and three each year after until she was twenty-one years old.

Industrial Topics.

N. Y. STATE AGRICULTURAL SOCIETY.

IN the RURAL NEW-YORKER I see some contributor criticises the young farmers of the State for their non-attendance at the annual meetings of this Society; says these meetings do not attract the attention of farmers in general—that they treat with indifference their proceedings, as though they were a mere farce, and thinks the young farmers of the State should attend and take an interest in them. All very good reasoning, and very true; but blessings on his unsophisticated soul, does he not know that no young farmer or any one else outside the charmed circle has the least chance of influence or voice in their proceedings? The writer hereof did for fifteen years regularly attend these meetings, was often on the Committee of Nominations, and even to some extent "inside of the curtain," and knows whereof he speaks. There would always be enough old members to overbalance all change in management, and whenever some luckless new man would intimate the desirability of such change, he would be scouted at and generally retire with a large "flea in his ear." The farmers of New York have long since ceased expecting any good to result to them from this Society, and have left the thing in disgust, to be run as it has been by the few and their coadjutors as they pleased. Does your contributor not see that the same men year after year manage the meetings, make all the motions, a majority serve on the committees, and the same ones receive the nominations and appoint the same superintendents and committees at the Annual Fairs, year after year? Indeed, the writer hereof will wager the price of the benefit any farmer in the State receives from six numbers of the Journal of the New York State Agricultural Society that he can give a correct general synopsis of the proceedings of the next annual meeting of this Society—giving the names of those making the motions, the names of a majority of the committee on nominations, the names of the officers elected, if living at that time, together with the names of those exhibiting articles and receiving premiums, (a very small list by the way,) and a general outline of the speakers and their subjects, with a general digest to close up, of the prosperity of the Society and the benefit it has been to the Agriculture of the State—ending by returning thanks in particular to the Committee on "Abortion in Cows."

The fact is, Messrs. Editors, this Society is a "big institution," and young farmers should "tarry till their beard is grown," before expecting to have any influence in their sage proceedings, leaving these to those who have grown gray and fat in the "Service of Agriculture." But, seriously, there should be an entire change in the management of this Society, and it is time the farmers of the State spoke out in this matter. A small amount of brains, to say the least, should be placed in that Secretary's office, in Albany—some one, if nothing more, who can get up a Journal that is not a disgrace to the Agriculture of the State—or the whole thing will be the disgust of the farmers of New York. The Society has even now become so unpopular that no locality wants the Annual Fair the second time, and the officers, have oftener than otherwise, to solicit the holding of them, instead of being flooded with applications, as they were a few years since.

A WESTERN NEW YORK FARMER.

THE OPPRESSED EMPLOYER.

How many farmers are in trouble like SEARS COURTNEY, that have no wealthy aunts or other relatives to bestow a fortune upon them, and with all their toil and care and sacrifice can scarcely bring the year around? Why is all this? Why do they not speak their grievances? Is it not because so few of them are accustomed to write for publication, and can find so little leisure to write at all?

If all should adopt four-acre or ten-acre farming, from whence would the bread, butter, cheese, beef, pork, wool, cotton and many other useful articles be derived? There must be some large farms, some to direct and manage them, or all would suffer for the necessaries of life. There must be some to employ others; for so many cannot employ themselves; but little work would be done.

Now the question arises with fearful import at this time, who are the laboring people? Let the employed reflect; let all reflect candidly and justly upon this important question. We read that the laborer is worthy of his hire. But what we all need to consider is, who are the laborers, and what is their hire? The employers may labor from fourteen to sixteen hours a day, as they often do, for much less than the employed would accept for half that toil. His pay comes in a different way. He must sustain his own losses often, and work out his hire, as best he may, by putting his productions in market, for such price as he can get for all perishable articles that cannot be kept.

To see the strife among hired laborers with employers one would think they thought themselves the only laborers in the world. That all the work and hire came by their exertion. If so grievously wronged, why not employ themselves instead of clamoring about employers? Do they forget that the Scripture says, "Be content with your wages?"

Why this discontent among the employed in city and country? Is it just, wise or humane? Wages were high when articles of living were high, because in most instances production brought a remunerating price. But it is very different now when almost everything has fallen to its old standard. Those who engage in extensive business, and have not help of their own, must employ others. But ought they to do it at a loss? Will they continue to do it at a great loss for a long time? Some who cannot shift their business may; but ought they to make ruinous sacrifices? Ought not the discontented employed to consider that, taking all things as they exist at the present time, they are much better paid for their labor than many of their employers? Let them look at both sides of the shield before they quarrel like the foolish knights. "They that take the sword shall perish by the sword." Does not the history of nations prove this assertion true? Will not many employers grow disheartened and cease from carrying on many branches of business unless there is a more contented and just feeling among the employed?

Employers, farmers certainly, (I speak more particularly for that class, as I am most familiar with their circumstances), cannot maintain the present high price of wages, while their productions must be sold so low. Now what are they to do? The employed will take all they can get and often strive with the employer for more, whether anything is left to reward him for his care and toil and expense. Does this proceed from ignorance, or avarice, or both combined?

Once laborers would say—"I have not earned so much, and I will not take it." Was not this an honest principle that spoke of justice in their souls? O, would that a little of this honest principle might revive, is the wish of a many a struggling farmer.

PATIENCE AND POTATO BEETLES.

WON'T you please tell our friend J. B. T. COLLINS, Michigan, just to keep up his courage; that we know exactly how it is ourself about the potato bugs, for we have seen them and had them just as thick on our potato vines as you ever saw currants or grapes on a bunch; have tried (in vain) both Paris green and eternal vigilance, taking them by panfuls, pouring boiling water on them, and then throwing them into an old cellar hole; and by the time we had vigilized across the patch, we might begin at the beginning and do the same again. Yet, now, I have as nice a piece of potatoes as I ever saw, and not a bug upon them; and another piece on the same place, where they were so thick that I had to abandon it to them entirely two years ago, has this year only a very few—not enough to hurt the crop, although we have let them "severely alone." I have seen three at a time on the first shoot, when it was not larger than your thumb nail, and some actually standing on end in the little holes, to meet the coming sprout; so let him hope. J. H. BODGER.

Stinging Ant.—I send you an insect which I found at Sour Lake, Texas. It was a great curiosity to me, and I thought it might be to you. Is it an ant? It has a very long sting; it is alive now, and has had the pin through it for two weeks.—LLOYD ARNOLD, *Galveston, Texas.*

THE bright scarlet, wingless insect, with black bands across the abdomen, is the female *Mutilla coccinea*, or Stinging Ant. It is also called Cow-Killer in some localities; why, we do not know. The male *Mutilla* has wings, but no sting, and, therefore, may be handled without fear of injury, which is more than can be said of the female.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Bedding Roses.—*August 6.*—Early last Spring I struck a large number of rose cuttings off the various sorts of Teas, Bourbons, and Noisettes, and as soon as they were well rooted, planted them out in the garden. Of course they were very small at the time of planting, very few being more than four or five inches high, and quite slender; but at this time they are neat, compact little plants, loaded with flowers, and will continue to give me an abundance of roses until checked by frost. I confess to be quite partial to these monthly roses, which I treat as bedding plants, not trying to keep any considerable number in my conservatory during the Winter, but dig them up every Fall and bury in a trench, taking up and planting again in the Spring. Cuttings made in the Spring, as well as the old plants, bloom freely during the Summer and Autumn, or just when roses are usually scarce in gardens where only the most hardy sorts are cultivated. It is not too late to strike cuttings now; for the little plants can be carefully protected during Winter, and then planted out in Spring. Those who have no greenhouses will succeed better with green cuttings taken off in August than at almost any other season, because the high temperature is just what is needed for this purpose. The little half-ripened twigs should be taken and cut into lengths of two or three inches, the lowermost leaves removed, and then stuck into pots or boxes filled with pure sand, set in a shady place. Keep the sand constantly wet, and roots will usually be produced in two or three weeks, when the plants may be potted off singly, or transplanted into boxes of good soil. Leave the plants out of doors until the cool weather of autumn has hardened or ripened the wood, and then remove to a cool cellar, or protect with a covering of straw or leaves.

There is no good reason why those who desire choice roses should not have them in abundance, provided they are able to purchase a few stock plants to begin with. A very little practice will enable almost any one to propagate these tender sorts successfully, as they grow much more freely from cuttings than the hardy June roses or even what are called Hybrid Perpetuals. I have at this moment several hundred plants in full bloom, all grown from cuttings taken off from a few stock plants last Spring.

Seedling Verbenas.—*August 7.*—I think I said something about sowing verbena seed in my Diary early in the Spring, and of course I endeavor to practice what I preach. The verbena seed were sown and now they are in bloom, and really there are some as good varieties among them as any of the much praised named sorts sent out by our florists. It is not half as much trouble to save a few verbena seeds as it is to send to a distance every Spring and purchase plants; and for my own part I prefer the seedlings, because they are always new, no two plants producing exactly the same colored flowers. Then again I find that the seedlings grow more vigorously than the majority of the plants that have been forced, in order to propagate them rapidly. Of course I do not wish to injure the trade of the commercial florists who propagate such plants for sale; but it does seem to me that we are all getting into the habit of purchasing things which we might produce at home. The seedstore is so handy now-a-days we are liable to neglect the saving of seeds from even the most superior varieties, hence many a choice *sport* in the way of fruit and flower is allowed to become extinct. When I get a good thing I do not like to run the risk of losing it, or depend upon somebody else for its preservation; therefore I always save seeds or cuttings until something better appears. If we would remember that progress is not confined to any particular place or locality, we might advance more rapidly than we do at the present time, and not be so frequently swindled.

Japan Oats.—*August 8.*—A gentleman who received a package of oats from Japan last Winter, gave me a few, and I sowed them in my garden, where they made a vigorous growth, and ripened about the same time as our common sorts. Upon comparing these Japan oats with specimens in my cabinet, I find that they are very nearly, if not the same, as the old skinless oat, long known to our farmers under various names. Last year a Western firm advertised it as the Bohemian oat; of course, recommending it as a very superior variety. When these oats are threshed, they drop from the chaff, the same as wheat and rye; hence the name "skinless or naked" oats. They are not considered equal to our common sorts for feeding, unless ground into meal, and used upon cut hay or straw; neither do

SANCHEZIA NOBLIS VARIEGATA.

they yield as well. Somebody may make a little money by introducing this grain from Japan, but it is neither a novelty nor of any great value.

Saving Materials for Mulching.—*Aug. 10.*—There are always more or less weeds and coarse grasses about a farm that are of little value except as a mulch for trees and plants, or to scatter in the barn-yard for manure. I have had my men clean up all the odd places, including some low, wet, uncultivatable land, and from all we have obtained several good loads of coarse materials that will come in very conveniently next Fall to cover my strawberry beds, as well as other plants which will be benefited by a slight protection during Winter. There are many thousands of tons of such material wasted every year in localities where it could be used to advantage for various purposes. It is not altogether such inferior material as I have gathered to-day that is allowed to go to waste, but thousands of tons of pretty good hay are allowed to remain ungathered, and in neighborhoods where cattle next Spring will show the want of sufficient food. A stack of poor hay or straw is far better than a snow bank for cows to sleep in, and now is the time to provide this if no better is at hand. There is, every year, enough low meadow and prairie grass allowed to waste, to feed one-half the stock in the country; and I am not sure but one-half of the farm stock will be glad to get it before next Spring. Perhaps I am wrong in making this assertion for other portions of the country, but I know I am right so far as it applies to the region around New York; for here we have many small streams and large ones, with wide bottom lands adjoining, which yield a mixture of both good and inferior grasses, out of which cattle would select, if afforded the opportunity, much good, wholesome food. It is a pity, if no worse, to permit fodder of any kind to waste.

Pomological.

KEEPING WINTER PEARS OUT DOORS.

Most growers of winter apples and pears in northern climates, have no doubt occasionally found specimens of these fruits that had kept sound and good till mid-winter, or early Spring, on the ground where they had fallen from the trees and been kept from light and air by a covering of leaves and snow. It is also well known that freezing of such fruits does not materially affect them if kept in a close and dark cellar, and allowed to thaw gradually without being disturbed. I have known apples to be kept in this way, purposely, in large quantities for market, with good success, only they need to be disposed of pretty quickly after thawing out in Spring. But I have never known but one instance where a pear grower has acted upon these hints, and devised a simple and successful mode of keeping Winter pears out of doors, in a frozen state till mid-winter. If any of the readers of the RURAL NEW-YORKER have tried such a plan I hope they will give us the particulars.

Dr. L. M. AVERS, Urbana, O., writes me that he gathers his late pears as soon as sharp frosts occur in October, and lays them in piles of about a bushel each upon a grassy spot of ground in his orchard or lawn beneath some tree—preferring an evergreen, and being careful not to have the fruit more than five or six inches thick; then cover them with dry forest leaves, five or six inches thick, and throw a little bush on the top to keep the leaves from blowing away and animals from running over the heaps. When hard freezing weather comes on, remove the bush and lay a coffee sack or the like over each pile, on top of the leaves; replace the brush and leave the pears to take the weather as it comes; the more they freeze and remain frozen the better.

When wanted for use, take some into the house, and, if frozen, let them thaw gradually in a dark place covered from the air, then ripen them as needed in a warm room, but it is better to let them thaw out before removing them from the pile. He says: "Last season I kept in fine order Columbia pears till the middle of January; Jarminettes till February, and Easter Beurres till May. In no other way have I been able to keep them so well." M. B. BATEHAM.
Painesville, O.

POMOLOGICAL GOSSIP.

Beecher's Pear List.—In answer to an inquiry from a correspondent, HENRY WARD BEECHER gives the following as his list of pears:

For early pears we should select *Beurre Giffard, Tyson, Rosticzer.*

For early Autumn, *Bartlett, Belle Lucrative, Seckel, Louise Bonne de Jersey.*

For late Autumn, *Beurre Bosc, Beurre D'Anjou, Sheldon, Duchesse D'Angouleme.*

For Winter, *Vicar of Winkfield, Lawrence, Winter Nelis.*

This list will do to begin on. Experience has shown that these sorts flourish well very generally throughout the North, and upon all tolerably good soils.

We do not believe that pears on quince will succeed well in ordinary hands, except in a garden. They require petting, and in orchard culture are apt to die out. We have found the following varieties to do well, and to give fruit of finer flavor than when on their own roots: *Louise Bonne de Jersey, Duchesse D'Angouleme, Vicar of Winkfield, Beurre D'Anjou.*

But any pear may be grown upon quince by *double working.* The *Seckel, Bartlett,* and many others, will not grow well on quince, but graft the quince with a kind of pear that flourishes vigorously, say *Louise Bonne*, or the *Duchesse*, and then upon *these*, the next season, graft the *Seckel* or any other sort that does not take easily to the quince. In this way any pear may be dwarfed.

Chambers' Pear.—W. H. Cox, Anchorage Ky. writes the Gardeners Monthly, July 15:—"This fruit has been selling in our market this season for six (6) dollars per bushel, which is more than we can get in our (Louisville) market for any pears during the whole season. Our first ripened about the 10th inst., and we will ship our last the middle of this week. Their beauty makes them eagerly sought for, and they are of much larger size than any other pear of its season; the tree is a slow grower, long coming into bearing; when it does it is generally sure and abundant." Is this a new fruit, or is it Pope's Scarlet Major of Downing. Let us know more about it?

The Sportsman.

TO TRAP WOODCHUCKS.

USE a steel trap; set it at the mouth of the hole—not too close—and make a mark around the trap; then take the trap up, dig out the dirt just as deep as the trap, and set it (the trap) in the spot excavated. Put some moss around the pan so that dirt cannot get under to prevent it springing. Cover nicely, poking the dirt with a board sliver. Stretch the chain out straight from the hole so that he cannot get into the hole after he is trapped, or he will get out.

When you get the woodchuck, skin him, spread out the skin, and put some ashes on the flesh side of it and roll it up. Lay it away as you would a sheep-skin to take the wool off. Wet the ashes a little, and in one or two days the hair will start. Pull it off and wash the skin clean and put it in old soft soap or strong soap suds, and in three or four days, perhaps, the flesh can be scraped off with an old case-knife. We call it "beaming." Then pull it over a sharp-edged board until it gets dry, and it will be soft as cloth and tough as leather.

In case the woodchuck pulls out of the trap, set a spring pole. Split the top of the pole, cut a ring around, slip the ring of the trap chain over the split end and drive a wedge into the split, to hold the chain; then drive a stake with a short hook to hold the pole down. When the woodchuck gets in and pulls, the pole is loosened from the hook, and up will go "chuckey" and trap.

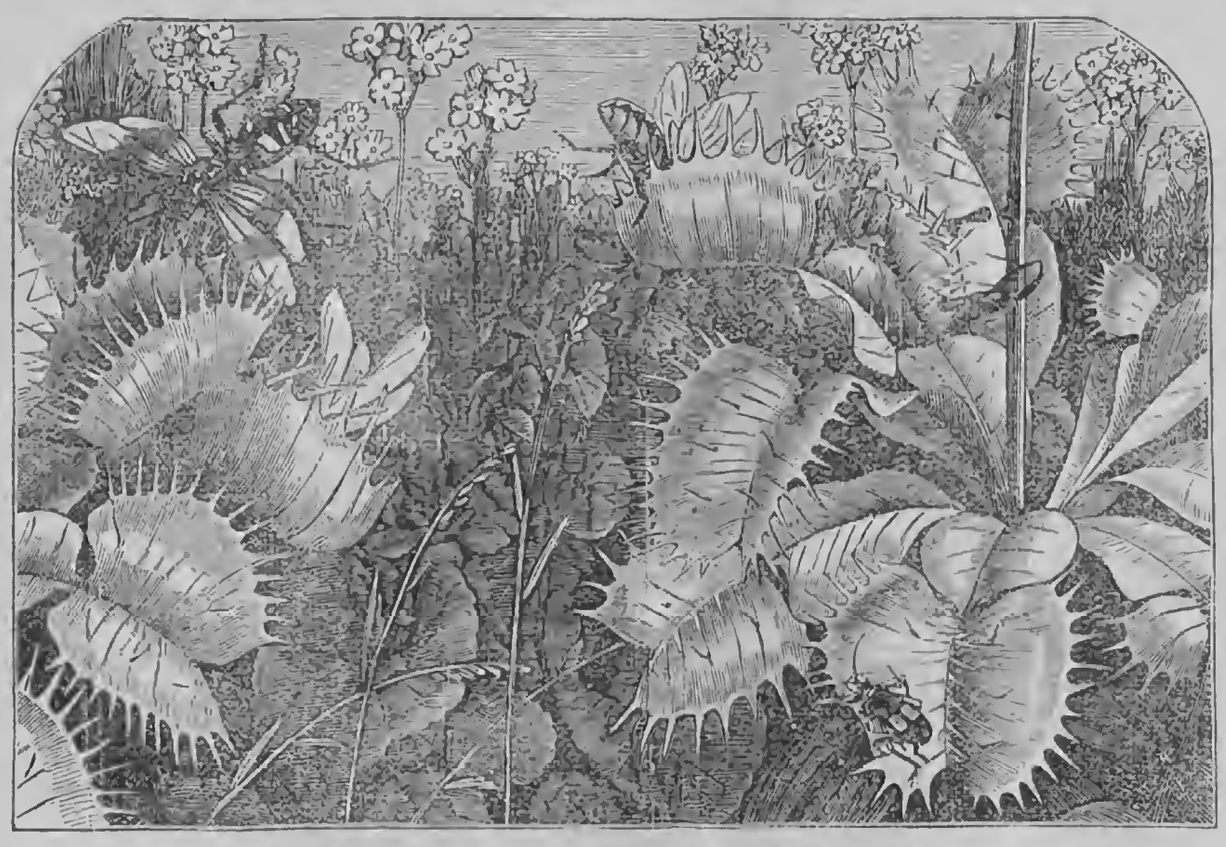
H. MILES.

Best Breech-Loading Shot Gun.—Will some of your readers tell which is the best breech-loading shot-gun at prices ranging from $40 to $60, for hunting foxes, rabbits, ducks, etc.? What success have they had with Colt's five-shot revolving shot-gun? I should also like the address of the manufacturers of the Whitney breech-loading double shot-gun, and of Rooper's repeating shot-gun.—B. M.

Floricultural.

VENUS' FLY-TRAP.

This interesting plant is a curiosity in the vegetable kingdom. THOMAS BARNES, writing in The Garden, says of it (*Dionœamuscipula*):—"It is referred to in most works on physiological botany, as affording a striking instance of vegetable irritability. The trap-like extremities of its leaves are so sensitive indeed, that the least touch causes them to close instantly on the luckless fly, wood-louse, or even larger insect that happens to get within their grasp. In the growing season, when the plant is strong, I have seen even a slug, four inches long, held fast by the tail until it was dead; and beetles so large as to protrude on all sides from the trap meet with a slow but certain death. This plant has, indeed, somewhat puzzled vegetable physiologists, some maintaining that its legitimate use in the vegetable world is that of an insect destroyer; others that it is carnivorous, and that it is benefited by the decomposed insects which it entombs. One thing we do know, which is that when a trap has inclosed an insect it retains its hold of it for weeks, or until the insect has become thoroughly decomposed; after that it re-opens.



TRAP-LIKE APPENDAGES OF VENUS' FLY-TRAP.

"This natural insect destroyer is a humble marsh plant, bearing from the root, on a smooth leafless stalk a few inches high, a corymb of white flowers. From the bulb-like root proceeds, in a radiating manner, a number of leaves on longish stalks. The lamina of the leaf is divided by the mid-rib into two nearly semicircular valves, each of which is fringed with stiff hairs, and furnished near the middle with three minute bristles arranged in a triangle, which bristles are extremely irritable, and when touched by a fly or other insect cause the two sides of the leaf to collapse with a sudden spring, imprisoning the intruder until it is either dead or ceases to move. It is a native of swamps in North Carolina.

"February or March is a good time to commence its culture. I have found it to grow well in the following materials:—Three parts rotten sphagnum chopped fine, two parts fibrous peat broken small, one part broken crocks, the size of a pea, a little leaf mold, and sand. Pot tolerably firm, using thumb pots well drained; plunge these closely in sphagnum in a pot or pan sufficiently large to accomodate them, giving the whole a liberal watering. If strong, the plants will grow up flower stems; but these should be removed as soon as they are long enough to pinch out. During the season of growth water copiously every day.

"Towards November the plants will show signs of going to rest, by making a few short leaves; these will be retained during the Winter, the larger Summer leaves dying off. The soil must never be allowed to become dry, not even in Winter, at which time the plants should be placed in a temperature of 50° by night, allowing a rise of some 10° during the day time. During its season of growth it enjoys a night temperature of 60°, with 75° or 80° by day. Provided the atmosphere of the house (which should be moist) suits the plant, all the crowns that throw up flower stems will be found to increase naturally by throwing off off-sets. Many grow this plant under a bell-glass, but its growth is stronger without than with one. It likes a moderate amount of light, but no sun; therefore, if the house is thinly shaded, the plant should have in addition a piece of thin tissue paper over it in bright weather. This is indispensable. About five years ago I had a large mass of this plant filling a twelve inch-pan. I gave it more light than is usually allowed it, and the trap assumed a beautiful bronzy color, so much so, as to be remarked by all who saw it. The following year I thought to still improve it by placing it still nearer the light; but one week's bright weather so injured it that it never recovered."

SANCHEZIA NOBLIS VARIEGATA.

This comparatively new variegated-leaved plant has, as yet, found its way into very few gardens, but when it becomes known, we think it will be a general favorite. It is not so rapid a grower as the *Coleuses*, and not quite as elegant in habit; but the rich, unique variegation of the leaves is its greatest attraction. The leaves are large, and of the form shown in the illustration (page 124). At first, they are of a light, yellowish green, the stripes or veins being of a deep golden color; but as they grow older, the yellow tinge in the ground color becomes a deep green, and the veins a silvery white.

The plant is readily propagated from green cuttings of the branches, or even cuttings of the leaves will grow quite readily; therefore, there is no good reason why the plants will not be very cheap and common another year. We have used the *Sanchezia* as a bedding plant this season, and, although it succeeds well in this position, still its place for making the best display is as a window or conservatory plant. It is just one of those charming and always beautiful plants which the ladies so much admire as a pet house-plant, not requiring any special care or culture.

FLORICULTURAL NOTES.

Tulips from Seed.—Can tulips be propagated from seed? and, if so, what time will it do to sow them?—SUBSCRIBER, *Silver Creek, N. Y.*

CERTAINLY; tulips can be propagated from seed and all new sorts are produced in this way. The seed should be sown as soon as ripe, either in shallow boxes in a greenhouse or in the garden, the same as you would sow any other small seed. If sown in the open ground this Fall, they would come up next Spring, when they should be kept free from weeds, as the little grass-like leaves will be quickly smothered by coarser growing plants. If the seedlings should appear so near each other as to crowd, the small bulbs may be transplanted in Summer after the leaves die; otherwise they need not be disturbed until they bloom, which will be when they are from three to five years old. This, certainly, is a long time to wait for blooms; but by sowing a few seeds every year you will soon have a new lot of seedlings coming into flower every season, which will in part compensate for the long delay at the beginning of such an experiment.

Myrsiphyllum Aspargoides (Smilax).—Two years ago I had a Smilax sent me from Boston, and there were about a dozen shoots from the roots, or, more properly, bulbs. The following Spring it died down; when it started again there were only two, and this Spring, after it died down, I repotted it, and, now that it has started to grow, there are only three, and they do not look thrifty and well; there was apparently a large number of bulbs. Will you please tell me what to do with it? Ought I to divide the bulbs? What kind of soil is best?—ALLETT C., *Clavcrack.*

THE soil in which your plant is growing has probably become soured and the tubers diseased. Take out the roots and separate them and put into fresh soil. A good, rich, sandy loam is best—one not containing any decaying vegetable matter such as barnyard manure. Transplant and separate the tubers every season after the stem dies down in Spring.

The Night Blooming Cereus Grandiflorus—Is said to be used by American physicians in their treatment of heart disease—plant and blossom being employed. We don't know but what it is so; do not know any reason why it should not be so.

Farm Economy.

NIGHT SOIL.

A CORRESPONDENT at Magnolia, Ark., asks what night soil is, and how to make a fertilizer of it. Night soil is human excrement. It is perhaps the best fertilizer known, and yet the least used in this country. Farmers, as a rule, make no effort to utilize it. They scrape their barn-yards over to get a load of manure, which does not contain as much plant food as a half bushel of night soil, which they permit to lie year after year in their privy vaults, ferment and emit its noxious gases without any attempt even to deodorize it, much less use it.

The RURAL NEW-YORKER has repeatedly given directions for making it inodorous and portable. One way is this: Instead of digging a hole in the ground and walling it up, over which to set the privy and into which the droppings are to fall, build the privy high enough from the surface of the ground to admit a large box, as long as the seats and as wide as is necessary. Some farmers build this box on low runners—a sort of a bob-sled, so that a horse can be hitched to it when desired, and thus haul it direct to the place where the manure is to be used or deposited for use. At any rate the box should be so built that it can be easily removed, emptied and replaced.

To prepare night soil for use, there should be always standing in the privy a box or barrel containing pulverized charcoal, or dry muck from the swamp, or plaster, or fine chip manure, or semi-decayed leaves or rotten wood from the forest. If none of the above are convenient, let some good, stiff dry loam be used; and at least once a day a quantity of some one or more of the materials mentioned should be thrown into the box or vault. It should be so deposited as to cover the surface of the excrement, and enough of it to absorb the liquids. In this way it is easy to secure a good manure, and an inodorous privy.

The wasted wealth in this country, in the shape of night soil, is almost beyond computation, and is a constant reproach upon the intelligence and economy of our people. Scarce a farmer or gardener in a thousand uses it. And we know of no city whose system of sewage makes any provision for saving and using this enormous resource in the production of food. And yet it is so valuable, that if such provision were made in our larger cities, the revenues that would be derived from its sale to neighboring farmers and gardeners would more than compensate the expense of such provision annually, beside diminishing the cost of and increasing the production of the country.

ECONOMICAL NOTES.

Cultivators, Harrows and Plows.—Mrs. JAMESON is informed that we know nothing of the cultivator named; but a good two-horse cultivator on stiff soils may be substituted for the plow in Spring in preparing land for seeding, provided it has been fall-plowed. Corn ground can be prepared for fall seeding, also, by the use of the cultivator. But we know of no cultivator that should be regarded a substitute for a plow. Land should be plowed and sub-soiled at least once a year for all crops. The harrow spoken of is excellent for smoothing purposes and for cultivating grain or corn when it is yet young. That it is the best for tearing soddy ground to pieces we are in doubt; but it is fair to say we have never tried it. Considerable fault has been found with it in some localities. If we were to choose between a good two-horse cultivator and a harrow for general farm use, we should prefer the cultivator. Of the relative merits of different kinds we are not disposed to speak.

Mosquito Manure.—The Scientific American has the following: "At Stratford, Conn., where mosquitoes are as thick as a fog, lives an ingenious Yankee, so they say, believe it who may, who puts these insects to profitable uses. He has invented a large revolving scoop net covered with lace, which is put in motion by a windmill, water power, or steam. The lower half of the scoop is placed in water. The upper half moves through the atmosphere and at each rotation draws immense numbers of the 'squitoes' down into the water, where they drown and sink to the bottom. Every revolution of the net draws in an ounce of mosquitoes, or a ton for thirty-two thousand turns of the machine. The mosquitoes thus collected make a splendid manure for the land, worth forty-five dollars a ton."

Brush for Firewood.—JOHN DAVIS, Decatur, Ill., urges Western farmers to cultivate quick growing timber, as Lombardy, Poplar, Soft Maple, Willows, etc., to be cut yearly, the cuttings to be bound into bundles and used as firewood, when it will burn slowly and make good fuel. His attention was first called to the subject by burning bundles of cuttings in his office stove, which were left over from sales and planting out. This plan is recommended for immediate use in treeless and coalless sections of the West, and as a substitute for ears of corn as firewood.

The Garden.

GARDENERS' NOTES.

Protecting Cauliflowers.—In raising a crop of cauliflowers for family use, too great a number of heads are likely to be in a proper condition for cutting at the same time. If the heads are left exposed to the sun, they will turn green and become open, loose, and tough, and it is often a matter of some importance to a family to preserve or retard a portion of the crop as long as possible. If one has an ice-house or other cool place, the heads, with a portion of the stem attached, may be cut and stored for a week or two without injury. If they are left in the garden, the leaves should either be broken down over the head or tied together so as to form a protection against the direct rays of the sun, as well as rain. Later in the season, if there are plants which are not likely to produce heads in the open air, they may be lifted, and replanted in a cold-frame, where the slight protection given, with the additional heat which they receive through the glazed sash, will hasten maturity. A very little care bestowed upon cauliflower plants at the proper time, will not only prolong their season, but quite often insure a crop.—W. F.

Tomato Culture.—The great secret is in pinching off the head continually just above the bunch of fruit. This pinching is continued throughout the season. On the above management they may be grown against ridges in this way, or even staked up if the situation is warm. Now, before I found out the simple way of making the plant bear a heavy crop, I dared not have recommended to waste time about it, for this plant, if allowed to grow anyhow, is the most barren of any plant I know of; and when fruit is produced half of it never ripens at all.—P. S.

To Protect Garden Walks from Weeds.—The following has been recommended:—Take one gallon of gas-tar and about half a pound of air-slacked lime, boil and incorporate them well together, then apply the mixture with a common long-handled whitewash brush. This will dry in a few hours if put on boiling hot, and will kill off all the young weeds and prevent their growth.

Scientific and Useful.

INFLUENCE OF FORESTS ON THE FALL OF RAIN.

THIS subject is at present attracting considerable attention, and the most contradictory opinions in regard to it find expression in the public journals. The general impression on the public mind seems to be that forests *do* promote the fall of rain; but a few scientific men of high standing have recently opposed their authority to this popular view, and now the tide seems to be turning in the other direction, and the cry is, "Down with the forests, and let them give place to grain, grass and roots." For ourselves, we have no very high regard for "authorities," considered merely as such, for we remember too clearly the notable mistakes that have been made by men of the highest standing, when they have ventured opinions upon subjects with which they were not specially familiar.

So, instead of taking the matter upon *authority*, let us see if there are any obvious and well-known reasons for supposing that forests do promote the fall of rain.

In all such cases the best evidence would be that of experience; but it unfortunately happens that in this instance it is very difficult to find unimpeachable cases in which the grounds for supposing that the increase or diminution in the rainfall is due to the planting or removal of forests, are clear and indubitable. It is said that the present, or recent, famine in Persia is due to a severe drouth, caused by the fact that the removal of the trees has prevented the usual rainfall. On the other hand it is claimed that drouths, though perhaps not of equal severity, have been known for centuries in that country, and that between these drouths there have always been periods when abundance of rain has fallen. The Isthmus of Suez, too, is a frequently cited case where the cutting of a great canal and the planting of numerous trees along its borders, has changed an arid and uninhabitable country into one of prospective fertility. And in various parts of Europe there occur localities which the advocates of forests claim as striking instances of the effect of tree-planting upon the general climate and fertility of the regions in which they lie. It was thought that in our own country there were several instances of this kind, and they have found a staple argument in the hands of men who, like HORACE GREELEY, are earnest advocates of tree-planting; but the Smithsonian Institute professes to have unimpeachable statistics to prove that the cutting down of our forests has had no influence whatever on the amount of our rainfall; and as the popular belief, that "figures cannot lie," is very strong, this evidence has had great weight. We would, however, remind the dear public that so far from figures being the innocent and honest creatures which the above proverb claims, they are the most mendacious and deceitful things known to humanity. No inmate of our prisons will lie like a good honest set of figures. But while we might oppose to the statistics of the Smithsonian Institute the equally valid, though perhaps not so numerically definite, data derived from the experience of good, honest men and women, who remember streams that in their youth poured a steady and considerable volume along their course during the entire year, and are now dry for three-fourths of the season and torrents during a large portion of the remainder of the year, it will probably be more satisfactory to take a plain and common-sense view of the action exerted upon the atmosphere by trees, and consequently of what *must* be their agency upon the rain-fall, provided the laws of nature do not cease to act.

The popular idea of rain is that it is a discharge from the clouds, but this is not always the case. KAEMTZ, in his Treatise on Meteorology, tells us that showers have frequently been known to fall out of a clear sky, so that rain is in reality merely the watery vapor of the air, condensed and aggregated into globules of such a size that their weight causes them to fall rapidly. Now, it is familiar knowledge that all warm air contains water vapor; even the apparently dry air of summer days, when the earth is parched and dusty, contains moisture, as is made evident when it is brought into contact with any very cold body, such as the outside of an ice-pitcher, in which case a rapid deposition of dew takes place, and the pitcher is, in common language, said to sweat. It is only very cold air that at all approaches dryness; and as the temperature increases, the capacity of the air for holding moisture increases very rapidly. Thus air at 70° Fah. can contain six times as much water as can be absorbed by air at the freezing point, or 32°. On carefully examining the law which governs the absorption of moisture by air, however, we find this very singular fact: that as the temperature of the air increases, its capacity for absorbing moisture increases in a greater ratio. Thus, if we double the temperature of the air, its power of holding moisture in suspension will be *more* than doubled. From this it follows that if we mix equal volumes of cold and hot air together, both volumes being completely saturated with moisture, a large portion of the moisture will be precipitated in the form of rain. And this is a very frequent cause of rain showers. The air in a certain locality becomes not only heated but saturated with moisture, and begins to ascend. As it ascends it expands and loses its power of holding moisture in suspension, and in addition to this a current of cold air rushes in and mixes with it, thus still further reducing its power of holding aqueous vapor in suspension, and consequently causing a precipitation in the form of rain. Now, it is very obvious that there are two circumstances, either one of which will prevent the formation of rain in this case. If the air, as it becomes heated, does not absorb moisture, that is to say, if the heating takes place over very dry ground, no moisture can be precipitated, for the simple reason that there is not enough to saturate the air, even at the reduced temperature. The second circumstance which may prevent the formation of rain, is this: If the heated air be cooled by a current of cold but very dry air, the resulting mixture may be able to hold in suspension all the moisture that is present.

The fact that air, as it expands, loses its capacity for retaining moisture in a state of invisible suspension, is beautifully shown during the exhaustion of moistened air from the receiver of an air-pump. As soon as a few strokes have been made the receiver is filled with clouds. Another illustration is frequently seen on close, warm days, when a dense cloud is sometimes seen to form over a moist locality and gradually expand and enlarge until it becomes what is popularly known as a "thunder-head," and a storm of thunder and lightning frequently follows. Such clouds are undoubtedly the heads of ascending columns of hot, moist air, in which the moisture is precipitated as the air gets into a higher region where the pressure is reduced. They can only be produced, however, where the ascending column rises from moist ground so that it may be itself moist.

In addition to these two causes for the deposition of moisture—cooling and expansion—there is another which, though not generally accorded much consideration, is, we think, often quite as powerful as either of the others. This is electricity. Precisely how it acts we do not pretend to say; but every one who has observed the heavy fall of rain which almost invariably succeeds a flash of lightning, must acknowledge that the discharge of electricity from clouds is quite as efficient as the lowering of temperature.

Let us now consider these general principles in so far as their agency may be affected by the presence or absence of frosts. In the first place, then, it is well known that all vegetables, trees included, perspire immense amounts of moisture, this moisture being frequently brought up from great depths. A single sun-flower plant has been known to exhale one pound fourteen ounces of water during twelve hours. Such being the case, what must be the quantity given off by all the leaves of a large tree, and what an inconceivable amount must be exhaled by any one of our large forests? It is evident, therefore, that the air in the immediate vicinity of large forests must be much more moist than that resting upon dry soil.

Another effect of this enormous evaporation must be a lowering of the temperature. All liquids when passing into the gaseous or vaporous condition, absorb and carry off heat, and the evaporation which we have noted must have a powerful effect in lowering the temperature of the air in the neighborhood of the trees. From this it follows that when a cool current of air flows over a forest the moisture will be precipitated in the vicinity instead of being carried off, as it would be if present in smaller quantity. And when a warm and very moist wind flows over a forest, the cooler air which is there present will cause a shower of rain, whereas if there had been no forest and the air had been hot, the moisture would have been swept onward to other regions.

But perhaps the most powerful effects are produced by the action of the forests in discharging the electricity which is almost always present in clouds, and thus producing a rainfall. That trees do act in this way is well known and easily proved. NOAD, in his large work on electricity says: "Living vegetables are the most powerful conductors with which we are acquainted. Mr. WEEKES found that a coated jar, having forty-six inches of metallic surface, was repeatedly discharged by the activity of a vegetable point in four minutes and six seconds, while the same jar, charged to the same degree, required eleven minutes and six seconds to free it from its electric currents by means of a metallic point—the points in both cases being equidistant. The same gentleman also found that the gold-leaf electroscope is powerfully affected by a jar at the distance of nearly seven feet, when the cap of the instrument is furnished with a branch of the shrub called butcher's broom, though the same instrument, when mounted with pointed metallic wires, is not perceptibly affected until the charged jar approaches to within two feet of the cap.

"If a blade of grass and a needle be held pointing towards the prime conductor of a machine, while the person holding them recedes from the instrument, a small, luminous point will appear on the apex of the needle." These experiments show conclusively that forests are powerful agents in discharging any electricity that may be present in such clouds as may pass over them, and we have every reason for believing that whenever this electricity is discharged a rainfall will occur.

In discussing this subject we have endeavored to avoid the introduction of all questionable theories, and to rely upon well know and thoroughly ascertained physical facts and laws. For the present, at least, we would regard the evidence derived from this source as of more weight than any that can be furnished by mere statistics, until the latter have become far more general and extended over a greater time than is yet the case. J. P.

SCIENTIFIC AND USEFUL NOTES.

Clock-Work to Raise Water.—Would a machine constructed on the order of clock-work, and run by a weight, raise 100 gallons of water, in 24 hours, from a well 25 feet deep, to a point 10 feet above the ground, said machine to run for 24 hours without being wound up more than once? If so, what would be the arrangement of the wheels to do the required work? By answering in RURAL NEW-YORKER at an early day you would confer a favor on a constant reader.—B. SMITH.

WE advise our correspondent to send the above inquiry to some technical paper—such as the Scientific American, American Artisan, or Handicraft (all of New York City), whose editorial corps embrace technologists familiar with such problems. Meantime, we publish the inquiry, so that any of our correspondents familiar with such questions may answer, if they choose to do so.

"The Siphon Again."—We, too, "would like to know whether Old Subscriber, who had a troublesome siphon, succeeded in making it work; and, if so, how he overcome the difficulty." A. J. thinks one of our reasons why it might not work "rather thin." If A. J. will take the trouble to experiment, as well as theorize, he probably will not expose his ignorance by saying, "it makes no difference if the well end of the pipe is two inches, and the down hill end one-fourth inch, or *vice versa*." We know, from experience, that it *is* essential that the pipe be of a uniform size, and that the outlet be the same size as the balance of pipe. —M. H. S.

Revelations of the Microscope.—A scientific journal says:—The microscope reveals to us the fact that the surface of our bodies is covered with scales, like a fish; a single grain of sand would cover 150 of these scales, and yet, a scale covers 500 pores. Through these narrow openings the sweat forces itself, like water through a sieve.

Expressing Oil from Castor Bean.—L. T. VAN T. is informed that, so far as our knowledge extends, a screw press is usually used for expressing the oil of this bean. We have seen an ordinary cider press used.

Domestic Economy.

WORKING UP BEESWAX.

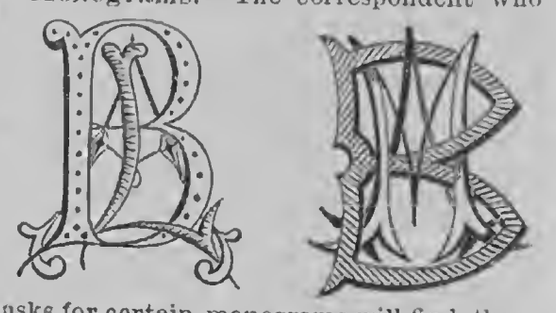
THE old-time practice of the wholesale destruction of a colony of bees when the honey was to be taken, has been considerably reformed in view of the fact that it is poor economy to kill the goose which lays the golden egg; and the wholesale destruction of honey comb has been stopped, as it has been discovered that it is largely economical to supply the old comb to other hives to help young colonies to set up in their housekeeping. Still there will be comb to be made into wax, and it is well to know how to make the most of it.

A pound of common beeswax in the lump is worth, say thirty-five cents, and a pound of bleached wax is worth, in the lump, twice as much. When maple sugar first appears in the early spring, you will see it sold in neat little cakes at the rate of seventy-five cents to one dollar a pound, when the price in the lump is twenty-five cents. So with beeswax; take a parcel of salt-cellars and cast little cakes of wax, sixty to the pound, and sell these at five cents a-piece. Before casting the cakes of wax, prepare a lot of silk ribbon loops, which will serve to hang the cake of wax by, and as the wax is poured into the moulds, lay the ends of the loop in the edge of the mould so it will stick well in the wax, and you have a neat and salable little article which will fetch very much more than the same material in the lump.

ODDS AND ENDS.

Domestic Inquiries.—Mrs. JANE M. ADAMS asks some one to tell her how to make elderberry wine . . . . L. W. L. asks for directions how to make a shirt to fit in every instance . . . . JANIE D. asks for a recipe "for making pepper sauce that will equal the Worcestershire sauce." [Can't be done.—EDS.] . . . . MEHITABLE and HEPZIBAH LIVINGSTONE ask for a recipe for making citron cake and Welsh rare-bits. . . EMMA R. BRIGGS asks for the best recipe for making cucumber pickles in vinegar.

Monograms.—The correspondent who



asks for certain monograms will find them furnished herewith.

To Drive Away Ants.—We were much troubled this season by having large black ants find their way to our sugar box wherever we could place it. Remembering to have read somewhere that the common elder would keep ants away from anything about which it was placed, I gathered an armful of the young sprouts and put them around the box. We have not since been troubled in the least by them.—E. E. TUTTLE.

Pop-Corn Balls.—I make pop-corn balls by pouring the sirup made by melting white sugar upon the popped corn, and working it with the hands to the desired shape and size. Afterwards roll the balls in sugar sand of various colors. These please my children greatly, though there may be a nicer way.—MRS. C. G. SMITH.

To Exterminate the Paper Moth.—I think they are not confined wholly to paper. I have tried pulverized borax, sprinkled on dry, which seems to effectually "*dis*-tinguish" them, as the man said about the fire. You can take your own way in making them eat it.—MRS. E. S. T.

Recipe for Making Artificial Oysters.—Cut from the cob green corn enough for a pint; to this add one egg, well beaten, one cup of flour, half cup of cream or buttermilk; salt and pepper them to taste; fry in butter.—FRANK G.

To Remove Iron Rust.—Saturate the rusted spots with lemon juice and spread the linen in the hot sun. If it is not removed the first time, repeat the process until the result is satisfactory.—MRS. W. L. B.

To Remove Iron Rust from White Linen.—Apply lemon juice and salt; put it in the bright sun for a time—one or two applications if necessary.

Hygienic Information.

BONE FELON ARRESTED—CONGELATION.

DR. JAMES B. WALKER, of St. Louis, Mo., says in the Medical Archives:—Not long since I was consulted by a young lady who was suffering from an incipient felon. The distinguishing characteristics of the painful affection were already manifest—pain, throbbing, some tumefaction, and the nervous excitement, indicated plainly what was in advance unless the inflammation was arrested; and the command was, arrest it at all hazards.

This starting point had been two days previous to her application of treatment. I could think of nothing offering such a prospect of success as cold, as low as the freezing point. Adding equal parts of snow and salt in a tumbler, I placed the finger, it being the middle one, in the freezing mixture. For a few seconds there was an increase of the sensibility of the part, and it was with difficulty I could persuade her to hold her finger in the mixture. By degrees the pain subsided, and at the end of two minutes perfect insensibility had followed. I removed the finger, and after a few minutes the sensibility returned, and with it came the pain, throbbing, etc. The application was renewed, and the pain ceased and insensibility ensued. This was repeated as often as the pain returned, and in about two hours, alternating the application and removal, there was no return of the painful sensations, and the difficulty entirely ceased, and there was no felon. The induration remained several days, and the skin gradually exfoliated.

HEADACHE REMEDIES.

"O, now my head aches," said Mr. A.; "it seems as if I never had such a headache before."

"Take these boneset blossoms and chew them," I said, (handing him what would fill his mouth), "swallowing the bitter juice; then lie down, and if they do not help you in half an hour, or you do not drop to sleep in that time, I will try another remedy."

The half hour elapsed, sleep did not come, and the pain was not eased; so I took about as much saltpeter as would make a lump as large as two peas, dissolved it in a little warm water, then added a little cold, so as nearly to fill a teacup; gave him a teaspoonful of this once in ten minutes, till he had taken four teaspoonfuls; wet a clean white cloth with some of the water and laid it on his head under a dry one.

After taking this he slept a few hours, and towards night was able to do his chores. Previous to retiring to bed that night he bathed his feet in warm water, to which had been added wood ashes sufficient to make it feel soft, soaking them well, loosening all the accumulations on them, rubbing and wiping them dry. With these simple remedies and attentions he was as well as usual next day. HATTIE HOPEFUL.

TEA DRUNKARDS.

DR. ARLIDGE, one of the pottery inspectors in Staffordshire, has put forth a very sensible protest, says the *Lancet*, against a very pernicious custom which rarely receives sufficient attention, either from the medical profession or the public. He says that the women of the working classes make tea a principal article of diet instead of an occasional beverage; they drink it several times a day, and the result is a lamentable amount of sickness. This is no doubt the case, and, as Dr. Arlidge remarks, a portion of the reforming zeal which keeps up such a fierce and bitter agitation against intoxicating drinks might advantageously be diverted to the repression of this very serious evil of tea tippling among the poorer classes. Tea, in anything beyond moderate quantities, is as distinctly a narcotic poison as is opium or alcohol. It is capable of ruining the digestion, of enfeebling and disordering the heart's action, and of generally shattering the nerves. And it must be remembered that not merely is it a question of narcotic excess, but the enormous quantity of hot water which tea bibbers necessarily take is exceedingly prejudicial both to digestion and nutrition.

HYGIENIC NOTES AND QUERIES.

Bald-Headed People.—FREDERICK KEMP writes from the silver mines of Montana, giving the following hint in reference to a cure for bald-headedness:—"A friend of mine who had the misfortune to be bald-headed, knowing that there is a wonderful invigorating power in the sun's rays, last spring threw away his hat, and worked in the gulch all Spring, Summer and Fall, bare-headed, and also for the first few days at mid-day. For a few days the rays of the hot sun on his head were almost unbearable; after that time he experienced no uneasiness whatever. The result was that in the Fall he had a good head of hair. And in this experiment he was not alone—several of his acquaintances who were bald-headed having followed the same plan, they were all fortunate enough to experience the same result."

Recipe to Prevent Felons Heading.—Take black pepper in the kernel and pulverize well; then soak the pepper with spirits of turpentine, and apply to the felon as a poultice. If this remedy is used when the felon first makes its appearance, it is a certain cure in a few applications. I have known felons that were almost headed cured by keeping this poultice on them, well bathed with turpentine. I would like to have you publish this recipe, for I am sure it would relieve some suffering person. —C. H. FENTON, JR., *Loudon Co., Tenn.*

Remedy for Poison by Ivy.—The best remedy for ivy poisoning is said to be sweet spirits of nitre. Bathe the parts affected freely with this fluid three or four times a day, and the next morning scarcely any trace of poison will be found. If the blisters be broken, so as to allow the nitre to penetrate the cuticle, a single application will be sufficient. The spirits of nitre may be prepared by dissolving one part of nitrous ether in 8 parts ether of common alcohol.

Wearing Green Kid Gloves.—An English medical journal gives a warning against wearing green kid gloves, because physicians have found that the hands of those wearing gloves of this color soon became covered with an eruption difficult to cure, as the poison seems to enter the system. These gloves were dyed with arsenic, though not all green kids are so dyed; yet it is regarded safer to wear some other color.

Salt in food.—W. H. asks if some one of the medical profession will state whether salt should be used freely or sparingly on food—especially on eggs, potatoes, &c.

Hygienic Inquiries.—A correspondent asks "how to cure corns? Is there not some way of taking them out and making a sure cure of them?"

The Vineyard.

A NEW EARLY GRAPE.

MR. WM. BOYLAN of Paterson, N. J., has kindly sent us a box of his new seedling, which is remarkable for earliness, as it commences to ripen the first week in August, and may, therefore, be set down as the earliest native variety known. It is supposed to be a seedling of the Isabella, and we have no doubt of this from the character of the fruit and leaves of the vine, as both show unmistakable marks of the true native *Labrusca* species. No special care has been bestowed upon this remarkable vine. The owner is a machinist, and makes no pretensions to pomological knowledge; therefore, this vine has not been "doctored" in order to make the fruit ripen early. It has borne, we are informed, three years, and the fruit never fails to ripen the first of August, which is a month earlier than the Hartford Prolific and Delaware, our two earliest sorts in this locality. We believe this new and promising grape has not yet been named, but is certainly deserving of dissemination. Bunch medium; berry medium to large, nearly globular, black, with a light bloom; adheres firmly to the peduncle; skin tough, but not thick; pulp of considerable substance, adhering to the seeds, as in most of the natives; flavor sprightly, and about equal to the Hartford Prolific. The great value of this grape will consist in its earliness and hardiness of the vine.

California has 14,000 square miles less area than France, but it is asserted that the actual average in California which can be successfully devoted to grapes will excel that of France in the proportion of 4 to 1, which would be 18,000,000 acres for California and 4,500,000 for France.

Miscellaneous Advertisements.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages**, is handsomely and fully illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price $2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Pres't. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2.

Address

D. D. T. MOORE, 5 Beekman St., N. Y.

MONEY IN THE GARDEN: A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening, and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Fear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely illustrated work of 268 12mo. pages. Sent, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.

By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely illustrated, and printed and bound in extra style. Contains 224 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

A GREAT PAPER.—The RURAL NEW-YORKER, published by D. D. T. Moore, 5 Beekman Street, New York, is the Great National Illustrated Agricultural and Family Journal of the Nation, sixteen large double quarto pages, devoted to the Farm, the Garden, the Orchard, Live Stock, Dairy Business, Household Affairs, Markets, General Intelligence, and Choice Reading for the Family Circle. The RURAL has long been the favorite farm and fireside weekly of America, and is undoubtedly the cheapest and best journal of its class now published. We have expressed ourselves freely and often, that it is the greatest paper in all this land. Terms, $2.50 a year. Gazette and RURAL $3.50 a year.

Real Estate, Etc.

A NEW COLONY IN KANSAS!

At "SKIDDY," in Neosho Valley, on Missouri, Kansas and Texas Railway.

Under the auspices of the NATIONAL BUREAU OF MIGRATION.

THE AMERICAN COLONIST AND HOMESTEAD JOURNAL, containing Maps, with full particulars as to the Organization of the Colony, the Lands, Productions, Climate, Wood, Water, etc., SENT FREE on application to S. R. WELLS, Secretary of the National Bureau of Migration, 389 Broadway, New York.

NORTH CAROLINA

LAND COMPANY.

(Chartered by Special Act of the Legislature in 1869)

Offers for sale 200,000 acres of best Farming Lands, near Railroads, Rivers and Towns, with good houses and improvements. Prices, from $2 to $10 per acre. Also, 300,000 acres of Timbered and Grazing Lands. Prices from 50 cents to $2 per acre. Also, numerous Mineral and Mill Properties, Water Powers, &c., at various prices. The *President* of this Company has been appointed *Commissioner of Emigration* by the Legislature of North Carolina, and by virtue of his office is required to give all needful information to emigrants. No other Company or Agency has the *indorsement* and *sanction* of the State. Apply for information and Circulars.

GEO. LITTLE, President.
WM. SCOTT, Secretary, Raleigh, N. C.

Fashions for Fall and Winter.

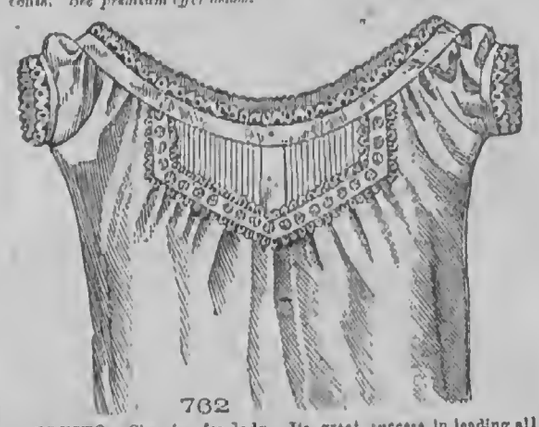
1170

GODIVA. This Polonaise is one of our latest Paris Novelties. It contains many new and very valuable features. Without looping it can be worn as a long tight-fitting basquine, or looped (as shown in cut) it is a most elegant Polonaise. The ornamental back piece passes over the shoulders and forms a neat Just tape in front and is "adjustable;" may be worn or not as fancy dictates, thus constituting two entirely different Polonaises in appearance. The back piece is sometimes made in velvet or satin, and richly trimmed, and completes a brilliant toilet when worn with a house dress. Besides its bountiful variations it is well adapted to any material. Takes six yards of 24 inch goods. Price of pattern with cloth model ONE DOLLAR. See PREMIUM OFFER below.

1163

NEW FALL WRAP, is a sacque and cape, with a shirbble box-pleat laid on the under side in the back, and in place of the broad pleat of last season; just the three edges are visible from each side, giving the appearance of six round folds, the cape slopes gracefully to the back, and is left open to trim. The sacque has a large sleeve, which can be used or not, as weather or occasion demand.

We give this as one of the very best for fall and winter cloak made in either velvet or cloth. The original is of dark blue ladies' cloth. Scalloped and bound with velvet and velvet buttons. Takes three yards of ladies' cloth. Pattern, with cloth model, 50 cents. *See premium offer below.*



762

PRESTO. Chemise for lady. Its great success in leading all other styles is owing to its perfect fitting hand and sleeve. The curved arm-size is an improvement of *much* value, as it will not *cut* the shoulder or *bind* the arm, and also avoids the homely, perplexing gusset. Takes three yards linen for medium-size. Pattern, with cloth model, 25 cents. See Premium below.

We give a CLOTH MODEL with each pattern which SHOWS every seam, pleat, gather, loop, etc., how to put the garment together by the pattern and how it will look when completed. By the use of our Cloth Models any person who can sew can FINISH the most difficult garment as easily as the plainest. They are PERFECT GUIDES.

Premium Offer!

If you write the following, viz.:

[RURAL, 1170, 1163, 762,]

and sign your name, giving your P. O., Co. and State, and then inclose it, with *One Dollar* and *Ten Cents*, to us, we will make you a *yearly* subscriber to *Smith's Illustrated Pattern Bazaar* (begin with the present No.), and send to you by return mail *all* the patterns, with cloth models complete, of the *three* above engravings, *as premium*. *Now* is the time to *Subscribe!*

Either of the above patterns sent by mail upon receipt of its marked price.

SMITH'S

ILLUSTRATED PATTERN BAZAAR.

ONE DOLLAR A YEAR.

Premium! See above "*Premium Offer.*"

It is the *best* and *cheapest* fashion *magazine* in the *world*. It is the *New York City* ladies' *authority* in *all* matters pertaining to toilets. It is the *only* fashion publication in this country that *imports Styles* and *sells* patterns of them.

The present number contains a large double-page *fashion plate*, 11 by 22 inches, printed on beautiful, heavy, rose-tint paper; Foreign Correspondence; Criticisms; Stories; Hints, Etc., Etc.—with information in detail upon all parts of ladies', misses' and children's dress and dress making.

Also a *Half-price Check*, which entitles each holder to select any pattern contained in this number by sending half price.

Single Copy 25 Cents.

The American News Co. supply the Trade.

☞ *Catalogue* of *Fall* and *Winter* Styles mailed upon receipt of *stamp* and address.

Be *particular* to address, very *plainly*,

OUT-OF-DOOR NOTES.

An Editor Getting Fresh Air.

We dislike pic-nics, as a rule—especially public ones. They are comfortless, because they are too often formal. They lack the spirit of the commune which makes such institutions charming. But they have their good features too; and a pic-nic recreation is better than none. But we have just attended one enjoyable pic-nic in the search for fresh air. These August days have been terrific in their heat. The 13th was especially oppressive. It was the day fixed for

The First Pic-Nic of the N. Y. Rural Club.

This Club is more æsthetic than practical. Its object is not so much to develop Rural taste and enjoyments—although that is likely to result—as to bring together those engaged in Rural pursuits who have acquired such tastes, make them better acquainted with each other, and concentrate and combine the kindred feeling and sympathy which already exists. The Club has met periodically since its organization in hotel parlors and dining-rooms, for social intercourse. But during the Summer months, it decided to substitute pic-nic visits to suburban places for the close halls and confined parlors of hotels. Hence this first pic-nic at Queens, L. I., on

The Flower Farm of Mr. C. L. Allen.

The Central Railroad of Long Island very generously placed a special train at the disposal of the Club. The Superintendent accompanied the excursionists, and looked after their safety and comfort while on his road. Fifty or sixty members and guests formed the party, and were debarked, literally, in the midst of a fifty acre flower farm, radiant, just now, with acres of Gladioli and Lily blooms.

There were eighteen acres of Gladioli in blossom. Perhaps our readers can imagine the mass of gorgeous color which three hundred named varieties, massed to this extent, would make. Perhaps they may have some conception of the adjectives used and the number of exclamation points required to report what the Club and its guests said on being pushed off a plank into this sea of bloom. Then, in addition to the three hundred named varieties, there was a bed of 3,500 seedling Gladioli—among them as fine specimens as can be found among the three hundred named varieties; and several that will become distinguished for their unique beauty.

Then imagine ten acres of Lilies, a large proportion of which were in bloom. These embrace also about 15,000 seedlings, most of which take the form and characteristics of *Tigrinum* and *Fortunei*. We saw here the only *Leitchlinii* in bloom to be found in the country, it was said.

Fifteen or twenty acres are cultivated in Tuberoses. JOHN HENDERSON'S new dwarf variety is here—about half as tall in growth as the old sort, and double—a decided acquisition, Mr. ALLEN says.

Balsams are also largely grown for seed. We saw at least an acre of them. They are much used in bouquets at this time of year—especially for funerals.

There are a couple of acres of Peonias; also Roses, etc., etc. full forty acres devoted exclusively to flowers.

Added, there are about 15,000 square feet of green and stove houses, devoted mainly to the propagation and growth of plants for mailing, for seedsmen, and for cut flowers in winter.

The Walk Through the Bloom

by the members of the Club was a most interesting one. The ladies of the party were not the least intelligent observers and inquirers. We were shown *Lilium candidum*, which flowered at Easter, was plunged in the Spring in a cold frame, and is now again in bloom. There was quite a show of Stocks, but upon our expressing surprise that so many people profess to admire them here, an enthusiastic German lady said they were never seen in this country in perfection—they will not grow here as in the moist climate of Europe, and those who have only seen them here know nothing of their beauty. Here, also, for the first time, the writer saw the *Clianthus dampieri* in bloom. It is a weird looking blossom—suggestive of the cloven foot of an unnameable being. Mr. ALLEN says it requires to be planted on poor soil to get it in perfection. It is a curiosity, and a striking flower and plant. But our space will not permit that we attempt to specify all the rare and beautiful things seen, nor detail all that was learned. After the party had wandered at will through the grounds, there was

A Jolly Pic-Nic in the Grove.

The Club was then called to order by Vice-President ELY, and the customary speech-making followed. Dr. HEXAMER called attention to the mass of flowers seen, and to the fact that few could realize the amount of labor and money expended in collecting the great numbers of varieties of plants exhibited. Lives of botanists and years of labor had been given to the gathering the material from which this garden is produced. It is the largest flower garden in the country. There are species here not to be found elsewhere in the country. The effect of this is not only that Mr. ALLEN can furnish others with what he has collected himself, but that he exerts a positive and direct influence in developing and ministering to the better taste and higher gratification of the people. General HURLBURT, HENRY T. WILLIAMS, ANDREW S. FULLER, and Messrs. WHITNEY, CHICK, SEEBRIGHT and others spoke also. Mr. FULLER said that four years ago, when he first met Mr. ALLEN, he was told that he was crazy: He made up his mind, therefore, that Mr. ALLEN was worth knowing. We see the effects of his insanity to-day. Most specialists are regarded as crazy. It is a good plan to go crazy on a specialty. It is the only way to accomplish anything. Take up a subject or a vocation and stick to it. Not long ago there was only one gladiolus known in Europe. Finally others were introduced from the Cape of Good Hope. Men in France went crazy over Gladioli, and the result of their craziness is the two or three hundred varieties of this beautiful flower which we see exhibited before us. Mr. WILLIAMS had suggested that Mr. ALLEN give a list of say the twelve varieties of Gladioli he could recommend for their superior beauty. Mr. FULLER did not know what Mr. ALLEN might do; but he had two hundred varieties growing on his place, and he could not go among them with a view to determine what varieties he would throw out, and dispense with one of them.

Mr. Allen Speaks.

Finally Mr. Allen was called out. Referring to his success, he said that a few years ago he was engaged in the coal business. He had a taste for flowers, and began to cultivate them. He bought bulbs and filled his coal office with their blooms. Finally, one day, a man said to him, "I met FULLER yesterday, and he said, 'Tell ALLEN that if he will devote his time and attention to the culture of bulbs and bulbous plants, make it a specialty, and *stick to it*, he'll make a fortune by it. Tell him to go right at it.'" I followed FULLER'S advice, and what you see before you to-day is due as much to ANDREW S. FULLER'S advice as to my own efforts. Referring to Mr. WILLIAMS'S request for a list of the best twelve varieties of Gladioli, he said the last one he looked at was always the best, with him; and if he was going to advise his friends what twelve varieties to select, it would be the last twelve on the list—*after having obtained all the others.*

So the Day Passed.

It is useless to attempt to report the speeches in detail, nor describe the songs under the trees, nor the loads of flowers each took away, and which filled with beauty and perfume the train on the way home; nor how, as the Club passed through the streets of New York, its members were besieged by hundreds of children, with "Please give me a flower, sir?" or "Please give me a flower, miss?" It made the heart ache to look upon the little ones, with their wan, white faces, and see the bright light in their eyes as they caught sight of the blossoms, and remember the stifling air in which they live, the noisome, noxious vapors they inhale, and the dearth of beautiful, natural objects there is for them to look at and enjoy. For this reason, if for no other, we hope Mr. ALLEN'S 40 acres will be multiplied by 400, and that it will become a popular charity among the wealthy of the city to buy wagon loads of flowers and distribute them through the streets to the little ones who hunger for what is sweet and beautiful.

BEACON STOCK FARM.

Forty miles' ride from New York, on the Long Island Railroad, brought us to the town of Northport, on the North shore of the Island, and from thence a carriage ride of five miles along Eaton's Neck, might have taken us to Beacon Stock Farm; but instead of this last we found the tall Scotchman, WILLIAM CROZIER, in waiting with the steam yacht of Mr. DELAMATER, to take our party across the bay, by a nearer route, which landed us at the foot of the beautiful lawn surrounding Mr. DELAMATER'S mansion.

We were a small party of Agricultural Editors from the City, out there upon invitation of the tall Scotch farmer, to witness the operation of his Scotch plows alongside of those of the Ames Plow Company of Boston. The representative of the RURAL NEW-YORKER was not a member of the committee (previously appointed by the Farmers' Club), and so, happily, under no obligation to deliver an opinion on the comparative merits of the plows; and if he had been under such obligation, would have declined to deliver an opinion on such unsatisfactory evidence as this exhibition furnished.

Beacon Stock Farm is a tract of some three hundred acres, mostly of high, rolling land—loam, sand and gravel—jutting into Long Island Sound, on what is known as Eaton's Neck. When it fell into the hands of WILLIAM CROZIER, several years ago, it had the unthrifty and worn-out look so common to the used up lands of the older States, with a brave show of mullein, brambles and other vagabond field trash, with not enough of tame vegetation to keep three geese to the acre.

Mr. CROZIER came on with all his notions of Scotch thoroughness, an apostle of agricultural reform. He built plenty of stables; he brought plenty of teams of mighty Clydesdale horses; he has a full field-force of stalwart Scotchmen, who would as soon think they might break the Ten Commandments as to strike a furrow half a mile long and not as straight as a line, from end to end. With these appliances Beacon Farm is being converted from a turfless waste to fertile fields, bearing their heavy burthens of clover, grass, corn, turnips, etc.

On this farm every one thing is made to help out the general result. The ample stables are filled with cows; the barnyards are filled with hogs; the cows are now living on sowed corn feed and turning it into crude manure; this is thrown out to the hogs to be worked over in their factory; muck and seaweed are added, and the whole compost forms the grand bank of deposit and discount for the farm. The breeding stock is all of the best blood. A splendid Clyde stallion is at the head of the stud of horses; the cows are about equally composed of Ayrshires and Channel Islands, the latter mostly Jerseys and Alderneys, with bulls to match. The hogs are all Berkshires of the fine modern style, and the sheep are Cotswolds. Talk of agricultural education and experimental farms; a week with the plain farmer of Beacon Hill would impart more knowledge of economic agriculture and stock-raising than a whole year or a lifetime in a college where a little of genteel agriculture is diluted with a large quantity of Greek and mathematics.

RURAL NOTES AND QUERIES.

Obituary.—George Vail.—The death of this gentleman, well-known for his connection with the New York State Agricultural Society, and for his early importation and as a successful breeder of Short-Horn cattle, is announced as having occurred at Troy, August 7. In 1841, at the time of the organization of the State Ag. Soc. under its present constitution, he was elected a member of the Executive Committee. In 1847 he was elected President of the Society. He was actively connected with it until age compelled release from care. He was born in 1784, and won and retained the esteem and respect of those who knew him.

The New York State Poultry Society's Executive Committee have done a very stupid thing by passing a resolution in relation to one of the members of that Society, and giving it a wide circulation. In our opinion they have done a very unjust thing. We are apt to hear or receive complaints concerning any "sharp practice" on the part of our advertisers; but we have never heard or received any concerning the gentleman referred to, although he has advertised a good deal with us. But we *have* received complaints concerning the "sharp practice" of some of the members of this censuring committee. If there were no other evidence that the men who run the State Poultry Society are not the men to do it creditably, their action in the matter referred to is, in our judgment, ample to condemn them.

The Maine Agricultural College Commencement occurred Aug. 4. The following are the names of the graduates:—GEO. OSMER WESTON of Madison; EBER DAVIS THOMAS of Brownville; EDWIN JAMES HASKELL of Westbrook; HIDDLE HILLARD of Oldtown; GEO. EVERETT HAMMOND of Eliott; and BENJ. FLINT GOULD of Waterville. These are the first graduates from this institution. There is nothing in the report before us to indicate how many of this class are to devote themselves to Agriculture or the Mechanic Arts, except the themes discussed by them respectively, which were:—"Republicanism;" "Our Republic—its safety and danger;" "Educated Labor;" "Magnetic Telegraph;" "Chinese Immigration;" "Maximillian." None of these being purely technical topics, we may infer that none of the students have "gone crazy on any specialty."

"Holstein Herd Book:—Containing a record of the Holstein Cattle in the United States; also a Sketch of the Holstein Race of Cattle." This work has just been published, in Boston, by authority of the Association of Breeders of Thoroughbred Holstein Cattle. It was prepared by WINTHROP W. CHENERY, President of the Association, and the most extensive breeder of Holsteins in this country. Mr. C. says it is believed the Herd Book includes every animal entitled to record. It contains the pedigrees of 61 Bulls and 67 Cows, and several finely executed portraits. All interested are referred to advertisement of the book in this paper.

Catalogues Received.—From ROBERT DOUGLAS & SONS, Waukegan, Ill., Wholesale Catalogue of Evergreen and Ornamental Tree Seedlings, &c.... From GEO. L. SQUIER & BRO., Buffalo, N. Y., Descriptive Catalogue of Sugar Cane Machinery....From J. K. HUDSON, Kansas City, Mo., Descriptive Circular of Thoroughbred Berkshire Swine.

THE SEASON, CROPS, PRICES, ETC.

North Shenango, Pa., Aug. 10.—Fine showers to-day and greatly needed. Some farmers are done harvesting; nearly all will finish next week if it is favorable weather. Oats rather light; cause, dry, unfavorable weather. Wheat rather poor; it was hurt a good deal by the April freezes. Hay about an average crop. Corn does not look as well as it did last year at this time, although there are some good fields. Early potatoes, a middling crop, but hurt by the dry weather; Early Rose tops are dead now. Late potatoes will not amount to much unless there is more rain the rest of the season than there has been. Fruit a better crop than last year; apples are a good deal scabby.—W. H.

Grand Blanc, Mich., Aug. 12.—It is excessively dry; vegetation of all kinds suffering materially, especially corn and potatoes, which, with a few exceptions, are a failure. Hay crop an average yield; wheat, light and poor quality, owing to midge and rust. The excessive heat during the month of July is without a parallel here; the highest point marked 101° in the shade, not falling below 99° for several days. Farmers are mostly through haying and harvest; secured in good condition. Wheat is worth $1.35@1.50; corn, 48c.; oats, 35c.; hay, $10@12 per ton; potatoes, 35@40c.; help plenty, at $1.50 in haying, $2 in harvest. Land worth $30@100 per acre, according to location.—C. C. O.

Ellsworth, Central Kansas, Aug. 2.—Land is cheap here, costing $2, $3 and $5 per acre. The corn crop is good this year; we think the price will be 15c. a bushel, although there are not more than twelve farmers in the county. There was a farmer here last year who raised two thousand bushels of corn and sold it for a dollar a bushel. That was "Drouthy Kansas," right where the Great American Desert was. The country here is level, with bluffs along the river. There are now twenty thousand head of Texas cattle grazing around within twenty-five miles of this place.—SUMMER BEACH.

RURAL BREVITIES.

We saw peaches—excellent ones—retailing in Fulton Market, the 15th inst., at fifty cents per basket.

NINA, Potsdam, N. Y., asks "where there is a school for young girls 12 or 14 years of age, where they can get a thorough knowledge of housework, finish their education and learn the ways of refined society?" We do not know.

Our Oregon correspondent is advised not to become too sanguine about the Angora goat business in that State. We have known it to cost some of our friends a good round sum to get rid of the fever after they once got it.

The Land Sales of the Union Pacific Railroad Company for the month of July, 1872, were 30,389 acres, amounting to $133,807.03, at an average of $4.41 per acre. The total sales from July 28, 1869, to the 1st instant, were 601,559 acres, amounting to $2,533,307.58, at an average of $4.21 per acre.

The time and place of holding a National Short-Horn Convention has been published as being at Indianapolis, Nov. 20. This is a mistake, as we understand it, no time or place having been named by the Committee having the matter in charge. The National Swine Breeders' Convention meets at the time and place named.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

Biographical.

THE GOVERNOR-GENERAL OF CANADA.

WE give our readers this week a fine portrait of the Earl of DUFFERIN, the new Governor-General of Canada, who succeeds Lord LISGAR (Sir JOHN YOUNG), who has recently returned to England. His family name is FREDERICK TEMPLE BLACKWOOD, and he is the only son of the fourth Lord DUFFERIN. His mother was the eldest daughter of THOMAS SHERIDAN, sister of the Duchess of SOMERSET and of Hon. Mrs. NORTON. He was born in June, 1826, and was educated at Eton and Christ Church, Oxford. He is expected to arrive in Canada soon, where he will fill the place occupied by one of the most popular Governor-Generals that Dominion ever had. Lord DUFFERIN gives promise of being as popular.

In the month of February, 1855, he was specially attached to the mission undertaken by Lord JOHN RUSSELL to Vienna, and in 1860 he was sent by Lord PALMERSTON as British Commissioner in Syria, in order to carry out inquiries in relation to the massacre of Christians in the East, and for his services on that occasion was nominated on his return a K.C.B., Civil Division. He acted as Under-Secretary of State for India from 1864 to the early part of 1866, and as Under-Secretary for War from the latter date to the following June. On the advent of Mr. GLADSTONE to place in December, 1868, he was appointed Chancellor of the Duchy of Lancaster. He was created an English Baron in 1850, nominated a Knight of St. Patrick in 1863, sworn a Privy Councillor in 1868, and has held the Lord Lieutenancy of the county of Down since 1864. He was raised to the earldom in the Autumn of last year.

His lordship is also known as an author. In 1846-47, at the time of the famine, he went from Oxford to Ireland to inquire into the state of things among the Irish peasantry, and on his return wrote an account of matters in that island, which caused no small interest in University circles and among other readers. In 1859 also he made a yachting voyage to Iceland, a well-known narrative of which expedition he published in the following year under the title of "Letters from High Latitudes." He has also published other works in light literature; *inter alia*, a satire on high life in the nineteenth century, entitled "The Honorable Impulsia Gushington." Lord DUFFERIN married, in 1862, the eldest daughter of the late Mr. ARCHIBALD HAMILTON of Killyleagh, county Down. Our Canadian readers are but little more interested in their Governor-General than we of the States; for we are so near of kin, and our interests are so closely allied, that what affects their welfare affects ours.

EARL OF DUFFERIN, GOVERNOR-GENERAL OF CANADA.

DR. LOWELL MASON.

ALL lovers of music will regret to hear of the death of this venerable man, as announced in our news columns, at his beautiful country seat in Orange, N. J. He did more to advance the popular interest in, and appreciation of, music in this country, probably, than any other man. He was born in Medway, in Massachusetts, in 1792, and passed several of the earlier years of his life in Savannah. While very young he pursued the study of music, and became a teacher, and at the same time a composer. After going to Boston to reside he took a prominent position, and in 1821 he published the Boston Handel and Haydn collection of church music, which gave him a national fame. For many years he conducted a large choir in the Central Congregational Church in Winter street, Boston, and he also had charge for a time of the music in the Bowdoin street Church, under the ministry of the Rev. LYMAN BEECHER. Through his hymn tunes, which have long been classic in the sacred music of the land, he won an enduring fame. Some of his best productions have been sung by two or three generations of church-goers, and his compositions still hold a prominent place in nearly all collections of church music, as they will doubtless continue to do unaffected by the many additions which are made from year to year in this field of musical endeavor. Dr. MASON received many honors during his lifetime, having been the first recipient of a musical degree from an American college.

THOMAS NAST.

CARICATURE is being carried to such an extent in our illustrated papers during the present presidential campaign, a few words in relation to Mr. NAST, who has made so many remarkable pictures for Harper's Weekly, cannot but prove interesting. His father was a professional musician, who played a trombone in WALLACK'S old theatre in New York at $10 per week. Mr. NAST did all he could to make his son a musician, but THOMAS had a love for the pencil, and would not give up drawing pictures. When but 11 years of age he showed some of his drawings to Mr. HERGHAUS and SOL EYTINGE, artists employed by FRANK LESLIE, and they advised him to continue his efforts, and assisted him. His parents, who were Germans, finally consented to his learning to be an artist, and he entered the employ of FRANK LESLIE. In less than a year he could earn more than $20 per week.

THOMAS NAST'S industry and genius rapidly carried him forward in the profession. He has, for the past ten years, made innumerable cartoons, illustrations for books, papers, etc. His style is so peculiar any one can tell his pictures at sight. Some time ago the Union League Club of New York gave Mr. NAST a silver cup in token of his services during the rebellion.

Several years ago NAST was introduced to an English family consisting of the father, mother, son and three daughters. The mother is an aunt of JAMES PARTON, the biographer. The eldest daughter, SALLIE, of this lady, (Mrs. EDWARDS,) Mr. THOMAS NAST married some nine years ago. They have had three children. Mr. NAST is still a young man, in middle life, pleasant and gentlemanly.

ANECDOTE OF PROF. MORSE.

THE story of the early life and struggles of the late Prof. SAML. F. B. MORSE, the inventor of the telegraph, are pretty well known. Col. STROTHER, the "Port Crayon" of the magazines, tells the following story of his early life:

I engaged to become Morse's pupil, and subsequently went to New York and found him in a room in University Place. He had three other pupils, and I soon found that our professor had very little patronage. I paid my fifty dollars; that settled for one quarter's instruction. Morse was a faithful teacher, and took as much interest in our progress more, indeed, than we did ourselves. But he was very poor. I remember that when my second quarter's pay was due my remittance from home did not come as expected, and one day the professor came in, and said courteously:

"Well, Strother, my boy, how are we off for money?"

"Why, professor," I answered, "I am sorry to say I have been disappointed; but I expect a remittance next week."

"Next week!" he repeated sadly; "I shall be dead by that time."

"Dead, sir?"

"Yes, dead by starvation."

I was distressed and astonished. I said hurriedly—"Would ten dollars be of any service?"

"Ten dollars would save my life; that is all that it would do."

I paid the money, all that I had, and we dined together. It was a modest meal, but good, and after he had finished he said—"This is my first meal for twenty-four hours. Strother, don't be an artist. It means beggary. Your life depends upon people who know nothing of your art, and care nothing for you. A house dog lives better, and the very sensitiveness that stimulates him to work, keeps him alive to suffering."

I remained with Professor Morse three years, and then we separated. Some years afterwards I met him on Broadway, one day. He was about the same as before, a trifle older and somewhat ruddier. I asked him how he was getting along with his painting, and he told me that he had abandoned it; that he had something better he believed; and told me about his proposed telegraph. I accompanied him to his room, and there found several miles of wire twisted about, and the battery, which he explained to me. His pictures, finished and unfinished, were lying about covered with dust. Shortly afterwards Congress made an appropriation, and Morse was on the high road to wealth and immortality.

AN old Scotch lady was told that her minister used notes; she disbelieved it. Said one:—"Go into the gallery and see." She did so, and saw the written sermon. After the luckless preacher had concluded his reading on the last page, he said:—"But I will not enlarge." The old woman called out from her lofty position:—"Ye canna, ye canna, for your paper's give oot!"

Our Story-Teller.

"DOCTOR JOHN."

"A DOCTOR'S life is a strange one!" muttered Dr. John Hessman, as he jumped into his carriage, taking the reins from the hands of the grinning Ethiopian who, for the last twenty minutes, had been cherishing the fond delusion that he was to accompany his master on his round of professional inquiry.

"Not this time, Ebony," said the doctor, with a good natured shrug of his broad shoulders. "You can come to-morrow," noting the look of disappointment in the boy's face. Dr. John was more tender of his servants than some men are of their wives.

"Oh, never mind, Massa, never mind!" replied Ebony, like the average human, quite forgetful of annoyance when the subject of consideration was distasteful. "I knows what 'tis. I just knows what 'tis," added Ebony, as he watched the carriage out of sight. "He's got one of his spells, and wants to talk to hisself; I know him of old, if 'twas anybody but Dr. John, I should just say, "Ebony, that man has got softening of the skull; but no such nonsense can be laid to him."

Dr. John did want to be alone, or as much alone as a man could be in the streets of a crowded city, and he did want to talk himself. Most men who are in the habit of communing with their own souls, do it in audible language; so in this respect, whatever he might be in others. Dr. John did not differ from his brethren. A man's own opinion is not unfrequently his best and safest companion. It will keep its owner's secrets, and when the companionship is frequent, will in all cases properly guide and admonish. Self-communism in its highest form is the avenue which leads directly to the heart of God.

"Yes," continued the doctor "yes, sir." (Sometimes Dr. John was very respectful to himself.) "A doctor's life is no joke. Easy, my beauty, easy! Now, John, look at that horse. You are only just a little more of an animal than he is. It's fun for him to travel when there's another horse close by that he can outrun. Exactly the case with you, John. If it hadn't been for another horse in the shape of a doctor you were determined to get a little the start of, where would you have been to-day? That's the point. Worthy ambition, eh? to pass a poor devil on the road of life! Upon my word, I believe I should be a better man if I had a wife. I rather like women; but it is a little hard to understand how a fellow manages with a woman tied to him morning, noon and night. That's what takes me. Then, I am not sure that anybody'd have me that was anyways suitable. Of course, I should want intelligence, and intellectuality, too, by George! and I never could endure a plain woman, or a woman with a loud voice, or —— Yes, sir, that question is in order," continued the doctor, stroking his long, silky, black beard. "That is what I call driving the nail in. What have you got, John Hessman, to give in exchange for these royal treasures of mind and body? A good name — yes; an exceptionable position, unimpeachable integrity — yes, sir. These are something;" and here our M. D., reined up before an elegant brown stone mansion, where one of his best (pecuniarily speaking) and most fashionable patients resided. Here Dr. John was employed by the year; and although the position was no sinecure, on account of the amount of patience required to battle with the nervous fancies of the principal invalid of the establishment, still Dr. John, to use his own telling vernacular, considered it "an exceedingly soft thing"—and soft it was in more senses than one.

Dr. John walked right up into the invalid's chamber.

"Oh, good morning, doctor. A little late aren't you? Seems to me I have been waiting an unusual length of time," drawled the lady from her luxurious couch.

"About the usual hour," replied Dr. John, with no especial show of deference. "What seems to be the matter *this* morning?"

"Now, really, doctor, that is too cruel. Matter *this* morning! Do you remember what was

the matter yesterday? Please don't be so blunt. You shock my nerves terribly."

"Let me see," said the doctor. "Yesterday, according to your own admission, you were tagged out with a fashionable party and a late supper. That, of course, cannot be the case to-day."

"I know I should not have attempted it in my weak state, doctor. I know just what you will think of it," sighed the fashionable woman from her downy bed. "But then you men never will understand what society demands of us women. Dear Estelle (dear Estelle was the invalid's daughter) had quite set her heart on going to Mrs. Donk's reception. Of course I could not allow the dear child to go unattended, and bless your heart, Dr. Hessman, the girl's father would not accompany her to a party if she fell dead in consequence. Oh, Lord, such a time as I did have about it, trying to induce Mr. Waters to escort her. I really believe that scene had more to do with my suffering to-day than the party had. Dear me, such a sad man as Mr. Waters is! I told him—says I, "William, this may result in my death!" Says he—"When a woman gets to be forty years old, and don't know enough to take care of her own health and the health of her children, it is time she died;" and then, doctor, he lit his cigar and puffed out of the house. I tell you this because I want you to know what has so unnerved me, and that you may not lay it all to the party. Estelle is quite ill, too, doctor, and when you have written out my prescription I wish you would walk into the next room and see her."

Dr. John knew that something must be administered or his profession would be irretrievably ruined, so with a quiet smile playing around his large mouth (Dr. John's mouth was really very large, and truth compels us to state that he had an under-jaw to match, though the rows of unexceptionably white and even teeth, and the silken chin-covering, glossy and soft as a woman's hair, entirely redeemed the lower part of his face from ugliness) the physician wrote the few necessary Latin words, among which aqua seemed really the most conspicuous, and then passed into the other room. The doctor knew what awaited him. This little game had been tried more than once before.

"Good morning, Miss Estelle," said Dr. John, approaching the sofa where the languid beauty reclined. "Your mother tells me you are ill."

Miss Estelle, with almost an impatient gesture, brushed back the floating hair from her temples—carelessly and really unintentionally, it would seem, barring by the motion one of the most beautiful arms that sculptor ever waved about—and replied:

"Your manner seems to say, Miss Estelle, you are always ill. Why don't you behave yourself?" "Oh, how happy I should be, Dr. John, if you would once in your life be kind to me. I do really think something is the matter with my heart. What if I should die?"

No picture of Watteau's could ever have been more witching, more charmingly colored, than the little form before him. Every accessory of toilet had been brought to bear upon the citadel of his heart—and to a handsome woman no dress is so becoming as the *negligee* of her boudoir, with its lace and fantastic embroidery, slippered feet and graceful posture. Then the vases filled with flowers, the mirrors, and jewels, and perfumes, and enticing lolling chairs. Helgho! many a strong man has bowed to such a shrine—made a fool of himself for life—when in the glare and glitter of the drawing room no such nonsense would have been thought of.

Dr. John acknowledged the beauty of this picture. It was dainty, piquant, dangerous. It had been dished up for him on several previous occasions, but never so much to his mind as now. The beauty's manner was earnest and almost supplicating. What man could fail to be appreciative under such circumstances? Remember, too, that Dr. John was longing to be loved—had that morning almost prayed that heaven would send him a little bundle of comfort in the shape of a good wife, and it will not be strange that, notwithstanding the efforts previously made to entrap him, he should think only of the present loveliness.

"What are you reading, Miss Estelle?" asked Dr. John, after a moment of appreciative scrutiny. "Wilson's Essays, eh?" and the doctor's face showed all the surprise and pleasure felt by its owner. "And upon my word, if here isn't Emerson. That is healthy food, rather heavy, though, I should think, for a sick girl!"

Miss Estelle drew a long breath! For the first time in the twelve months of trial had she received one single word of compliment or commendation from the man whom her mother had determined she should marry.

"And, as true as I live, another book under the pillow. Really, I have some curiosity to know the title of that volume also," continued the doctor almost caressingly.

"Oh, it is nothing," replied the would-be invalid, languidly, "but a stupid cookery book that I got from the library. Mother depends upon me, you see, for our deserts, and I can tell you that sometimes my ingenuity is sorely tested."

One little hand tucked the volume further under the pillow, while the other, unconsciously, of course, dropped upon the doctor's. With the white, jeweled fingers lying on his, the fair dazzling face upturned, the words which would have doomed him to misery all the days of his life were almost spoken.

How wonderfully and providentially little things sometimes appear to save from desolation and death! The hand with which she had striven to hide the partially concealed volume had strangely enough, lifted the frill of the pillow and disclosed both title and author—one of the most mischievous and recklessly written books ever translated into the English language.

For a moment the doctor sat silent with horror and astonishment. Not so much that the woman before him had developed a taste for such literature, but that she could so unblushingly lie to him.

"I do not think" said he, at last, "that you need any medicine. So you have my permission to study the cook-book under your pillow as diligently as you may feel disposed. It is pleasant to know that fashionable young ladies are possessed of such domestic and literary tastes. Good morning, Miss Waters."

Dr. John passed out of that abode of luxury sick at heart.

"I came very near losing myself in that trap. What confounded fools men are?"

The thought was rather humiliating, and Dr. John was unable to shake it off during the day; and when he turned his horse's head homeward it was with a feeling of disgust and loneliness never before experienced.

"Pretty much all alike, I'm afraid," he continued softly to himself.

Just then a little figure in the middle of the street attracted his attention. A child, to all appearance not a day over five years, with uplifted arms stood, heedless of danger, looking straight in his face. Quicker than I can tell, Dr. John had jumped from his carriage, seized the little creature and placed her on the seat beside him.

"You were in great danger, my dear," said the doctor, looking down into the singularly sweet and intelligent young face. "What made you stand in the middle of the crowded street?"

"Are you a doctor?" was the only reply vouchsafed.

"By profession, yes, little miss, and by name John Hessman. Have you any commands for his highness?"

"If you are a doctor, I want you to go home with me, and if you are not, please tell me where I can find one. My sister Kate is sick—awful sick—and she talks and sings all the time; and I haven't got any money—neither has she; but she will die if somebody don't come."

"I am a doctor, and will go home with you, little darling," said our friend, involuntarily drawing the sobbing child toward him. "Don't cry; I can help her if anybody can."

Before they arrived at the residence of the sick girl, Dr. John had discovered, by skillful questioning, that the child's name was Florence Britton—the sister's Kate Britton; that Kate wrote stories, and made reports, and sometimes was out late at night taking notes and preparing articles for the press, that she had not been well during the winter, and for the last three weeks had been unable to attend to her literary duties, and was now suffering from brain fever. The room which the doctor entered was plainly and neatly furnished, and bore unmistakable marks of refinement and womanly taste.

"Kate," said the little girl, climbing into the bed where her sister lay moaning with pain—"sister Kate I have brought a doctor to see you. I found him in the street, and he says he can make you well. Look at him, Katie—he is very kind."

"Cuddle right down beside me, Flory darling. There, that's a good little girl. Go to sleep, don't mind sister Kate—she's only got a headache. Say your prayers, Flory—say your prayers," murmured the girl, even in delirium, thoughtful of her precious charge.

Here was a case to rouse Dr. John's energies—a case which appealed to his sympathy and respect—a case, so far as he was able to judge, of utter loneliness and destitution. So, like the good man he was, he set himself to work in good earnest. A good nurse was procured, necessary articles were brought into the house, and over all he watched as if the sufferer had been his own sister. The fourth day the invalid awoke to consciousness, and looked at Dr. John straight in the face.

"Where am I?" said she, attempting to rise.

"At home," he replied. "Please be very quiet."

"Where is Flora?"

"Asleep by your side. Don't ask any more questions."

"Who are *you?*" she continued, apparently oblivious to the command.

"John Hessman at your service, and at present your self-constituted physician, who will be obeyed! Now drink this beef-tea—take Flory's little hand in yours and go straight to sleep."

With a sigh of relief, a smile, a momentary attempt to keep her eyes open a little longer, and the invalid was sleeping as quietly as an infant.

Four weeks from that day, Miss Kate Britton rode out in the doctor's carriage, almost as well as ever.

Dr. John looked unutterable things, as he jumped into his gig and took his seat beside her. Very like the day a month ago when he had something particular to say to himself—only now he evidently had a communication to make to another.

"It will be safe for me to resume my writing to-morrow; will it not doctor?" inquired Kate, the first to break the silence. "I feel better and stronger to-day than I have for a year."

"No, little girl," replied the doctor. "It will not be safe for you to resume your writing in six months!"

"Oh, doctor, you are only joking now; I know you are," said Kate noting the look of amusement in his expressive eyes.

"No, Kate, indeed I am not joking. You shall never go back to that drudgery again, if I can help it."

The hot blood mounted clear to Kate's temples. "Dr. Hessman," she continued, assuming a business-like manner, "but for you I should have been in my grave!"

"In all probability," broke in her companion with more truth than modesty.

"Well," she continued, "you have saved my life, kept my darling little sister from starvation—cared for us both as though we had been your own kindred! But how can I ever——?"

"There, child, stop right where you are. Never, if you have any regard for my feelings, allow that word to slip from your lips. I want to take you and Flory to my home, and make your happiness my care. In short, Kate, I want a wife and a sister; will you be the first? Perhaps you don't love me exactly—but I know I can make you love me!"

"But I do love you!" said Miss Kate under her breath.

"All right, then! Will you go?"

She went.

Dr. John scarcely ever talks to himself now.

"SHOOST SO LONG AS IT VAS."

A CHICAGO correspondent sends the following:—At a recent trial before Justice Dougherty it was thought important by counsel to determine the length of time certain "2 quarters of beef, 2 hogs and 1 sheep" remained in an express wagon in front of plaintiff's store before they were taken away by defendant. The witness under examination was a German, whose knowledge of the English language was very limited; but he testified in a very plain, straightforward way to having afterward carried it out and put it into the aforesaid wagon.

Then the following ensued:

Counsel—"State to the jury *how long* it was after you took the meat from the store and put it into the wagon before it was taken away."

Witness—"Now I shoost cand dell dat. I dinks 'bout dwelve feet. I not say nearer as dat."

Counsel—"You don't understand me. *How long was it* from the time the meat left the store, and was put into the wagon, before it was taken away by defendant?"

Witness—"Now I know not what you ask dat for. Der vagon he vas back up mit der sidevalk, and dat's *shoost so long as it vas.* You tell me how long der sidevalk vas. Den I tells you how long it vas."

Counsel—"I don't want to find out how long the sidewalk was, but I want to know" (speaking very slowly) "*how long* this meat was—in the wagon—before it was—taken away?"

Witness—"Oh! dat! Well, now, I not sold any meat so. I all time weigh him; never measured meat, not yet. But I dinks 'bout dree feet." (Here the spectators and his honor and the jury smiled audibly.) "I know not, shentlemens, how is dis. I dell you all I can so good as I know."

Counsel—"Look here, I want to know *how long it was* before the meat was taken away after it was put into the wagon?"

Witness—(looking very knowingly at counsel)—"Now you try and get me in a scrape. *Dat meat was shoost so long in der vagon as he vas in der shop.* Dat's all I told you. Dat meat vas dead meat. He don't got much longer in den dousan' year, not mooch."

Counsel—"That will do."

A SOFT-TONED BELL.

REV. AZEL HACKUS, D. D., was a graduate of Yale, and became President of Hamilton College. It was in the good old days when they had prayers and recitations before breakfast, so that early rising was in order. The chapel bell was moderate in size and feeble in utterance, and it became a standing excuse for "sleeping over;" "I didn't hear the bell!" At last one morning the President himself was late at morning prayers, and as he opened the Bible to commence the service, he delighted the boys by indorsing their own threadbare excuse: "The fact is, young gentlemen, I didn't hear the bell. And no wonder, for it scarcely makes more noise than would the shaking of a fur cap with a sheep's tail for a clapper."

"THE WRONG SHMELL."

A HIGH officer of the Sons of Temperance presenting himself with the smell of grog he had been drinking, at the door of a "Division" for admission, was waited upon by an Irish sentinel, to whom he gave the pass-word, when the following passed:

"Sir," said he, "and ye are Mister O'Wright, the Grand Worthy Patriarch of the State of Khalutucky, I do be after belavin."

"Yes," said Jim, "you are perfectly right my friend, but why do you ask the question?"

"To tell ye the thruth, then, sir, and shame the deevil," said Pat, "ye do be having the right pass word for a Son of Temperance, entirely; but by the Holy Virgin and the blessed Saint Patherick ye've got the wrong shmell!"

NO REPENTANCE IN THE GRAVE.

A SCOTTISH clergyman, happening to go into the churchyard while the beadle was employed neck deep in digging a grave, thus accosted him:—"Well, Saunders, that's a work you're employed in well calculated to make an old man like you thoughtful. I wonder you don't repent of your evil ways." The old worthy, resting on the head of his spade, and taking a pinch of snuff, replied, "I thought, sir, ye ken'd that there was nae repentance in the grave."

Sabbath Reading.

NOT PARTED.

THEY are not parted, though their feet
Have wandered far in different ways,
And though they never more may meet
On Winter eves or Summer days.
It matters not though realms divide,
Though boundless seas between them roll;
For, still defying wind and tide,
Heart yearns to heart, and soul to soul.

They are not parted—only those
Are parted whom no love unites;
Their absence breaks not our repose
Who have no share in our delights.
They may be by our side, and still
As far from us as pole from pole,
Who lack the sympathetic thrill
Of heart to heart, and soul to soul.

DRIFTING AWAY.

WITH proud, exultant step we may tread to the very verge of the future in the journey of life; but we can go no further; there it becomes lost to us in the realities of the present; we are left to look forward to a new future, while behind us lies the past, from which we are rapidly drifting. Often our hearts grow weary, our eye-lids wet with tears, as we pause to look back at the receding shore, and through the dim distance seem to catch glimpses of the forms we loved in other days—early friends, whose hands we were wont to clasp in fond, familiar greeting, but whom now we meet no more as in the olden time, for on the restless sea of change our barks have drifted far apart. Far more vividly than all come to us visions of the old homestead from whose portals we went forth with brave hearts, to try the realities of the world which lay beyond the precincts of our own quiet home. Half impatiently we had looked forward to the time when, no longer bound by the restraints of home, we should take our place upon the stage of active life; but often the path has proved a thorny one, our feet have grown weary, and with yearning hearts we have longed for the quiet joys from which we have forever drifted.

No more do we gather an unbroken circle beneath the shelter of the old home tree; loved ones, grown weary with life's burdens, and borne on the river of Death, have drifted away to the unknown shore. It is sometimes sad to feel that we are receding from all that our hearts hold dear. From our childhood years with their innocent joys—from the sacred ties of home and early association—but more sad, more bitter than all, comes to us the knowledge that on the current of worldly pleasure we are floating from the love of our Heavenly Father; that with thoughtless feet we are treading each day nearer the grave, unmindful of what may lie beyond its dark borders.

There are moments when our better natures are awakened within us—when we turn heart-sick and weary from the vanities of the world, and pause to contemplate whither the stream of life is carrying us. Then it is that we feel the need of a stronger arm than earth can give to lean upon; and could we but throw off the shackles of sin, and with renewed energy and earnest purpose press forward in the path of duty aiming to fulfill the mission of which Our Saviour has left an example in His Holy Word—our lives would be purer, our influence more ennobling, and we far more happy; that when our eyes grow dim with age, and we await our summons home, there may come to us no regret for the joys from which we have drifted away—but rather golden gleams of the home to which we are hastening. S. E. W.

Maple Hill, Cazenovia, N. Y.

THOUGHT-SUGGESTING PARAGRAPHS.

THAT which is distinct from man is unknown and unknowable.

THE natural world can give joy. It is folly to underestimate its capabilities in this direction.

THE great defect of that joy which is not "in the Lord" is that it is so transitory. It has really some resemblance to a dream.

A MAN may be so engrossed by the natural world as to live as if there were no spiritual world. Such a man becomes a gross materialist.

WE are now in this world. Our business is with this world. We have functions and duties here. All true religion must help us to discharge these. Whatever does not is worthless.

MUCH of our life is frittered away with carking cares and anxieties. They come from too close a look at things which are temporal. We are so near them. This nearness must be corrected by spiritual-mindedness.

WHEN you have been diligent in business all day, neglecting nothing, hurrying nothing, acting as an agent for the Lord, leaving all your books and transactions to His inspection and protection; when you have had intelligent, faithful, trustful carefulness all day, how free from fretting care you ought to be at night!

THE care of earnest thoughtfulness with intent to do right is not degrading, nor weakening. No man should wish to be rid of it. It is the care that distracts, that pulls one's mind many ways, that disturbs and distresses and perplexes, which a wise man would desire to avoid, so that he may have all his powers to devote to caring for those things which are of real importance and the caring for which will do some good.

Ladies' Port-Folio.

SUMMER DAYS.

BY ROSETTE A. ROSE.

O! the days are full of splendor,
And the radiance of their light
Weaves a dream of fairy grandeur,
Brightening ever to my sight;
Nature wears her festive garlands,
And the earth is full of song,
And the charms that gild the heavens
To these Summer days belong.

There's a wealth of untold gladness
Breathing through the balmy air,
And the loving care of Heaven
Cheers our pathway everywhere;
In the shower and in the sunshine
We may see the hand of Him,
Who will not forget to cheer us
When the Summer's light is dim.

When the morn with crimson blushes
Draws her curtains from the night,
And the twinkling stars are hidden
In a flood of golden light,
Nature wakes from dewy slumber,
Full of joy, and light, and life,
And the day grows bright in gladness,
With a thousand blessings rife.

And when evening's solemn beauty
Charms the earth to peace and rest,
Angel voices seem to whisper
From the mansions of the blest,
Of the peace and rest of Heaven,
Of the endless Summer there;
And a solemn joy seems thrilling
All the dewy, evening air.

And through all the joyous Summer
At the morn, or at the eve,
In the sunshine, or the shower,
Beauteous visions we may weave
With the cares that cluster round us
In our weary march through life,
And their memory will help us
Bear our burdens, and our strife.

EVERY-DAY LIFE.

BY LEAD PENCIL, ESQ.

I AM daily getting new revelations of life. The mails bring them to me. Some of them are exceedingly interesting. Here is one which illustrates a very common phase of life, and that it has its

Two Sides.

IDA FOXGLOVE, who is spending the Summer in a country town somewhere, writes:

A gentleman has just gone whom I have seen very frequently since I came here—one of the first acquaintances I made. I have always seen him in a merry, jesting mood, good natured and insincere, talking, apparently, merely to hear himself talk; and every one whom I have heard speak of him seems to have the same opinion. He is a merchant, thirty-five years of age, a widower soon to be married to a woman of twenty-three and a little girl in thought. I never heard a man talk more soberly and seriously and *sensibly*, showing that he thinks and draws close, *deep* deductions from life, for the same length of time than he just has. I said to him:

"You have two lives, Mr. ——. The surface one, in which I have heretofore seen you, would hardly be recognized in the one in which you now present yourself to me."

Said he:—"Do not we all?—some in a lesser and some in a greater degree? I assume the character which is the easiest and most complete mask. I have not talked with a person in eight years as I have to you to-day."

He had no reason to talk to me so, save his own pleasure; in fact, I have never treated him with other than friendly courtesy, as I do all. But I do not remember ever to have conversed an hour alone with a man in my life, that he did not talk sensibly and earnestly to me—show me that which was *best* in himself, as it were, and give me a better opinion of himself than I had before entertained. Is it strange that I grow to have more instead of less confidence in men, as I grow older? Long ago I was almost a manhater, regarding him as my natural enemy; but woman is rarely blessed with such man-friendship as I have been. Why? Compensation? I usually find men more liberal, charitable and considerate of women than women are. Why?

I wish there were more women who could and would develop, in their relations to man, the highest and best qualities of mind he possesses, and bring to the surface that other side of his nature which too rarely finds expression in his intercourse with his fellows.

Tenement Life at Midnight.

If physicians could tell the stories of life they witness and learn, it would startle those quiet, even-tempered people of equable lives. A physician sends this PENCIL the following experience in New York City:

Last night I was out all night in a tenement house, with a poor woman who has seen better days, and there was a terrible drunken brawl in the next house. Such profanity and obscenity, yells and howls, curses and prayers! The night was rendered hideous. It seemed as though Pandemonium was let loose. There, right opposite, two thin-faced, pinched-looking girls sat till three o'clock in the morning, making green silk bonnets, which they trimmed with huge blue feathers on the top. Just below a baker kneaded and patted and stirred his cakes till morning dawned. A little further down in the same block, an anxious-looking wife, over and anon, came to the window in her night clothes and, putting her head out, peered up and down the street in the darkness, vainly looking for her husband, who did not come home till four o'clock, and then was full of bad liquor and politics.

True, it is but a common-place glimpse of common-place life in the tenement-house regions of great cities; but the phases of it, seen from a single window in a single night by a physician accustomed to such scenes, are suggestive and contrast strongly with the peaceful, quiet lives which others lead in green, sweet, quiet country nooks. But talking of life in the country, I find among my letters one in feminine hand, without signature, which came from the country, addressed to "LEAD PENCIL, Esq.," which gives a vivid view of

One Phase of Country Life

which I trust is not common, but which, I have sad reason to know, is far too common. Here it is:

Sitting here in the moonlight by the window, I have been watching the great moon sailing in the flecked sky, and thinking how little need we would have for any other heaven than our own beautiful world, if there were only *Love* enough in it. Do *you* know what life is *without* love? Did you ever feel the wide waste of dreariness, the sickening faintings of heart, the wild retrenching of pain, the tired, tired, *tired* exertion of breathing? Did you ever feel the quick tears start when a *dog* licked your hand? Did you ever turn dizzy from a sick faintness when people were flattering and caressing you with *words*, and feel so oppressed with the mockery of food held to your lips which has no taste and you just dying of hunger? Did you ever hear the hum and stir of busy life about you from which you felt you were an alien and had no care or share, and feel the jar, jar upon your excited nerves until you could only sit and let the tears drop from your closed eye-lids from sheer exhaustion; and then have no place in which you could be alone for even one brief hour to gain rest and courage?

I might answer these questions categorically; but to what purpose? Is it not enough that other hearts will reach out in sympathy, born of experience, to this burthened life which thus finds expression?

ROYAL EDUCATION OF WOMEN.

ALTHOUGH eccentricity is said to be a plant of island growth, we occasionally see it cropping out in continental households, and sometimes even in royal palaces. For instance, the queen of Naples and her sister, the empress of Austria, two of the most beautiful women in Europe, were brought up by their father, a Bavarian prince of a collateral branch, in the strangest manner possible. Fond of low society, he would take them with him incognito to the taverns of Munich and the tents of the gypsies. He taught them to ride, row, shoot, drive, and swim, and no one else thought of supplementing this very defective education. Their mother, a hypochondriac rather than an invalid, used to sit all day reading novels in a darkened room and feeding her precious lap-dogs. Her children were now and then ceremoniously brought in to see their mother, who had nothing to say to them when they were come. They hated the dogs, naturally enough, and were given to slyly pinching their ears in consequence. The dogs yelped and the mother querulously complained of her head. Thus ended the interview, and the girls went back to their father and their sports.

It was *de rigueur* that they should receive religious instruction, and the archbishop of Munich chose among his clergy one whom he thought most competent to the post of teacher to the princesses. After a month the unhappy chaplain was sure to ask as a favor to be relieved of this duty. The girls would laugh and talk to each other, utterly unheedful of any remonstrance, and generally managed to tease their poor preceptor beyond all patience. When the archbishop himself, with infinite pains, had instructed them for confirmation, they laughed in his face during the ceremony. All these facts we learned from his own lips during his stay in Rome, where he has since died.

The empress of Austria, however, improved very much after her marriage, learned French and Hungarian and many other useful things, and became very popular both with the court and the people, especially in Hungary. Her sister's career, less fortunate, has been also more romantic, but one cannot help deploring that in her so much energy, misdirected or rather lying waste, has led to much domestic unhappiness.

FEMININE FELICITIES.

A STUDENT of theology describes a woman's original sphere to be apples.

IT is said that after Lot's wife was turned to salt he could not find a fresh one.

A CLERGYMAN said the other day that modern young ladies were not the daughters of Shem and Ham, but the daughters of Hem and Shaw!

AN Ohio lady sent back a book she had ordered, because the leaves were uncut. She thought it was an unfinished copy, and was right.

A PARIS shopkeeper lately fixed over his door a notice that as his daughter had "made a splendid match," he would sell goods at a reduction of twenty-five per cent. for a week.

A SOUTH-SHORE Long Islander, on his first visit to the city with his sweetheart, seeing the bunches of bananas in Fulton market, exclaimed "I'll be mowed Suphrony, if them ain't the biggest beans I ever seed!"

"THESE ladies are like birds that are on the wing," said a humorous clerk to his employer—Mr. Martin—as a bevy of shop damsels left the store. "Why so?" asked the proprietor. "Because it takes them a long time to settle upon their purchase" (perches), replied the clerk.

A BEAUTIFUL young lady who had allowed the tendrils of her heart to twine fondly around a strapping great conductor on a horse car, had her affectionate nature crushed by the discovery that he was taking fare from her and deadheading another girl who lived on the same street.

Reading for the Young.

JOHNNY'S OPINION OF GRANDMOTHERS.

GRANDMOTHERS are very nice folks;
They beat all the aunts in creation,
They let a chap do as he likes,
And don't worry about education.

I'm sure I can't see it at all,
What a poor fellow ever could do
For apples, and pennies, and cakes,
Without a grandmother or two.

Grandmothers speak softly to "ma's"
To let a boy have a good time;
Sometimes they whisper, 'tis true,
T'other way, when a boy wants to climb.

Grandmothers have muffins for tea,
And pies, a whole row in the cellar,
And they're apt (if they know it in time,)
To make chicken pie for a "feller."

And if he is bad now and then,
And makes a great racketing noise,
They only look over their specs
And say, "Ah, these boys will be boys."

"Life is only so short at the best;
Let the children be happy to-day."
Then they look for a while at the sky,
And the hills that are far, far away.

Quite often, as twilight comes on,
Grandmothers sing hymns, very low,
To themselves, as they rock by the fire,
About Heaven, and when they shall go.

And then, a boy stopping to think,
Will find a hot tear in his eye,
To know what will come at the last:
For grandmothers all have to die.

I wish they could stay here and pray,
For a boy needs their prayers every night;
Some boys more than others, I s'pose—
Such as I need a wonderful sight.

[*Ethel Lynn.*

LETTERS TO YOUNG RURALISTS.—X.

FROM COUSIN JOHNNIE.

I WONDER if any of my little cousins have a bow and arrow. It used to be one of my greatest pleasures, when I was a little girl, to practice shooting at a mark. My bow and arrow were very simply made; the bow being only a flexible piece of wood, curved, and having a piece of twine fastened across from end to end. It was made for me by a kind gentleman who, with his family, was once spending the Summer with us, and was like those he had made for his boys. Our arrows were of light wood, sharpened but very little at the point, so that there was no danger of our hurting each other. We used sometimes to place an empty bottle on its side, on the top of a barrel, and try to shoot our arrows into its neck. After we had all tried a great many times without success, I, at last, one day succeeded in making my arrow go straight in, and as I was the youngest, and a girl, too, it was quite a triumph. We used to have famous times playing—ALLAN and FRANK and I—after the boys had recited their lessons to their mother. It being my vacation, I had no tasks, except to practice a little on the piano every day. I had no work to do, for though we lived on a farm, we were not farmers—my father having his business in the city. I am afraid some of my little farmer girl cousins will be shocked at my laziness; but I must tell them that I was not very strong, or I should, in all probability, have been made to do some sewing, as my sisters did. I was then nearly ten years old, FRANK was eleven, and ALLIE thirteen. Another pleasure their father, Mr. D., provided for us, was a "spring board." This was a wide plank, resting at either end upon a great stone. Upon this board we would skip and prance, up and down, and round and round (every now and then losing our footing and going down upon the ground), till our legs ached. Then we would move the board along till the middle of it rested on one of the stones, and our spring-board became transformed into a delightful see-saw. We also used to make running and standing loops over a string, to which sand-bags were attached, fastened by Mr. D. between two upright stakes, and each day he would raise the string a little bit higher, till after a while we got to be quite expert leapers. But the amusement that gave us the greatest pleasure was something we invented ourselves. We would take three empty barrels, and placing them on their sides in a row, on the barn floor, we would each crawl into one, head first, and then start on a race the length of the barn, propelling our barrels partly with our feet and partly by rolling ourselves over and over, regardless of bumped heads or torn clothes! And then we—but I must wait till next time to tell you the rest of our amusements.

OUR LETTERS FROM BOYS AND GIRLS.

From Compton, California.

EDA C. writes us from the Golden State: Dear Mr. RURAL—Pa has been having the RURAL NEW-YORKER sent to him for some time, and I have been very much interested in your letters from boys and girls. Pa also likes the paper very well. As I have not seen any letters from California girls, I thought I would say a few words. We are now living in a small village near the L. A. S. P. R. R., about twelve miles from Los Angeles and eight from Wilmington. We have a very pleasant home, a farm of fifty acres, with an Artesian well which raises thirteen feet above the ground in a seven-inch pipe. We have a great many wild flowers and some trees. We have not been here hardly long enough to have many bearing, but we have some apple and peach trees that have fruit on this year, and a good many grape vines which will bear beautifully this year. 'Pa was one of the first ones that came to Compton to live, and consequently the place was named after him. When we came here there were no white people living here; then there were some Spaniards, but now there are a great many whites. We have a store, a hotel, and a M. E. Church, and a splendid new school-house just finished. We have a lumber yard, warehouse, depot office in our town. We do not live in town, but about a mile out of town. I like it much better, it is not so dusty.

Frames for Morning Glories, Fuchsias, etc.

IN the Young People's department of the RURAL, IDA A. S. asks for a way to make frames for morning glories, cypress and other vines. I have seen a very pretty and simple frame made by having a stake about eight feet in length, at the top and bottom of which are fastened circular boards, the one at the bottom being made the larger around. When the strings are fastened from one board to the other, the frame is complete.

My house plants are mostly fuchsias and geraniums. I have found out a queer little fact about fuchsias. It is this:—If from a fuchsia, the blossoms of which are single, you take a slip with a woody stem, it (the slip) will produce a double flower. While if the slip has *not* a woody stem, the blossom will be single. We have tried this several times and find the result always the same.

A description of myself would interest no one; I will simply say, I am not a blonde. Have no great desire for pets, (the only pet I own being the fourth share in a small brown dog,) and do not in the least resemble a wild flower. So I will close by signing myself my own home pet name, given me by my mother and sister conjointly, in consideration, I suppose, of my natural characteristics.—FIRE-CRACKER.

Ashtabula Co., Ohio, June, 1872.

The Puzzler.

ILLUSTRATED REBUS.—No. 7.

A BEAUTEOUS line of Whittier, in wreathing,
With imagery to make the weary glad,
A thought a most delicious fragrance breathing.
What Annie dreamed her long-gone Enoch had—
The Sun of Righteousness above his head—
Before to hungering Philip she was wed.

Rockford, Ill. FOURTEEN.

RIDDLE.—No. 1.

WE are little airy creatures,
All of different voice and features;
One of us in glass is set,
Another you will see in jet;
Then the third you will see in tin,
And the fourth a box within;
While if the fifth you would pursue,
It can never fly from you;
And if the sixth you would espy,
You may find it in an eye. L. E. K.

☞ Answer in two weeks.

PUZZLE.—No. 4.

A PART of a song, then to it add one;
One hundred next place to the right;
Myself will come next; then part of a loan,
And part of yourself do not slight.
These placed together, if you'll be so kind,
And very quickly an island you'll find.

☞ Answer in two weeks. J. M. S.

HIDDEN LAKES.—No. 1.

1. MY sister I expect. 2. Carry it as careful as you can. 3. Did you see Arthur on the boat. 4. He is of age, or getting near it. HATTIE.

Moltke is inspecting the fortifications at Belfort....President Thiers has returned to Paris....The strike of the agricultural laborers in England continues....The Swiss Arbitrator, Mr. Staempfli, says he hopes the Board of Arbitration will finish its work in three weeks....The Catholic processions in Ireland have caused much disorder....At the meeting of the Emperors in Berlin a European Congress will be proposed....Both Brazil and the Argentine Confederation are making great preparations for war.

SEMI-BUSINESS PARAGRAPHS.

Electro-Galvanic Spectacles.—If there be "nothing new under the sun," there are new combinations of familiar things that are sufficiently surprising. The union of Electricity and Spectacles is one of these. Dr. J. MOSES has placed at the ends of the wings of the spectacles small galvanic batteries, which, he claims, generate a weak but continuous electric current, largely increasing the power of the nerves traversed by it, doing much to restore sight, helping to cure deafness, protecting against certain forms of nervous headache, &c. The inventor is very confident in his assertions of the use of these spectacles, and we are constrained to admire the ingenuity which has made so unlikely a combination so neat, convenient and comfortable to wear. The wholesale depot for the same is at 10 Cortlandt St., New York, and they are for sale at retail by dealers throughout the United States.

Sixteen Years of Success.—In 1856 the now famous Mustang Liniment was first made known to the public by an extensive system of advertising. From that time to the present the demand for it has been steadily increasing, until it has taken the lead of all embrocations, lotions, ointments and other external remedies, imported or domestic, ever introduced into the American market.

Facts for the Ladies.—Mrs. E. K. BARMATYM, La Sueur, Minn., has tried many machines, and found none to compare with her Wheeler & Wilson Lock-Stitch, which she has used seven years without repairs, earning about $20 a week, and enjoys perfect health. See the new Improvements and Woods' Lock-Stitch Ripper.

Beware of worthless imitations of Marinn, United States Watch Co. (Giles, Wales & Co.) Watches, with which the country is flooded. To avoid imposition, see that the words MARION, N. J., are engraved on the plate over the Main-Spring Barrel. All others are spurious.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Aug. 19, 1872.

DURING the past week the general trade of the City was active. The Importers and Domestic Commission Merchants are making good sales for the Fall business, both in Dry Goods and General Merchandise. The Imports continue on a large scale, independent of the stocks of goods accumulated in bonded ware-houses in June and July. The prospects of trade or the certainty of the crops are regarded as favorable for the Fall months, and our merchants are generally in good spirits.

In financial affairs since our last report, the rates for Money among the Brokers have ruled cheap on call loans, and not over 6@7 per cent. on time engagements. The banks are generally easy in their movements, and while there is some talk of a probable sharp trade demand for money in September and October, no signs of it yet appear at bank or on Wall street.

Gold has fallen 1 per cent, since our last report. The shipments abroad have ceased, and as the Treasury is paying out and selling nearly as much as it receives, the speculators in the Gold Room have nothing to go on in regard to supply and demand.

The Stock market has improved 1@2 per cent., and while the Fall campaign is not inaugurated, owing to the continued heat of the weather, the speculators seem to regard present prices about as low as they are likely to be.

The following are the comparative movements of the City Banks for the past fortnight:

	Aug. 19.	Aug. 17.
Capital	$87,315,700	$87,315,700
Loans	260,586,500	256,802,800
Gold and Greenbacks	72,769,000	72,932,700
Deposits	237,068,200	235,757,600
Circulation	27,313,000	27,200,000

PRICES OF STOCKS AND BONDS.

U. S. 6s of 1881	118½	N. Y. Central	97⅝
U. S. 5-20's of 1867	116	Erie	46⅝

Virginias (new)	54	American Gold	111⅜

*Ex. Dividend.

PRODUCE AND PROVISIONS.

NEW YORK, Monday, Aug. 19, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,020,100	Meal, bbls	2,540
Oats, "	151,500	Flour, "	49,300
Wheat, "	135,450	Eggs, "	1,488
Rye, "	31,000	Cotton, bales	2,420
Barley, "	—	Hops, "	218
Malt, "	54,100	Wool "	2,600
Seed, "	318	Butter, pkgs	12,500
Beans, "	320	Cheese, "	57,800
Meal, bags	200	Lard, "	1,578
Peanuts "	3,450	Dried fruits, pkgs	108
Pork, bbls	290	Cut Meats "	1,578

Butter.—Since our last, fine butter has sold rapidly, and just before the weather set in so terribly hot it looked as though choice stock would have to be marked up. The weather, however, has been seriously against trade—that is, it has cut down purchases to actual wants, besides causing a want of confidence in the quality of lots that were caught in the cars during the excessively hot days. The market is firm for perfect quantities that have come through cool or were safely stored. It is not likely that we shall suffer a great addition to the accumulation of common stock. Most of recent supplies have been of nice salable quality, and have been well sold up. During the week 400 pkgs. were taken for Europe, and a car-load for California.

The quotations are:—State pails, choice, 28@30c. other, 22@26c.; State selections, 26@27c.; good to prime firkins, 24@26c.; do. half tubs, 24@26c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 19@20c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.

Beans and Peas.—The market for beans has been weak and a buyer of a full parcel would obtain further concessions. The few jobbing sales making have been at about late figures. Peas—The reports from Canada indicate a short crop there and holders have put prices up. The asking price is $1. We quote Medimns, prime, $3.10@3.25 per bushel; good do., $2.70@3; fair do., $2.60@2.70; common do., prime marrowfats, $3.20@3.25; good do., $3@3.15; common and fair do., $2.50@2.80.

Cheese.—With the cable quoting a weak market on the other side holders here have been making concessions. The warm weather has necessitated a speedy shipment of supplies, and at the close the market has very rarely been so bare of stock at this season. There have been fewer fancy grades in market this week and shippers have found some difficulty in filling their orders for this stock, and in instances, would offer, relatively, better figures. Some of the best stock has been worked off in small lots at 12½c., but 12¾c. is a fair price for that. We quote State factory fine at 12½c.; good do. 11@12c.; common do. 9½@10c.; skimmed as low as 3c.; State dairy, 10½@11½c. for prime, fair do., 9½@10c.; Ohio factory 10½@11½c.

Cotton. The market is firm, with a moderate business. Sales are mainly to spinners, with some call from exporters.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16⅝	16⅝	16¾	16¾
Good Ordinary	19⅛	19⅛	19⅜	19⅜
Low Middling	20⅜	20⅜	21⅛	21⅛
Middling	21⅜	21⅜	22⅛	22⅜
Good Middling	23⅜	23⅜	24⅛	24⅜

For forward delivery latest sales on the basis of low middling are at 20½c. for Sept.; 19½c. for Oct.; 18¾c. for Nov.; 18⅜c. for Dec.; 18¼c. for Jan.

Dried Fruits.—The steamers from the South last week brought about 500 packages new. The market has not opened as yet, the trade showing great disinclination to operate. It is believed the stocks of everything in this line will be heavy the coming season, and there is no confidence placed in the opening prices. New peeled peaches opened at 17@18c., but have declined 13@16c. New Southern apples have been offered freely at 6c., with scarcely over ½c. bid. New Southern sliced are held at 8@10c., without sales to establish a price. New blackberries have not come in as fast as needed, and the price has advanced to 9½@10c., with small sales only. There is no movement in old unpeeled peaches, but holders think they will compare very favorably with the new crop, and claim late prices with confidence. We quote quarters at 5@5½c., and 6@6½c. for halves. New cherries bring 21@22c., in a small way. New plums, 15@16c. State apples, quarters, 1871 crop, 8½@9½c.

Eggs.—The demand has been sufficient to prevent any further decline. Receivers are free sellers. Sales at 19@20c. for Western; 21c. for State and Pennsylvania; 22@23c. for parcels from near points.

Flour.—Prices have been held with less confidence. Exporters find no margin with the current market, and the home trade will not buy beyond actual wants. The close approach to the season for full supplies of new is the main feature influencing the market. The arrivals have been somewhat larger, embracing some few lots of new. The stock at this market is the lightest known here for years.

Fresh Fruits.—Everything has had to give way to peaches this week. Large quantities have ripened at once, and for several days the market has been overstocked. We are opening upon some good Old Mixons, and these are about all that will realize our top prices. Pears are abundant, with Bartletts from the Southern and N. J. orchards. Plums are in excess of the requirements of the trade; many lots will have to go to loss, owing to unripeness. It is useless and profitless to send apples here in the quantities that have afflicted the market latterly, and there will be a large yield of cider this season if farmers do justice to themselves. Quotations will explain this. Apples, fancy, $1@1.50 per bbl.; do. common 50@75c. do. Grapes are in fine order and have a fair share of trade: Delawares 12@14c. per lb.; other 6@9c. do. We quote peaches, Del. prime, baskets 75c.@$1; small 25@60c., Del. crates 50c.@$1.50, N. J. baskets 25@75c. Plums, fancy, $5.50@6.50 per bbl., common $4@4.50. Whortleberries per bush. $2.50@3. Watermelons Va. $15@30 per hundred, nutmeg per bbl., $2@3; poor do. $1@1.50. Pears, Bartlett, Va., $7@10, do. N. J. $3@11, bell $3.50@4, common $2@2.50. Pecans—One or two parties have been in the market and bought up about all the stock, something over 200,000 lbs. The asking prices at the close are 10@10½c. Peanuts—Virginia grades take the attention of buyers, and some fine lots have been sold at $2.10@2.25.

Grain.—In wheat the market has been ruling in the seller's favor, without marked changes in prices. The supplies have been unusually light, with some little call from exporters, but holders are disposed to meet the current trade promptly, as we are close upon the season for liberal supplies of new. No. 2 in store, $1.58@1.63; No. 1 do. $1.63@1.65; Winter red Western, $1.60@1.75; amber do., $1.80@1.85; white do., $1.85@1.95. Sales of new Winter red Western at $1.60@1.61. Oats close with a good speculative inquiry, and prices are very strong; sales at 41¾@43½c. for Western, in store and afloat, and 47@52c. for white. Corn is more in the buyer's favor, with a limited business. Steamer lots of Western mixed, 61¾@62¾c.; sailing do. at 62½@63c.; yellow, 63@65c.

Hay and Straw.—Supplies have been lighter and full prices are ruling. Hay, old shipping, $1.10@1.15; retailing do., $1.40@1.50; new shipping do., $1.05; new retail do., $1.40@1.50; Clover, 80c.@$1; Straw, long rye, $16@1.05; short rye do., 80@90c.; out do., 70@80c.

Hops. There is scarcely any stock on sale suited to the wants of brewers, and prices still rule high. Sales at Waterville of the new crop have been made at 60@65c. of parcels to go West.

New Yorks, growth 1871, 22@65; Eastern do., 22@30c.; Western do., 22@30c.; Yearlings do., 70, 10@30c.; Olds do., '69, 10@15c.; Bavarians, 65@75c.; English, 10@60c.

Poultry and Game is plenty and lower. We quote Woodcock at $1.25@1.50 per pair. Turkeys, N. J., 18@20c. ₱ lb; Western, do., 18c. ₱ lb; Spring chickens, Western, 40@50c. ₱ pair; N. J., do., 17@18c. ₱ lb; Fowls, N. J., 15@16c. ₱ lb; Western do., 15@16c. ₱ lb; Roosters, 9@10c. ₱ lb; Ducks, N. J., $1@1.25 per pair; young do., 75c.@$1 per pair; Western do., 75c.@$1 per pair; Geese, N. J., young, $2.50@2.75 per pair; Western do., $1.50@2 per pair.

Provisions.—Mess pork is better for contracts, closing at $13.85@13.90 for Sept., and $14@14.05 for Oct. Sides have been comparatively free, including a fair jobbing business at $13.85@13.90 cash for new mess, and $13 for old do. Prime mess, $12@12.25. Bacon has sold very largely for the Winter delivery, and spot lots are well cleared up. Long clear quoted 8c. cash; short do., 8¼c. Short rib, 7¾c., all city made. For Dec. long and short clear have sold together at 7¾c., and short clear for Jan. at 8¼c.; also a good trade for Feb. in short clear at 8¼. Hams and cut-meats generally are easier. Prices have stretched too high for general trade, now that dealers, especially local ones, are stocked up. Smoked hams range at 15@16c. Pickled do., 13@14c. Beef dull at old ranges. Tallow steady at 9¾c. for city, and 8¾@9c. for outside bbl; to prime. Stearine in good demand at 10¾@10¾c. for ice. Lard is firm at 9¼c. for spot or Sept. City, 8¾c. steam and kettle, and 8¾c. for No. 1.

Seeds.—Grass are selling in small lots at 9¾c. for Olde clover; 10@10¼c. for Indiana and Michigan do.; 10¼c. for State. Timothy at $3.25@3.50.

Vegetables.—Potatoes are higher with small supplies.

Early Rose, bbl., $2.37½@2.50; Jackson White, $1.75@2. Tomatoes, 50@75c. Squash, per bbl., $1.25@2.25, white and yellow. Cucumbers, ₱ bbl., 25c.@$1. Turnips, ₱ bbl., $1@1.50. Large Dutch cabbages, $10@12. Green corn, ₱ 100, 75c.@$1.25. Marrow squash, ₱ bbl., $1.25@1.50. Onions, ₱ bbl., $2.50.

Whisky.—There is a firm feeling with light supplies. Sales of Western at 93½c.

Wool.—Sales are a little larger, at irregular figures. We quote fleeces at 60@65c. for New York, March; 63@68c. for Ohio; 60@64c. for Indiana and Wisconsin; 55@61c. for Illinois; 40@50c. for Texas fine, 30@35c. for do., coarse. Pulled, 61@68c. for extra.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., August 17, 1872.

THE market at Little Falls for the week ending August 17, was rather dull, with a decline in prices from last week of ½c. to ¾c. per pound. The delivery of farm dairies amounted to about 1,100 boxes, and prices ranged from 9@11½c., the latter price having been reached by only a few extra lots.

The factories were largely represented, the offerings amounting to some 11,000 boxes, 4,500 of which were sold.

We give quotations of leading transactions as follows:

Newport Hill	11¼	Turner & Welch	11⅝
Craine's Corners	12	J. H. Ives	11⅝
Brockett & Peter	11¼	Manheim	12
Brocketts' Bridge	12	Manheim Center	12
Buell	12	Manheim Turnpike	12
Cayuginto	11⅞	Newport	12
Countryman	12	Rook	11
Dunkle	12	Old Salisbury	12
Elm Grove	12	State Hill	12⅜
Fairfield	12	Top Notch	11⅜
Fairfield Association	12	Palatine Union	11½
Old Fairfield	12	Rathbone	11
Herkimer	11½	Vanhornsville	11⅜
Herkimer Co. Central	12		

We have advices from abroad to the first week in August. Our London correspondent says that cheese is brisk, with sales as landed. Market quite bare of stocks, and prices upward. American extra is quoted at 58@60s.; fine, 56@58s.; good, 50@55s. The other descriptions sell as follows:—English Cheddar, 70@80s.; Wiltshire double, 56@68s.; Cheshire medium, 56@64c.; fine, 74@80s.; Scotch, 64@68s. Dutch cheese:—Edams, 50@60s. Gouda, 46@52; Derby shape, 50@56s.

In butter, choice European and Irish in demand. We give quotations as follows Clonmells, 106s.; Normandy, extra, 118s.; New York 76@90s.; Canadian, 76@80s. The corresponding prices last year for butter and cheese were, for American cheese, 57s.; Clonmells butter 120s.

The weather in Herkimer is intensely hot, and the hay harvest is generally completed.

LIVE STOCK MARKETS.

NEW YORK, Aug. 17, 1872.

CATTLE and hogs show a slight falling off in numbers as compared with the previous week. The weather has been extremely hot, which rather retarded trade, but the markets were quite as lively as could be anticipated, especially when we consider the perfect glut in the peach trade. Good peaches have been selling at 25@30c. per basket, and many a peddler wagon has been filled up at 10@15c., to say nothing of the thousands of baskets dumped. This turns the most eaters into fruit consumers, to quite an extent.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,539	112	3,187	25,415	23,168
" last week	8,746	120	2,189	24,511	38,111
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—After the very strong market one week ago, cattle came forward rather freely. Peaches disputed the field with them, and prices fell off ½@¾c. per lb. Texans were a perfect drug, arriving in large quantities, and butchers were shy of them. This class would sell better were there not so much risk in getting them home. They often stampede, and it is impossible to stop them. Besides the danger and damage, which the owner has to pay, provided he does not abandon the animals, preferring to lose them rather than discover himself and foot the bills, it is not unfrequently the case that a wild Texan has to be shot down in the street, thus entailing considerable expense in getting him home. Some of this class were sold at 7c. per lb., along side of extra fine Illinois at 13½c. Most of the Texans went at 8@9c. Some of the native cattle were very thin, and would only bring 9@10c.

The following are the closing prices for the week

in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₹ lb	13 @ 13¼	13¼ @ 13½
Good to prime	12 @ 12¾	12¾ @ 13¼
Medium	11½ @ 12	12 @ —
Poorest grade	7 @ 10	9 @ 11
Average sales	11¾ @ 12	12 @ —

Hogs.—There is a little advance in prices, with lighter arrivals. Some dressed are selling at 6¼@6¾c. Two cars rough Michigan, 150 lbs., sold at 4¾c. Dressed close at 6¾@6¾c., pigs reaching 6¾c.

Milch Cows.—The market begins to show signs of improvement, after weeks of extreme dullness. Milk is doing better. Cows still sell at $30@70 each.

Sheep and Lambs. With free arrivals there is not much change in sheep, the rules being 5@6¾c., with a few extras at 7c. Lambs have fallen off about 1c., the best scarcely exceeding 9c. A few extra State did bring 9¼c. Thin State and Western go at 6¼@7c.; as a car State, 53 lbs., at 7c., and 36 Pennsylvania, same weight, at 6¾c. The average of 9,012 sheep and lambs was $5.70 per head.

Veal Calves.—The hot weather and cheap fruit hurts the calf trade. The best milk veals sell at 9c., with good at 8c., and common at 7c. per lb. Grass calves are a perfect drug, and only worth 2½@3½c. They are generally sold by the head, at $3@6 each—a large lot going at $5.

LATEST.—Monday, August 19, 4 P. M.—Beeves.—Arrivals to-day, 162 cars at Communipaw, 128 at 130th St., and 51 at Weekawken, making 5,785 for the present market. This is too many for a hot day, and all except the few choice animals are ½@¾c. lower. The quality is poor, very many Texans not selling at all. Those which find a market are at 7@8¼c. A few very fine cattle still bring 13½c.

Sheep and Lambs.—Arrivals for to-day's market, 5½ car loads at Communipaw, 18 at 38th St., and 11 at 40th St., making 7,018 on sale. Trade rather slow, with no change in the price of sheep, while thin lambs are lower. Some Ohio of 18 lbs. sold at 6¼c. A few prime State reached 9c.

Hogs.—Receipts to-day, Sunday included, 33 car loads at Communipaw and 23 at 40th St., making 8,267. No change in prices but market firm.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

KIDDER'S PASTILLES.—A sure relief for ASTHMA. Price, 40c. by mail. Stowell & Co., Charlestown, Mass.

The Indiana & Illinois Central
Railway Company's
FIRST MORTGAGE 7 PER CENT.
SINKING FUND GOLD BONDS,
FREE OF GOVERNMENT TAX.

An East and West Air Line of 152 Miles, Indianapolis, Ind., to Decatur, Ill.

This road passes through a belt of the best settled and richest agricultural and mineral country of Indiana and Illinois, averaging thirty miles in width, with no other East and West railway built or projected through it. It crosses, in Parke and Vermillion Counties, the rich

BLOCK COAL FIELD

of Indiana, which alone will supply an ample business.
Thirty miles through Douglass County, Illinois, just completed, opened and paid for.
Whole Western Division, Montezuma to Decatur, eighty-five miles, to be finished in 1872. Grading nearly done and materials (except iron) already procured; bridge over Wabash ready for superstructure.
Eastern Division, sixty-seven miles, partly graded, and to be finished in 1873.
$1,300,000 IN CASH ALREADY EXPENDED ON THE ROAD, AND $1,500,000 REMAINING TO BE CALLED FROM TWENTY SUBSCRIBERS, AMONG WHOM ARE **W. H. GUION, SIDNEY DILLON, JAY COOKE & CO., CLARK, DODGE & CO., J. SELIGMAN, VIBBARD, FOOTE & CO., AND PAUL S. FORBES,** OF NEW YORK; **BENJ. E. BATES** OF BOSTON; **HENRY LEWIS** OF PHILADELPHIA, AND **G. M. PULLMAN** OF CHICAGO.
Besides its right of way the Company owns 32,000 acres of land, chiefly in Indiana, of which 2,000 acres are the best BLOCK COAL LANDS. It has also SUBSCRIPTIONS IN BONDS AND CASH from counties, towns and individuals of $700,000.
The road connects at both terminii with the most important THROUGH RAILWAY LINES of the West, and being by many miles shorter than any other line, will be indispensable to them, while its local business alone will insure good dividends on its stock.
Bonds $1,000 each, payable to Union Trust Company, Trustee or bearer, July 1, 1901, in gold coin. Coupons, also in gold, payable Jan. 1 and July 1, in New York, or at Union Bank of London, at fixed exchange of 27 sterling.
SINKING FUND of 2½ per cent. a year on gross earnings, to be invested by Trustee in Bonds at not exceeding par.
For sale at 90 and accrued interest, by the Financial agents of the Company,

WALKER, ANDREWS & CO.,
No. 14 Wall Street, New York.

Patented May 21, 1872.

GREAT IMPROVEMENT IN
CHAIR SEATS.

Various have been the efforts of men to produce a seat which should be comfortable, light, comely, durable, and also admit of universal application. The degrees of success have been as varied as the effort; but within the last year the long-sought was revealed to an observing, practical genius, and is hereby offered to the public, in full confidence of its instant appreciation.

The seat is composed of three layers of veneer (boards as thin as a knife blade), the grain of each lying in an opposite direction to its neighbor, all glued firmly together in a slightly dishing form, adapted to the person. The entire thickness slightly exceeds one-sixth of an inch. We thus have moderate cost, little weight, neatness, great beauty if desired, and a lasting quality which, in usual service, may properly be called eternal. *While it is especially adapted to reseating chairs by any one who can nail down a carpet*, it is coming rapidly into use for the better class of chairs for sumptuous apartments. The slightest observation will convince the most skeptical of its unequaled merits.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

SECOND

GRAND GIFT CONCERT

IN AID OF THE

Public Library of Kentucky,

AT LOUISVILLE, KENTUCKY.

BY authority in the act of the Legislature Incorporating the PUBLIC LIBRARY OF KENTUCKY, the Trustees will give their

SECOND GRAND GIFT CONCERT

In the great hall of the Public Library building, in Louisville, Ky., on

Saturday, September 28, 1872.

This magnificent hall, known as Weisiger Hall, is the largest, most centrally located, and best arranged for large and fashionable audiences of any in Louisville, and is fitted up in superb style. The building has a front of 168 feet on Fourth street by a depth of 200 feet, four stories in height, and was recently purchased for the Public Library at a cost of $210,000. Three large rooms are now fitted up for a library, and contain about 20,000 volumes and a museum of 100,000 specimens, now open and free to the gratuitous use and enjoyment of all citizens of every State in the Union. It is the purpose of the Trustees, by the GRAND GIFT CONCERT now announced, to raise the money with which to pay the balance of the purchase money due upon the Public Library building, to enlarge the library, and to so endow the institution as to make it self-sustaining and forever beyond the necessity of calling upon any individual who uses the books for the contribution of a single cent toward its support.

100,000 TICKETS OF ADMISSION

will be issued at $10 each; half tickets, $5; quarter tickets, $2 50; 11 whole tickets for $100; 28 for $250; 56 for $500; 113 for $1,000; 285 for $2,500; 575 for $5,000. No discount on less than $100 worth of tickets at a time.

Tickets will be sent, when requested, by registered letter. The money for them may be sent by Adams Express Co. and its connections, P. O. money order, registered letter or bank draft.

The holder of each ticket, or fraction of a ticket, (a half or quarter), is entitled to admission to the concert and to the gift awarded to it. During the concert the sum of

$500,000 IN CURRENCY

will be given to the holders of tickets by distribution by lot of **ONE THOUSAND GIFTS,** as follows:

LIST OF GIFTS.

613	"	100 "	61,200 "
Total, 1,000 Gifts, all Cash,			$500,000

This Concert, like the first of the 16th of December last (which was so decidedly successful, and at which the first grand gift was drawn by and paid to Mr. John R. Durff, of Memphis, Tenn.), is for the benefit of the

PUBLIC LIBRARY OF KENTUCKY.

The Farmers' and Drovers' Bank is Treasurer, and the corporators and supervisors are all representative men, and are among the most respectable and distinguished citizens of the State. Should any tickets be left unsold on the day of the drawing, they will be destroyed, and the one thousand gifts offered will all be drawn and paid, but diminished in value in proportion to the percentage of unsold tickets. For instance, if only three-fourths of the tickets are sold, the capital gift will be reduced to $75,000, and all the others in proportion.

The Hon. THOS. E. BRAMLETTE, late Governor of Kentucky, has consented to represent the Trustees in the management of this second Grand Gift Concert, and he will personally see that the money from the sale of Tickets is deposited with the Treasurer, that the drawing is fairly conducted, and the gifts justly awarded and promptly paid.

The drawing will take place in public, in full view of the audience, and under the immediate supervision and direction of the officers and Trustees of the Public Library of Kentucky and the following named eminent and disinterested citizens, who have consented to be present and see that all is fairly done:

Hon. M. R. HARDIN, Judge Court Appeals, Ky.
Hon. J. PROCTOR KNOTT, late M. C. Lebanon Dis.
Hon. H. W. BRUCE, Judge Ninth Judicial Dis., Ky.

4.—May-ma-mi-i-cat-squaw, the great Indian Physician and Medicine Man of the Black Leg tribe.

BANKING HOUSE OF JAY COOKE & CO.,

20 WALL STREET, NEW YORK.

We continue to sell at par, adding accrued interest, the First Mortgage Gold Bonds of the Northern Pacific Railroad Company. Track-laying on the Road is now progressing at the rate of two miles a day, through the most fertile prairie region of Dakota. On the completion of this season's contracts, there will be FIVE HUNDRED AND SEVENTEEN miles of the main line in operation, uniting Lake Superior with the Missouri River, and securing the large traffic of the Northwest. This amount of Road also entitles the Company to Ten Million Four Hundred Thousand Acres of Land, located in Central Minnesota, Eastern Dakota, and in the Columbia Valley on the Pacific Coast. The bonds are secured by a first mortgage on the Road, its Traffic and Franchise, and on the entire Land Grant received from the Government. The rate of interest is Seven and Three-Tenths Gold, equivalent to about Eight and a Quarter per cent. in currency. Believing the security to be ample and the rate of interest satisfactory, we recommend these bonds as a desirable investment. Holders of U. S. 5-20s and high-priced corporate securities may materially increase both their principal and their interest income by exchanging for Northern Pacifics.

JAY COOKE & CO.,

New York, Philadelphia and Washington.

TARRANT'S SELTZER APERIENT. Trade Mark. Patented.

THE GREAT NATIONAL PARK

In the Yo-Semite Valley, when finished and fenced in (?) will be the grandest pleasure-ground in the world. If it had a fine medicinal spring, like the German Seltzer, it would be perfect. Yet this is of no importance, for who goes anywhere in summer without being provided with

TARRANT'S EFFERVESCENT SELTZER APERIENT,

which is identical in its components and its effects with the famous Prussian Spa. It takes but an instant to evolve from this preparation the most delightful and admirable of all medicinal draughts. As a cure for biliousness, rheumatism, indigestion, constipation, nervousness, etc., and as a renovator of the system, it stands alone. Sold by all Druggists.

APPLE SEEDLINGS—ONE AND TWO years old—in quantity. Send for sample. W. KAUFFMAN, Des Moines, Ia.

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY, ST. LOUIS, Mo., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

SAM'L N. PIKE, Pres't.

The Horseman.

THE HORSE "BLAIR ATHOL."

MR. BLENKIRON, an English celebrity as a horseman in the sporting world, had a very fine stable of horses which were recently sold at auction by TATTERSALL, the English auctioneer. There were four days' sales, amounting in the aggregate to £100,000. Among the horses sold was "Blair Athol," a thoroughbred, which brought $62,500 in gold. This horse is a splendid chestnut. We copy from an English paper a portrait of him, which, however, does not fill our ideal of a thoroughbred, although all the portraits given preserve most of the points and features shown in this engraving. TATTERSALL declared him to be "the best horse in the world." We have not access to his record, and, being no sportsman, are not acquainted with what constitutes him "the best horse in the world," but give his portrait for the purpose of showing our readers how he looks.

RUDIMENTS OF HORSE-BREAKING.

MISS MIDY MORGAN is good authority on training colts, and this is the way she puts it:—The secret of success in breaking young horses is to commence early, to give frequent, short lessons, to repeat each lesson until it is comprehended, and never to attempt to teach two or more lessons at one time. Thus, for instance, never break a horse to the saddle and harness at the same time. Decide which you want to do, then perfect the animal in one or the other, and the first lesson having been acquired, the second will be attained without trouble. The routine of horse-breaking, as practiced in the British Isles, is, first make the horse's mouth and give him a good carriage. This is effected by using a heavy, smooth mouthing snaffle, buckling the lower reins to the side-buckles of his roller, and then permitting the pupil to remain loose in a roomy box-stall, where he can move about and play with his bit. This will effect more in a shorter time than any other method.

As soon as the colt's mouth has become fine, but not until then, he may be mounted. As carrying a weight on his back is quite new to the young horse, care should be had not to permit him to travel faster than a walk until his action has become easy and free from nervousness. Even then, for many weeks he should not be allowed to do more than trot gently on level ground, and never be galloped unless on springy turf. Too deep a soil causes a horse to labor, and if frequently galloped on such his action becomes higher and less rapid than it otherwise would have been. Only in breaking chargers is this system considered good, as war horses require style and dash rather than speed.

In the breaking of steeplechase horses, slow work in deep soil is necessary, but this must not be permitted until the young horse has been fully formed, until he is at least four years old, and better still if he is five. Then put him into a team of four steady, willing, well-broken farm horses; harness him on the off side as leader, and use him thus for two or three hours three times weekly for eight or ten weeks. Let there be scarcely any strain on the collar, lest the young animal acquire the habit of leaning forward. To do so materially shortens the breathing, a serious fault in a horse destined for long and rapid saddle work. The benefit of thus using a young horse is that in extricating his feet from the dirt he is compelled to use those very muscles which in leaping will afterwards be brought into most frequent action. The education that fits a horse for the saddle fits him also for harness, only that care afterwards is necessary to instruct the novice in the new duties required of him.

SWEENEY IN HORSES.

SWEENEYED shoulder in horses is not a disease of the shoulders originally, but is a representative of other diseased parts, through sympathetic action of the limbs, from the feet. A horse suffering severe pain from bone spavin, for months, will exhibit sweeney or shrunken hip, as a result of the morbid action of the diseased parts. All diseases of the fore feet affect the shoulders. Canker, contraction, founder, gravel, prick from a nail, are affections of the feet only. Some people will say that such a horse is chest-foundered, while the horse apparently perishes in the chest. This is caused by the horse standing with his fore feet stretched out forward. If a man were to remain with his arms stretched forward, his chest would suffer in the same way. Contraction is not so much a disease as the result of bad management on the part of the smith in shoeing the horse.

Albion, N. Y. J. HENDERSON.

NOTES FOR HORSEMEN.

Pin-Worms in Horses.—I have a mare that is troubled with what I call pin-worms. They are from one and one-half to two and one-half inches in length. At the head, for a half an inch or more, they seem to be filled with some dark substance, and about one-eighth of an inch in diameter. The remainder or back portion is but little larger than a common thread. The mare seems to feel good but eats very little, and will quite often leave oats or meal in the manger and eat the coarsest of straw or hay. I can't get her to eat grain enough to fatten her, six quarts a day being as many as she will eat on an average. Some have recommended feeding salt and ashes. I have tried it but it seems to do no good. Any one having experience and knowing a remedy, will confer a favor by communicating the same through "RURAL."—RURAL READER, *Delhi, N. Y.*

AN injection of linseed oil will generally do the job for these pin-worms.

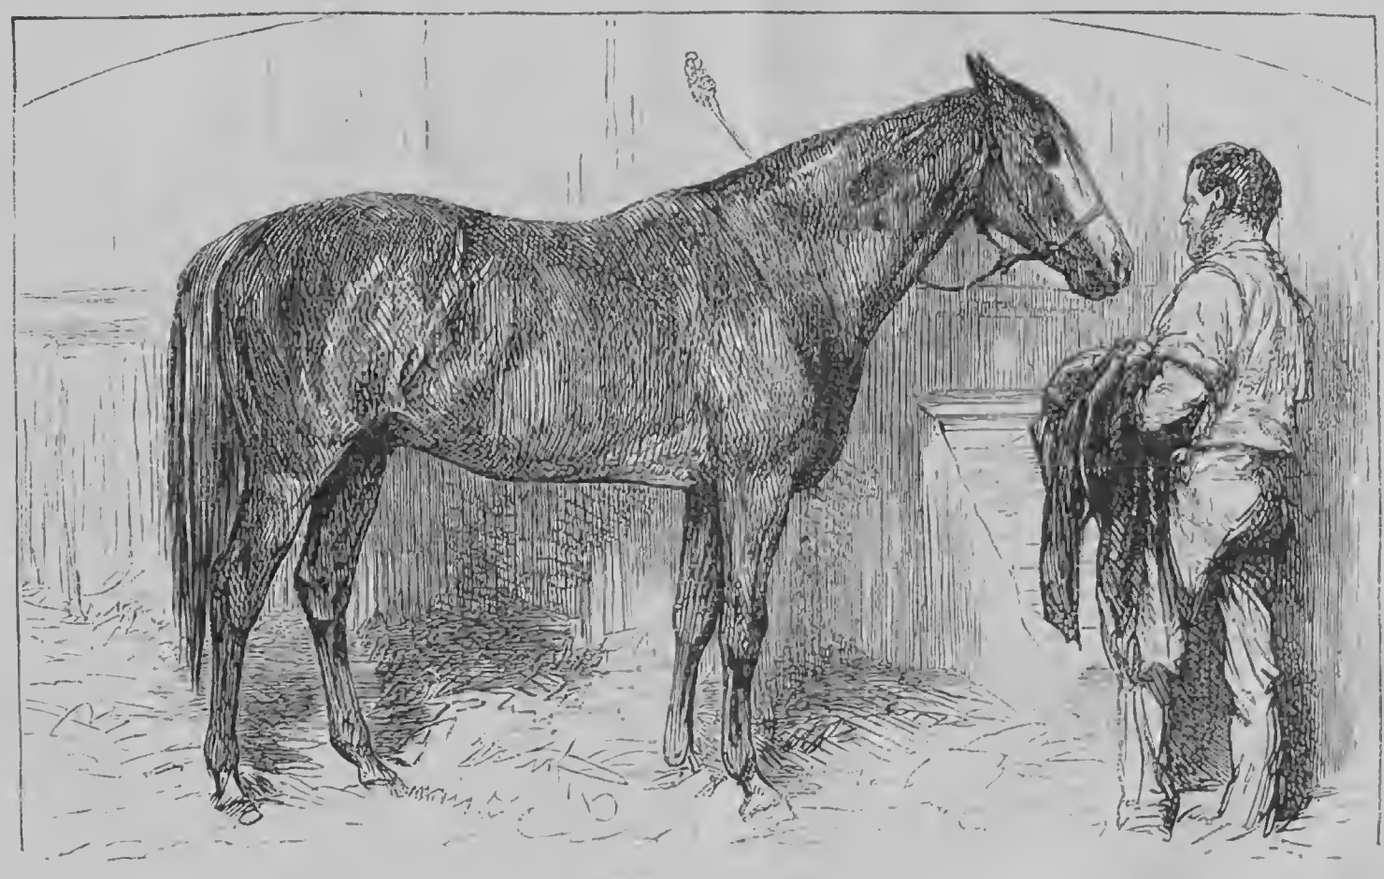
To Move a Balky Horse.—A Texan once told us that he knew of no simpler and surer way to move a balky horse, than to place the hand over the nose of the animal and shut off his wind until he wants to go, and then let him go. We have never tried it because we do not own balky horses.

Horse's Tongue Out.—I have a young mare which persists in keeping her tongue above the bridle bit and lolling it out in spite of anything I can do to prevent her. Perhaps some of your readers can tell me what to do to make her keep this unruly member in its place.—J. H. T., *New Lisbon, O.*

THIS is a habit which sometimes comes of fevered and sore mouth, and sometimes of paralysis of the tongue. In the first instance cure the mouth by cooling and healing washes, and keep the bits out of the mouth long enough for it to get well. If it comes of paralysis, there is no effectual remedy.

The Breeders' Trotting Stakes for 1874, heretofore noticed in these columns, has closed with 57 entries. The entries are of foals that were dropped in 1871, the trials to occur Sept. 22, 1874.

Fistula Remedy Wanted.—WM. E. WADDEN, Northampton Co., Va., asks some of our readers to give a remedy for fistula.



BLAIR ATHOL.

The Swine-Herd.

SOWS EATING THEIR PIGS.

THE Department of Agriculture publishes the following:—"It is well known that sows not unfrequently attack and devour their own young; or if prevented from this, will not let down their milk, so that the young pigs necessarily die for want of nourishment. When this state of things is not caused by a diseased condition of the uterus, it is said the sow can be brought to terms by pouring a mixture of ten to twenty grains of spirits of camphor, with one to three of tincture of opium, into the ear. The sow will immediately lie down on the side of the ear to which the application was made, and remain quiet for several hours in this position without interfering with her pigs; and on recovery from the stupor will have lost her irritability in regard to them. The experiment has been tried in Germany hundreds of times, according to one of the agricultural journals, without any injurious effects. It is also said that the eating of pigs by the parent sow can be readily prevented by rubbing them all over with brandy, and making the same application about the nose of the sow herself."

PIG-PEN PAPERS.

Chester Whites in Georgia.—FRANCIS FONTAINE (of Georgia, we conclude, though place of residence is not given,) says, in the Plantation:—"I am sure that I have found the Chester White hog eminently satisfactory, both as a breeder and a pork-maker, for this climate. In *no* instance have I lost a single animal from the effects of 'mange' or other cutaneous affections; nor have the flies troubled them particularly; nor has the beneficent sun injured them a hair's breadth. True, they have free access to clover and grass pastures—without which no breed of swine can be profitably raised in Georgia—and running streams furnish them water. I consider them infinitely preferable to the ordinary hog of the South. Their short legs and short nose proclaim them an improved breed. Clover grows more luxuriantly in Georgia than in Kentucky, and, other things being equal, as large animals can be grown here as there. It seems contradictory to claim, on the one hand, that we have in Upper-Georgia a grass country, *par excellence*, and on the other that we cannot rear the product of that advantage, viz., large breeds. Grant from the evidence given that, under domestication, light-colored animals suffer most, it seems plausible to think that a cross of the Chester White, the most popular breed at the North, and the Berkshire or Essex, the most popular breeds at the West and South, would originate a breed eminently adapted to a region capable of producing the chief staples of all."

The Convention.—We are glad to notice our contemporaries are generally commending the proposed National Swine-Breeders' Convention. We hope swine-breeders at State Fairs will see that delegates are appointed.

Dairy Husbandry.

PROMOTING HOME MARKETS AND HOME CONSUMPTION OF CHEESE.

In the RURAL of August 3 we suggested a plan of opening up new home markets for cheese and for promoting the consumption of this class of food among our own people. The plan, in brief, was simply for the factories to associate or go in together in sending out an agent to take orders, and make sales of goods throughout the various villages and towns. We said, the time has come when dairymen must take this matter into their own hands, in the same way that all our city wholesale merchants do. They send out their agents and runners, and in this way sales are effected and profits realized. It is our home markets which should be supplied, and our home trade which should be developed. Half the villages of the States are unprovided with cheese, and no effort is made to introduce it by home dealers.

The Western Farmer calls the attention of Western dairymen to the plan, and urges the importance of doing all that can be done to develop our home markets for dairy products. The Cultivator and Country Gentleman, in a recent issue comments upon the plan, concluding with the following remarks:

"This is very good advice, and no doubt if adopted will pay in the end; but to the dealers it will involve *present* sacrifices, which, like all business men, they desire to avoid if possible. Railroads are sometimes built and operated in sparsely-settled districts, and cheap fares established, by which the companies sink money for the time but in the end are rewarded by building up a paying traffic. It is a system which requires capital, and while unquestionably a good one if well managed, it is slow, a little risky and is not usually adopted, except in cases where capital is abundant, with energy behind it and business circumstances give reasonable prospect of ultimate success."

In the same connection it gives the views of its correspondent, F.—a gentleman of Western New York who has paid much attention to markets, and whom we esteem as generally very sound on these questions. He says:—"Similar views to those expressed in the RURAL NEW-YORKER have for some time been entertained by me. Having often found it difficult to get good, or even ordinary, cheese in a large village in Western New York, and such as the dealers had only at high prices, it has frequently been a question why some one did not come and get orders, and thus supply the market with a good article direct from Little Falls or Utica. Cities and villages are thickly located on the Central Railroad and Erie Canal, and a good trade should be soon built up in those places; and when the trade was fairly established, then it could be gradually extended over the whole country. In this way, in a few years, the home market for cheese should be at least doubled, and I believe it may be increased from three to five fold.

"I am strongly in favor of home markets; no others are so sure and reliable. We are now exporting large quantities of cheese to Great Britain; but a war with that nation would at once stop all this trade. So, too, a war with any large European nation that has a strong navy would materially cripple, if not ruin, the foreign cheese trade. Hence the great need and advantage of building up a large, reliable home market; and I earnestly second the suggestion that owners and patrons of cheese factories, and others who are interested in the cheese trade, move in this matter."

We are convinced the plan is feasible, and if it can be fairly brought to the attention of cheese factories, so that they shall be induced to once fairly enter upon the movement, New York and other great cities would be relieved of their overstocked market, while consumers in the country will be better accommodated, and last, but not least, the producer would be better remunerated for his labor.

CHEESE AND THE CHEESE TRADE.

DURING the early part of the season we made some suggestions in this department of the RURAL NEW-YORKER in regard to prospective profits to be derived by our dairymen in exporting butter as compared with cheese. We alluded to the low price of cheese last year and referred to some of the causes operating to reduce rates and depress the trade. The Utica Herald took exception to portions of the article and attempted to prove that the English consumer could not afford to pay any more for cheese than he did last year, while at the same time the consoling proposition was made that "if we cannot come to his [the English laborer's] means it is better to consider the game closed and turn our attention to something else." It also affirmed that in consequence of the high price which the retailer charges the consumer at home for cheese but "few families use it except as a relish. Put cheese," it says, "at eight cents to ten cents and it would always be found on the table and be eaten as freely as meat, potatoes and bread—provided a palatable article could be had."

The whole drift of the Herald's article, it appears to us, was an attempt to throw depression upon the cheese market, and, whether intended or not, was a direct effort in the interest of speculators to reduce prices of cheese below the cost of production, and to fill the minds of dairymen with doubt and depression. We replied to the article in a courteous manner, pointing out the fallacy in its leading arguments, and quoting from the Herald fairly, that all could see the points at issue.

To this the Herald took umbrage, and tried, in a coarse, political-campaign style to sustain its position, indulging largely in arguments like the following:—"Now, we hope the RURAL will at once send an agent over to England to compel the English employer to put up the wages of the laborers, so that they can afford to pay us whatever price we may ask for our cheese," etc. Subsequently we printed an extract from the Herald's correspondent, in which Mr. J. R. CHAPMAN of Madison Co. very conclusively proves that the Herald's position is a wrong one, and in which some important facts are given concerning the settled policy of the governing classes of England in cheapening food imported for their laboring population.

The Herald now, in reply to this, attempts to get out of its dilemma and accuses us of misrepresentation, though we quoted its language *verbatim*. Dropping argument, it commences a coarse personal attack upon the writer, all of which, it is needless to say, has no foundation in fact. The statements and insinuations, we repeat, are utterly devoid of truth. As an instance of the little confidence to be reposed in the Herald's statements, we might refer to its reports of the Little Falls cheese market, which the Herkimer Co. Journal recently denounced as "incorrect, valueless and wantonly injurious," and, moreover, that the Herald *persistently* and *intentionally* misrepresented."

Agricultural journalism, we conceive, has higher aims than wasting its force in exhibitions of bad temper, and in finding vent for personal spite and malice. An honest difference of opinion we can respect, but when a journal so far forgets what is due its readers, as to resort to calling names, to "flinging mud" and personal abuse, it enters upon a line of agricultural writing which promotes no good, which is repulsive to decency, and only serves as an exhibition of its weakness.

Field Crops.

SOWING GRASS SEED ALONE.

MY attention was called to an article in RURAL NEW-YORKER of August 10, in regard to sowing grass seed alone. If you think the experience of twenty-five years will aid any of your readers in bettering their grass lands I shall be amply rewarded. It is customary in many places to sow oats at the earliest opening of Spring, and seed down with timothy and clover, and perhaps red top; but I am inclined to believe, that where a farmer desires but one kind of grass, either for feeding or for market, timothy, above all others, is the best, and the early Fall the time to sow it, as in fact, all the other varieties you mention. I am told by many that timothy hay is too hard and coarse—good for horses, but unfit for cattle. I admit that it is, where meadows having run completely out are permitted to renew themselves without furnishing any seed, and where, in large meadows, you may find here and there a stray timothy stock, standing like grim sentinels watching for the other grass which is coming. In the name of all that's rational, where is it coming from? If I am told that all these weeds and roots will soon give way to nice grass, which will make more and better milk, butter or cheese, than my well cured timothy hay, I am not only astonished but confounded. When I am told day after day by farmers who, for the past week or ten days, have been curing their hay (as they call it) in alternate rain and sunshine, that it makes mighty good fodder for cattle in the Winter, I cannot help but exclaim, "Heaven help the poor cattle!" In this part of the country they seem to sow grass seed as they apply manure, making a small quantity of seed go a great ways.

There is one great and to me overwhelming objection to sowing with rye or winter wheat, and I think my reasons are very obvious to any thinking farmer. First, because you gain nothing in so doing, as the crop of grain is all you get the first year, and secondly, wherever a stool of rye or wheat comes up, it fills the space which should be occupied by the grass seeds, and before the young grass gets a good start, weeds of all kinds spring up and almost smother it, making it a slim yield the second year after sowing; of this there is but little doubt.

Without further digressions I will simply give you my experience of the seeding I have done in the past two years:—By reference to my farm book, I find that on the 11th of October, 1870, I finished seeding a lot, which was later by thirty days than I could have wished for, and really a venture on my part. I sowed it thickly, as in fact I do all kinds of grass seeds (preferring to have the grass roots fight each other, rather than to have them fight weeds), and it scarcely made a show before Winter set in; yet this season it gave a good yield and would have been better had it been fortified. On the 15th of September, 1871, I seeded down another lot which, with seasonable weather soon made the field look green, and notwithstanding the extreme severe Winter, unprotected by snow, I cut three tons to the acre, and now, at this time, it has the appearance of making me another crop this Fall, were I disposed to cut it, but which I shall most assuredly not do, as it will save me a coat of manure.

In conclusion, if you have a field from which any kind of grain has been taken, turn under the stubble, manure if possible, put in nice condition. Sow your seed thickly and my word for it, you will never return to the old but played-out system of seeding with grain. If, as I before remarked, this experience will be the means of benefiting any among your many readers, I shall be repaid by reading on some future occasion, that I had done them good.

Litchfield Co., Conn. PETER BIRKEY.

HYBRIDIZING WHEAT.

CHARLES ARNOLD, Paris, Ont., who has had much experience in hybridizing says, in Country Gentleman:—"I would give it as my opinion, that fructification in wheat takes place in the closed flower, before the pistil is exposed to any pollen but that produced by its own stamens. Therefore, if crossed at all, it must be crossed by accident, or artificial means. I think such crosses are necessary after a long period of time, in order to the health, vigor, hardiness and productiveness of the plant. And, after devoting much time to observing and experimenting in this matter, I am prepared to believe that grain of almost every conceivable size, shape and color can be procured by artificial crossings, and that, in the hands of skillful and persevering persons, vast good to the agriculturists must be the result.

"That many of the varieties of fruit and grain produced by this method will be worthless, there is no doubt, and ninety-nine out of every hundred of them will be inferior to some old varieties, is quite probable. But it should be remembered that in many of the new kinds of grain the tendency is to improve for years to come, while in the old varieties it is reversed. And again, perfection in crossing plants must not be looked for in the first generation any more than in the first cross of animals. Much time, labor and expense will be required in crossing, re-crossing and selecting, before we arrive at perfection. And it seems to me that if a portion of the funds of the various agricultural societies were applied to this purpose instead of horse-racing, the world might be the better for it.

"I am pleased to be able to inform you that Hon. FREDERICK WATTS, commissioner of Agriculture at Washington, has wisely ordered a quantity of my first crossed wheat, to be distributed, I suppose, over your whole country, and I feel confident that vast good will result therefrom. That it will prove superior to all other wheat in all parts of the country, with such a great variety of soil and climate, is not to be expected, but if it should succeed in any one State better than any other variety of wheat, a benefit has been conferred. As stated above, perfection cannot be expected from the first cross, but as a proof of the benefits arising from crossing, re-crossing and selecting, I enclose a statement of the fact, that from one bushel of seed sown with an ordinary seed drill upon ordinary soil and culture, I have sixty bushels of such grain as that now sent, while my neighbors upon the the same soil and with the same culture every way, will not, I am confident realize from the old varieties of Diehl and Treadwell one-quarter of that quantity, and I very much question if sixty bushels of wheat from one of seed will be raised on this continent this year from any of the old varieties."

"Now to prevent numerous letters of inquiry after this wheat, I beg to say that as this sixty bushels above alluded to is all that is in existence of this variety; it is not my intention to offer it for sale this fall."

The Apiarian.

NATURAL VS. FORCED QUEENS.

WE are frequently asked if "forced queens are equal in all respects to natural ones." Now, this question, like many others connected with bee culture, is a many-sided one, very much depending upon surrounding circumstances. This question is one of great moment to all practical bee keepers—one which they cannot overlook if they wish to secure the greatest possible amount of profit from their bees. Many good apiarians have unhesitatingly answered it in the affirmative, while many others, equally successful, tenaciously hold to an opposite conclusion. All agree that we must secure for our colonies, in some way, such queens as are prolific, hardy, and long-lived. To secure such has been our aim, and we give, in this connection, our opinion as to the best method of accomplishing this result. Forced queens, if properly raised, are just as good in every respect as natural ones.

In the first place, we wish to rear all of our queens from the best and purest Italian stock obtainable. Make a box six inches wide, eight deep, and ten long, in the clear, without top or bottom. Make four little frames, seven inches deep and nine inches long, outside measurement, which will just fill our small box. Rabbet the top edges of the end pieces of the box, and cut a hole in front, for an entrance, large enough for two bees to pass in and out at once. Fill the frames with good worker comb; that three or four years old is preferable. One of the center ones should contain freshly gathered pollen, if it can be had. Now go to your choice Italian stock, and cut out a piece of comb containing eggs, three or four inches long and one inch deep. Fit this piece of comb in the center of one of your small frames, leaving an opening directly below it, two inches in depth. Now shake off enough bees from one of the brood combs of the old hive into the nucleus to stock it well. If this be done when the bees are busily at work, we obtain mostly young bees.

Right here is just where very many have failed in getting good forced queens—they fail to *stock the nucleus with young workers*. Close the box up so that no bees can escape (giving them ventilation), and set it where you wish it to remain. Shade it from the sun. If the combs do not contain sufficient unsealed honey, place a feeder over the frames, containing new honey and water. The next day, near sunset, the entrance may be opened. We would not recommend this method only when the weather is warm both day and night; although, if the nights were not too cool, the bees might be protected by laying a small blanket over the box. As soon as the cells are sealed over, they may be cut out and put into the queen-nursery to hatch, or otherwise be disposed of to suit the circumstances of the bee keeper. So much for forced queen rearing.

All who wish to obtain natural queens, can do so by preventing a choice stock from swarming, and removing all queen cells every eight days, putting them into the queen-nursery, for safe keeping, as directed for forced cells. The advantage of having extra queens on hand is very great to the practical bee keeper, for he can then attain results which would otherwise be utterly impossible. For the safe keeping of such, we cheerfully recommend DR. JEWELL DAVIS'S queen-nursery, an invention which should be in the hands of every bee keeper.

HERBERT A. BURCH.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Rural Club Pic-Nic.—*August* 13.—In company with some members of the New York Rural Club, I visited, to-day, the bulb farm of C. L. ALLEN & Co., at Queens, Long Island. It is not every farm that is adapted to the culture of bulbs, and unless a man is a pretty good judge of soil, he is very likely to make a mistake, even if he knows the wants of the plants to be grown therein. The firm to which I have alluded is fortunate in possessing land in which the Gladioli and Lilies succeed most admirably, these being the plants cultivated in enormous quantities. PAILLET, and other celebrated French cultivators of the Gladioli, will probably soon learn that they have successful rivals on this side of the Atlantic, not only in propagating the imported varieties, but in producing new seedlings of great merit. The display of new seedlings at the ALLEN farm is only another example of what we might do in this country in the way of producing rare flowers of all kinds, provided the attempts were more generally made. Now, raising Gladiolus from seed is just as simple an operation as raising onions; and no one need be deprived of a garden full of the choicest sorts. All that is required is a little care and patience. Save seeds from choice sorts, keep them until Spring, and then sow in good, rich soil, and give water occasionally if the weather should prove dry. In the Fall, take up the little bulbs and store in a dry, warm place. In Spring, plant out again, and give good culture, taking up the bulbs in the Fall, as before. If the plants have been well cared for, they will bloom the third season, and then comes the pleasure of watching the unfolding buds.

Although we may have gathered all the seed sown from one plant, the seedlings are pretty certain to be of various colors. It is better, however, to obtain seed from the very best sorts, instead of the poor ones, as it costs no more to save them, and the chances of obtaining superior varieties are greatly enhanced thereby. It is worth all it costs to raise a few such plants from seed, if for no other purpose than to teach us patience, and what it is to be careful in handling delicate plants, beside giving us some idea of what it costs in labor to produce many of the beautiful things which make this earth a Paradise to those who have the capacity and inclination to enjoy it. The happiest men and women are those who have learned to enjoy what they know and see.

Cuttings of Bedding Plants.—*Aug.* 14.—Within a month from this date it will be time to commence taking up bedding plants, if they are to be secured against injury from frosts. The professional florists in the more Northern States have probably already begun to make preparations for securing their stock of plants to be preserved through the Winter, and amateurs should take the hint and do likewise. Large plants of Coleus, Verbenas, Heliotropes, and the like, that have been growing in the border during the Summer are far too large and cumbersome to be preserved in the house during winter; besides, it is a difficult matter to lift them and preserve all or any considerable part of their foliage. A far better plan, and the one usually adopted by florists, is to take off cuttings and strike them either in frames or in the house, thereby securing a sufficient number of small, healthy plants as a stock from which to propagate next season. Cuttings of nearly all of the half succulent bedding plants will strike very readily at this season, without the aid of bottom heat. Small boxes filled with sand and covered with glass will answer every purpose, and plants sufficiently large and vigorous can be secured before cold weather. Much of the trouble experienced by amateurs in keeping bedding plants through Winter in a healthy condition is due to the practice of lifting the old plants instead of starting new ones in time. Even layers from Verbenas, Geraniums and Heliotropes are not as good for stock plants as those grown from small, healthy cuttings. I have commenced putting in cuttings of such plants as I wish to preserve a stock of, and shall continue to do so, as I have leisure, until the weather is too cold for striking without the aid of artificial heat.

Harvesting Sowed Corn.—*Aug.* 15.—I have commenced harvesting my corn sown in drills for fodder. It was sown early and is now fully as large as it should be to make good fodder, although some farmers would think me foolish to cut it before the lower leaves were ripe; but I have found that ripe cornstalks were about as poor feed for stock as ripe grass; and although it is a little more troublesome to cure while in this condition, than it would be a little later, the fodder is enough better to pay for the extra care required. If the weather is clear and dry at the time of cutting up drill corn, there need be no difficulty in having it well cured without destroying its nutritious qualities; cut it down in the morning and spread out thinly over the ground; next morning turn it over, and either tie up into small bundles in the afternoon or the following day. The bands on the bundles should not be drawn too tightly if the cornstalks are small and slender, but tied so that they will not come apart. Set the bundles up in small shocks and put a band around the tops to hold them together. If the bundles or shocks are not made too large, the fodder will cure without any further care and it will be of a green color, not all bleached out as usual when allowed to cure as spread upon the ground. At the approach of cold weather the fodder may be drawn under

LILIUM LEICHTLINII—(Max Leichtlin's Lily).

cover; but it is not safe to place a very large quantity together in a mow, as it is very likely to become moldy and unfit for feeding. I do not know of any other plant that will yield so much fodder per acre as corn; but to secure the crop in good condition requires considerable care as well as suitable weather while the operation is being performed.

Budding Fruit Trees.—*Aug.* 16.—I find budding fruit trees is quite often more convenient than grafting, because it can be done at a season when one is not so driven with work as in Spring, when grafting must be done, if at all. A few buds can be taken from a choice pear or other fruit tree and inserted into the branches of some poor variety; and if they should happen to fail the branch still remains in good condition for grafting next Spring; thus we have two chances of success instead of one. If I were a country school teacher, or a superintendent of common schools, every boy and girl under my charge should be taught how to bud and graft trees; and I am sure no parent would object to such practical lessons in vegetable physiology. Boys, in particular, like to whittle, and they should be taught how to do it to some purpose. A few budding lessons in August would not be half as dry or useless as some things which every scholar is obliged to learn. Suppose some of our school-masters who are trying their brains with mythological problems come down or up and try their hands at budding, and illustrate the operation in a scientific and practical manner. I know that it is not in the school books, but that is no good reason why it should not be. I am inclined to believe there are more useful lessons left out of such works than there are put in; and that is the principal reason why we have to learn how to live when we are too old to enjoy the fruits of our labors.

Entomological.

THE CABBAGE BUTTERFLY.

THE "cabbage butterfly," *Pieris rapæ*, LINN., has made its appearance in this section in great numbers, so that the cabbage crop is threatened with ruin. It is a white, or very light yellow butterfly, about two inches broad from tip to tip of its wings. The wings are tipped with black, and the males have one round black spot upon each upper wing, while the females have two and sometimes three such spots. The females begin laying their eggs upon the young plants, early in the Spring, one egg in a place. These soon hatch into green worms which feed upon the tender leaves of the cabbage, rendering it very filthy by voiding its excrement upon and around the head. They grow very rapidly until about one and a-half inches in length, when they begin spinning their cocoon, and in a little over a week are again transformed into a butterfly, ready to repeat the operation, and so continue doing until Fall.

We have seen two dozen butterflies at one time on a piece of less than one-fourth acre of cabbage, and have seen them lay several eggs each in a minute's time. They may be seen flying around in the fields and streets everywhere, and as they make their transformations so often it seems of little use to kill them.

According to the report of TOWNSEND GLOVER, United States Entomologist, they were first introduced into Quebec in 1857, were found in New Hampshire and Vermont in 1866, and around New York in 1869.

Now, what we wish to know is, what our prospect of cabbage-raising will be next year? What is the experience in places visited by them several years ago? Do they increase or decrease in numbers each succeeding year, and is there any effectual remedy known to stop their ravages? Can we not have a little light on these points through the RURAL?

Factoryville, Penn. I. F. TILLINGHAST.

YOU are certainly in error in regard to these insects spinning a cocoon, for the worms become chrysalids which are merely fastened to a board or side of a building with one thread. In the RURAL NEW-YORKER, Nov. 25, 1871, page 333, and Dec. 9, 1871, page 365, we alluded to and gave a description of a minute parasite which destroy sthe chrysalids of this cabbage pest. Its work has been so efficient in Northern localities where this cabbage worm was so abundant two years ago as to destroy the entire crop, that it is scarcely seen now. This parasite is the old and natural enemy of this same cabbage pest in Europe, and has been for centuries; but in importing the cabbage worm, *Pieris rapæ*, (or its chrysalids) in seeds, its parasitic enemy, *Pteromalus puparum*, was left behind, hence its rapid increase without check in this country. We know of no efficient immediate remedy. This parasite will protect you after a little.

LYTTAS IN KANSAS.

I INCLOSE two bugs; if they arrive safely, I would like to be informed what they are. There are thousands, yes, millions of them here. They eat beet leaves, and the leaves of some kinds of flowers and weeds; but where they do the most damage is among the potato vines. They have stripped our Peach Blow potato vines, and some of the tops are entirely dead. They did some injury to the crop last year, but not as much as they have this season. The weather was very dry through the latter part of June and fore part of July, but since the 20th of July have had plenty of rain. Is there anything that will destroy these bugs? We would be very thankful to get rid of them. Perhaps some one can give us a remedy.—C. W., *Washington, Kan.*

THE ash-gray beetle, about three-fourths of an inch long, which you send, is one of the many species of Blister beetles (*Lytta*) which infest the potato and other garden vegetables. The specimens sent were ground almost to powder; therefore, we cannot determine the species positively, but think it *Lytta cinerea*, LEC. We do not know of a better way to get rid of this pest than to gather them from the vines with a net fastened to a hoop about a foot or more in diameter, and this affixed to a handle three or four feet long. Scald the beetles as soon as caught. It is quite probable, however, that they will all disappear, and you will not be troubled with them next season. Three years ago they were abundant in our garden, but we have not seen a half-dozen there since.

ENTOMOLOGICAL NOTES.

Grape Leaf Galls.—Inclosed please find several leaves off of Taylor Bullet grape vines. Please state in RURAL NEW-YORKER what is the cause of these leaves being infested as they are and a preventive of the same. A friend in Kansas has eight varieties of grapes growing on his place; nearly all of the leaves of the Taylor Bullet vines are affected like the inclosed; the other vines are, apparently, all right.—D. A. V.

THE small galls on the leaf inclosed are caused by a gall-louse, known as *Phylloxera vitifolia*, FITCH. This insect was figured and described in the RURAL NEW-YORKER, Oct. 21, 1871, page 251, and in the two following numbers, by C. V. RILEY. If you have kept a file of the RURAL, which every subscriber should do, turn to the numbers named and you will find the most complete history of this formidable and rapidly increasing pest ever published. The three numbers of the RURAL NEW-YORKER containing the article to which we refer are worth far more than the subscription price for one year to every one who owns a grape vine.

Floricultural.

LILIUM LEICHTLINII.

Max Leichtlin's Lily.

WE herewith give an illustration of a charming new Lily which we saw in bloom a few days since in the grounds of C. L. ALLEN & Co., Queens, Long Island. We presume that it is not a distinct species, but either a hybrid between the Tiger Lily and some other species, or it may be only a sport from this old favorite. Its origin is unknown, further than Messrs. VEITCH & SONS, the well-known English nurserymen, found a bulb of it among some *L. auratums* which they received from Japan a few years since, and J. D. HOOKER, Curator of the Kew Gardens, named it after MAX LEICHTLIN of Carlsruhe, a gentleman who has paid especial attention to the introduction and cultivation of lilies.

This new lily resembles, in some respects, the common Tiger Lily in the form of the flower, but differs from it not only in the color but graceful habit of the plant. The stems are tall, slender, three to four feet high, with many long, slender branches, or flower-stalks. Leaves, alternate, sessile, rather remote, linear lanceolate, acute, spreading and recurved, three to four inches long and about three-fourths of an inch broad, pale bright green; flowers solitary but numerous, four inches in diameter, nodding, bright, light golden or lemon yellow, spotted or blotched with maroon. The bulbs appear to be perfectly hardy and the plant altogether a vigorous grower and profuse bloomer.

Domestic Economy.

HOW TO HAVE GOOD YANKEE PICKLES.

TAKE medium sized and quite small cucumbers (as the small ones keep better than large ones, and are more brittle). If you have to buy them, and can't afford to use small ones, use larger ones. Let the stem be on each one, as they keep much better. Have a cask or crock with vinegar from your last year's pickles, if on hand; if not, use fresh vinegar, and add to it, from time to time, a small handful of common salt. If you raise your cucumbers, as fast as you pick them wash them gently in cold water, and be careful and not rub off the prickles from them. Drain them as nearly dry as you can, and put them into the vinegar and salt prepared for that purpose. Spread a cloth over them that will fit into the vessel, to absorb the scum that will be apt to rise. This can be wrung out and rinsed in clean water every few days, and then replaced. When you have the quantity you wish to pickle, the last batch you put in can remain a week or more, but be sure and not let them remain till they get soft. If you purchase your pickles all at a time, deposit them in the weak vinegar and salt, as directed above, and let them remain some two weeks; but see that they remain hard.

Now procure pure cider vinegar (manufactured will only spoil them). Take a porcelain kettle, or a very *clean brass kettle*, which will give them a greener *color*. (We have used brass for forty years and have not been *poisoned* yet). Place the pickles in the kettle on your stove, with sufficient pure, fresh vinegar to cover them. Also put in a bag of such spices as you fancy—two or more kinds, if you please, and after the bag has been scalded with the pickles, deposit it with the pickles with small pieces of horse radish root, and some like a pepper or two. Be sure and put into each batch as it goes on to the stove, a piece of alum as large as a common walnut. This will harden them. As soon as the vinegar begins to warm up a little put your hand into the vinegar and keep stirring them round from the bottom of the kettle, and keep them in as long as you can bear your hand in it, then they will be done. Continue the process until all are done.

It may be necessary to scald the vinegar from time to time if a scum keeps rising to the top. If you get cheated in your vinegar the pickles will grow soft and *tasteless* and be worthless, unless removed to pure vinegar. If they do not taste strong enough of the spices, you can boil the bag with a little vinegar and pour it into the cask.

Pickles prepared as above will keep the year round, and are much nicer and plumper than those put down in salt, will not shrink nor taste as salt as "Lot's wife" when used.

LETTUCE SALAD, COLD SLAW, Etc.

TAKE one egg thoroughly beaten; three tablespoonfuls of sugar; half a pint good sour cream; three or four tablespoonfuls of vinegar; stir well together and pour over the lettuce. It is better if served immediately, or soon after prepared.

Cold Slaw.—Cut the cabbage rather fine into a basin or large bowl; sprinkle a little salt over; then with a potato masher thoroughly bruise the cabbage; then take three tablespoonfuls sugar; half pint best sweet cream; four tablespoonfuls vinegar; stir well together and mix through the cabbage. The cabbage should not be too green. Many persons do not know the value of cream in cooking; it is far preferable to butter in a great many things.

An Excellent Cake can be made as follows:—Three eggs; one cup sugar; one cup sour cream; beat all together till light; add one teaspoonful soda; one teaspoonful extract; about two and a half cups flour.

Drop Dumplings.—Three eggs; six tablespoonfuls sour cream; a little salt; flour enough to make a very stiff batter—make excellent drop dumplings.

Boiled Pudding.—Four eggs; one quart sweet milk; half a pint sour cream; one teaspoonful soda; little salt; flour enough to make a stiff batter—makes an excellent boiled or steamed pudding.

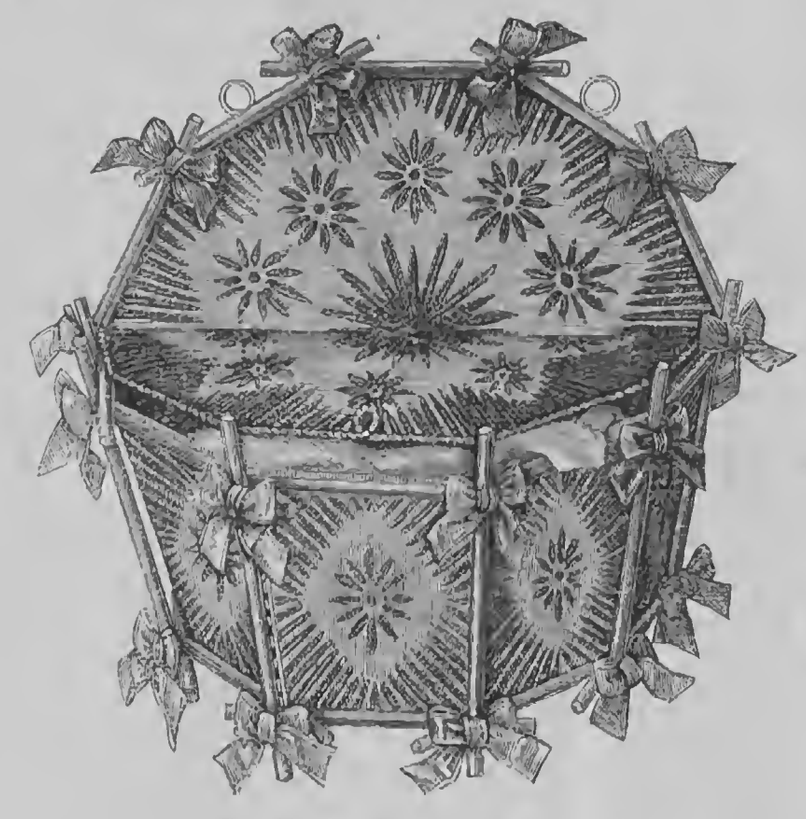
The same recipe, with a less quantity of flour, makes very good waffles, or wheat griddle cakes. MRS. LIDA CLEAVER.

Milton, Pa.

ODDS AND ENDS.

Ornamental Scrap-Bag or Basket—(See page —). This basket, to hang against the wall, is composed of cardboard, covered with gray linen, embroidered with brown wool, and fastened in a cane stand. Cut out first a piece of cardboard for the back and the bottom, and 5 pieces for the front. Bind them with a crossway strip of gray linen, cover them with gray linen, and work on the outside with brown wool the design in point russe, taking the stitches through the cardboard. Then line the pieces with linen and sew them together. Next prepare 5 pieces of thin cane 1½ inches long for the edges of the back, and 5 4½ inches long, 5 4 inches long, and 6 5 inches long for the front of the basket. At ½ inch from the ends cut a little hollow in the canes, and then fit them to each other and tie them together, first with strong thread, then with brown ribbon, according to illustration, and secure the basket into the stand. For the cover, cut a piece of cardboard according to the shape of the upper part of the back doubled. Cut it half through along the center, cover the side on which you made the incision with linen, and work on one half of the design seen in illustration. Then stitch the center along the incision to the back of the basket, double the cover, sew the edges of the linen together, and sew on a cord, leaving a loop in the middle. Two brass rings sewn at the back serve to hang up the basket.

About Frying Potatoes.—In reading the RURAL NEW-YORKER of August 10th I noticed on page 95 two communications in regard to "How to Fry Potatoes." In the first communication the lady does not give her name. I don't like the chopping process, for if they are sliced thin they are much better, as they do not take up so much fat. Mrs. H. J. JOHN, Elizabeth City, N. C., has a very good idea in her article, with two exceptions, viz:—I use nice fresh butter instead of lard, and slice very thin. I would like to know, however, what she means by "when soft, remove to a clean napkin." I always have clean napkins on the table, but I remove the fried potatoes to a clean dish. I cannot see the phenomena of removing to a "clean napkin," and I would be pleased if Mrs. JOHN would explain. It may be that she intends to remove to the table, where there always should be a clean napkin. I am not so sure that Mr. BROWN will "doff his hat" to Mrs. JOHN, until she explains.—MRS. C. S. S. TODD, *Plymouth, Ind.*



ORNAMENTAL SCRAP-BAG OR BASKET.

To Preserve Citron.—Take three pounds of sugar to fourteen pounds of citron; cut in as large pieces as convenient. Put the sugar in a preserving kettle with a little water; boil and skim; add cloves, cinnamon, mace, and coriander seed. Put in as much of the citron as the sirup will cover, and cook till you can run a straw through; then place upon plates to dry. A little citron thus prepared is very nice for mince pies or cake.—SUBSCRIBER.

Using Strong Butter.—I find that by melting, and skimming well, then turning off so that the salt is left, it is excellent to fry doughnuts in. I sometimes use half lard, but it is good alone, and is really the best use I have ever found for it. Try it. Will some one be so kind as to tell me how to remove stains made by iodine; also by nitrate of silver.—HOUSEKEEPER, *Grinnell, Iowa.*

The Naturalist.

"BIRDS AND CATS."

"S. H. J." certainly has struck a "key note" in the plea for "birds." It should attract the attention of all who look to their own interest and benefit (and all should). It certainly behooves them to be up and doing, and to take measures to protect all insectivorous birds that are beneficial to any extent. It would be impossible for one or two persons to protect all the birds throughout the country. What is wanted is the combined force of all to move with the intent of exterminating all the enemies of our feathered friends.

Yet, in our war of extermination, we should not be too hasty in our conclusions as to which are the greatest enemies. "S. H. J." thinks that for such a protection all the cats in the country should be disposed of. (1.) I differ in this to some extent, thinking it not necessary to dispense with one friend, entirely, to protect another. I do not wish it to be understood that I'm a firm friend of the cat; far from it. When there is a dozen or more of the feline race at a house, carrying on their murderous work, I do think that some could be disposed of to some benefit.

Why should we make war on some of the enemies of the birds and let others go on and continue their depredations unmolested? There is the common crow indisputably does more injury to insect-eating birds than almost all other enemies. Upon several occasions during the past season I have seen the crow destroy the nests of several birds, and kill the young to satisfy their voracious appetite. Mr. SAMUELS says of the crow (Ag. Rept. of 1867, pp. 208):—"Now, let us see what the injury amounts to when the crow destroys the four eggs or young of the Sparrows, Warblers, and Thrush. As remarked on a preceding page, the young of all our small birds are fed, while in the nest, upon soft caterpillars and insects." (2.) BRADLEY says that a pair of sparrows will destroy 3,360 caterpillars for a week's family supplies. For four weeks, at the lowest estimate, the young of our sparrow are fed on this diet, and the family that the crow destroys would, in that time, eat at least 13,440 insects; (3) and as they feed more or less upon the same diet during their stay in the North, killing, certainly, as many as fifty each, daily, the family would devour 200 per diem, or, before they would migrate in September, as many as 20,000. This is only one instance we choose to show the injury they will do.

Again he says, We now find, in a general summing up of the crow's merits and demerits, that during the whole year it is beneficial to the amount of 229 units, and that it is injurious to the extent of 4,918 units. If, for the sake of the greatest indulgence, we take but one-tenth part of this enormous disproportion as the actual fact, we still have an exhibit that proves at once that these birds are not only worthless, but positively injurious. (4.)

The Blue Jay is also another great enemy of insectivorous birds, often robbing their nests of their eggs or young. These two birds, I do think, should not be overlooked by those who wish to benefit themselves and the feathered songsters.

M. J. W. M.

1. No cats, plenty of rats; rats destroy ducks and chickens and the young of the ground sparrow. Chickens are insect destroyers and garden protectors.

2. How do you know that those soft caterpillars are noxious or innoxious species? We should bear in mind that one portion of the insect world preys upon another, thereby establishing an equilibrium. Do the birds exercise any judgment in their selection? From our own observation, we judge they destroy as many of the useful (to man) insects as of the noxious ones.

3. We supposed the sparrow was graminivorous, mainly; will the insects destroyed for the young compensate for the grain eaten by the old?

4. Had Mr. SAMUELS or Mr. BRADLEY seen, as we have, crows congregate by the thousands, and attack the army worm, crickets and grasshoppers, ridding our fields of these pests, we think they would find a place for the crow, just where the Creator placed him, and in whose wisdom we have great confidence, high in the list of useful birds, despite the theories and figures of these sentimental, one-sided naturallsts.

Hygienic Information.

DYSPEPSIA CURE.

SOME years ago a physician in New York City published a small book, in which he gave well-written certificates of marvelous cures of dyspepsia. Patients began to flock to him. Their introduction to his treatment was very queer. He took the patient in his consultation office, examined his case, and if it was one he could cure, he announced his fee as five hundred dollars, to be paid in advance. If the patient's confidence was strong enough the money was paid, and then the doctor took him through a hall, up a flight of stairs, through another hall, then through a room, down a flight of stairs, up a flight, down a flight, then to the right, then to the left, and at last they arrived in a room without window, artificially lighted, and in that room the patient was required to put his name to a solemn vow that he would never reveal the mode of treatment. This being all finished, the patient was introduced to the treatment. It consisted in slapping the stomach and bowels. Besides this, the patient was required to live temperately, and much in the open air. On rising in the morning he was required to spend from five to ten minutes in striking his own abdomen with the flat of his hands. Then he went out for a morning walk after having drank a tumbler or two of cold water.

At 11 o'clock in the forenoon he spent a quarter of an hour or more in slapping the bowels with his hands. Then he laid down to rest. He dined temperately at 2 o'clock, and spent the afternoon in sauntering about. At 7 o'clock in the evening he repeated the percussion, and went to bed at 9 o'clock. A majority of the cases that sought relief at this establishment had used all the other means except the slapping; that is to say, had lived on plain food and much in the open air. It was the slapping, the pounding with the fists, kneading with the fist, sometimes with the fists of an attendant, that cured these people, for cured they certainly were. Marvelous cures were effected at this establishment. After the death of the doctor some of the patients felt themselves absolved from the obligation and one of them described the treatment to me. In every case of indigestion, no matter what may be its character, slapping the stomach or bowles with the fists of the hands on rising in the morning, four hours after breakfast, and in the evening on going to bed, is excellent treatment. I cannot conceive of a case of chronic indigestion which such manipulation would not relieve. If the patient be so weak that he cannot perform these slappings or kneadings upon his own person, the hand of a discreet assistant should be employed. It is marvelous how the body, the stomach for example, which, when these manipulations are first practiced, may be so very tender that the slightest touch can hardly be borne—it is marvelous how in two or three weeks a blow as hard as the hand can give is borne without suffering. If you have a pain in the side or across the chest, percussion will relieve it most immediately. But constipation, dyspepsia, torpidity of liver and other affections of the abdominal viscera are relieved more surely and completely than any other class of affections by percussion, kneading, &c. Such treatment comes under the head of counter-irritation. A new circulation is established in the parts near the points of suffering and congestion. Besides this, especially in abdominal troubles, the manipulation appeals directly to the contractility of the weak, relaxed vessels in the affected part.

Farm Implements.

J. H. MELICK'S IMPROVED STRAW PRESERVING THRESHER.

The common threshing machine tears the straw all in pieces, which is all well enough where the straw is only to be thrown into the yard for manure or used for bedding. But it often happens that the straw is wanted for other purposes, and especially rye straw, which may be wanted to put up in bales or bundles, or to be used for filling beds, or for any other purpose for which straight straw is desirable. To meet this demand is the object of the invention herewith illustrated, by J. H. MELICK of the New York State Agricultural Works, at Albany, manufactured by the WHEELER & MELICK Co.

The chief feature of this thresher consists of a cylinder five feet and four inches in length, on the periphery of which there are numerous plates of malleable iron, having a corrugated surface, which in revolving pass near a corrugated concave or bed piece. The unthreshed straw is fed sidewise rather than endwise into the machine; the grain is threshed between the corrugated plates of the cylinder and the concave which is below, and the straw is delivered as even and straight as the sheaves were before they were threshed. A few of its many advantages are as follows:

It has no spikes to break or mash the straw, and to get out of order.

It is provided with separate spring bars, which act to open any bunch or mass of straw fed into the machine, necessary for the thorough threshing and cleaning of the grain from the straw.

It has a yielding incline over which the material passes to the concave, so that any substance, such as a stone or stick, may be forced out between the edge of the yielding incline and the concave or rubber, thereby tending to prevent damage to the machine.

It has nearly twice the space for receiving the grain that ordinary machines have, which adds very much to its working facility.

This machine was patented in 1866, and has heretofore made its way in the world solely on its own merits, and if success is any test of merit, the increasing demand for these threshers fully settles that question.

J. H. MELICK'S IMPROVED STRAW PRESERVING THRESHER.

PLOWING AT BEACON STOCK FARM.

We made brief mention in the RURAL NEW-YORKER last week, of a trial at Beacon stock Farm, of the plows of the Ames Plow Works alongside of the imported Scotch plows in use by WILLIAM CROZIER, the farmer of that domain. We did not consider the trial as at all conclusive as to the actual or comparative merits of the American plows, from the fact that the exhibitors of the latter had no experts of their own to manage their implements, and none of the plows were tested with a dynamometer. Mr. CROZIER very courteously tendered the use of his teams and plowmen to the gentlemen whom he had invited to a friendly contest, and in all other ways afforded such facilities for a fair trial, as lay in his power, liberally dispensing the hospitalities of the DELAMATER and CROZIER homesteads to all who were in attendance. The objects, which he freely avowed, in getting up the trial, was to show how he could do all manner of desired plowing with one pattern of adjustable Scotch plow, and to induce American manufacturers to go into the making of these plows for the benefit of American farmers, to obviate the expense and inconvenience of importing them.

The Scotch plow is very long in the point and moldboard, both of which present a convex conical surface on the turning side, the bottom edge of the mold-board curving inwards toward the land side, so that the bottom of the furrow, when opened, is quite narrow, and when the next furrow-slice is laid over there is no open space at the foot, making a complete lap-furrow, lying close in all its parts. When asked if flat furrows, as made by most American plows, were not generally preferable to lap-furrows, Mr. CROZIER replied that the office of the plow was to turn the furrow, while the smoothing of the surface for a seed-bed, was the office of the harrow. That is his view of the case, with which many good farmers will not agree.

The Scotch plows are stocked short in the beam and very long and raking in their handles. This gives the plowman great leverage and enables him to guide the plow with great precision, striking his furrows as straight as a line. They are also capable of adjustment as to width of furrow, by an extension bar between the mold-board and land side. The depth of furrow is regulated, as in all plows, by the hitch of the clevis; the medium furrow is seven inches deep by nine inches wide.

The Ames plows are stocked a trifle larger in the beam, with short, upright handles. The share and mold-board are both concave throughout, thus lifting the furrow-slice and laying it over, instead of partly crowding it over, as with the Scotch plow. On a strong blue-grass sod, as we have in the West, we should expect to see the green stuff better covered by the American than the Scotch plow; and also on old land where there is a good deal of stubble or foul trash; but as there was very little of soil on the lands which were plowed at Beacon Stock Farm, we had no demonstration in this particular. A double Michigan plow of the Ames Co., did some capital work, covering all surface trash completely and running so nicely, that the plowman did not touch the handles for rods at a time. Also a loose ground plow in a stubble field did its work as well as could be desired. The Scotch plows worked well in all situations, and in the hands of the experienced Scotch plowmen, with their mighty Clydesdale teams, the work was as artistic and exact as the most fastidious mechanical eye could desire. The Scotch plowmen are proverbially expert in the furrow, and scrupulously exact in the mechanism of their work, coming as near to the description of agricultural artists, as such a homely operation is capable of being made.

A Sheaf Carrier.—The Rochester, Minn., Post speaks of a sheaf carrier attached to the Marsh Harvester. It consists of a simple platform, on which the sheaves are carried until a half dozen are collected, when by a movement of a lever by the hand of the driver these are thrown off, and on the next round an equal number are thrown off beside them. The aparatus is the invention of a Mr. CLARK of that place, and works so satisfactorily that about 100 have been sold in that vicinity. It is proper to say that the Marsh Harvester is so constructed that the binder or binders stand on a platform of the machine and bind the grass as it is cut.

Farm Economy.

MAKING BARN-YARD MANURE.

We have spoken of the manure factory as the grand bank of deposit and discount on the farm, especially on a tillage farm. A notable example of this is what we saw at Beacon Stock Farm, under the management of WILLIAM CROZIER. Here are forty to fifty cows, kept in the stables during the day time, at green feed in summer, and allowed to go out for fresh air and exercise upon the pasture during the night.

The stables are long, narrow buildings of sufficient width to allow of a walk in front of the stanchions, for the convenience of feeding, and a walk in the rear of the cows for the purpose of handling the manure. The stable floors are just long enough to allow a cow to stand upon, when she is well up to the stanchions. Immediately in the rear of the stalls is a vat running the whole length of the stable, some six inches below the floor of the stalls, and about three feet in width. All the droppings from the cows and the refuse feed fall or are raked into this vat, which is also supplied with muck from without. Here is the beginning of the manure works.

The rear of the cow stables form part of the enclosure of the great yard, which is the principal manure factory. Another side of the enclosure is the rear of the long line of hog pens, with the rain-drip into the yard all around. The hog pens are comprised in a long, low building, just wide enough to allow of a walk in front of the stalls for the passage of the barrow which trundles the feed to the troughs, while the rear doors open directly into the great yard. Here are thirty to fifty nice Berkshire hogs, whose business it is to breed pigs and daily to work over the manure of the yard.

The surface of the yard is made dishing, with quite a pool in the center, which is always filled with a rich mush of well-worked cow manure, straw, seaweed, muck, etc., and, being water-tight, affords a mud-bath for any venturesome hog which is disposed to wallow or swim in such an unctuous element. All the drippings of the stables and pens go into this central manure factory, where the busy hogs turn it over and trample it, day by day, until is thoroughly mixed and the straw stuff considerably decayed.

But in this condition the mass is not yet at its best as food for plants. The genius of the Beacon Stock Farm is not a man to be satisfied with anything but the best, so the contents of the yard are carted out to a field and laid in a heap which looks like the immense earth-works of an entrenched army. Here it ripens into the perfection of fertilization, and in due time is disconnted to the fields made ready for its reception, which thereafter bear the burthen of abundant harvests.

ECONOMICAL NOTES.

Fish Guano—The Long Island Menhaden Fisheries.—The conversion of a fish known as Menhaden into oil and fish guano on Long Island, has become a tremendous business, as the figures we give will show. Years ago the Long Island farmers used to catch these fish and cover one where a hill of corn was wanted with great results. Finally they began to deposit them in the furrows made by the plow and cover them. Later years companies have been organized to extract the oil from these fish, and convert the residuum into what is known as fish guano, which is held in high esteem as a fertilizer. During the two weeks ending August 17, the Long Island waters have literally swarmed with these fish. One company has taken 1,300,000 of them, realizing $1 per thousand for them. Another company has taken 3,000,000 of these fish. One company has rendered into oil and guano 5,000,000 of these fish the present season, without running it its full capacity. The price of these fish was formerly sixty cents per 100, but the rate is lately fixed at $1 per 1,000; and yet fishermen assert they could make money at that price if they could sell all they catch. Only about one-third are taken by the factories.

Home Fertilizer.—I wish to obtain from some of your readers a recipe for making a home fertilizer. I have a large quantity of cow and horse manure, well sheltered, and of good quality, and I desire to add to it such chemical salts as will increase its value and lessen the quantity required per acre. Will not some one of experience give me a formula, suited to the growth of corn and cotton, with all the particulars of mixing and cost of ingredients.—T. D. S., *Americus, Ga.*

Sulky Plow in Texas.—"Tarheel" requests some Texan correspondent of the RURAL NEW-YORKER, who has had it, to give his experience with the sulky plow on the prairies of Texas—whether they will pay, and if the soil of the Hogwallow prairie will stick to the plow so as to be troublesome—if so, if there is no way of avoiding it by using steel hoes. How much land can one man cultivate with one of them?

Pomological.

POMOLOGICAL GOSSIP.

Apples for Iowa.—JAMES H. LEMON, Union City, Iowa, sends the Iowa Homestead the following list, which is numbered as preferred.

Summer.—1, Sweet June, yellow; 2, Williams' Favorite; 3, Red June, red; 4, Red Astrachan, red.

Fall.—1 Duchess of Oldenberg, large yellow; 2, Fameuse, handsome, red streaked; 3, Jonathan, red streaked; 4, Wagoner, deep red streaked; 5, Pomme Grise, Canada grey; 6, Wine Sap, red cheek.

Winter Varieties. 1, American Golden Russett or Downing; 2, Little Red Romantine, deep red; 3, Newark Pippin, lively green, Coxe 127, 4, Rawle's Janet, dull streaked; 5, Domine American, Rambo family; 6, Blue Pearmain, streaked with bloom.

These are all good growers except Pomme Grise and Pearmain. The earliest bearers are Duchess, Williams' Favorite, (Early Washington,) Fameuse, the Janes and Wagoner. Heaviest bearers are the Romanite, (Court House Crab, of Pennsylvania,) Golden Russett, and eventually the little Pomme Grise comes into time, pays for forbearance and patience with heavy crops, toothsome and sound. There are over twenty-five kinds of Golden Russetts sold, but the true kind stands sloughs like a willow, and prospers on high grounds. If you intend to plant in Iowa, preserve this list.

Richardson Pear.—The Prairie Farmer has received this pear from JONATHAN HUGGINS, Woodburn, Macoupin Co., Ill., and says of it:—"It is a variety highly prized by him as a market sort, being a vigorous, healthy and productive tree, and an early and very handsome fruit. Origin, New England. If we remember rightly, this pear was traced back to an old Connecticut tree. Shape, pyriform. Calyx rather large, open. Stem long (1.10 inches) and tolerably strong. Skin smooth, green, covered with numerous darker green dots, and from one-third to one-half covered with a bright, brownish red, something like that of the Louise Bonne de Jersey. Flesh course, granulated, dry, sweet. Capsule rather open; seeds, numerous, small. Ripens in July, this year, about the 15th. Must be picked early and house ripened, we presume, inasmuch as our specimens late-gathered, are rotton at the core; third rate in quality. This pear is very handsome and healthy, and will be profitable until public taste improves and asks something else than fine color and bigness."

The Shockley Apple as a Keeper.—The Plantation of August 14 says:—"Our distinguished orchardist friend, Dr. B. Hamilton, of Dalton, has placed upon our table two Shockleys, in remarkably fair condition under the circumstances of their history. They are of the crop of 1871; kept through the Winter, and shipped to Alabama, in an express package, last Spring. The consignee not being found, they are just now returned—no rot—some bruises. This shows the remarkable keeping quality of the Shockley; it is a very prolific bearer. We do not regard it as a nice eating apple.

Tetofski Apple in Wisconsin.—A. G. TUTTLE, Baraboo, Wis., writes the Western Farmer, that this apple proves to be earlier than the Red Astrachan, as most of the crop was past season Aug. 9. He thinks the tree valuable "for its extreme hardiness, early bearing, early ripening, great beauty and fair quality of its fruit, compared with other early varieties. It is especially valuable in a new country, as it gives a return of fruit as soon after planting as the currant and most of the small fruits."

Hale's Early Peach in the South.—The Rural Alabamian has letters from Austin, Texas, and two from different parties in Natchez, Miss., speaking highly of this peach, declaring that is has been, with them, entirely free from rot this year.

A New Illinois Peach is announced as having originated with a Mr. ALEXANDER, Mt. Pulaski, Ill.—said to be three weeks earlier than Hale's Early and of fine quality.

Minnesota Apples.—There was a horticultural Fair at Minneapolis, July 3 and 4, at which the following apples of last year's growth were exhibited in good condition: Ben Davis, Golden Russet, Tallman Sweet, Little Romanite, Limber Twig, Jonathan, Rawle's Janet, and others.

The Vineyard.

GRAPES IN CHAUTAUQUA COUNTY.

GRAPES in this section are at this date looking remarkably well. The unusually heavy crop of 1871 weakened the vines of some varieties, and left them in rather poor condition for a good crop the present year. But along the lake shore the Winter was not unusually severe, the thermometer reaching only 6° below zero, and buds of most varieties came through with little injury. Isabella was overloaded last year, made a light growth, and failed to mature its wood well, and the present season is carrying only a moderate crop. Catawbas are doing well, with no rot as yet, but are not bearing over two-thirds the crop of last year. Concords are carrying a good crop and looking well, yet not over two-thirds the yield of last year, when many vineyards produced five or six tons per acre. One acre of Concord in our vineyards yielded five tons, and netted us $600, after paying for boxes, packing, freight and commission.

Delaware and Iona never looked better, and are carrying a full crop. Foliage, as yet, remains perfectly fresh and healthy, and vines, where well cared for, are making a fine growth. Ives and Hartford are bearing a heavy crop, and are doing well. Diana also well loaded and healthy.

Martha is doing exceedingly well, bearing good crops, and proves to be all that is claimed for it. The fruit is very sweet, and with the mass of consumers, I think will, like Concord, prove very popular and sell for double the price of Concord. With us it is perfectly healthy, a good grower, productive, and matures fully as early as Hartford. For *profit*, I would recommend it for vineyard planting above any other of the newer varieties, unless it be one of Rogers' Hybrids.

Eumelan is this year doing better than previous years. It is making a fair growth and heavily loaded with good, compact clusters. Last season the clusters were very imperfect. It colors and matures a little later than Hartford, but fully as early as Concord. Quality of the fruit is excellent, and if allowed to remain on vine a month, it does not shrink or drop like many early kinds, but remains plump and sound and becomes very sweet and good.

Walter fails to prove itself healthy and a good grower. The foliage is very susceptible to blight, and in this section it has not proven what we had hoped from it. At Vine Valley I see it does not do very much better where they have an acre in full bearing.

Rogers' Hybrids are generally doing well, and are yearly growing in public favor. Agawam (No. 15) is a rank grower and good bearer, yielding last year three tons per acre, and netting us $100 from 100 vines. This year it is carrying a fair crop, and is healthy. I think it has proved itself valuable for vineyard culture, and with us does much better than Nos. 19 or 4. We also consider No. 9 almost or quite the best of the series. It is the earliest of any of Rogers', except No. 3; is a good grower, productive, and quality of fruit is excellent. It readily sells in market at double the price of Concord. No. 3 also proves good and worthy, and is valuable on account of being the earliest of the lot. Salem is bearing a fair crop, and healthy. Nos. 9, 15, and Salem, all have firm berry and tough skin, which renders them valuable for shipping or for long keeping, all proving to be the best of keepers for Winter use.

Croton grows well, and foliage appears healthy; but at Vine Valley, where they have an acre or two in bearing, the fruit shows a tendency to mildew, and the vines were considerably injured by the Winter. It grows a very fine looking cluster and fine quality of fruit.

The present season, on the whole, has been quite favorable for the grape crop. Spring opened three weeks later than last year, and time of blossoming was a week behind average seasons. But the hot weather of July brought them forward rapidly, and at this date we are fully up with average seasons and not more than three or four days behind last year. We have had about the right amount of rain to suit the grape crop, the fore part of the season being quite dry and at no time has it been too wet. The ground has not been thoroughly soaked to a great depth this year. Foliage on all varieties never looked more healthy, and vines have generally made much better growth than last year.

A recent visit among the vineyards and grape growers of Central and Western New-York, convince me that the grape crop will not be more than will be needed to supply the demand for market and wine at much better rates than last year. Pleasant Valley and Keuka Lake, which last year produced 1,000 tons, are this season growing but about 2,000 tons. Last year the wine cellars used 2,000 to 2,500 tons.

Their business is yearly increasing, while the acreage of vineyards in good bearing condition is annually diminishing. It would be safe to say that, in the grape regions of New York and Ohio, unless extensive planting be resumed, there will not be two-thirds the acreage of vineyards in good condition and well cared for, five years hence, that there were last year. Many have become discouraged by low prices, and the effect can be seen on every hand. Some have plowed up their vineyards while others neglect them, allow grass and weeds to gain the ascendancy, and ultimately their vineyards will be ruined.

The demand for both table and wine purposes yearly increases, and with no corresponding increase in vineyards, prices must necessarily advance. The crisis of low prices and little profit is, no doubt, already passed, and he who keeps his vineyard in good condition, well cared for, will, no doubt, be abundantly rewarded for his care and labor. T. S. HUBBARD.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS WORK, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 432 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price $2. Address

EMPLOYMENT.
I want 1,000 agents to canvass for the COMPLETE HERBALIST. I will give such terms and furnish such advertising facilities that no man need make less than $200 per month and all expenses—no matter whether he ever canvassed before or not. A premium of a new dress given to daily canvassers. Address Dr. O. PHELPS BROWN, No. 21 Grand St., Jersey City, N. J., and full particulars will be sent by return mail.

Fashions for Fall and Winter.

1170

GOTHA. This Polonaise is one of our latest Paris Novelties. It contains many new and very valuable features. Without looping it can be worn as a long light-fitting basquine, or looped (as shown in cut) it is a most elegant Polonaise. The ornamental back piece passes over the shoulders and forms a neat dust cape in front and is "adjustable;" may be worn or not as fancy dictates, thus constituting *two* entirely different Polonaises in appearance. The back piece is sometimes made in velvet or satin, and richly trimmed, and completes a brilliant toilet when worn with a house dress. Besides its beautiful variations it is well adapted to any material. Takes six yards of 21 inch goods. Price of pattern with cloth model ONE DOLLAR. *See* PREMIUM OFFER below.

1165

NEW FALL WRAP, is a sacque and cape, with a thribble box-pleat laid on the under side in the back, and in place of the broad pleat of last season; just the three edges are visible from each side, giving the appearance of six round folds, the cape slopes gracefully to the back, and is left open to trim. The sacque has a large sleeve, which can be used or not, as weather or coat-fort demand.

We give this as one of the very best for fall and winter cloak made in either velvet or cloth. The original is of dark blue ladies' cloth. Scalloped and bound with velvet and velvet buttons. Takes three yards of ladies' cloth. Pattern, with cloth model, 50 cents. *See premium offer below.*

762

PRESTO. Cheaper for lady. Its great success in leading all other styles is owing to its perfect fitting band and sleeve. The curved arm-size is an improvement of *much* value, as it will not *cut* the shoulder or *bend* the arm, and also avoids the homely, perplexing gusset. Takes three yards linen for medium-size. Pattern, with cloth model, 75 cents. See Premium below.

We give a CLOTH MODEL with each pattern which SHOWS every seam, pleat, gather, loop, etc., how to put the garment together by the pattern, and how it will look when completed. By the use of our Cloth Models any person who can sew can FINISH the most difficult garment as easily as the plainest. They are PERFECT GUIDES.

Premium Offer!

If you write the following, viz.:
{RURAL, 1170, 1165, 762,}
and sign your name, giving your P. O., Co. and State, and then inclose it, with *One Dollar* and *Ten Cents*, to us, we will make you a *yearly* subscriber to *Smith's Illustrated Pattern Bazaar* (begin with the present No.), and send to you by return mail *all* the patterns, with cloth models complete, of the *three* above engravings, as *premium*. *Now* is the time to *Subscribe!*

Either of the above patterns sent by mail upon receipt of its marked price.

SMITH'S
ILLUSTRATED PATTERN BAZAAR.
ONE DOLLAR A YEAR.

Premium! See above "*Premium Offer.*"

It is the *best* and *cheapest* fashion *magazine* in the *world*. It is the *New York City* ladies' *authority* in *all* matters pertaining to Toilets. It is the *only* fashion publication in this country that *imports Styles* and *sells* patterns of them.

The present number contains a large double-page *fashion plate*, 11 by 22 inches, printed on beautiful, heavy, rose-tint paper; Foreign Correspondence; Criticisms; Stories; Hints, Etc., Etc.—with information in detail upon all parts of ladies', misses' and children's dress and dress making.

Also a *Half-price Check*, which entitles each holder to select any pattern contained in this number by sending half price.

Single Copy 25 Cents.

The American News Co. supply the Trade.

Catalogue of Fall and Winter Styles mailed upon receipt of *stamp* and address.

Be *particular* to address, very *plainly*,

SATURDAY, AUG. 31, 1872.

OPENING OF THE FAIR SEASON.

On the first week in September the Agricultural Fairs will open in earnest. A few Local Fairs are open this week, but a majority of them will not open until two or three weeks later. Of the larger exhibitions, Ohio leads off with her State Fair the first week in September, on the new and beautifully shaded grounds at Mansfield, which are the admiration of all who have seen them. At the same time will open the great Exposition of the American Institute in New York City, the still greater Show of the Cincinnati Industrial Exposition, and the new venture of the Louisville Exposition Co., in Kentucky; these last remain open until October. Also, on the same week, will be held the Fair of the New England States, at Lowell, Mass.

After these, follow the large and small State, District, County and Local Fairs, all over the country, and the people will be trooping in hot and happy haste to look upon the good things of the land, and to have a right sociable time with each other. We hope that all will make the best use of these opportunities, to learn the lessons of industrial progress and economy in these open schools of the people.

On the second page of the RURAL NEW-YORKER, for this week, we give a very full table of the names, and the times and places of holding Fairs in all parts of our wide rural domain on this continent, by which will be seen in how many places and at what times will occur the musterings of the mighty hosts which go to make up the Grand Army of Industry in in our land! We bid you all hail!

DEPARTMENT OF AGRICULTURE REPORT FOR 1871.

THIS Report has been received. The Report of the Commissioner of Agriculture to Congress has heretofore been commented upon. The tables of the Statistician are worthy of more careful examination and more space than we can now give them. The report of the Entomologist is largely devoted to reiterating what has already been repeatedly published concerning the extent of the ravages of insects upon farm crops and the loss to farmers thereby. What is said in the report concerning the Twig Girdler, *Oncideres cingulatus*, SAY., is good so far as it goes, but betrays a very incomplete knowledge of the work of this insect, of which we shall have something to say in a week or two. But, as a whole, we congratulate the Entomologist upon the improved character of his report as compared with those upon which we have had occasion to comment heretofore. It is altogether more creditable.

The report of the Chemist is also an improvement on previous reports from that division of the Department. The report of the Superintendent of Public Grounds, embraces many interesting facts. That on the Fungoid Diseases of Plants will command attention. It is elaborately illustrated and will certainly stimulate inquiry. There are several pages devoted to reports upon tests of Department seeds, which farmers may peruse with profit. The report upon Southern Fruit Growing for market, illustrates the rapid increase and extent of fruit culture in the South. Eleven pages are devoted to "A Few Facts from Florida," which will meet a demand for information concerning that State, which is widely extended. The report on the Introduction of the Jute Plant, foreshadows its ultimate success as a fiber plant in this country. Elaborate Dairy statistics are given; also an elaborate report upon the Wools of the United States. There is a report on (with Illustrations of) the Agricultural Patents of 1871.

A report is made, in brief, upon the legal requirements of each State in regard to weights and measures. It, together with the tables of legal weights and measures in the respective States is valuable for reference. "Current Facts in Agriculture," "Recent Farm Experiments," include much compiled information. An elaborate article on "Practical Irrigation in Colorado," and also on "Irrigation Systems in Different Countries, are timely; to it we refer our readers who have made recent inquiries on this subject. The space devoted to the "Relations of the Centennial of American Independence to Agriculture," could have been better occupied. The paper on the Progress of Industrial Education is valuable. The Digest of State Reports is very well done, and is a compendium of many important Facts and farm practices. There are also notices of Current Rural Publications, a paper upon the Agricultural Topography and Resources of Montana Territory, the Relations of Agriculture to Other Industries, MOULE'S Earth Closet System, Statistics of Fences in the United States, and a Catalogue of Donations to the Museum. As a whole, the Report is creditable to the Department.

RULES FOR VOTERS.

A CORRESPONDENT writes:—"What rules for voters can you commend? Should I vote for a man nominated by a party with whose principles and policy I generally sympathize, when I have no faith whatever in him?" We do not know the political affiliations of the gentleman asking the above questions; but we will answer them according to our best judgment.

1. *In Regard to Presidential Candidates:*—Fix, definitely, upon the principles you desire promoted and perpetuated, and what line of public policy you regard safest and wisest for the whole country. Vote for the man whom you believe most nearly represents such principles and policy, and will most surely sustain and enforce both.

2. *In Regard to Congressional Candidates:*—You must consider both the principles and public policy you desire sustained by Congress in making your selection of a candidate; you should also consider the breadth and comprehensiveness of the man's character whom you send to Congress—the consistency and probity of his life, the wisdom of his action, the motives which impel him to become a candidate, the amount of his sympathy with and strength of his fealty to the local interests of his immediate constituents. He should be a man capable of comprehending the relations of his own constituency to the whole country, and of subordinating, on occasion, all local interests to the public interests, even at the risk of being misunderstood by the narrow-minded and selfish.

3. *In Regard to Gubernatorial Candidates*, the same rule applies as in the case of the Presidential Candidates—except that the general interests of the State are especially to be considered. The Governor should be familiar with the political, industrial, and commercial history of the State; with its laws, its public institutions, and with the working relations of the parts to the whole. He ought never to be selected or elected with a view to the promotion of merely partisan interests and purposes—a very difficult element to root out of elections, we grant. He should fully comprehend the relations of the State to the General Government and to sister States, as individuals. He is a sort of watchman on the walls, upon the boundaries of these separate organizations; and he needs to be both vigilant and wise.

4. *In Regard to State Legislators*—Never vote for a man who is not fully identified with the business interests of your locality. Do not consent that a mere politician—a man who gets a living by politics—shall represent you. Select legislators as you would select business agents; that is all they are. Let them have clear heads, well balanced, practical, business minds; and let them represent, in their profession or pursuit, the business majority of the district from which they are sent; *i. e.*, if the majority are farmers, let the legislator be a farmer; if merchants, a merchant; if manufacturers, a manufacturer.

We repeat: Never vote for a man as your representative in Congress, or in the State Legislature, who has no other vocation than that of a politician, and no other mode of making a living than by politics. It does not matter to which party such barnacles attach themselves, they are leeches on the people, and should not be supported by the votes nor the money of the people. They are the curse of our Government, the reproach upon our political system, and a vicious element in the body politic. Do not vote for such a man, on any platform.

RURAL NOTES AND QUERIES.

What Advertising Does.—The following French story is told; we do not publish it for the sake of inducing men to get rich by advertising worthless articles, but to enforce the axiom that if one has a good thing to sell he may profit by advertising it. Here is the story:

Miland, the banker and newspaper speculator, who died a little while back in Paris, and who founded the Paris *Petit Journal*, which at one time had a daily circulation of nearly half a million copies, was an enthusiastic believer in the advantages of liberal advertising. One day he had at his table nearly all the proprietors of the leading Paris dailies. They conversed about advertising. Miland asserted that the most worthless articles could be sold in vast quantities, if liberally advertised. Emile de Girardin, of *La Presse*, who was present, took issue with him on the subject. "What will you bet," exclaimed Miland, "that I cannot sell in one week one hundred thousand francs' worth of the most common cabbage seed under the pretext that it will produce mammoth cabbage heads? All I have to do is to advertise at once in a whole-page insertion of the daily papers of this city." Girardin replied that he would give him a page in his paper for nothing if he should win his wager. The other newspaper publishers agreed to do the same thing. At the expiration of the week they inquired of Miland how the cabbage seed had flourished. He showed them his books triumphantly, and satisfied them that he had sold nearly twice as much as he had promised, while orders were still pouring in; but he said the joke must stop there, and no further orders would be filled.

Horticulture in Western Missouri.—Late papers from Western Missouri, give a stirring account of a meeting of the Jackson County and Missouri Valley Horticultural Societies at Lee's Summit, and a visit to the extensive nurseries and flower gardens of the BLAIR BRO'S., at that place. Jackson Co. is on the west line of the State of Missouri, and to read the account of the progress of horticulture in that region impresses one with an idea of the vast energy which has pushed its conquests in that direction. The grounds of BLAIR & BRO.'S comprise nearly four hundred acres, nearly all under cultivation, and to take an account of the stock of nursery stuff, takes one into the millions. As one evidence that these gentlemen understand their business, they advertise in the RURAL NEW-YORKER.

An English Test Case as to Laborers' Time was recently tried in Berkshire, England. The 24th of June a farmer had a good deal of hay down and thirty men at work. At 9½ o'clock at night there remained an hour and a-half's work to be done in order to secure the hay. A portion of the workmen refused to work longer, unless paid extra for it. This was refused, the hay was not secured, a rain came on, the hay was damaged, and the farmer sued two laborers whom he was paying by the week, to recover. The magistrates decided that the defendants were not bound by their contract to go on with the work at that time of night, and the case was dismissed. We should think so!

Time is Money and Money is Cash!—Straight lines of travel and rapid transit are the order of the day! Time was when men went to Chicago by way of the Straits of Mackinac; but now the railroad which expects to do the trans-continental business must bore its way in a right line. That is just what the great CANADA SOUTHERN AND CHICAGO RAILROAD is doing, and to finish up its great line now offers the last five million dollars of seven per cent. Gold Bonds, through LEONARD, SHELDON & FOSTER, Bankers, No. 10 Wall St., N. Y., and WINSTON, LANIER & CO., of No 27 Pine St., N. Y. See their announcement in advertising department.

A Romance of Florida.—In the RURAL NEW-YORKER of September, 1871, was a serial story of "Life and Love in the Land of Flowers." The publication of this story brought us a host of letters making inquiry as to the actual truth of the narrative, and calling for the address of the writer. The story was a romance, and probably embraced more fancy than fact. The author of it is not at present a resident of Florida. Will our numerous correspondents accept this note as a reply to their anxious inquiries? All earthly paradises have their drawbacks.

The Recent Auroral Display not only attracted much attention, but has caused much comment; and a RURAL correspondent asks if "its cause is refraction, or what." Of course it is not *known*, beyond question, what the cause is; but it is believed by the majority of scientists to have a magnetic or electric origin. Mr. CULLEY, a distinguished English telegrapher regards it as a kind of lightning, differing from ordinary lightning in being a gentle and gradual flow instead of a violent and sudden discharge. There is little doubt of its electric or magnetic nature because of the manner in which its presence affects electrical instruments and the magnet.

Little and Sweet,—There was a marriage in Springfield, Ohio, on the 7th of August, in which the principals were "The Little Bee Man," Col. JOSEPH LEFFEL, who is 45 inches high, weighs 55 lbs., and is 38 years of age: and Miss EVALINE BEASLEY, who is 51 inches high, weighs 75 lbs., and is 23 years of age.

The Foot-and-Mouth Disease among cattle, sheep and swine in England does not abate, but from last accounts seems to be on the increase, both as to the number of animals attacked, and in respect to virulence. Pleuro-pneumonia has also appeared in localities, and seems to be steadily spreading.

Agricultural Colleges in Canada.—The London, Ont., Farmer's Advocate says there are two Agricultural Colleges in Lower Canada maintained at Government expense; that the lowest number of scholars in each must be ten, and it is with the greatest difficulty that the required number can be obtained to enter the establishment to enable these institutions to draw Government pay, although tuition is free to scholars. Evidently the Lower Canadians need a revival upon the subject of Agricultural Education in Canada. At any rate, they do not seem to appreciate what is evident they are taxed to pay.

Fisherman's Luck.—W. S. HICKOX of Mansfield, Ohio, is a new member of the State Board of Agriculture, through whose energetic advocacy the State Fair was located at that place this year. Having got all things in course of operation for the Fair, Mr. HICKOX took a trip to Lake Superior for a little fun and fishing, and, while tipping the rod and fly at Fort Gratiot, slipped on a rock and broke his leg. The Ohio State Fair is to come off the first week in September, and the loss of Mr. HICKOX's active services will be severely felt.

Personal.—Our Ohio associate, Col. HARRIS, having completed his Summer sojourn in New York, returns to his post in Cleveland this week, to enter upon the Fall Campaign among the Fairs of that State, commencing at the Ohio State Fair next week, the Northern Ohio Fair at Cleveland, the week following, and in other principal places until the season is over. Look out for the Banner of the RURAL NEW-YORKER and give the old Agricultural Missionary a friendly greeting wherever you see him.

Premium Lists Received.—Of the North Missouri Ag. and Mech. Ass'n, Hannibal, Mo.; Fair Sept. 23-28 ..Of the Blackhawk Co., Iowa, Ag. Soc.; Fair at Waterloo, Oct. 1-3....Of the Carroll Co., Md., Ag. Soc.; Fair at Westminster, Oct. 1-5. ..Of the Wisconsin State Ag. Soc.; Fair at Milwaukee, Sept. 23-27 ...Of the Trumbull Co., O., Ag. Soc.; Fair at Oak Grove, Warren, O., Sept. 17-19 ...Of Aurora, Ill., Ag. and Hort. Soc.; Fair at Aurora, Sept. 9-13....Of Delaware Co., N. Y., Ag. Soc.; Fair at Delhi, Sept. 17-19 ....Of St. Louis Ag. and Mech. Ass'n; Fair at St. Louis, Oct. 3-12. ..Of the Fair of the Carolinas, at Charlotte, N. C., Oct. 22-26.....Of Steuben Co., N. Y., Ag. Soc.; Fair at Terre Haute, Sept. 17-21 Of the Ripon, Wis., Ag. Ass'n; Fair at Ripon, Sept. 17-19.

The New Hampshire Ag. College at Hanover has been in operation five years; has, it is asserted, the best halls, lecture and cabinet rooms of any institution in the State; a farm of over 160 acres under good cultivation, affording opportunity for practical education and compensation for the labor of students. The term and the college year commence Sept. 1.

Refrigerator Cars.—There are now in daily use on the Michigan Central railroad, fifty-one cars fitted up expressly for carrying butter, beef and eggs from Chicago to Boston and New York. An average of four of these loaded cars start East each day, and are inspected and re-iced at Detroit before they go further. Each car consumes four tons of ice on the trip.

RURAL BREVITIES.

F. W. MAUSON:—We do not know any work of the kind you name.

THE foot and mouth disease has appeared among the herds of Australia.

A FARMERS' Convention is called at Cedar Rapids, Iowa, at the time of the State Fair.

THE Texan cattle fever has appeared among the herds in Morgan Co., Ill., and is causing much alarm.

THE BRIGHT SIDE, a Chicago monthly juvenile paper, is to be published weekly in future, at $1.50 a year.

THOMAS STAYNER is informed that we know nothing whatever of the instrument to which he alludes, nor where it can be procured.

WE call the attention of vineyardists to the report upon the grape crop, in another column, and solicit reports from other localities.

THE Wisconsin State Agricultural Society has "Resolved that, hereafter, all games of chance of any kind, even those apparently harmless, be excluded from the fair grounds."

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

SMILE WHENEVER YOU CAN.

BY KATE CAMERON.

When things don't go to suit you,
And the world seems upside down,
Don't waste your time in fretting,
But drive away that frown;
Since life is oft perplexing,
'Tis much the wisest plan
To bear all trials bravely,
And smile whene'er you can.

Why should you dread to-morrow,
And thus despoil to-day?
For when you borrow trouble,
You always have to pay.
It is a good old maxim,
Which should be often preached—
Don't cross the bridge before you,
Until the bridge is reached.

You might be spared much sighing,
If you would keep in mind
The thought that good and evil
Are always here combined.
There must be something wanting,
And though you roll in wealth,
You must miss from your casket
That precious jewel—health.

And though you're strong and sturdy,
You may have an empty purse—
And earth has many trials
Which I consider worse—
But whether joy or sorrow
Fill up your mortal span,
'Twill make your pathway brighter
To smile whene'er you can.

CURRENT COMMENTS.

Marriage of Christine Nilsson.

The marriage of Miss Nilsson has been announced. "Love laughs at locksmiths," it is said, but in Miss Nilsson's case she smiled on a locksmith's grandson and love won her. There was a great gathering at Westminster Abbey of notables and the London *elite*. The effect inside the grand old Abbey was brilliant; bright-colored dresses and brighter glancing eyes illuminated every part of it. There were plenty of celebrities, too, to stare at, such as the American Ambassador, and Baron Brunnow, and the Marquis of Lorne, and Mdlle. Titiens, and Mr. Mapleson, and Sir Julius Benedict. At last the organ struck up an air of Handel's, "Guardian Angel, oh! protect her," and then the choristers and clergy slowly advanced up the aisle, the choristers singing the German chorale, "Now thank we all our God." Dean Stanley walked first before the bride, who leaned on the arm of Count Sleinbach, Secretary to the Swedish Embassy. The fair Christine looked pale, and a little anxious, but very lovely. There were five bridesmaids, who wore white muslin flounced skirts, and tunics of aqua-marine-colored satin, trimmed with pink, and had blush roses in their hair. The service was performed in the middle of the choir. Before the address a marriage chorale was sung by the choir, and after the benediction the organ pealed out "The Wedding March." Then the procession came back, and Madame Ronzaud, who looked less pale than at the beginning, acknowledged the salutations of her friends in the sweetest manner as she passed along. We give an illustration of the bridal party as they left the church.

England, the United States and Japan.

There has been a ludicrous little flurry among the foreign representatives in Japan. Mr. Watson, the new British Charge d' Affairs in Japan, announced that he would not be received by the Mikado unless that dignitary rose to receive him, contrary to previous custom. He got the French and Russian representatives to back him up in this demand. The United States representative, Mr. Shepard, refused to join the British lion, though urged to do so; on the contrary, he gave the Japanese Government to understand that he recognized its right to regulate such ceremonies as it chose, suggesting, however, that if it would relieve it of any embarrassment, he would be the first to receive the voluntary proffer of the compliment coveted by the Briton. Japan took the hint, an interview was arranged, the Mikado rose at the approach of Mr. Shepard and Admiral Jenkins, and remained standing during the interview. When the Briton heard of this he was wroth, and sought to establish the fact that he was co-operating with Uncle Sam to secure him this recognition. But he had to take it back. Uncle Sam is a "good fellah" with the Mikado, and John Bull isn't!

Personal Politics.

The Rural New-Yorker says—and it means it, too—that the personalities of the present political campaign are a disgrace to the country and to the American people—especially to American journalism. We have looked for something high-toned, dignified, impartial and independent in the so-called "independent journals." But, alas! we do not find neither dignity or "high tone," with a few rare exceptions. And when we descend to partisan papers, a still worse state of things exists. The personal outrage is not confined to editorials. It crops out disgustingly in some of the illustrated papers. The writer of this is not in sympathy with Senator Sumner in his position in this campaign; but he is not in sympathy, either, with the outrageous cartoon in a recent illustrated journal founded on remarks of his that were honorable, in reference to the man who once assaulted him in the United States Senate. We like humor, and recognize the telling effect of Nast's and Morgan's cartoons when legitimately applied; but we condemn, with emphasis, any such distortion of the best utterances and qualities of a man, and any such appeal to the passions of men, or any such attempt to revive animosities which should be buried in oblivion, as is found in the cartoon to which we refer. As we have said before, it is a bad cause which cannot triumph without employing such personal and disgraceful agencies.

The Press Law of Russia.

Heretofore, authors of books and reviews in Russia were required to deposit a copy with a court of law, which had the right to stop the issue if an accusation could be based on its contents, showing that it was a violation of a distinct clause of the criminal code. Recently, however, the censorship is placed in the hands of the administrative authorities, who are solely guided by what they may think of the general purport and tendency of the book, and can suppress it without regard to any law. This is the "free press" of Russia! Is this an example of her progress in liberal ideas?

Princess Louise Girl School.

The Princess Louise recently married the Marquis of Lorne. Under her patronage a school has been established in England, for girls, which is said to be the best ever devised in that country. The defects of feminine education in England are asserted by official authority, to be "want of thoroughness and foundation; want of system; slovenliness and showy superficiality; inattention to rudiments; undue time given to accomplishments, and these not taught intelligently or in any scientific manner." It is the object of the Princess' school to correct these defects and "train the girls for the practical business and duties of life." We trust this distinguished indorsement of practical education will have its influence not only among English but American mothers, for the defects above enumerated of feminine education in England, also obtain in this country and need correction here.

An International Language Needed.

The fact that the United States Navy Department is about adopting the code of signals used by the merchant vessels of foreign nations, and that the Treasury Department is considering the propriety of urging upon Congress the importance of some general enactment in regard to its adoption by our Merchant Marine, and that it is now so difficult for American vessels to communicate with foreign vessels because of a dissimilarity in signals, suggests another topic equally important. Our intercourse with foreign nations, even the most remote, suggests the importance of a common language. We happen to know one American who has long been engaged upon such a work, and the result is a language for which it is claimed by those who have most carefully examined it, philological completeness and simplicity. It is called "Alwato," and is the work of Stephen Pearl Andrews.

An Electric Week.

The past week has been a remarkable one in the East for the exhibitions of electric power which have occurred. There have been repeated auroral displays, but the roll of thunder and freaks of lightning have been grand and fearful beyond comparison. The air has seemed full of electricity. Balls of it have traversed railway tracks, played hide-and-seek about railway engines, danced in and out of telegraph offices, winked and blinked like demons in the faces of those who would sleep, while the reverberating roar of thunder accompanying, has helped to intensify the impression this phenomenal week has left upon the minds of those who have experienced the prostration from the great heat which has accompanied these phenomena.

The Telegraph and the Japanese.

It is said the lower classes in Japan are afraid of the telegraph. They cannot comprehend it, and think it a device of the devil (But what do they know about the devil?)—that the wires are coated with the blood of young women, and that the census now being taken is for the sole purpose of finding out the number of available Japanese maidens whose blood will do for telegraph purposes. It would be interesting to know just what qualities the Japanese suppose to belong to their maidens' blood, that it should give such power to a wire coated with it. Is it magnetic? And does contact with their maidens thrill and shock them like electricity?

The Large Telescopes of the World.

The comparative size of the large telescopes of the world, are—London, 22 inches telescopic aperture; Chicago, 18½ inches; Cambridge, Mass., 15 inches; Pulkova, Russia, 15 inches. Now, Leander J. McCormick, Chicago, Ill., has ordered of Clark & Son, Cambridgeport, Mass., one to be 26 inches, larger than any now existing. It is to be placed in an observatory to be erected by the donor at Lexington, Va., in connection with the Washington and Lee College. It is said that the same firm have received an order for an instrument the same size as the McCormick, from the United States Government.

THE MARRIAGE OF CHRISTINE NILSSON.

A WESTERN WELCOME.

BY GEORGE W. BUNGAY.

LIKE the voice of many waters,
Shouting where wild echo starts,
And the sunshine longest loiters,
And Winter, like a dream departs,
A welcome comes to sons and daughters
Of our heartbstones and our hearts.

Where the sun in glory glowing,
Smiles on prairies broad and free,
Where the winds their trumpets blowing,
Sound their welcomes to the sea,
Where the Mississippi flowing,
Murmurs music merrily,

Comes a welcome palpitating
With pure hospitality.
Why in cities hesitating,
Crowded, pinched by penury,
Stay the poor, undeviating
From the path of poverty?

In the country fewer vices
Prey upon the rich and poor.
Like golden banners with devices,
Blossoms beckon, birdlings soar,
And the breeze, with breath of spices,
Whispers welcomes at the door.

Want never doles its stinted rations
In the broad land nature blest.
Hear the welcome salutations,
"Those that labor shall have rest!"
There is room for teeming nations
In the valleys of the West.

Our Story-Teller.

IDA WOODHULL;

OR, THE YOUNG MUSIC TEACHER.

BY ELIZABETH NEWTON.

"DEAREST mother, why are you so sad to-night?" said IDA WOODHULL, seating herself at her mother's feet and looking earnestly up in her face; "have you any new cause for anxiety? or, rather, tell me, has my marrying Mr. CARSON anything to do with it? Oh, you will not, you cannot, dear mother, add your entreaties to father's, and, contrary to those principles you have endeavored to instil, persuade me to marry one I can never love. Speak quickly, mother, and relieve my doubting heart."

"You have partly divined the cause of my care; but not all. No, dearest IDA, I too well know the many cares and anxieties of married life that require the most devoted affection to bear one through (for instance, the fearful change in your father) ever to wish you to marry, save from the purest motives."

Mr. WOODHULL was an extensive merchant in Philadelphia, and, marrying early in life, for many years enjoyed uninterrupted happiness. He had two lovely daughters—IDA and EMILY. When IDA was about ten years old, Mr. WOODHULL failed, and, being a man of strictest integrity, gave up everything to his creditors; so to satisfy those demands he gave up all he possessed. Fortunately, he had married an only daughter, whose property had been secured to her and her children—else had he found himself completly destitute. Mrs. WOODHULL owned a beautiful place a short distance from the city, and here they now retired. Mr. WOODHULL obtained a situation in a bank, so that once again they had every comfort at command, and for many years enjoyed health and happiness.

Shortly after this he was prostrated by a severe attack of congestive fever, and for many days seemed lingering between life and death; but having a strong constitution and excellent nursing, he soon regained his health. Alas for poor Mrs. WOODHULL, his mind was so impaired by illness as to entirely incapacitate him for business. This was not all; he had become petulent, suspicious, and unreasonable in all things. Well might Mrs. WOODHULL say it needed the strongest attachment to bear with him. This was the severest trial of all to this amiable woman, to find him whom she loved and reverenced so completely changed.

IDA had now attained to her nineteenth year, and added to her other accomplishments a highly finished musical education. Her principal charm was the expression with which she sung, touching the inmost cords of the heart, and not until she ceased were you aware of the spell that had bound you. She had a mind richly stored with knowledge, and being the constant companion of her inestimable mother, she had imbibed those high and holy principles which, based upon the Rock of Ages, no time can change. Such was IDA at the commencement of our tale.

It was at a small party she first became acquainted with Mr. CARSON, a rich Englishman whom she completely fascinated; he who had withstood the powerful attractions of the fashionable beauties of the day, at the age of forty was subdued by the magic of sweet sounds. From that time he became particulary attentive to IDA, never doubting he had only to offer himself to be most graciously accepted. Ida intuitively perceived the impression she had made, and, too honorable to encourage feelings she could never reciprocate, endeavored, as delicately as possible, to discourage his attentions. Judge then what must have been her surprise and vexation when her father bade her receive Mr. CARSON as her accepted lover. It was then IDA was made to feel the bitterness of that change which sickness had wrought. He that had formerly studied to gratify every wish of her heart, and at any time forego his own pleasure for that of his wife or daughters, now, in the embarrassments attending his situation, wished to sacrifice his daughter's happiness for that wealth which, having lost the means to obtain, he began to constder indispensable.

Now, all the energy of Mrs. WOODHULL'S character was called forth to restore peace and comfort to her household. She endeavored to reason with her husband, and by fond persuasion to win him over to her view of the subject, for she was fully determined that IDA'S warm affections and firm principles of truth should not become a sacrifice for wealth.

"So, Mrs. WOODHULL, you are resolved to uphold IDA in refusing one of the best matches of the day," said her husband as he impatiently strode up and down the breakfast room he had just entered.

"It may be, my dear," mildly replied Mrs. W., "that we only differ a little in the term *best*, and if you would consider a moment I am sure you would agree with me. In the first place Mr. CARSON is twice the age of IDA, and I do not think this inequality is calculated for happiness. Then he has a very great opinion of his superiority, as regards his standing in society, and as an Englishman; this, you will allow, will hardly suit IDA, who is truly American in every feeling. True, he has wealth, but can that buy the affections of the heart?"

"Very true, my dear, it cannot, but it will buy her everything else that she wants. Now, that Fall is fast approaching, I suppose her wants will not be few; and there is old DINAH asking for money, and POMP, too, will expect his new suit of clothes. I ask you, Mrs. WOODHULL, where am I to get the means to keep up such an establishment? No, madam, if you wish to display your wisdom you will, like CATO of old, part with your useless servants as soon as possible."

This was a trying moment to Mrs. WOODHULL, for these old servants had belonged to her mother. DINAH had been her nurse, as also her children's, and when she offered them their freedom, long years before, their answer was, "No; we will live and die with you;" how then could she part with them? She pondered these things in her heart, but remained silent as she generally did when her husband became thus excited for she knew the mood would soon pass away, and he would be happy and contented until again aroused by some petty contradiction.

In the meantime IDA had not lost one word of the conversation, but so busy was she with her own thoughts that she was not conscious her father had left them until aroused from her revery by her mother asking of what she was so intently thinking.

"Oh! dearest mother, I have such an excellent plan in contemplation, if you will only sanction it: but it needs your approbation to give me the necessary courage to execute it. Do you remember LYDIA SOUTHMAYD—how fond she is of music yet how difficult it is to make a player of her? The other day, when I was playing for her, she threw her arms around me and said, 'If I only had you for a teacher, I am sure I should soon learn.' Her father said he would give any money if she could play like me. Now, mother, dear, don't think I am vain of my acquirements, for whenever I feel inclined to be uplifted by superiority, I remember old Mr. LAWRENCE'S remark of how grateful I ought to be to my Heavenly Father for giving me the power to contribute so much to the enjoyment of others while also possessing so useful an accomplishment. And why may I not now turn it to our advantage? If I take LYDIA as a pupil, I may get her sister also, and, through them, several others. Then see how comfortable we shall be; we can take care of DINAH and POMP, and I need not annoy father any more by asking for money. Speak, mother, and say you approve of my plan, that I may go at once to Mr. SOUTHMAYD'S and try what success I will meet with."

Mrs. WOODHULL remained silent for some time. At last she said:

"I have no objection to your proposition—but I am afraid, my dear child, you have not well weighed the consequences of this first step in life. You will no longer be sought and admired as the fashionable Miss WOODHULL, but henceforth sink to the level of those who support themselves—be looked upon simply as a music teacher—I mean in the eyes of the world. Now, IDA, do you think you can endure this?"

For some moments IDA was silent. At last she looked up to her mother, her face glowing with enthusiasm, and said:—"I trust, dearest mother, not to find many such among my friends, but if I have only been valued for my possessions, and not for what I am, I shall not be a loser by the operation: so my resolution is not shaken by looking on the dark side of the picture."

"Then go, my love, and may you be successful in your undertaking."

IDA tied on her bonnet and, kissing her mother, sped on her way toward the city, buoyant in spirits imparted by a hope and trust in the world natural to the young.

"Congratulate me, dear mother," said IDA, as a few hours after she entered her mother's sitting-room, her cheeks glowing with the exercise of walking, and her eyes sparkling with happiness. "Congratulate me upon the success of my mission. I found Mr. SOUTHMAYD in search of a teacher for a young ward of his. When I mentioned the subject to him he seemed so much pleased you would have thought it was I conferring a favor instead of himself. So you see I am to commence on Monday with three pupils. Now am I not fortunate?"

Her mother embraced her with tears in her eyes, and said she hoped she would never have cause to repent her generous purpose. And did she? We shall see.

IDA commenced with her young friends, and in a short time had the satisfaction of finding them rapidly improving; she had also added several pupils to her number, so that she was enabled to gratify, to the full extent, her generous nature.

And did IDA find the world as she had pictured it? Alas—for poor human nature we are compelled to answer—no. There were many of IDA'S acquaintances who never saw her when they met—others gave a patronizing nod to the music teacher; but a few of whom she had not much thought in the days of her prosperity, now extended the hand of friendship to her who had so nobly bore a change of fortune. The dereliction of her friends mused IDA many a pang; but her heart now warmed and opened toward the few, and she now considered them as among God's gifts.

IDA had now become so much attached to her young pupils that teaching was rather a recreation than a task—particularly did she enjoy the hours with the young SOUTHMAYDS. One morning she had given them a piece in which each was to take a part. It was a beautiful trio, commencing with a short solo, until each joining in, formed a harmonious whole. At first it was quite difficult for MARY to commence at the right time, when LYDIA would burst forth into a merry peal of laughter, and the next moment make a mistake herself; but IDA, patient and persevering, at last accomplished her undertaking. After repeating the song several times they were enabled to go through it without a mistake. It was just as IDA had commenced it for the last time, that Mr. SOUTHMAYD entered the adjoining parlor with a young friend.

He no sooner caught the sound of IDA'S voice, than he paused to listen in rapt attention. When they had concluded he turned to Mr. S., and said, "I presume that two of these voices belong to your daughters, but whose is the divine solo?"

Mr. S., smiled and replied: "I beg, HOWARD, for your mother's sake, you will not be falling in love with it, for the owner is only a music teacher."

For a instant young HOWARD changed countenance, then ingenlously answered, "My dear friend, I candidly acknowledge. I have changed my mind upon the only subject of difference between us."

EUGENE HOWARD belonged to one of the wealthiest and most aristocratic families in Virginia, and had imbibed from his mother all her pride of birth and consequence. Mr. SOUTHMAYD and his father had been bosom friends when boys, and their friendship remained unimpaired by the lapse of time. It was with great uneasiness, then, that Mr. S. had observed the folbie of young HOWARD, and had endeavored, as opportunity offered, to combat it. It was with unfeigned pleasure he now heard the acknowledgment of his error, and begged him to relate how the wonderful change had taken place.

"You may rember when I left Philadelphia last Summer, that I was bound for the Springs, full of anticipated pleasure. I could not forget your warning, that if I did not overcome my mistaken pride of birth and circumstances, I should certainly become the prey of some designing fortune hunter. At the springs I had a pretty fair field to test the truth of your principles, for those I met were of all classes. To commence, then—for I was in earnest—I entered my name as Mr. Nobody-of-any-consequence, and I was allowed to pass in and out without creating the least sensation. This was rather mortifying at first, but I was far better enabled to make my observations. Among the visitors I observed one young lady who particularly interested me. She was not handsome, but I noticed those addressing her did so with the greatest deference. I inquired her name, and found, to my astonishment, she was a Miss L—— of New York, not at all famed for wealth, but exercising her good judgment in thinking for herself. Not being governed in her opinion of others by their wealth or fashion, her independence of character had given her considerable consequence. I soon obtained an introduction, and she helped to rid me of many follies. One evening, as we sat conversing together, we overheard a conversation between two young ladies, who did not perceive our vicinage. Their conversation was considerable service to me, and was to this effect:

"So, ANNA, the rich Mr. HOWARD is expected here soon. I have made up my mind to catch him, if I can."

"If he is that piece of pomposity, MARY, that I have heard him described, I wish you joy of your bargain. I do not believe that wealth ever brought the love of a noble heart, and that, in my opinion, is the only true riches—for that alone can never change. Mr. HOWARD may be a very fine young man, but I could never endure him if he is as proud as I have heard."

"I don't care a straw for his pride; he has wealth in abundance—that is all I want;" and they passed on.

For some time we remained silent. I then asked Miss L. if she did not believe in the nobility of family. She said:—"As far as my ancestry can transmit to me a name untainted by one act of dishonor, I am proud of my ancestry; but, as a true American, I bow to no nobility save that which GOD has planted in the soul. As for those who marry for aggrandizement, they rarely fail to make a wreck of happiness. I sincerely hope Mr. HOWARD will escape Miss MARY."

In a few days Miss L. returned to New York, where she shortly after married; and I now resumed my consequence as a wealthy Southerner. It was wonderful to watch the manœuvres of mothers, and, alas, of daughters also, to catch the fortune. Suffice it to say, I have determined never to marry, unless I am satisfied that affection, and not wealth, is the motive.

"I honor your resolution," said Mr. SOUTHMAYD, "And now, EUGENE, have on all your armor, for I am going to introduce you to the fascinating Miss WOODHULL."

As he spoke, he threw open the folding doors and ushered him into the rustic room. Great was IDA'S confusion at the introduction of a stranger, for she suspected he had been a listener. Mr. S., pitying her embarrassment, asked for one of his favorite airs, and IDA, soon forgetting all save the sentiment of the song, recovered her composure, quite unconscious of the sensation she was creating in the heart of young HOWARD. When she finished, the silence that followed was sweeter praise than the most studied applause. After an hour spent in agreeable conversation, IDA departed, having other engagements to fulfill.

Why is it now that IDA looks forward to her hours with the young SOUTHMAYDS with such pleasure? HOWARD had become quite an acquisition to their circle, occasionally accompanying them in some song, or taking a book with the ostensible purpose of reading, partly to watch IDA, strengthening unconsciously, his feeling of admiration for her into a deep and rooted affection.

And how fares it with poor IDA? Alas? she did not stop to analyze her feelings; conscious only of the pleasure she enjoyed in his society, she was innocently tightening the silken cord that bound her. But she was soon to awaken from her dream. One morning while IDA was awaiting the entrance of her pupils in the music room, young HOWARD entered with an open letter in his hand, and finding IDA alone, thus addressed her:

"I have just received a letter from mother requesting my return home. Allow me to thank you, Miss WOODHULL, for the many delightful hours I have spent in your society." As he spoke he kept his eye intently fixed upon her.

Poor IDA. She felt as though an arrow had entered her heart. A deadly paleness overspread her countenance, but true to her woman's nature, she endeavored to conceal her feelings; looking up with all the composure she could assume, caught the intent gaze of HOWARD, which sent the telltale blood mantling brow and neck, revealing that which she would willingly have hidden.

Why did young HOWARD'S face brighten. He felt he was beloved, and at once determined to seize the happiness presented. Taking IDA'S hand he respectfully asked permission to request it as a gift from her parents. Not until then did IDA truly realize how deep was her affection for HOWARD, but when she felt that for him she was willing to leave a mother so devotedly beloved, the feeling was too painful and she burst into tears. Her lover, fully sympathizing with her, endeavored to calm her agitation in which he was soon successful, and accompanying her home, had the satisfaction of being accepted by Mrs. WOODHULL as her future son-in-law.

Time now sped quickly on, and IDA was shortly to resign her happiness into another's keeping. Had she no doubt or fears? None. There was but one drawback to her felicity. In marrying she was depriving her mother of many luxuries to which she had been accustomed, but putting her trust in Providence that all things would be ordered aright, her bridal morn found her radiant in smiles, full of hope and trust in him for whom she was about to leave all else. After the ceremony, and as they were about to depart, Mr. HOWARD gave his wife a paper, telling her it was her wedding present. How IDA'S heart swelled with gratitude when she found it was a deed of gift, the income of which would enable her to make her beloved mother independent. Turning to her husband, she said: "How is it, dear EUGENE, you can give me this extravagant present? Mr. SOUTHMAYD said you were of an excellent family, but never conveyed the slightest idea of your being wealthy."

"You see, IDA, I had a mind to be loved for myself alone, and while I consider I have secured the highest prize I could desire, you may thank Dame Fortune for not turning the wheel around to you empty."

Now, gentle reader, shall we leave them, or take a peep behind the curtain after a lapse of five years? Here is Mr. H.'s description of his home—you shall judge for yourself. Writing to his friend he says: "I wish you could see IDA fulfilling her duties as the head of my household. She is kind and gentle, yet firm in her rule. There is not a servant on my plantation but looks upon her as almost an angel. As regards mother, she is a complete convert to wealth of affection and principle. If you would know anything of IDA as a mother, come and see her. I shall always bless the day when you made me acquainted with her."

Thus is it always! Those principles of truth and integrity which, if strictly adhered to, sometimes lead us through thorny paths, yet will ultimately bring us into green pastures, where flowers continually spring up to bless us as we pass on through life; but if neglected and lost sight of, for the sake of pomp and vanity, will as surely end in the wreck of happiness.

Ladies' Port-Folio.

TIRED MOTHERS.

A LITTLE elbow leans upon your knee,
Your tired knee, that has so much to bear;
A child's dear eyes are looking lovingly
From underneath a thatch of tangled hair.
Perhaps you do not heed the velvet touch
Of warm, moist fingers, folding yours so tight;—
You do not prize this blessing over-much,
You almost are too tired to pray to-night.

But it is blessedness! A year ago
I did not see it as I do to-day,—
We are so dull and thankless; and too slow
To catch the sunshine till it slips away.
And now it seems surpassing strange to me,
That, while I wore the badge of motherhood,
I did not kiss more oft and tenderly,
The little child that brought me only good.

And if, some night when you sit down to rest,
You miss this elbow from your tired knee;
This restless, curling head from off your breast,
This lisping tongue that chatters constantly;
If from your own the dimpled hands had slipped,
And ne'er would nestle in your palm again;
If the white feet into their grave had tripped,
I could not blame you for your heart-ache then

I wonder so that mothers ever fret
At little children clinging to their gown;
Or that the foot-prints, when the days are wet,
Are ever black enough to make them frown.
If I could find a little muddy boot,
Or cap, or jacket, on my chamber floor;
If I could kiss a rosy, restless foot,
And hear its patter in my home once more:

If I could mend a broken cart to-day,
To-morrow make a kite, to reach the sky—
There is no woman in God's world could say
She was more blissfully content than I.
But ah! the dainty pillow next my own
Is never rumpled by a shining head;—
My singing birdling from its nest is flown;
The little boy I used to kiss is dead!

[*Mrs. Albert Smith.*

PICTURES.

IT is rare, in these days of photographs, chromos, and engravings of all kinds, to see walls on which there is not some attempt at the display of artistic taste, or lack of taste, as the case may be. In some old farm houses, we still see the extremely proper-looking young ladies, with corkscrew curls and red cheeks, labelled "Rosa," "Matilda," or "Mary Jane." Or the lachrymose lady, leaning on a tombstone overshadowed by a weeping willow. Or the soldier boy, in the glory of new regimentals, taking an affectionate adieu of his lady love. Sometimes we find paintings in water colors, crayons, or oils, done by the lady of the house, whose blue roses and scarlet violets would drive a florist crazy. Or if her tastes incline to the ROSA BONHEUR style, we see nice little animals, which are so accommodating that we can call them dogs, sheep, cats, or pigs, just as we choose.

Steel engraving from magazines look very prettily in home-made or rustic frames. One of the prettiest I ever saw was simply a gnarled and knotty branch, bent around in an oval shape, the twigs trimmed off and the bark left on and varnished. Among the great variety of beautiful chromos every one can select something with which to beautify the walls of their homes. To be sure chromos are imitation of oil painting, and while I despise shams when they take the form of cotton lace, oroide gold, and Alaska diamonds, I am heartily glad of the invention of chromos, which bring the beauty of paintings to those whose limited means would not admit of the purchase of the originals.

We often see documents in frames which would be much better put away in drawers Masonic charts, family records, diplomas and marriage certificates.

It is a downright piece of selfishness for the head of the family to hang a masonic chart on the walls. It may be a satisfaction to him to look mysteriously wise over its signs and symbols, but to his wife who is compelled to have it before her eyes most of the time it is suggestive of nothing except the nights she has sat up awaiting the return of her liege lord from the lodge, and what woman wants to be continually reminded of them?

Some people have a fancy for adorning their walls with portraits of all the Presidents and Generals. Of course it is merely a matter of taste, but I am too tired of hearing the respective merits and demerits of GRANT and GREELEY discussed, to wish to contemplate either of their faces upon *my* walls. Perhaps, if I were supposed to be capable of voting, I might think differently.

Photography can make the dear faces of friends—"wanderers world wide," or waiting for us beyond the river—smile upon us every day from our walls, and sometimes, in dark hours, comforting us like their real presence.

In selecting pictures, remember there is nothing one tires of so soon as comic pictures of any kind, while a good landscape is a joy forever. GRACE R. BARTHOLOMEW.

A WESTERN writer describes a Dolly Varden dress as an animated old-fashioned window curtain thrown over a red brick wall.

A YOUNG lady has brought a libel suit against her mother, as the only means to get a mother-in-law.

"FIGURES won't lie," is not supposed to apply to a fashionable woman's figure.

How to prevent your wife from scolding you—Don't marry.

WHAT IT IS TO BE A WIDOW.

A WRITER in the Home Journal thus lovingly rebukes the flippancy and thoughtlessness of some young women: "'I think it must be a jolly thing to be a young widow!' I heard this remark the other day in a group of laughing girls. I think I remember saying such a thing myself in my girlish times. Do you know, girls, what it is to be a widow? It is to be ten times more open to comment and criticism than any demoiselle could possibly be. It is to have men gaze as you pass, first at your black dress and then at your widow's cap, until your sensitive nerves quiver under the infliction. It is to have one illnatured person say, 'I wonder how long she will wait before she marries again?' and another answer, 'Until she gets a good chance, I suppose.' It is now and then to meet the glance of real sympathy, generally from the poorest and humblest woman that you meet, and feel your eyes fill at the token, so rare that it is, alas! unlooked for. It is to have your dear fashionable friends console you after the following fashion.—'Oh, well, it is a dreadful loss. We knew you'd feel it dear.' And, in the next breath, 'You will be sure to marry again, and your widow's cap is very becoming to you.'

"But it is more than this to be a widow. It is to miss the strong arm you have leaned upon, the true faith that you knew could never fail you, though all the world might forsake you. It is to miss the dear voice that uttered your name with a tenderness that none other could give it. It is to hear no more the well-known footsteps that you flew so gladly once to meet. To see no more the face that to your adoring eyes seemed as the angels of God. To feel no more the twining arms that folded you so lovingly, the dear eyes that, looking into your own, said plainly, whatever it might seem to others, yours was the fairest face earth held for him. It is to fight with a mighty sorrow as a man fights with the waves that overwhelm him, and to hold it at arms' length for awhile only to have—in the hours of loneliness and weakness—the torrent roll over you, while—poor storm-driven dove—you see no haven."

MENTAL POWER OF THE SEXES.

REGARDING this oft-discussed question, Professor Maudley says: "It has been affirmed by some philosophers that there is no essential difference between the mind of a woman and that of a man; and if a girl were subjected to the same education as a boy, she would resemble him in tastes, feeling, pursuits and powers. To my mind it would not be one whit more absurd to affirm that the antlers of the stag, human beard, and the cock's comb are effects of education; or that by putting a girl to the same education as a boy she could be sexually transformed into one. The physical and mental differences between the sexes intimate themselves very early in life, and declare themselves most distinctly at puberty. If the person is hermaphrodite, the mental character, like the physical, participates equally in that of both sexes. If either sex is mutilated, it approaches in character the opposite sex. While woman preserves her sex, she will necessarily be feebler than man, and, having her special bodily and mental characters, will have, to a certain extent, her own sphere of activity. When she has pretty well divested herself of her sex, she may then take his ground and do his work; but she will have lost her feminine attractions, and probably also her chief feminine functions."

WOMAN'S GROWTH.

THERE is a period in the early life of every true woman when moral and intellectual growth seems for the time to cease. The vacant heart seeks for an occupant. The intellect, having appropriated aliment requisite to growth of the uncrowned feminine nature, feels the necessity of more intimate companionship with the masculine mind to start it on its second period of development. Here, at this point, some stand for years, without making a step in advance. Others marry and astonish, in a few brief years, by their sweet temper, their new beauty, their high accomplishments, and their noble womanhood, those whose blindness led them to suppose they were among the incurably heartless and frivolous.

THIS is one of the newest descriptions of a Dolly Varden:—"The starboard sleeve bore a yellow hop-vine in full leaf, on a red ground, with numbers of gray birds, badly mutilated by the seams, flying hither and yon in wild dismay at the approach of a red and black hunter. Calvary Mission infant class was depicted on the back, the making up of the garment scattering truant scholars up the sides and on the skirt, while a country poultry fair and a group of American hunting dogs, badly demoralized by the gathers, gave the front a remarkable appearance. The left sleeve had on it the alphabet in five different languages."

A YOUNG LADY at Council-Bluffs, being informed by her "feller" that he intended to cease his attentions, cowhided him round the room, and, as he sprang through the open window, told him, with a parting lick, that that would teach him to be more careful for the future not to trifle with a gentle and loving heart.

FIRST RUFFIAN:—"Wot was I hup for, and wot 'ave I got? Well, I floor'd a woman and took her watch, and I've got two years and a flogging." Second ruffian:—"Ha! I flung a woman out o' the top floor winder; an' I've on'y got three months." First ruffian:—"Ah, but then *she was yer wife!*"

Reading for the Young.

LITTLE SORROW.

AMONG the thistles on the hill,
In tears sat Little Sorrow;
"I see a black cloud in the West,
'Twill bring a storm to-morrow.
And when it storms, where shall I be?
And what will keep the rain from me?
Woe's me!" said Little Sorrow.

"But now the air is soft and sweet,
The sunshine bright," said Pleasure,
"Here is my pipe—if you will dance,
I'll wake my merriest measure;
Or, if you choose, we'll sit beneath
The red rose tree, and twine a wreath;
Come, come with me," said Pleasure.

"O, I want neither dance nor flowers—
They're not for me," said Sorrow,
"When the black cloud is in the West,
And it will storm to-morrow!
And if it storm, what shall I do?
I have no heart to play with you—
Go! go!" said Little Sorrow.

But lo! when came the morrow's morn,
The clouds were all blown over;
The lark sprang singing from his nest
Among the dewy clover;
And Pleasure called, "Come out and dance
To-day you mourn no evil chance;
The clouds have all blown over!"

"And if they have, alas! alas!
Poor comfort that!" said Sorrow;
"For if to-day we miss the storm,
'Twill surely come to-morrow—
And be the fiercer for delay!
I am too sore at heart to play;
Woe's me!" said Little Sorrow.

[*Marian Douglass, in Our Young Folks.*

HOW TOM HARTLEY GOT HIS WISH.

BY LAURA SOUTHGATE.

EVERYBODY in the town of S—— seemed to be astir. All the boys in the town were, I'm sure. For several days, large printed bills, with pictures of lions and tigers, had covered the fences here and there, all around; and these were to tell that a grand circus was coming. Beside the wild animals, which were in great cages, there were three elephants; then there were ponies, with monkeys to ride them, and trained horses, and the funniest looking fellow of a clown. Altogether, there was a great deal to see, and it's no wonder the boys were half crazy over it; I'm sure I should have been myself.

Well, very soon the music was heard, and how delightfully it sounded that bright, sunshiny morning! "There! there! they're coming," cried ever so many of the boys at once, and in a moment they saw the cloud of dust way down the road.

"I wonder if the lions ever get out?" said little BOB EMMETT, as they all stood watching.

"I guess we'd all run if they should," said DICK EATON.

"Pooh! run! I wouldn't," said TOM HARTLEY. "I'd just like to see them running round loose—would'nt it be jolly!"

"I guess you'd be scared if the elephant should step on you," said BOB.

"Scared! now what do you think I'd do? I'd just push his foot away, and I'd give him a great kick; and I guess he wouldn't step on me again."

Now, TOM always talked in this grand way, and the boys thought he must be very brave. It's true one time he fluttered a red shirt among the geese, and when the old gander flew at him TOM ran screeching like a loon. Then another time he roared lustily because he thought a cow chased him.

Well, pretty soon the circus came up, with the elephants, and the ponies, and the horses, and the great cages; but the best of all, was the great gilded car, drawn by eight elegant horses. It certainly was the most splendid carriage that ever was seen—all gold and crimson—the boys thought that none but kings ever had such magnificent carriages to ride in.

Pretty soon the circus company came to the great tent which had been put up for them, and the elephants, and ponies, and car, and everything else went in, and then no one could see anything more but by paying twenty-five cents and going to the performance. But all the boys had saved their money, and the next day they all went.

There they were, I don't know how many of them, and they managed to get up on a platform, and all the people of the town were sitting round on seats, one above another.

"Oh, see! see! they are going to begin," said BILL MYERS, as some men dressed in velvet and covered with spangles, came from behind a curtain. Then the ponies came out with monkeys riding them. And the monkeys were dressed in funny dresses, and the funny things they did were more than I can tell. The clown was there, too, and his clothes were striped red and white and blue, and he had great patches of paint on his face. The drollest antics he cut up that were ever thought of. The boys shouted and roared with laughter, and everybody else did, too.

Pretty soon the elephants did some very wonderful things, and then, at last, out came the trained horses, and then the clown was funnier than ever.

One of the horses was named "Dan," and he could jump over high bars and walk on his hind legs, and I don't know what all else. Then there was "Beauty," and he could waltz, and when the clown turned his back a moment, "Beauty" would pull his cap off; and then the clown would scold him, and "Beauty" would get down on his knees to beg pardon, and then, pretty soon, he would lie down and pretend he was dead.

Then next came "Hector;" he was a great tall horse, and he could jump very high, and snatch down a flag in his mouth.

Well, all this time the boys upon the platform had been screaming and making a great noise. They called out to the clown, "Here, Mister, give us a ride," and all sorts of saucy things they had to say.

Pretty soon a monkey was brought and put on "Hector's" back. "Oh! don't I wish *I* could ride him," said TOM HARTLEY.

"Wouldn't you be scared?" said JACK WILSON.

"Scared pooh! I shouldn't be scared if he jumped as high as the top of the tent. The higher he jumped the better I'd like it."

Just at that minute "Hector" kicked up his hind legs and threw the monkey across the tent. But the monkey picked himself up and ran after "Hector" and caught him by the tail. Then he commenced striking him with a stick. It didn't hurt the horse at all, but he pretended that it did, and so he ran around the ring as fast as he could go.

But it happened he stopped just under the platform where the boys were, and as the clown came up, BOB EATON threw a piece of melon rind at his head, and JACK WILSON reached down with a long stick he had, and poked the cap off his head. Then the boys all shouted and stamped their feet, and screamed out all manner of rude things again.

The clown looked very angry; he picked up his cap, but no sooner had he put it on his head again, than TOM HARTLEY reached down with *his* stick to poke it off. But TOM'S stick was not long enough, and in reaching down, over TOM went. He fell to the ground and hurt himself a good deal, but he hadn't time to think of that, for quick as a wink, the clown picked him up and put him on "Hector's" back.

"Oh! Oh! Oh!" roared TOM, as the clown cracked his whip, and "Hector" commenced running round the ring at an awful gallop. TOM thought he should die; he tried to hold on, but he screamed so loud "Hector" was frightened, and ran a great deal faster than ever he did with the monkey. The clown put up the bars, and "Hector" gave a great jump and went over them. It almost took the breath out of TOM. I really think then the clown might have taken him off. But he didn't; he clapped his hands and "Hector" understood what he was to do; so he kicked up his hind legs, and TOM went—not exactly sky high, but over the horse's head and almost across the tent.

Of course it hurt TOM a great deal more than it ever did the monkey, for the monkey was such a little fellow, and then he always knew when "Hector" was going to throw him, and could give a jump. But there lay poor TOM on the ground, screaming louder than ever he did in his life before.

Then the clown took up a long iron rod that had a hook at the end of it, and he went up to TOM. "Oh, see," cried the boys, "he's going to lick him."

The clown came up to where TOM lay sprawling on the ground, and he stooped down and looked at him, as though he saw some very curious thing that he never had seen before. He looked in such a funny way, that it made everybody in the circus laugh. Then the clown put the hook right through the waistband of TOM'S trowsers and held him up.

All the people shouted and laughed again, for TOM looked just like a crab stuck on the end of a poker. And so the clown carried him over, and lifted him up to the platform.

Poor TOM! For my own part, I felt very sorry for him; but after that, he never was heard to say that he should like to ride on a circus horse, and he never again was known to teaze the clown.

News of the Week.

CURRENT TOPICS.

The Indian Peace Conference a Failure.

A DISPATCH has been received from a special correspondent writing from Cheyenne and the Arapahoe Agency, under date of August 9, says the proceedings of the so-called peace council with the Kiowas and other hostile Indians thus far appear to be a failure. The Kiowas are evidently disposed to make this pretense of friendship in order to secure the release of their chiefs. Santanta and Big Tree, who are now confined in the Texas Penitentiary.

Lone Wolf, the principal Chief of the Kiowas, made a speech in reply to Col. McIntosh, who had urged upon the Indians the absolute necessity, if they desired to free their chiefs, of living at peace with the whites, saying that he was ready to do all that was asked of him, but he must first have the soldiers removed, and until this was done the Kiowas would make no change in their way of living. He concluded as follows:

"I have listened to what the council has told me, and I believe the talk is straight, and the peace captains who have talked to me can, perhaps, make things satisfactory in Washington. When I was a boy, our country extended from the Rio Grande to the Missouri, and I want this limit restored. What more can I say? I have already told you that all my young men are ready to travel on the white man's path, but I want a good country that all can live in; and now nothing remains to be said."

Moral Legislation.

THE Prairie Farmer says:—The last Legislature of Illinois exhibited commendatory zeal in the line of moral legislation. It gave us the best liquor law the State has ever had. It legislated rigorously for the suppression of gambling houses, and it went for those who had a penchant for betting on elections in the following wholesome manner:—"Whoever bets or wagers any money, property, or other valuable thing, upon the result of an election which may be held under the constitution or laws of this State; or bets or wagers money, property or other valuable thing upon the number of votes which may be given to any person at an election, or upon who will receive the greatest number of votes at an election, or agrees to pay any other person money, property or other valuable thing, in the event that any person shall or shall not be elected, or shall receive a greater number of votes than others, upon conviction thereof he shall be fined in a sum not exceeding one thousand dollars, or imprisoned in the county jail not exceeding one year, or both, in the discretion of the court." Now if these enactments remain a "dead letter" in the statute books, it will be the fault of the people. The law-makers have done their duty.

New York State Republican Nominations.

THE Republicans, August 21, held a State Convention at Utica, and nominated for Governor, Gen. John A. Dix; for Lieut.-Gov., Gen. John C. Robinson; for Congressman at large, Lyman Tremain; for Canal Commissioner, Reuben W. Stroud; for State Prison Inspector, Ezra Graves; Electors at large, Frederick Douglass, Emil Sauer, Stewart L. Woodford; for District Electors: 1st Dist., Geo. W. Curtis; 2d, S. B. Chittenden; 3d, H. B. Claflin; 4th, Matthew J. Perry; 5th, Wm. E. Dodge; 6th, Wm. Laimbeer; 7th, Frederick Kuhne; 8th, James W. Farr; 9th, Joel W. Mason; 10th, Salem H. Wales; 11th, David E. Smith; 12th, Sloddard Hammond; 13th, John C. Newkirk; 14th, Elisha M. Bingham; 15th, Minard Harden; 16th, Thomas Coleman; 17th, Isaac Mott; 18th, Henry R. James; 19th, Stephen Sanford; 20th, Boliver Radiker; 21st, Henry Spicer; 22d, Samuel Campbell; 23d, John F. Lyon; 24th, John H. Camp; 25th, Kidder M. Scott; 26th, Andrew D. White; 27th, Barney R. Johnson; 28th, Martin Butts; 29th, Geo. H. Sickles; 30th, Moses C. Richardson; 31st, Pascal P. Pratt; 32d, Nelson Norton.

Africa—Livingstone.

DR. LIVINGSTONE has been found and relieved by an American journalist, as all the world knows ere this. This is, of itself, an important event, but we are inclined to think that the outgrowth of this illustration of American enterprise will be increased attention to the vast resources of the African continent, and the occupation of this new field by civilization. The mystery which has enveloped the central regions of that continent are likely to be revealed speedily, if not by Dr. LIVINGSTONE, by younger men who will emulate him in his pursuit of knowledge and adventure. The vast accumulated wealth of Europe will find, sooner or later, fields for investment here. LIVINGSTONE'S urgent recommendations that colonies of Christians settle on the East coast of Africa, are quite likely to be acted upon, and we may not unreasonably expect to see the tide of European emigration flowing in that direction at no very remote day.

The Labor Reformers at Philadelphia.

A NATIONAL Labor Reform Convention was held at Philadelphia, Aug. 22, at which resolutions were passed expressing regret and disapprobation that their Candidates for President and Vice-President, had withdrawn from the canvass, and the suspicion that they had been influenced in their action by the mercenaries of Grant and Greeley. The Convention also resolved that under no circumstances would it support either Grant or Greeley. A committee of thirty was appointed to confer with the Louisville Convention as to the best means of carrying on the campaign against Grant and Greeley, and urge the nomination by that Convention, of Charles O'Conor for President and Senator Saulsbury of Delaware, for Vice-President of the United States.

The Unjust Judge.

JUDGE GEORGE G. BARNARD of the Court of Oyer and Terminer, New York City, has for some time been on trial before the High Court of Impeachment, in answer to charges made against him. There were, we believe, thirty-eight specific charges. It is unnecessary to state them. It is sufficient that the people of the State of New York, through their representatives, have removed this unjust Judge from his high and sacred office, and have disqualified him from holding any office of honor, trust, or profit in the State. The vote to remove was unanimous; the vote to disqualify was opposed by but two negatives. Thus has, finally, retributive justice asserted itself to punish and disgrace a man who used judicial power corruptly. It is well.

Disturbances in Ireland.

THERE has been, the past week, the wildest rioting in and near Belfast, Ireland, mobs destroying property to the amount of near $250,000. There is also great excitement in other quarters, and apprehensions of further outbreaks. Troops have been concentrated in the neighborhood. Lives have been lost, and for nine days the authorities seemed powerless to suppress the turbulence. It is the old story of faction against faction; of religious intolerance possessing the ignorant and bigoted, and, to some extent, of restiveness under the control of an obnoxious government.

Michigan Democratic Nominations.

THE Democrats and Liberal Republicans nominated the following State Ticket at Grand Rapids, Mich., Aug. 22: Governor, Austin Blair; Lieutenant-Governor, John C. Blanchard; Secretary of State, Geo. H. House; Treasurer, Joseph A. Holter; Auditor, Gen. Nell O'Hearon; Land Commissioner, Geo. H. Murdock; Attorney-General, Gen. Matthew H. Maynard; Superintendent of Public Instruction, Willard Stearns.

Tea Flowing Through the Suez Canal.

THE English Board of Trade have published statistics which show the rapidly increasing use made of the Suez Canal by ships engaged in the tea trade. In July, 1870, there were 711,000 pounds of tea passed through the canal; in July, 1871, there were 4,010,000 lbs.; in July, 1872, there passed 22,912,000 lbs. All of which proves that this route is rapidly being adopted, instead of that round Cape Horn.

Arkansas State Republican Convention.

AT Little Rock, August 22, the following State ticket was nominated by the Republicans:—Governor, Elisha Baxter; Lieutenant-Governor, V. V. Smith; Treasurer, H. Page; Auditor, Stephen Wheeler; Attorney-General, L. D. W. Youley; Superintendent of Public Instruction, J. C. Corbin, colored; Supreme Judge, E. J. Searle; Congressman at Large, John M. Bradley.

DOMESTIC NEWS.

The Prince of Wales has visited President Thiers. . A Statistical Congress is in session at St. Petersburgh.

SEMI-BUSINESS PARAGRAPHS.

A Small Payment Down and the balance in easy monthly payments, and the total amount only $50, are the terms of the New Wilson Under-Feed Sewing Machine, in every respect the best and most perfect machine in use. No man has any excuse for not presenting to his wife, mother or sister, one of these superior machines. The price is low, and he can have his own time to pay for it. When one considers the low price at which it is sold, and the fact that it has demonstrated its superiority over all the other machines by surpassing them in elegant work, and above all the terms on which it is sold, the wonder is that there is not a Wilson Sewing Machine in every home in the State. Salesroom at 707 Broadway New York, and in all other cities in the U. S. The Company want agents in country towns.

The Horse and His Rider.—It was a happy day for Horse and his rider when the MUSTANG LINIMENT was introduced as a cure for the external diseases and injuries of both. In the stable, the barn and the household this wonderful emollient is equally useful. If a horse is spavined, or foundered, or harness-galled, or afflicted with any other of the many superficial ills that equine flesh is heir to, the Liniment effects a speedy cure.

Facts for the Ladies.—Mrs. ROBERT CHALMERS, Detroit, Mich., has used her Wheeler & Wilson Lock-Stitch Machine constantly since 1861, doing her family sewing for nine persons, and general dress-making, without any repairs or breaking a needle. See the new Improvements and Woods' Lock-Stitch Ripper.

Watch No. 3,111,—Bearing Trade-Mark "Geo. Channing, Marion, N. J.," manufactured by the United States Watch Co., has been carried by me twenty-four months; its total variation from mean time being less than two seconds per month. O. B. ABBOTT, Coal Dealer, *Oriskany Falls, Oneida Co., N. Y.*

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Monday, Aug. 26, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,003,000	Meal, bbls	2,360		
Oats, "	555,800	Flour, "	48,380		
Wheat, "	276,000	Eggs, "	4,570		
Rye, "	23,700	Cotton, bales	2,310		
Barley, "	2,500	Hops, "	52		
Malt, "	44,000	Wool "	2,138		
Seed, "		Butter, pkgs	10,000		
Beans, "	430	Cheese "	70,450		
Meal, bags	200	Lard, "	600		
Peanuts "	2,080	Dried fruits, pkgs	735		
Pork, bbls	540	Cut Meats "	620		

Butter.—Receipts have been moderate for several days, and the demand has again used up everything clean that possessed table merit. The weather has turned favorable for transportation, and it is likely that supplies will increase from this time forward, as a large quantity of Western is known to have been held back while the weather was so detrimental. As before, a few hundred packages of low grades, rather above grease, can be placed where the buyer rules the bargain. In the steady competition to obtain the price of fine lots here and to arrive, prices for choice State and Western have worked up a cent or two; but this improvement does not represent what is understood as a commercial advance, as it is occasioned by the absence of stock for a day or two that always finds sale no matter what features attend the market. Pails are coming direct from Ohio. It is to be hoped that this method of packing can be made to pay. The old-fashioned favor with which pails are regarded by many would really help off a line of choice Western butter packed that way, when firkins are deemed too bulky. At all events, Western dairymen might as well have the benefit of what extra price can be realized on account of style of package, for many occasions can be pointed to where the dodge of putting Western in our near by pails has been resorted to in order to satisfy the whim of certain buyers.

The quotations are:—State pails, choice, 28@30c., other, 22@26c.; State selections, 27@29c.; good to prime lickins, 24@26c.; do. half tubs, 24@26c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 20@21c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.

Beans and Peas.—Some Eastern demand has been noticed for medium. The stocks of this description are moderate, and holders think they will be able to maintain current prices. Marrowfats are very dull. The W. I. markets are pretty well stocked, and but little shipping trade is expected. Prices are weak. Canada peas have been sold in bond at 90c. We quote Mediums, prime $3@3.10 per bushel; good do., $2.60@2.75; fair do., $2.30@2.50; common do., prime marrowfats, $3@3.10; good do., $2.90@3.05; common and fair do., $2.20@2.50.

Broom Corn.—Trade is small as we are close upon the new crop. The nominal prices are 3@5c. for red; 5@6c. for green; and 7@8c. for hurl.

Cheese.—For the first day or two in the week the arrivals were so small that the market was almost at a stand for want of stock. Shippers were on the market, their orders from the other side giving them increased margins. This was entirely unexpected, as the feeling was in view of the unprecedented shipments to the other side that the market there would be fully stocked for a time. Receivers steadily advanced prices with the supplies placed on arrival. At the close we are beginning to have something like the receipts early in the month, the totals for Saturday marking 32,000 boxes. Still this amount is entirely worked up; 11c. have been paid for fancy factories. The turn of the market creates some speculative feeling in the interior, and large purchases have been made there. We quote State factory fine at 13½@14c.; good do. 13@13¾c.; common do. 12c.; State dairy, 12½@13c.; for prime, fair do., 11½@12¼c.; Ohio factory, prime, 12½@13c.; good, 11½@12c.

Cotton.—There is considerable inquiry and with moderate stocks, prices are ⅜c. higher.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	17	17¾	17¾	17¾
Good Ordinary	19¾	19¾	20⅛	2 ⅛
Low Middling	21	21⅛	21⅛	21⅛
Middling	22	22⅛	22⅛	22⅛
Good Middling	24	24⅛	24⅛	24⅛

For forward delivery the market is weak. Latest sales on the basis of low middling are at 20¾c. for Sept.; 19¾c. for Oct.; 18¾c. for Nov.

Dried Fruits.—Trade in full parcels still in abeyance. A few small lots are selling. Blackberries have been received sparingly and the price has advanced to 11c. New peeled peaches are offering at 11@15c. for good, with one or two inferior lots on the market at 12c. New Southern apples are held at 5@7c. without trade, and sliced at 9@10c. Old unpeeled peaches are held firmly. We quote quarters at 5@5½c., and 6@6½c. for halves. New cherries bring 21@22c., in a small way. New plums, 13@15c. State apples, quarters, 1871 crop, 8½@9½c.

Eggs.—The arrivals have averaged about 800 lots daily. This supply has been insufficient, and prices have advanced to 25c. for Western. The markets at other points are relatively higher, and this has turned stock from this market. We quote Western at 25c.; State and Penn., 25@26c.; Jersey, 26c.

Flour.—Concessions have been made to the extent of 50@75c. per barrel, but this fails to induce trade of consequence. Exporters orders, as a rule, name very much lower prices than those current. With the increasing receipts of new, holders are anxious to realize.

Superfine State	$5 50	@	6 15
Common extra do	6 60	@	6 65
Good to choice do	6 70	@	6 80
Fancy do	6 85	@	7 60
Superfine Michigan, Indiana, Ohio, Iowa	5 50	@	6 15

Fair to very choice extra Minnesota	7 00	@	9 00
Common to fair extra St. Louis	7 10	@	9 25
Good to choice do	9 30	@	10 25
Extra Southern	7 00	@	9 25
Good to choice do	9 30	@	12 25
Rye, common to fine	4 25	@	5 10
Corn meal, Western	3 25	@	3 35

Fresh Fruits.—The various distributing points of the city have been daily crowded with fruit, peaches predominating. Prices are and have been very irregular, and anything quoted at our outside figure had to be choice in size and quality. Medium sized peaches, but good, are selling to-day in lots at 10@20c. per basket. Crates are about done with. Sellers can now pack for their own shipping orders. Some extra fruit sold early in the week at $2.25@2.50 per basket; but with so large a stock in, it is now difficult to obtain above $1 50 for fine Del. Crawfords or Mixons. New Jersey stock has a wide range, and is likely to until Delaware falls off in supply. We quote peaches, Del., fancy, per basket, 90@$1.50; common to good, 40@70c.; New Jersey, 25c.@$1. Apples are pressing less heavily upon the market and are better; the various pippins sell at $1.75@2.25, when choice; common river and sweet, 75c.@$1 25. Plums are abundant, and preservers bought them early in the week by the 100 bbls. at $3 per bbl. To-day they are quoted higher, with improved condition. The range is $1.50@5.50 including gages, Damsons and other. Grapes are in regular supply, and sell well for so early a season: Del., per lb., 10@11c.; Concords, 6@8c. Ives, 6@8c.; Hartfords, 4@6c. Whortleberries, per bush., $2.50@3. Melons are in demand; a large daily sale to restaurants uses up a portion of the stock that used to depend upon ordinary retail trade. Pears are receiving some attention, with very good qualities of Bartletts offering; Bartletts quoted at $8@10 for choice, and $5@6 for rough; other pears range at $2@6 per bbl. Peanuts bring $1.90@2.25 for Virginia; $2@2.10 for Wilmington do.; common Wilmington, $1.10.

Grain.—In wheat the break of the "corner" at Chicago created an unsettled and depressed feeling here early in the week. Prices declined fully 10c. per bushel. At current prices there is a moderate trade for export, but holders are disposed to meet the market promptly as the increasing receipts by rail indicate that some considerable portion of the stock held at Chicago is being hurried forward in this market. We quote No. 2 in store, $1.49@1.53; No. 1 do. $1.51@1.57; Western, $1.49@1.63; amber do., $1.63@1.65; white do., $1.57@1.85. Rye is inquired for at 73c. for prime Western. Oats are lower with increasing arrivals. Sales at 41½@43½c. for Western; 35@37c. for new do.; 45@50c. for Ohio; 46c. for old mixed State; 51c. for old white State. Barley malt quoted at 25@35c. Corn is lower under large arrivals, but closed steadily with a brisk export inquiry. We quote at 59@61½c. for steamer lots, Western mixed; 61½@62c. for sailing vessels do.; 62@63c. for yellow.

Hay and Straw.—The arrivals of new are larger, and prices are lower. Hay, old shipping, $1.10; retailing do., $1.30@1.45; new shipping do., $1@1.05; new retail do., $1.30@1.65; Clover, 80@85c.; Straw, long rye, $1@1.05; short rye do., 75@85c.; oat do., 70@80c.; oat new do., 60@65c.

Hops.—Trade is small. One or two bales new have arrived from Madison Co., and sold at 15c. Holders here claim to be in a position to sustain present prices on the old crop. The reports from the new crop are that the quality will be good with growers stating that the yield will be light, comparatively.

New Yorks, growth 1871, 20@58; Eastern do., 25@35c.; Western do., 22@30c.; Yearlings do., '70, 10@30c.; Olds do., '69, 10@15c.; Bavarians, 65@75c.; English, 60@65c.

Provisions.—There has been a steady advance in pork with a fair business. Sales for August $14.25; for September $14.20, sellers option, and $14.50 buyers' option. Old mess has sold quite freely at $13.50. Prime mess, nominal at $12@12.50. Extra prime $11. Beef has sold sparingly at old quotations per bbl. and tes., and old Texas bbls., have been closed out at $6. New beef hams begin to come forward, selling at $3 per bbl. Bacon is in large demand for Winter months at 7¾c. for long and short clear together. Spot is scarce and firm at 8¼@8½c. for long clear; 8¾@8¼c. for short do. Cut meats are dull; trade has slackened up greatly and prices are too high for dealers to stock up to any extent at this advanced season. City smoked hams, 14@15c. Pickled hams, 12½@13½c. Smoked shoulders 8½c. Lard is very firm at 9½c. Spot or September new lard, 9c. City lard has sold largely at 8¾c. for August and 9c. for September. Tallow quiet at. 8¼@8¾c. for country, and 9¾c. for City. Stearine, 10¾@10½c. for tes.

Poultry and Game.—The arrivals are lighter and prices are held a little higher. We quote Turkeys, N. J., 21c. ₱ lb; Western, do., 20c. ₱ lb; Spring chickens, Western, 40@50c. ₱ pair; N. J., do., 12c. ₱ lb; Fowls, N. J., 16@18c. ₱ lb; Western do., 15@17c. ₱ lb; Roosters, 9@10c. ₱ lb; Ducks, N. J., $1@1.25 per pair; young do., 75c.@1 per pair; Western do., 75c.@$1 per pair; Geese, N. J., young, $2.50@2.75 per pair; Western do., $1@2 per pair. Dressed at 22@24c. for prime chickens; 18@20c. for prime fowls; 22@23c. for prime turkeys.

Seeds.—Grass are selling in a small way at 9¾c. for Ohio clover; 10@10¾c. for Indiana and Michigan do.; 10¾c. for State. Timothy at $3.25@3.50.

Tobacco.—Shippers operate with confidence and have purchased large lines of all descriptions at full prices. Virginia, common to good lugs, 7¾@8¾c.; low to medium leaf, 9@10¾c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.	Heavy Grades.
Lugs	8¾@ 9 c.	9 @ 9¾c.
Common to medium leaf	9¾@10	9¾@10¾
Good do	10¾@11	11 @12¾
Fine do	11¾@12½	13 @14

Pennsylvania do medium		12 @14
fair		15 @17
fine		18 @22
Ohio, running lots		10½@15
Wisconsin and Western		8¾@10

Vegetables.—Potatoes are lower under increasing arrivals. Sweet potatoes at $5@6.50 per bbl., Del., and $5@6 for Virginia.

Early Rose, bbl., $2@2.25; Jackson White, $1.50@1.87½. Tomatoes, 37@62c. Squash, per bbl., 75c.@$1, white and yellow. Cucumbers, ₱ bbl., 25c.@$1. Turnips, ₱ bbl., $1.50@2. Large Dutch cabbages, $10@12. Green corn, ₱ 100, 75c.@$1.25. Marrow squash, ₱ bbl., 75c.@$1. Onions, ₱ bbl., $2.75@3.

Whisky—Is dull and weak at 92½@93c. for Western.

Wool.—Trade has fallen off, the slow sales for manufactured goods being the reason. We quote fleeces at 55@58c. for New York and Mich.; 54@62c. for Ohio; 55@58c. for Indiana and Wisconsin; 50@56c. for Illinois; 40@47c. for Texas fine; 30@35c. for do., coarse. Pulled, 55@65c. for extra.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., August 24, 1872.

THE market at Little Falls for the week ending August 24, was brisk, with an advance in prices over sales of last week.

The delivery of farm dairies amounted to 1,025 boxes, and sales were made at 10@12c., the bulk going at 11@11½c.

Factories were largely represented, the offerings amounting to over 12,000 boxes, from 8,000 to 10,000 having been sold.

We give the leading transactions as follows:

Mohawk Valley	12	Flat Creek	12⅝
Lasserville	12	Herkimer	12½
Ludue	12⅜	Newport	13
Ladueville	13	Newport Hill	12⅜
Danube Cold Spring	12⅜	J. D. Ives	13
Charleston Union	12⅜	Zoller	12⅜
Baker	12⅜	Keys	12⅜
Avery & Ives	13¼	Johnston Cross Roads	12
Billinger	12⅝	Manheim	13
Brocketts' Bridge	13	Manheim Center	12⅜
Buell	13	Manheim Turnpike	13
Caryl	12	Mohawk	12⅜
Cayadutta	12½	Mother Creek	12⅜
Cook & Ives	13¼	Nichols	12⅜
Dairy Hill	12⅜	Palmo's Hollow	12⅜
Dairy Valley	11⅜	Palatine Union	13
Dunkle	13	Root	13
Empire	12⅜	Russell	12⅜
Fatonville	13	Reyder	12⅜
North Fairfield	13⅜	Smith Creek	13
Old Fairfield	13⅜	Snell's Bush	13
Fairfield Association	13	Schuyler	12⅜
Fords Bush	12⅜	Stone Arabia	13
Getumn	12⅜	St. Johnsville	12
Herkimer Co. Central	13	Stratford & Salisbury	13½
Herkimer Co. Union	12	Top Notch	13
Hill	12⅜	Warren	12⅜
Franklin	12	Vanhornsville	12⅜

The weather has been intensely hot and sultry, with frequent showers, making it difficult to secure the oat harvest. The afterfeed in meadows is very luxuriant, and we are likely to have a good yield of milk during the coming autumn.

LIVE STOCK MARKETS.

NEW YORK, Aug. 24, 1872.

No very important changes have occurred during the week. The run of cattle was the largest ever known, but a great many of them were poor, being largely made up of Texans. The weather was hot for most of the time, so that butchers were compelled to use ice freely. At best considerable meat was spoiled. Fruits continue very plenty and cheap, but with all these there is an unusual call for beef at this season of the year. Sheep and lambs are rather improved. Hogs did better up to yesterday when there was ½c. decline. Just now there is a favorable turn in the weather and the prospects are more cheering.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	9,767	18	2,934	28,177	36,270
" last week	8,533	112	3,187	25,115	33,368
Average last year	7,187	88	2,501	25,132	26,177

With the largest supply ever known, it is a matter of surprise that cattle keep so nearly at the old prices. In fact, prime beeves are doing rather better, several lots selling at 13c. This is because there were so few fat cattle. Texans could only be sold by reducing the prices to 7@8c. for the bulk. Even then it was almost impossible to induce butchers to take the green lots, such as cost about $32 per head in Chicago, or less than was paid for them in Kansas. In contrast with these lonmature cattle of 4½ cwt., were some Texans fed two winters in the States, 7 cwt., and fat, which were sold at 10½c., or about the price of ordinary natives. The trade was very slow during the entire week, all save the best stock declining about ½c. ₱ lb, and many cattle were left over each night. Perhaps there is a little firmness at close though a drove of 121 very good 8 cwt. Ky., cattle was sold at 12½@13c., with two cars, Ill., 6¾ cwt., are 11½c. The Texan cattle trade is largely overdone. It is possible that well fed native cattle will be so scarce that our butchers will be compelled to take the "long horns." If so, they will do it under protest, for Texans never will be favorites.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb	13 @ 13½	13 @ 13½
Good to prime	12 @ 12¾	12 @ 12¾
Medium	10½ @ 11½	11½ @ 12
Poorest grade	7 @ 9½	7 @ 10
Average sales	11¾ @ —	11¾ @ 12

Milch Cows.—These are doing better, being helped in two ways, viz., a lighter supply and quite an advance in milk, owing to its souring so much in transit to the city. Both milkmen and private persons who keep one or two cows are now in the market to buy, while dealers are anxious to secure lots and take them out among the Long Island farmers and milkmen, to sell again. Light as are our receipts, a portion of these were in transit from the West to farmers along the Harlem Railroad. Prices range from $30@45 for poor; $50@70 for medium, and $70@75 for good milkers.

Veal Calves.—All kinds sell quicker and for more money. The glut, with very low rates one week ago, caused farmers and country dealers to hold up, so that just now there is something of a scarcity. Very few grass calves are received. They sell at 3@5c. per lb., or $4@6 each. Thin milk veals are worth 7@8c.; fair to good, 9@9½c., with small sales of extras at 10c. A large lot of Bucks County, Pa., calves, 135 lbs. sold at 9½c. as they run.

Sheep and Lambs.—The demand is better, and lambs especially have advanced. They are worth 7c@8c. for common to scarcely medium; 8½@9c. for fair to good, and 9¾@9¾c. for prime. A few choice 66 lb. Delaware County, N. Y., lambs sold at 10c. Sheep are worth 4c. for bucks; 5@6c. for thin to medium sheep, and 6¾@6¾c. for good to prime. The average of 9,305 head sheep and lambs was $5.44 per head.

Hogs.—These close dull, city dressed declining to 6¾@6¾c., only pigs selling at 6¾c. Several cars of live have been sold at 5½@5¾c., but 5¾c. is a full price for the best at close.

LATEST.—Monday, August 26, 4 P. M.—Beeves.—Arrivals to-day, 154 cars at Communipaw, 98 at 100th St., and 28 at Weehawken, making 4,500 for the present market. There is no change in the prices of fat cattle, save that some extras reached 14c. Thin go off slowly, Texans at 8@9c.; nothing very poor offering. Everything is selling.

Sheep and Lambs.—Arrivals for to-day's market, 15 car loads at Communipaw, 8 at 48th St., and 5 at 40th St., making 5,750 on sale. Sheep are doing very well, quite a good many fat C., of 95 lbs. selling at 7c., or ½c. better than on Saturday. Lambs go at 9@10c. for fair to prime.

Hogs.—Receipts to-day, Sunday included, 46 car loads at Communipaw and 33 at 40th St., making 8,500. None were offered alive. Dressed sold at 6¾@6¾c.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

The Indiana & Illinois Central

Railway Company's

FIRST MORTGAGE 7 PER CENT.

SINKING FUND GOLD BONDS,

FREE OF GOVERNMENT TAX.

An East and West Air Line of 152 Miles, Indianapolis, Ind., to Decatur, Ill.

This road passes through a belt of the best settled and richest agricultural and mineral country of Indiana and Illinois, averaging thirty miles in width, with no other East and West railway built or projected through it. It crosses, in Parke and Vermillion Counties, the rich

BLOCK COAL FIELD

of Indiana, which alone will supply an ample business.

Thirty miles through Douglass County, Illinois, just completed, opened and paid for.

Whole Western Division, Montezuma to Decatur, eighty-five miles, to be finished in 1872. Grading nearly done and materials (except iron) already procured; bridge over Wabash ready for superstructure.

Eastern Division, sixty-seven miles, partly graded, and to be finished in 1873.

$1,300,000 IN CASH ALREADY EXPENDED ON THE ROAD, AND $1,500,000 REMAINING TO BE CALLED FROM TWENTY SUBSCRIBERS, AMONG WHOM ARE W. H. GUION, SIDNEY DILLON, JAY COOKE & CO., CLARK, DODGE & CO., J. SELIGMAN, VIBBARD, FOOTE & CO., AND PAUL S. FORBES OF NEW YORK; BENJ. E. BATES OF BOSTON; HENRY LEWIS OF PHILADELPHIA, AND G. M. PULLMAN OF CHICAGO.

Besides its right of way the Company owns 32,000 acres of land, chiefly in Indiana, of which 2,000 acres are the best BLOCK COAL LANDS. It has also SUBSCRIPTIONS IN BONDS AND CASH from counties, towns and individuals of $700,000.

The road connects at both terminal with the most important THROUGH RAILWAY LINES of the West, and being by many miles shorter than any other line, will be indispensable to them, while its local business alone will insure good dividends on its stock.

Bonds $1,000 each, payable to Union Trust Company, Trustee or bearer, July 1, 1901, in gold coin. Coupons, also in gold, payable Jan. 1 and July 1, in New York, or at Union Bank of London, at fixed exchange of £7 sterling.

SINKING FUND of 2½ per cent. a year on gross earnings, to be invested by Trustee in Bonds at not exceeding par.

For sale at 90 and accrued interest, by the Financial agents of the Company,

A PRIME INVESTMENT

AT A

LOW PRICE.

THE

CHICAGO

AND

CANADA SOUTHERN

FIRST MORTGAGE SINKING FUND 30 YEARS'

7 PER CENT. GOLD BONDS

AT

90 AND ACCRUED INTEREST.

INTEREST PAYABLE APRIL AND OCTOBER AT UNION TRUST CO.

This road is the western link in the new AIR LINE from BUFFALO to CHICAGO, and runs from the Detroit River to Chicago in nearly a straight line.

The road is a part of the same line as the Canada Southern, and is being built by the same men, viz., Milton Courtright, John F. Tracy, David Dows, Wm. L. Scott, Henry Farnam, R. A. Forsyth, John M. Burke, M. L. Sykes, Jr., all directors either in the Chicago and Northwest or the Chicago, Rock Island and Pacific; Geo. Opdyke of the Midland Road; Sidney Dillon, Daniel Drew, John Ross, David Stewart, Samuel J. Tilden, Kenyon Cox, and other prominent railroad men.

The road, like the Canada Southern, will have steel rails (sixty pounds to the yard) throughout; is practically straight and level, much shorter, and can be run more quickly and with greater safety than any other road connecting Buffalo and Chicago.

Twenty-five miles are finished and running; seventy-five miles more are so far advanced as to be finished by Jan. 1, and the entire road will be completed during the ensuing year. Steel rails and ties for one-half the entire road have already been purchased.

The builders of the road control enough of its Chicago feeders to obtain for it a profitable business from the start, having projected the line to accommodate existing business, and having seen the necessity for another trunk line between Chicago and the Atlantic seaboard, located expressly with the view of obtaining the cheapest transportation practicable.

The branch lines will make the shortest connections between Chicago and Toledo, and Chicago and Detroit, as well as between all these points and Buffalo.

The Canada Southern Bonds, in every particular like these, were eagerly taken, the last of them several weeks ago, by the best class of investors, and were on the market a shorter time than any other railroad loan of like amount for years past.

The proceeds of these bonds will complete the entire line, and we recommend them with the same confidence as we did the Canada Southern, and regard them as in every way a choice security.

— Richfield Springs is the gayest of all New York watering places.

— There are said to be 428,850 more males than females in this country.

— The whortleberry crop in Massachusetts and New Hampshire is very large.

New Publications.

FRUIT RECORDER AND COTTAGE GARDENER

A MONTHLY of 16 pages, at **$1.00** per year, edited by A. M. Purdy—a life-long fruit grower and flower fancier, having now under cultivation at Palmyra, N. Y., and South Bend, Ind., two hundred acres of fruits alone. Big silly pictures, fashion plates novels, politics, &c., find no room in it, but it is *strictly* devoted to FRUIT GROWING AND HOME'S ADORNMENT. It's high moral tone and rich store of practical, original and copied matter (from some 20 exchanges) endears it to all. To see a copy is equivalent to subscribing. Specimen copies *free*, or an excursion trip of four months (Sept. to Dec.) for only 25 cents. Don't judge it to be of no account because printed in an inland town and the editor a *working, practical* fruit grower, but try it four months, and *be satisfied*. Address,
A. M. PURDY, PALMYRA, N.Y.

SMALL FRUITS! SMALL FRUITS!

THE largest stock in the United States. Plants pure and unmixed. Wholesale and Retail List *free*; also the SMALL FRUIT INSTRUCTOR, a 64 page pamphlet—tells how to plant, grow and market all kinds of Small Fruit—price, post-paid, 25 cents. Private terms to Agents, or those desiring to sell locally, free to all applicants. Parties have realized $100 to $200 in one or two week's time selling our Fruits, while others have got their own plants *free* by selling a few to their neighbors. Address, A. M. PURDY, PALMYRA, N.Y.
or PURDY & HANCE, SOUTH BEND, IND.

A CHOICE LIST of SINGING BOOKS
For the Coming Musical Season.

The Standard! By L. O. Emerson of Boston, and H. R. Palmer of Chicago. Price, $1.50; $13.50 per doz.
First edition exhausted. *Next* edition already sold. This Church Music Book, the joint product of the best talent of the EAST and the WEST, will be used immensely, both WEST and EAST. Good for Chorus Classes. Good for Quartette Choirs. Good for Conventions. Good for Societies and Singing Schools. Send at least for specimen copy, which will be mailed, for the present, *post-paid*, for $1.25.

(NOTE.—Just published, Strauss's New MANHATTAN WALTZ, first played, with great success, in New York. Price $1.)

THE HOUR OF SINGING! By Emerson and Tilden. Price $1.
Good, practical, interesting HIGH SCHOOL SINGING BOOK. Already highly approved and widely used. Excellent also for Seminaries.

SPARKLING RUBIES! Sabbath School Song Book. Price 35 cents. None who try it can help liking it.

PILGRIM'S HARP! For Social Meetings. 60 cents. Very convenient size. Moderate price. 250 tunes. Well selected music.

GOLDEN ROBIN! For Common Schools. 50 cents. An established favorite, which has a large sale.

☞ Music and Music Books mailed, post-free, on receipt of retail prices.

"FAMILY FAVORITE!"

THE WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

AUDACITY.

Swell.—"Ah! good morning, Ah; going to market, Ah; you look charming, I assure you."

Lara.—"Dear me, FRANK, I'm *so* glad I've met you—I wanted some one to carry my basket for me."

INVESTING MONEY.

THE NORTHERN PACIFIC RAILROAD COMPANY, through its Financial Agents, offers for sale its First Mortgage 7-30 Gold Bonds. They fall due in 30 years, bear 7 3-10 per cent. gold interest, payable semi-annually, are exempt from U. S. tax to the holder, and are secured by first and only mortgage on

1. The Railroad, its Right of Way, Franchise, Rolling Stock, and other Property.
2. Its Traffic or Net Earnings.
3. A Government Grant of Land averaging on completion of the Road about 23,000 acres per mile of track.

The Road follows what is known as the Valley Route to the Pacific, flanked most of the way by an excellent country, and is assured in advance of a vast and profitable traffic, which already awaits its completion. The work of construction is steadily and satisfactorily progressing; the settlement of the adjacent country and the building of towns keep pace with the advance of the road; a large body of the Company's lands is already in market, and the proceeds of sales will constitute a Sinking Fund for the redemption of the Company's Bonds, which are convertible at 110 into the Company's Lands at market prices.

Believing that these Bonds, both in point of safety and profitableness, constitute such a security as judicious investors can approve, we recommend them to the public. Government Bonds and all marketable securities are received in exchange at current quotations without cost to the investors.

JAY COOKE & CO.,

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY, ST. LOUIS, Mo., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

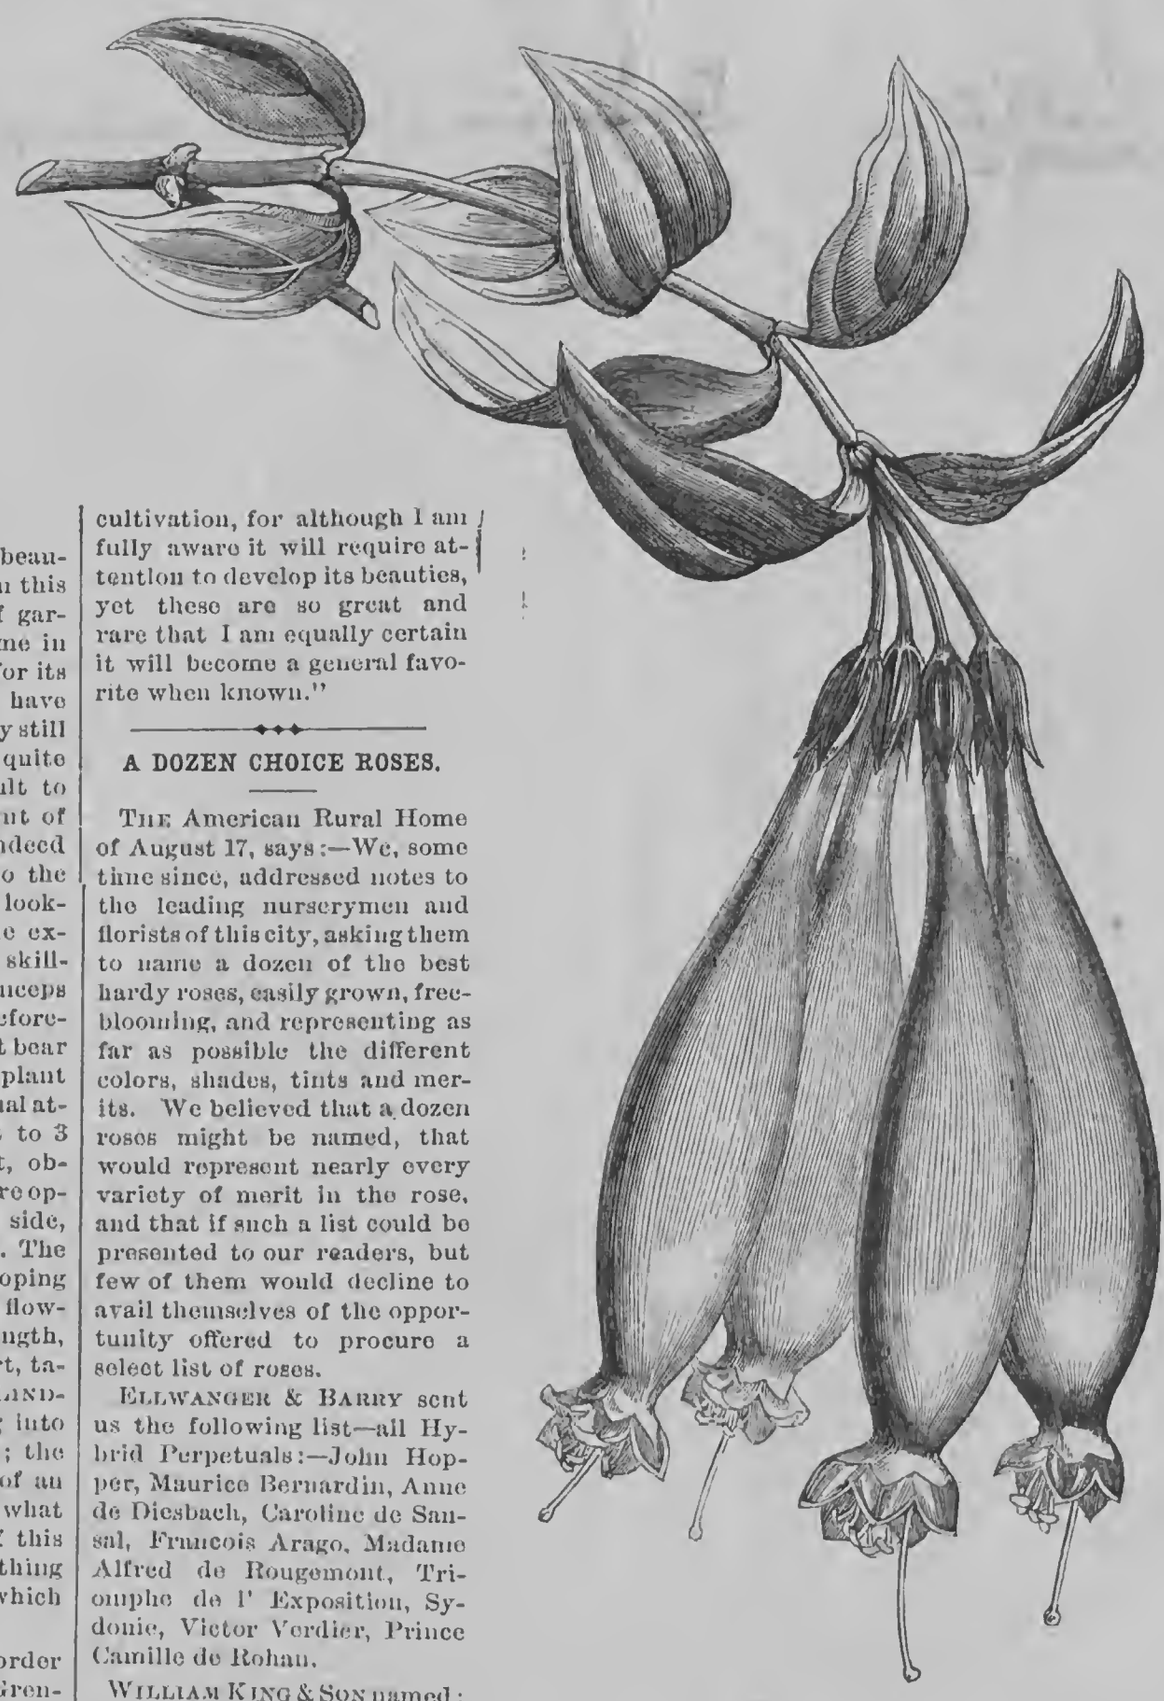
LISIANTHUS PRINCEPS.

EXPERTO CREDE, in Cottage Gardener, thus apostrophizes this flowering plant: "Rejoice, my brother gardeners, and all amateur lovers and growers of plants, for this gem is likely soon to be seen in our collections. The late Dr. LINDLEY was so enraptured with it, that in describing it he said, "This must be one of the noblest plants in existence. Its long flowers are rich scarlet, melting into yellow at either end, with an emerald green 5-lobed limb; they hang in clusters of four from the ends of the drooping twigs, covered with firm deep green opposite leaves. According to Mr. LINDEN, it naturally forms a tufted shrub 2 to 3 feet high, growing at the entrance of the table land of Pamplona at the height of 10,000 or 11,000 feet above the sea.

"Many years ago I was shown specimens of this plant, and, oh! how I watched, and waited, and longed to see it in our gardens! But my hopes were doomed to disappointment, and I much question if there have been any plants in Europe for these twenty years. I attended the sale at Mr. Stevens's rooms, hoping to be able to secure a little seed early, but as the whole was disposed of in one lot, I was doomed to disappointment, still I had the satisfaction of again seeing flowers of this beautiful plant, thus proving it to be the true species.

"I have long known and grown the beautiful Lisianthus Russellianus, but even this species is unknown to the majority of gardeners and amateurs with whom I come in contact; theirs, however, is the loss, for its large, clear blue, tulip-shaped flowers have few equals, and I think I may safely say still few superiors; and although I am quite ready to admit it is somewhat difficult to manage, yet it fully repays any amount of labor and trouble bestowed upon it; indeed we owe the loss of many fine plants to the fact that plants which require little looking after have crept into favor to the exclusion of those which really require skillful treatment. Now, although L. princeps belongs to the same genus as the beforementioned L. Russellianus, it does not bear the slightest resemblance to it. The plant is perennial, of shrubby habit, and usual attains a height of about 2 or from that to 3 feet. The leaves are somewhat short, oblong-lanceolate, and acuminate; they are opposite, and deep green on the upper side, whilst below they are somewhat paler. The blooms are produced in terminal drooping racemes three or four together. The flowers are tubular, from 5 to 6 inches in length, about an inch broad at the largest part, tapering at each end; the color, as Dr. LINDLEY has stated, is rich scarlet, melting into golden yellow, both at base and apex; the calyx is about half an inch deep, and of an intensely vivid green. Just imagine what the effect of a well-grown specimen of this plant would be; I cannot imagine anything that I know in the vegetable kingdom which would be more enchanting.

"Lisianthus princeps belongs to the order *Gentianaceæ*, and is a native of New Grenada, where it grows at some 10-11,000 feet above the level of the sea, and consequently in a somewhat cool atmosphere; therefore it must not under cultivation be subjected to excessive heat, but a sheltered and cool place in an intermediate house will be found to suit it well. The soil should be composed of loam, peat, and sand in about equal parts, and the pots must be well drained. These plants in general do not like large shifts, but rather prefer repotting three or four times in the course of the season. During the early part of summer water abundantly, but as Autumn approaches gradually withhold the supply, whilst during the winter months it must be administered very sparingly; at the same time care and discretion must be exercised to prevent the plant suffering and becoming unsightly. The growth commences as soon as the flowers fall, and during the early part of the growing season water should be given freely. I hope soon to see this plant again in cultivation, for although I am fully aware it will require attention to develop its beauties, yet these are so great and rare that I am equally certain it will become a general favorite when known."



LISIANTHUS PRINCEPS.

A DOZEN CHOICE ROSES.

THE American Rural Home of August 17, says:—We, some time since, addressed notes to the leading nurserymen and florists of this city, asking them to name a dozen of the best hardy roses, easily grown, free-blooming, and representing as far as possible the different colors, shades, tints and merits. We believed that a dozen roses might be named, that would represent nearly every variety of merit in the rose, and that if such a list could be presented to our readers, but few of them would decline to avail themselves of the opportunity offered to procure a select list of roses.

ELLWANGER & BARRY sent us the following list—all Hybrid Perpetuals:—John Hopper, Maurice Bernardin, Anne de Diesbach, Caroline de Sansal, Francois Arago, Madame Alfred de Rougemont, Triomphe de l' Exposition, Sydonie, Victor Verdier, Prince Camille de Rohan.

WILLIAM KING & SON named: Anne de Diesbach, Caroline de Sansal, General Jacqueminot, General Washington, John Hopper, Madame Victor Verdier, Madame Alfred de Rougemont, Maurice Bernardin, Prince Camille de Rohan, Sydonie, Victor Verdier, and Triomphe de l' Exposition—all Hybrid Perpetuals.

WILLIAM S. LITTLE named:—Baltimore Belle, Queen of the Prairies, Mad. Plantier, Persian Yellow, Princess Adelaide, Salet, Perpetual White, La Reine, Belle Normande, General Washington, Mad. Alfred de Rougemont, and Sovenir de Count Cavour.

H. E. HOOKER & BRO., named the following seventeen, unable to condense any further:—Madam Plantier, Persian Yellow, Salet, Perpetual White, Madam Alboni, Baronne Prevost, Caroline de Sansal, Emperor Napoleon, Gen. Jacqueminot, Gen. Washington, John Hopper, Jules Margottin, La Reine, Mad. Boutin, Mad. Victor Verdie, Pius IX., and Sydonie.

FAIRCHILD & ROCKFELLOW named:—Baltimore Belle, Queen of the Prairies, Mad. Plantier, Princess Adelaide, Perpetual White, Baronne Prevost, Caroline de Sansal, Dr. Arnal, Gen. Jacqueminot, Gen. Washington, La Reine, and Lord Raglan.

FROST & CO., present; Anne de Diesbach, Baronne Prevost, Caroline de Sansal, Chas. Lefebvre, Duc de Rohan, General Washington, John Hopper, La Reine, Madame Victor Verdier, Pierre Notting, Rosine Margottin, and Triomphe de l' Exposition.

WENTZ and FISHER present; Baronne Prevost, Caroline de Sansal, Victor Verdier, Duchesse de Sutherland, Deull de Prince Albert, Gen. Jacqueminot, Gen. Washington, La Reine, Leonide Leroy, Panache d'Orleans, Portland Blanche, and Viridiscens.

Here we have seven lists by as many nurserymen of long experience, naming in all forty-one varieties. Let us examine them carefully, and see how much accord we can find among them.

Gen. Washington has the suffrages of all	7
Caroline de Sansal	6
La Reine	5
John Hopper	4
Victor Verdier	4
Gen. Jacqueminot	4
Baronne Prevost	4
Anne de Diesbach	3
Madame Alfred de Rougemont	3
Triomphe de l' Exposition	3
Sydonie	3
Madame Victor Verdier	3
Madame Plantier	3
Perpetual White	3
	14

Here we have fourteen, two more than our dozen, which three or more agree to include in the best dozen. Of those receiving three votes we have three white ones—Madame Alfred de Rougemont, Madame Plantier and Perpetual White—the first a Hybrid perpetual, the second a Hybrid China, blooming but once in the season, and the third a Perpetual Moss. Perhaps we had better drop the second. Madame Victor Verdier being of a rose color, and somewhat resembling Victor Verdier of the same color, and class, we may drop that, and then our list of a dozen would stand: Gen. Washington, Caroline de Sansal, La Reine, John Hopper, Victor Verdier, Gen. Jacqueminot, Baronne Prevost, Anne de Diesbach, Madame Alfred de Rougemont, Triomphe de l' Exposition, Sydonie, Perpetual White.

We will give brief description of these dozen, premising that authorities differ in the names which they apply to various tints and shades.

General Washington. Brilliant, rosy carmine, approaching to scarlet; very large and fine form; free bloomer.

Caroline de Sansal. Clear, delicate flesh color, becoming blush; large and full.

La Reine. Brilliant, glossy rose color; very large; cupped and beautiful.

John Hopper. Deep rose, with crimson center; very large and fine form.

Victor Verdier. Clear rose, globular, fine form, and free bloomer.

General Jacqueminot. Rich fiery crimson; abundant bloomer. One of the best for bouquets, but casts its petals too soon for a garden bloomer.

Baronne Prevost. Deep rose, very large and fine; free bloomer; vigorous grower.

Anna de Diesbach. Bright rosy carmine; beautiful form; very large and double.

Madame Alfred de Rougemont. Pure white; large and very double; profuse bloomer.

Triomphe de l' Exposition. Rich deep red, shaded with crimson; flowers in large clusters.

Sydonic. Light pink; very large and full; fine in Autumn.

Perpetual White. Pure white; blooms in clusters.

All but the last of these are Hybrid Perpetuals, a class blooming at intervals, from June to November. The last is a Perpetual Moss, a class that is also hardy, blooming at intervals through the season. Those who wish to add to this list another Perpetual Moss, will find Salet a good one. Those who wish *climbers* will find Baltimore Belle and Queen of the prairies, the best of the class. And those wishing a yellow rose will find Persian Yellow the best of that class.

FLORICULTURAL NOTES.

Amaranths in Texas.—I want to tell you about an Amaranth I raised this year, and see if you think, like me, that it is pretty good "for high." It was eight feet and a few inches high; the main spike was over thirty inches long, and yielded nearly a pint of seed. Besides this, there was a lateral at every leaf, each bearing a spike, the longest of which was sixteen inches, and the shortest six inches—in all nineteen side branches, the seed of which would have measured as much as the main spike. I don't know the variety; it is probably a *Celosia*. I obtained the seed from a Chickasaw Indian.—DICK HORSON, *Sherman, Texas.*

WE think if any one beats this Amaranth they will have to go further South than Texas.

Leaf for Name.—I have a plant that came from seed this year, and has grown about two feet high. The seed looked like Hollyhock; so did the first leaves resemble those of that plant; but this appears to be a shrub—not herbaceous. The inclosed leaf is a specimen of its foliage. Can you name it?—A READER.

IT is probably a species of Mallows, really related to the Rose of Sharon, but we cannot give the name without seeing a flower as well as leaf. Send us both when the plant blooms.

Balsams.—C. J. S., Fowler, N. Y. The flower you sent us is a single balsam, and not camellia flowered.

Pomological.

JONATHAN APPLE IN THE SOUTH.

DR. SWASEY, in Rural Southland, says:—"The Jonathan Apple is a marked illustration of the general distrust with which all Northern emanations are received, however much their intrinsic excellence may entitle them to our esteem. We have been practically acquainted with this variety for a quarter of a century in the South, and have studied its character closely as developed in other sections, and have yet to see or hear the first objection made to it as a Fall and early Winter fruit. So far as a large and long experience goes, we believe it succeeds just as well in the South as it does in the West, and better than it does in New-York, where it originated. Of course it ripens earlier here—in September, or about the time of the Roxbury Russet, Hubbardson, Nonsuch, and Taunton; and, like the first two, requires good soil and culture to bring out all its good qualities. One chief reason of its unpopularity, no doubt, is that in the nursery the tree is a miserable grower; but in the orchard it makes a fine tree, and bears large crops of sound, handsome, long keeping (after gathering) fruit, which for quality is excelled by no other variety with which we are acquainted."

POMOLOGICAL GOSSIP.

Packing Choice Pears.—The *Gardener's Monthly* gives this advice in the packing of choice pears for transportation:—A pear should be put in clean paper and then laid in dry moss. An inch at least of thickness of moss should be between each pear, and after the pears are all in, then the box filled tightly with moss. If one decays then the moisture is quietly absorbed by the dry moss, and the others are not affected. Besides, the moss gives an elasticity—breaks the shock of the blows of the baggage smashers, who seldom deliver a box without first 'knocking the spots' out of it."

Col. Cheeney Strawberry.—We notice Mr. PURDY commends this highly, saying—"A more valuable variety we have never yet known, judging by two years' experience." Is it as good as the Colfax commended by the same gentlemen—which was good for nothing?

Field Crops.

TOBACCO VS. THE FARM.

ALTHOUGH the experiment proves that wheat does well when it follows tobacco, yet the latter is, unquestionably, a violent exhauster. The reasons for wheat succeeding well after it are patent. The land is generally well manured for the tobacco, and shows the effect the second year. The ground is well prepared by plow and hoe for the tobacco, and all land well broken shows the effect of thorough preparation.

Again, the grass and weeds are kept down until it is too late for them to attain much growth, and the broad-leaved and low plants shade the ground. The suckers, which grow up after the main plant is cut, afford considerable manure as a green crop, since they are plowed under, generally, when they are in a green, fresh state. But it is doubted whether any well-informed person would contend that the little that is taken up from the air by these suckers, and returned to the soil, will equal or bear even a respectable ratio to the entire mass of nutriment which the crowded main plants have extracted from that soil.

Let it be noted that only a very small extent of land can be well cultivated in tobacco—since not more than from eight to fifteen thousand hills, say from two to three acres, can be attended to by one laborer, when the other common crops are carried on. Hence, in ordinary tobacco farms, very limited territory can be put in wheat after tobacco.

But the main effect of "the weed" on the farm is not to be sought in its influence on the spot that produces it. It is a real despot among the several crops, whenever it is made and sold with success. It is of so precarious a nature in several respects, and is so liable to various injuries at the several stages from kindling the fire at the plant-bed to the final delivery in market, that it is the virtual master of the planter and plantation. In consequence it interferes seriously with the interests of the farm in every other branch. In the Winter, when others are cleaning up and making compost or Winter-plowing, it must be watched, fired, stripped, taken down, hung up, and is sure to be hurt somehow in the great majority of cases where the attention and handling are not skillful and indefatigable.

After Christmas the new crop enters the lists—beds to be burned and sown—and as soon as the plants are up they must be watched and nursed till large enough to be transplanted. Then, if it rains, there is a rush, and if it doesn't, there is the trouble of watering and planting. It clashes with the oats and the corn and the wheat and the cotton. It engages the laborers in the season of Summer and Fall plowing, as it needs to be "suckered" and "primed" and "topped" and kept free of worms, and all cut before the frost.

Thus the great crops of grass and weeds that ought to be plowed down are suffered to dry up and and spirit the substance of the fields away—the fences and stock go from bad to worse—the labor, always tedious and particular, often needs to be hasty and afflictingly irregular, while the exacting product keeps up its perennial demands upon body and mind, lapping the old crop over the new so that there is no absolute freedom to its raisers at any season. Few who cultivate it do so from choice. They do so because they esteem it the best means of making money. A. W. M.

Greensboro, N. C.

DON'T SOW CHESS THIS FALL.

I CLAIM that chess was, in its original state, nothing more nor less than an annual grass, growing from seed every season; but by coming in contact with wheat or rye, this grass has been fertilized by the grain and produced the well-known grain called chess. I am inclined to believe that the grass that first produced chess, is not a native of this Continent, from the fact that I have seen chess sown by itself, both on wet and dry ground, but am yet to see the first patch of ground produce a crop of chess without the aid of wheat or rye. It has been tried faithfully in this country and failed every time. Furthermore, I tried sowing wheat, both on wet and dry ground, three years in succession, and never raised a grain of chess on any of my experimental grounds, but at the same time had chess in my general crop, grown alongside of my experimental grounds.

I experimented with rye in Connecticut, before coming to this State, and never raised a grain of chess on my experimental grounds. I have tried five years of my life to raise chess without planting the seed of chess, and have never been able to produce one grain of chess yet, any more than I could grow a crop of corn without planting corn. My advice to farmers is, clean the chess entirely out of your wheat before sowing, and sow on clean land, and raise more and better grain per acre, and of such a quality that you may realize the full value of your crop when put in market. Thousands of bushels of wheat are sold annually at very low prices, carried away from where it is grown, cleaned from chess, the wheat ground into flour, shipped back, sold to the producer to make his bread, and claimed to be made of superior wheat, and the chess is sold to distillers to be distilled, and the producer reaps no benefit whatever from his labor and capital invested.—

Onarga, Ill. I. F. C.

FIELD NOTES AND QUERIES.

Preparation of Beet Leaves for Fodder.—MEHAY maintains the entire success of his method of so preparing the leaves of the beet as to render them capable of preservation for several months as fodder, and at the same time greatly improving their qualities as food for cattle. The method consists simply in placing them in baskets and immersing them in a tank containing diluted hydrochloric acid of 4 of Beaume. The result of this is to greatly condense the volume of the leaves, and to render it necessary to add more fresh ones to fill up the basket, which has to be again immersed, and finally allowed to drain off. The leaves may then be placed in beds, in dry earth, and kept until needed for use. According to a report of a committee who examined the results of this process, domestic animals become exceedingly fond of the leaves thus prepared; and, indeed, milch cows fed with them are said to give a large increase of milk, with a decided improvement in the quality of the butter. The tendency to diarrhea in cattle produced by the fresh beet leaves seems not to be developed by this prepared fodder, and for this and many other reasons it is strongl yrecommended to agriculturists.

Potato, Corn and Oat Experience Wanted.—W. H. asks the experience of our readers with the Peerless potato, Chester Co. Mammoth corn, add White Norway oats.

The Swine-Herd.

PIG-PEN PAPERS.

White Hogs in the South.—B. Y. ROOTS, Perry Co., Ill., writes the Prairie Farmer:—Five years ago I sent to my son in Arkansas, eleven very fine Chester white shoats. For about two years they did well, but subsequently they did poorly, and although receiving good care they have nearly run out. I visited the State last Summer. I conversed with stock raisers of that State, Tennessee, and all of the Gulf States. Without a single exception, all agreed that in those latitudes, white hogs did not do well; that black hogs did much better. My attention having been thus turned to the inquiry, I have called to mind, as far as possible, the incidents of my own experience, running thirty years, of hog raising here in latitude 38°. I have also conversed with others of large experience here, and I am confident that any good variety of black hogs is better here than any variety of white hogs.

White and Yellow Corn for Chickens.—I remember there was a discussion last Spring in RURAL NEW-YORKER as to whether pigs knew any difference between white and yellow corn. I cannot say as to pigs, but I know that we used to have a Bantam chick that knew the difference very well. We used often to mix white and yellow corn in our hands and call her to eat. She would pick out every white kernel and throw them away and then eat the yellow. —MRS. A. A. OVITT.

Scurvy Pig.—A correspondent has a scurvy pig, four months old. The hair "stands on end." Although it has been washed repeatedly, in four or five days after washing, it is as scurfy and black as ever. Asks RURAL readers to give a remedy. We have known swine cured of scurf by giving them plenty of dry dust to wallow in and feeding them a little sulphur and ashes in their feed once or twice a week.

The Herdsman.

NOTES FOR HERDSMEN.

Stock and Shade.—E. L. LAWRENCE, Champaign, Ill., writes the Prairie Farmer as follows on this subject, with which we should like to know if our readers agree: "Having for many years pastured where there was good shade, and for the past two seasons, where there was none, and observed closely the habits of cattle and horses, with regard to feeding, I have become satisfied that stock of any kind (except perhaps hogs) will thrive and do best where there is no shade at all, from the fact that without shade stock will feed several hours in the day that otherwise would be spent in the shade fighting flies. Let any one in doubt on this subject, put horses and colts in pasture and allow them to run in and out the stable as they choose. It will be found that they will quit their shelter scarcely at all between seven in the morning and five in the evening, and will grow poor on good pasture at this season of the year. On the other hand, if allowed no shade or shelter at all, they will thrive nearly as well in July and August as in May or October. The same will be found to apply to horned cattle and sheep, though perhaps the difference will not be so great."

Sores on Cows' Feet.—I wish to inquire what the matter is with our cow. She has a sore come on the top of her foot and partly between the claws, about as large as a cent; another on the under and back part of the foot similar to the one on top. The sores are dry and cracked open; foot swelled some above the claws and joint. I should not think much about it, but there are two other cases like it near here, and one has a sore on each of her feet; her legs are swelled to her knees; she cannot stand, and her owners have given up milking her.

THESE sores are usually an indication of foul blood, and any remedy for them must include a treatment of the whole system to purify the blood and put the animal in healthy condition. For local treatment use a common sense application of cleansing the sores with emollient washes and healing oils or ointments.

Cattle Sales in Ohio.—The August monthly cattle sales at London, Madison Co., O., were held on the 15th inst., and were attended by a large crowd of stock buyers, stock sellers and spectators. The country had experienced a vast change since the last sales. An abundance of rain had brought on excellent pasture, while the prospects for a corn crop were better than ever known before. About 600 head of cattle of various ages changed hands. One bunch brought over six cents per pound, but four and a half cents was the prevailing price for good feeding cattle.

Lame Cows.—About the first of June one of my cows was found to be lame in one fore foot, and shortly became lame in all her feet, one after another. She has fallen off in flesh and the flow of milk has lessened very much. She walks as if foundered. I now have five affected in the same manner as the one I have described, and I can find no cause for it. Can you enlighten me on it and suggest a remedy? I have given them copperas, sulphur and saltpetre.—LYMAN SHUMWAY, *Ashtabula Co., O.*

Sheep Husbandry.

NOTES AND QUERIES.

Dressing Mutton in Texas.—A Texas correspondent of the Mobile Register tells how he dresses sheep for mutton:—"Hang the sheep by the heels and cut his throat thoroughly—wind-pipe, swallow, jugular vein and all. He will die very quick. So soon as life is extinct, or motion ceases, remove entrails with a sharp knife, opening completely from tail to tongue. This job I generally get through with in just about half a minute. I am satisfied that the peculiar flavor of badly handled mutton, said to come from the wool, is due to the entrails lying too long in the animal. I pay no particular attention to the wool other than is demanded by neatness. On the plan above named I frequently kill muttons four miles from home, tie them to my saddle, take them home, and even allow to remain over night, without skinning, and no woolish flavor results. My mutton is proverbial for its delicacy and sweetness, and now you have exactly how I manage it.

Dairy Husbandry.

THE MILK OF WHEY-FED COWS.

I HAVE seen, I think, several times, in the RURAL NEW-YORKER, your opinion in regard to feeding whey to dairy cows, and have noticed that you disapprove its use in that way; but, so far as I remember, you spoke of the sour whey from factories only, and did not give your opinion in regard to feeding whey to cows when it is fed sweet, or nearly so, as it can be when the cheese is manufactured on the farm. How would you regard the following method, which I have tried, and like:—Have the milk barn provided with troughs made after the usual manner among dairymen, and when the whey is drawn from the vat, have it taken directly to the stable and put into the troughs, without going into any sour resorvoir at all. Of course it will not have time to sour but little before the cows, on being put up to be milked, will drink it, and will have nothing to help the fermentation, as it does when run off into a whey trough or vat which always has more or less very sour whey in it. Your views on this, given in the RURAL, will greatly oblige at least one who has a very high regard for the same, who believes in "high feeding," and who thinks that whey, unless it has a bad effect on the quality of the milk, can be the most efficiently disposed of in the way described. —B. B. W., *Cattaraugus Co., N. Y.*

WE cannot approve of feeding cows whey in the way proposed, though we have no doubt the quantity of milk may be increased by such feeding, and especially so when pasturage is short and grass begins to deteriorate in nutrition. During hot weather, the milk of cows fed upon whey is inferior in flavor and quality, and not unfrequently causes serious trouble to the cheese maker. The influence of the whey may not be so strongly marked when the milk is worked up at the farm dairy, as at the factory, or when the whey is fed comparatively sweet; still the tendency of such feed is to make bad milk, and we think it better to avoid such feeding altogether.

In the plan proposed by our correspondent, the whey may, perhaps, be kept in sweeter condition for feeding than it would be if left in the vats, as usually practiced; still the troughs are liable to get foul and sour, and the whey standing therein from the time the cheese is made, until the cows come into the barn at night to be milked, must acquire considerable acidity, and especially will this be the case during hot weather. Again, the milk, even under careful management, is liable to be faulty and take on taints. To feed the whey of such milk must have an effect to aggravate the trouble with these cows giving the defective milk, while it carries its objectionable flavor to the other milk which, but for the whey feeding, would be good.

The cause of milk taints is better understood now than formerly, and much more attention is being paid to the feed of cows and their surroundings, that milk may be produced in good order. It has been long known that turnips or onions, when fed to milch cows, will leave their peculiar taint in the milk; and more recently, the fact has been abundantly demonstrated, that milk may be tainted in the bag on account of the cows inhaling the odors of carrion while at pasture. Why, then, should not whey taints make their appearance in the milk of whey-fed cows? We have had some experience in feeding cows whey and in noting its effect on the cheese when made at the farm dairy, and although the whey was not conveyed directly to the troughs in the barn, as suggested by our correspondent, still we became satisfied that the influence of the whey upon milk was bad, and therefore abandoned its use altogether as a feed for cows.

We regard whey, when fed to cows in hot weather, as liable to do much harm to the milk, even though the whey be fed as it comes directly from the curds, and although in cool weather the harmful influences are less apparent, yet on account of its liability to injure the milk, it ought not to be so used.

There are some other considerations that might be named, showing that whey is an objectionable food for cows. In the first place it may, with reason, be doubted whether the health of an animal is promoted by a continual consumption of its own secretions. In our own experience in feeding whey the animals often "scoured" badly, approximating so much to diarrhea that the whey had to be, for a time, abandoned; and although we did not observe the loss of teeth and general breaking down of health in the animal, as claimed by some as the effect of such whey feeding, still the excessive scouring at times, and the tendency of the animals to be thin in flesh, raised serious doubts in our minds as to whether the whey was a healthy diet. Cows fed upon whey appear to yield a greater quantity of milk, and considered simply from this standpoint, many have been induced to feed whey. But the experience at factories with the milk of whey-fed cows, has so plainly demonstrated the bad character of such milk, that the practice is every year going more and more out of date. Many of the best factories in New York now prohibit its use among their patrons as a feed for cows, and we believe this is the safe course to be adopted at all factories which are seeking to produce a uniform, fine-flavored and high-priced product.

The question raised by our correspondent is an important one, and we call the attention of the advocates of whey-fed cows to the points we have named. Dairymen cannot be too careful in the production of milk, to avoid every influence that is likely to deteriorate it in flavor or quality, for bad, ill-flavored goods pay very poorly.

HEATING CHEESE-CURING ROOMS.

WILL steam pipes answer as heating apparatus for curing cheese? The room we want to heat has stone walls, with concrete floor, 96 by 38 feet inside. If you have any experience in this matter, you will confer a favor by answering the above question.—F. MALCOM, *Innerkip, Ontario.*

VARIOUS methods have been employed from time to time in heating cheese-curing houses, as steam, hot air, and the stove. The latter is the more commonly used in America, because supposed to be less expensive and more readily applied. This method of heating is objectionable, inasmuch as the heat is not equally distributed, the cheese near the stove often becoming overheated while that furthest off is at too low a temperature. Stove heat, too, it is claimed, is of too drying a nature. Steam pipes and steam are regarded by those who have made a comparative test of the two methods as a decided improvement. Steam pipes have been employed with success in England, and many of the Somersetshire dairy rooms are provided with this appliance for heating.

Recently, however, hot water distributed in iron pipes arranged through the rooms and in connection with the boiler which is used for cheese making, are recommended as superior to any known application of artificial heat for curing cheese. Mr. HARDING, the distinguished exponent of Cheddar cheese making in England, affirms that no method of heating known to him is equal in its result to the hot water arrangement. Iron pipes proceed from the boiler fixed in the boiler house, and surround the cheese room and descending from thence to the dairy, pass through it and return to the boiler. Thus a complete system of pipes is laid, by which the milk and whey, as well as the cheese room and dairy room, are heated. To heat the dairy and cheese room a cistern stands in one corner of the latter filled with water, and this supplies all the pipes down to the boiler. As the water heats so it circulates and does its work of heating all the way round. At the top of the cistern is a pipe communicating with the open air and forming a means of escape for accidentally-created steam.

As the water leaves the boiler it is turned in the direction required by means of stopcocks, and when the operation of cheese making is completed it is only requisite to stop one and open another for the heat to be transferred from the cheese vats to the cheese room. The pipes in the cheese room are laid in the space between the cheese racks and the skirting, thus throwing up the heat behind the cheese, where it is most required. With this system of heating, by a little attention, a tolerably uniform temperature may be maintained.

This is the plan adopted by Mr. HARDING with eminent success, but of course the arrangement may be varied to meet circumstances in differently constructed buildings. The cheese-curing rooms of England are usually of stone or brick, and we heard of no complaint of dampness on account of using either steam or hot water pipes for heating.

Dried Cream in Butter.—I see Mrs. L. W. has been troubled with dried cream in her butter. I think the cause too much air or a current of air, which dries the cream while it is rising. Have observed this effect in my own milk. If a pantry off the kitchen must be used through the Summer for milk, it should be kept nearly closed and darkened, as it may thus be kept at a more even temperature—taking pains to open it only when the air is coolest, say early in the morning. I do not think it is possible to make good butter in warm weather, where the milk is set in pantry, used as pantries usually are.—MRS. L. J.

Industrial Topics.

EMPLOYERS AND EMPLOYES.

I WISH to reply to an "Every-Day Laborer," in Livingston Co., N. Y. He says he knows of no instance where an industrious laborer has ever dreamed of lodging in the poor-house. Perhaps he has not; but I will inform him that I have. I would like to ask him this: If he is a man with wife and family, of three to six little ones looking to him for shelter and food, if he thinks on twenty or thirty dollars a month he can support them, and pay fifty to seventy dollars a year for house rent, and eight dollars a cord for wood—as it is that here, with butter at forty or fifty cents a pound, and with other things in proportion; if he can, he is a very uncommon man. I saw a case decided in the courts of this town, where it was proved that a young man could not support a wife on his earnings of twenty dollars a month; and I know by reason and common sense that it cannot be done. More than that, I have known cases where poor men have worked through the season and have saved every cent they possibly could—good, temperate men—men who never spent a cent for amusements, and who, when sickness came in their family, and they were stricken down and could not work, the very men for whom they had worked when well, instead of lending a hand to help them through, would be the first to put them and their family on the town.

Now, my friend, you may differ with me, but all I ask is, in the name of justice, let us be more kind to the poor around us. How the poor man is content with what he gets—only a living, for he cannot lay up anything for a rainy day—is more than I can see. But, my friend, you say he gets his board! that may be, but what does his family get at home? I will tell you. While he is sitting at your table, his wife and children may be in want of food to sustain life and health; while he works for the money to get it with, they must wait. After he earns it does he always get it? No, he does not. They tell him sometimes they have not got the change, and through various pretenses, I have known men kept out of their pay for nearly a year.

I speak not for my own town or county, for I have seen much of the world and I know it is the same throughout our land. Livingston Co., N. Y., is no exception. Look at both sides. I learned, while young, to try and do good to others and obey the Golden Rule. I have heard of so much trouble between farmers and their hired men, that I would take the side that I know is right. I shall ever honor and respect the poor man as much as I do the rich. Brother farmers, forgive me if I speak as I do. I do not mean all of you; but I beg of you to be kind to the poor and teach them to love you and respect you. REFORM.

Johnstown, Fulton Co., N. Y.

MY attention was called to an article in your issue, in which the writer utters a wail in behalf of "hired men," in a manner that might lead one to suppose, if he had no experience in the matter, that the employed are the only ones that ever suffer; they being, *of course*, always models of honesty, uprightness, perfectly trustworthy, etc.

It may be that is the case with "hired men" in Fulton Co. If so, a few of them would do well to visit Cattaraugus Co., where such are duly appreciated, and could not fail to find employment at good wages. If the man *is* "obliged to work," so the farmer is obliged to employ, and obliged to pay all his business will allow him to. The employed is not obliged to take "a little butter, or pork, or potatoes," towards his pay, for the employer is usually ready to pay the money for work, and the employed can make his purchases where he pleases. The assertion that the man is obliged to begin work at 4 o'clock and work until dark, is a mistake, as far as this section is concerned. One of my neighbors informs me that he has employed help at $1.50 per day to chop wood, and the man would not get ready to strike a blow with the ax before 9 o'clock. On our dairy farms, during the long days of summer, probably 6 o'clock is about the time people are up doing the "chores," preparatory to commencing the heavier work of the day, which begins at about 8 o'clock. On many, and probably a majority of the farms, the field work is left at about 5 or 5½ o'clock, P. M., for the purpose of attending to the "chores" again, getting through with them at or before sundown.

"If he wants a horse to use" occasionally, he has it, and a wagon too, if he wishes; and it costs him nothing. At least, we would consider him a mean man that would refuse to *lend* a horse to hired help sometimes, provided the horse was properly treated. "Reform" omitted to state that trusty hired help is such a rarity that any farmer, when he once finds such, is not willing to part with it. It is nothing strange (because not uncommon) for a hired man, when left alone for a day, to go and lie on the hay in the barn a portion of the time, go hunting, or manage to pass a part of the day in some other way equally profitless to his employer. It *is* uncommon to find a hired man that will treat a team properly, or take good care of farm tools and machinery. Regarding wages in New York or New England, I am sure they are as good as, or better than are paid by farmers generally between the Mississippi and the Rocky Mountains, where land is cheap and the unemployed, if they choose, can take homesteads and so be "their own employers."

I venture to say that "Reform" has had very little experience with hired men, or he could see clearly that there is as much need of a reformation on the part of the employed as upon the part of the employers. C. M. H.

Napoli, Cattaraugus Co., N. Y.

The Horseman.

HORSE STABLE FLOORS.

I HAVE no patent to offer to the public through your columns, but I most heartily agree with you in your protest against Mr. J. WILKINSON'S bare floor of any construction for any animal. A dishing floor, as he describes, may be very safe against a horse rolling himself up on his back against the partition; but let him try standing all day and night with the outside of his shoe-sole raised even a little, and try a race the next day with an equal, who has slept in a good bed. I have known several good, *very good* horses, that would not stale upon his bare floor so as to completely empty the bladder in a month, very much to their injury. Horses paw their bedding for two reasons. When tired they want their heels raised, and try to pile up the straw for that purpose. If the floor stands very much backward, my remedy is, to take an inch board about four inches wide, bevel it to nearly an edge on one side. Nail this (thin edge forward) to the floor, across the stall, just where the heels of their fore feet come, when they stand at ease after eating their meals. They will soon learn to use it and not paw the bedding if it is properly spread. Improper spreading of bedding is another reason for pawing. If it is not put far enough back for the hips to lie upon it, the horse will try to fix it. I have purchased several bad pawers and never have failed to break them by a long bed and standing rest. The fools are generally at the small end of the halter.

About staling on a clean bed. It shows how much the animal dislikes to spatter his clean legs. When the groom goes in the stable to put down bedding, first throw a little straw—or sawdust, if preferred—in the proper place to catch the urine, letting it make noise enough for the animal to hear it. Let them be quiet for a moment and they will be sure to use it, when it should be scraped out clean and the bed put down.

A tired farmer will not stop to buckle pads upon the tender parts of his horse, nor will the horse thank any one for putting straps and strings about his limbs to hold on pads. J. W. BEECH.

Coldwater, Mich.

NOTES FOR HORSEMEN.

Sprained Foot of Horse.—Can you or some of your readers tell me a cure for a horse injured long since by stepping through a crack in a bridge with one of his hind feet? The joint became enlarged but never seemed to inconvenience him particularly, until last Fall he passed a night out-doors in a cold rain, and the cold he took settled in his leg at the place of the old trouble (just above the foot), the swelling became much larger and has ever since been very large; it troubles him continually, especially if he takes a little cold. It has discharged a watery fluid, and at present discharges matter. The horse has no appetite and is kept reduced in flesh by his apparent suffering. Hoping to obtain a cure through your paper.—MOSES ALLARD, *Fort Howard, Wis.*

WE should never expect to *cure* such an old hurt. Treat it as you would a sprain on your own uncle, by keeping it in a warm bandage, with fomentations of wormwood and vinegar and such, and keep the horse from cold and wet.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Grapes Ripening.—*Aug.* 20.—A few of the earliest varieties of grapes begin to ripen, although they will not be in their best condition before the first of next month. I wish we had a greater variety of good table grapes, for at present there are very few that can be classed as first-class which will succeed, except in a very few localities. The Concord is certainly one of the best suited to general cultivation, but it is a little too late in ripening for the extreme Northern States, while in quality it is not first-class. The Delaware is certainly best in quality, but its success is only local. The Hartford Prolific is very early, the vine hardy and prolific, but in quality a little below the Concord. Rogers' Hybrids are all uncertain, although in a few localities some of them do passably well, and are from second to third class in quality. Mildew and rot make sad havoc among them in most localities. Allen's Hybrid is our best white grape in quality that has been generally disseminated, but there are so few localities in which it will succeed that it is now seldom placed in any select list. I had great hopes of the Martha when it was first brought out, but thus far it has not proved to be of any great value as a table grape, being of a rather rank flavor, and the flesh tough and almost indigestible. Catawba is too late and liable to rot. Diana is a failure almost everywhere, and the much lauded Walter is scarcely better, while the Eumelan promises well in some gardens, but mildews badly in others. Arnold's Hybrids are too small, with the exception of Othello, and this fails on account of mildew and rot. Iona is a fine variety of most excellent quality, but unfortunately not generally a success, although I have seen it in great perfection in Central New York and in a very few other localities.

In villages and city yards, almost any of the above varieties can be successfully cultivated; but when it comes to vineyard culture, we are still sadly in want of good, hardy, and disease-proof sorts. It is more than likely that such varieties will never be produced, and that grape culture in this country must be conducted the same as other branches of fruit culture, favored localities and soils taking the lead; supplying the markets and making the business profitable. A man may thoroughly understand the culture of any particular kind of fruit, but unless nature is with him his success is uncertain. The sooner our people recognize this fact the better it will be for those who think they are going to make a fortune out of grape culture without regard to the adaptation of varieties to soil and climate. I have had my little experience in trying to do the impossible, and suppose others will have theirs, even with all the warnings given them.

A Walk About My Garden.—*Aug.* 20.—As the month wanes, I begin to look about to see which plants among the many set out this year shall be saved, or seed therefrom, for next. As I cultivated them for my own pleasure, I am not disposed to consult the fashion or popular tastes in this matter. Here, for instance, is the new *Amaranthus salicifolius* so extensively puffed last Spring, with its long, string-like leaves, possessing no beauty to my eye—at least not enough to pay for culture, when there are so many more beautiful plants. The frost may have my plants, seeds and all.

But here is that unique and stately-looking *Amorphophallus Rivere*, with no particular beauty except in the elegance of its giant stem and leaves; still, these are attractions, and it shall be carefully preserved. What shall I say of this bed of double Zinnias? They are certainly very symmetrical in form; so are Sun flowers; but neither are, to my taste, what a garden flower should be, and you will see none on my place next year. Here are *Heliotrope Lantanas*, double and single; *Geraniums* in variety, *Cupheas Ageratums*, *Coleuses* and *Phlox Drummondii* of every conceivable color, and all so good that I cannot find a place to begin to throw away, therefore, will save all. Down at the lower end of my lawn I have large beds of *Gladioli*, *Cannas*, *Caladiums* and Carnations, all handsome and worthy of preservation. The scarlet Sage is putting on its brightest tints, and although my plants were raised from seed for Summer garden decoration, I shall cut back a few and put them in pots for blooming in Winter. I tried this plan last Winter and had splendid spikes of flowers during the holidays. When one wants to make a showy bouquet, this Sage works in splendidly. My pets, however, are the Monthly Roses, and in this I am not likely to have much opposition, for of all flowers the Rose is certainly queen, and I am only surprised that she does not receive the deserved adoration. The first and last tribute of affection to the gentler sex is always symbolized by a rose-bud; then why not keep the chain complete, instead of dropping a link at the beginning of life and another at the end. A rose-bud for the bride and another for the dead wife are the only roses seen in far too many families.

The Naturalist.

THE RACCOON.

(Procyon lotor—AUDUBON.)

THE raccoon has an extensive geographical range, being found in all the United States, and as far North as the fiftieth degree of latitude. It is found in the greatest numbers in the Southern States.

THE RACCOON.—(Procyon lotor.)

The body of the raccoon is from twenty to twenty-nine inches in length; the tail, with hair, about nine inches. The body is stout, with legs of moderate length, strong and muscular; head roundish; nose sharp and tapering; snout naked and movable; canine teeth, long; eyes, round, of moderate size; whiskers, scant, strong, and very rigid; ears, low, erect, with tips much rounded. In the feet it is partially plantigrade; soles naked; nails strong, hooked, and sharp; the tail of moderate length, thick and bushy; the body is densely clothed with two kinds of hair, the outer longer and coarse; the inner softer and more like wool. Though clumsy in appearance, he is capable of maintaining respectable speed, and he is a good climber. The general color is blackish-gray, which results from the long hairs being alternately ringed with black and dirty white: the belly is lighter colored; the face whitish, with a black patch surrounding the eye, and descending to the lower jaw, and a dark-brown line descending from the forehead between the eyes; point of nose, eyes, and soles of feet, black; the soft under fur, pale brown throughout the whole body; the tail has about six distinct black rings, and is tipped with black; these alternate with five light yellowish-brown rings.

Their favorite resorts are retired swampy lands covered with lofty trees, through which are small water-courses, on whose banks frogs and muscles are found, though they are by no means confined to such localities, as they are frequently found on rocky hills, living in holes in the rocks. Their nest or lair is usually made in a hollow tree. The raccoon is not strictly a nocturnal animal, though he commonly sleeps in his nest during the day and seeks his food at night. Sometimes, on warm days in the Fall, in this latitude, he is found asleep in the branch of a tree or the sunny shelf of a ledge.

He feeds on frogs, mice, muscles, oysters, birds' eggs, and sometimes on domestic fowls and their eggs. He is said to destroy many more animals than he is able to consume, merely sucking their blood and eating the brain. He is very fond of Indian corn, when it is "in the milk," and it is from his havoc in fields of this, that he renders himself most obnoxious to farmers. He breaks down the stalks, tears off the husks with his fore-paws and feeds on the rich, milky grain, tearing down and destroying much more than he eats. When a party of raccoons has visited a corn-field, a person unacquainted with their habits might think a hog had been at large there. Like its near relative, the bear, the raccoon hibernates only occasionally on warm, sunny days, leaving its retreat during Winter. It usually produces from four to six young at a litter, about the first of May, though the time varies with the latitude.

To Trap the Raccoon.—It being a very strong animal it needs a stout trap to hold him; the large double-spring trap, commonly known as "box trap," is the best. When his den is known, the trap is placed at its mouth, either fastened to a stake driven firmly into the ground, or to a clog, that the animal can drag slowly. When set with bait it is placed in water, or else covered with moss. If there is more than one way of approaching it the bait is suspended over it. They are also frequently caught in dead-falls. For bait, use fish, fowl, the carcass of the muskrat, and, as some advise, burnt salt cod-fish. AUDUBON speaks of one in captivity crazy for honey, and, without doubt, that would make a good bait. Some use oil of anise to scent the bait, but musk of the musk rat is as good as anything to attract the animal.

The most sport, however, is to be got by hunting the raccoon with dogs, at night, when he is committing his depredation upon corn fields. The dogs are taken out to the edge of the field after night has fairly set in. Fox hounds are commonly used, but dogs of other breeds often make good "coon dogs." If the hunters approach carefully they often hear their game at work in the corn. The hounds, let loose, range the field and give notice by their melodious cries if they find the trail. The hard pressed animal betakes itself to the nearest tree, to which, stumbling over logs and through brush and briar, the hunters are led by the baying of the dogs. If the tree can be climbed the most agile of the party ascends it, and by dint of hard shaking dislodges the closely clinging victim, which, falling to the ground and attacked by the dogs, is usually dispatched by them and the hunters; but sometimes he eludes them and escapes to the woods or his den, or to the nearest stream, which is a favorite method of his for baffling the dogs. If the tree cannot be climbed a fire is built under it. If that does not reveal him among the branches, so he can be shot, daylight is waited for. He is hunted in the same way when out in marshy places hunting frogs, or visiting white oak trees for their acorns, of which he is very fond.

Another method of hunting him, is to follow his track during the thaws of late Winter and early Spring, when he comes from his Winter quarters as before mentioned. If he is tracked home to a tree, he is got by chopping down the tree, if to a den in rocks, he may be trapped.

The raccoon and skunk are skinned by slitting up the belly, instead of stripping off the skin from the hind legs as in the case of most other fur-bearing animals. In skinning all animals, as the raccoon, whose tails form a part of the fur, the bone and flesh must be carefully removed from the tail. It is no small job to do this, though it is necessary to render the skin salable. Turn the skin from the roots of the tail as far as possible, then put it back in place and pull the skin off towards the tip of the tail. All fat must be removed from the skin, when it must be stretched to dry, with the flesh side out. Raccoon skins make handsome sleigh-robes and serviceable overcoats, and are in good demand, Northern skins bringing seventy-five cents or a dollar a piece.

The flesh of the young is tender and well flavored, and if kept some days, furnishes an excellent meal. The raccoon has a quick scent and sharp hearing. It is easily tamed and makes an interesting though sometimes, from his inquisitiveness, a troublesome pet. He is a good fighter, and when attacked by the dogs he makes a spirited defense.

HOW RATTLESNAKES POISON.

I NOTICED an article in the RURAL NEW-YORKER entitled "How Rattlesnakes Poison." As my companions through boyhood were mostly of that class of reptiles, I thought I would give you my version of the *modus operandi*. Their poison fangs, two in number, are in the upper jaw, not attached to any bone, but controlled by muscles, by which they are protruded or retracted at pleasure. These fangs are hollow the whole length, as may plainly be seen with the microscope. On striking, the fangs protrude, and as they enter the flesh the sacks at their roots are depressed, causing a flow of the venom through the cavity into the wound. The teeth, or poison fangs of the yellow rattlesnake of this region are about the size and shape of the claw of the cat at six months of age. H. A. R.

Devil's Lake, Wis.

The Garden.

KEEPING MELONS.

AN inquiry was made in the RURAL NEW-YORKER, Aug. 10, about keeping watermelons till Winter. My plan is to take the perfect melons (not the first nor the last to ripen), being careful not to bruise, press or scratch them; lay them in a cool, dry room, and let them alone. Cut them off the vine as soon as ripe enough to use. I have kept such until they froze in Winter, when, of course, they were worthless; but nearly all were good that we used, until they froze. We keep them good till in the Winter; who can tell how to keep them till Spring?

My mother keeps pumpkins on the above plan till Spring, and sometimes longer; and grandmother, when she was living, was still more successful—kept them till the next crop got ripe. Who comes next on the pumpkin? JOHN WEESNER.

Morgan Co., Ind.

GARDENERS' NOTES.

Fertilizing Melons and Cucumbers.—The artificial fertilization of the female flowers of cucumbers and Melons constitutes a most important article of faith among practical horticulturists. The "setting" of the crop by hand is insisted on in all garden calendars; if it is not necessary, the immense amount of time consumed thereby is wasted. In the thousands of gardens where handsome and well-flavored fruit is everything, and seed of no consequence at all, we believe the operation to be altogether unnecessary. At all events, we have managed to secure for our own use for many years past cucumbers and melons in sufficient plenty, without putting ourselves to the trouble of applying the pollen, and have long since been satisfied that, except for the production of seed, it is labor wasted.—*Gardeners' Magazine.*

Tilden Tomatoes.—Among a quantity of large Tilden tomatoes, gathered in my mother's garden a few days ago, there was one weighing 22 oz., and measuring 15½ inches in circumference.—OCTAVIA FINLEY.

Entomological.

THE TWIG-GIRDLER.

(Oncideres cingulatus—SAY.)

In the Transactions of the Academy of Natural Science of Philadelphia, Vol. 5, Nov., 1826, THOMAS SAY described this insect under the name of *Saperda cingulata*. But in the republication of Mr. SAY'S writings in two large octavo volumes, which appeared after his death, the editor, Dr. JOHN L. LE CONTE, says that it "belongs to *Oncideres*," and by this name it is best known at the present time. Although this beetle was described more than forty years ago, and has frequently invaded our orchards, doing considerable damage, as we shall presently show, still very few persons seem to know the insect, much less anything of its habits; even our entomologists have looked upon it as rather a rare beetle. Mr. CHAS. V. RILEY, who is a close observer in this field, says, in the American Entomologist, Vol. 1, page 76, 1868, in reply to a correspondent who had sent him specimens, "The girdling insect proves to be one of the rarest of our Capricorn or Long-Horn beetles." But it is really one of the most plentiful, being more or less abundant from the Atlantic coast Westward to the great plains, and Southward to Texas.

Its Appearance and Habits.—This twig-girdler is a robust little beetle (figure 1) about three-fourths of an inch long, the body being covered with short grayish hairs; head of a brownish red color; antenna usually longer than the body; elytra brownish at base and tip; a broad silver-gray band passing across the middle of the elytra and entirely around the body. These colors are quite distinct in the live insects, but they fade out in cabinet specimens.

The beetles appear in the vicinity of New York City about the first week in August, and from this time until the middle of the month; but as they live several weeks it is not difficult to find specimens during the greater part of September. Both sexes feed upon the bark of small hickory twigs, one and two years old. When the females are ready to deposit their eggs, they select the largest twigs or ends of vigorous branches; but if the tree is small they are very likely to choose the terminal shoot, laying several eggs in small holes in the soft bark made for the purpose, one egg only being deposited in each.

Instinct has taught this beetle that her larvæ require dead wood for food; therefore, to secure this, she immediately sets to work to kill the twig in which she has deposited her eggs. This she does in a very systematic manner, by descending below where the eggs have been deposited, and there girdling the branch, as shown in Fig. 2. In performing this operation she does not eat the chips cut out, but drops them to the ground. After finishing this little job, she extends her operations to another branch, feeding through the day and working mostly at night. Both sexes are quite lively at this time, flying about among the trees and seeking each other's company; but are passive through the day. The eggs, which are very small, white, and of an oval shape, hatch within twenty-four to forty-eight hours after they are laid, and the young grub immediately penetrates the soft inner bark, not attacking the wood until it is several days old. This beetle, if abundant, as may readily be seen, can do an immense amount of damage to hickory timber; and when it leaves the forest, as it frequently does, and attacks our orchards, girdling pear and apple twigs from a half inch to an inch in diameter, it really becomes quite a formidable pest. Last year it damaged some of the pear orchards in and about Norfolk, Va.; but in attacking the pear tree the female seems to make a great mistake, her object being to perpetuate the species; for in girdling the twigs of this tree, she invariably cuts so deep that the twig breaks off and falls to the ground, where the grubs are pretty sure to be destroyed, not only by the moisture, but rapid decay of the wood. The wood of the hickory being hard and tough, she only cuts fairly through the bark, which is enough to kill it, but it still remains firmly attached to the tree during the two years (not one, as usually asserted) required for the larva to mature and pass through its transformation. If any one doubts this statement, that it requires two years, instead of one, for the larva to mature, they have only to examine the infested hickory trees, and notice the annual growths thrown out on the girdled twigs. We have examined hundreds of girdled twigs during the past two or three weeks, and find no variation; besides the trees, we have other proofs that this insect is biennial brooded, instead of annual, as has been claimed by those considered authority on such questions.

The grubs, or larvæ, when fully grown are nearly an inch long, although variable in size, the same as are the beetles. One taken at random from many in our possession is shown in figure 3; also a pupa, in figure 4, both natural size. The grub eats out the entire inner or woody portion of the twig, leaving nothing but a thin shell of bark by the time it changes to a pupa. We might suppose that the wood of a small twig, sometimes scarcely a foot long, would

FIG. 2.

FIG. 1.

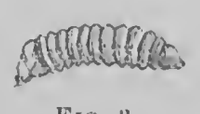


FIG. 3.

FIG. 4.

not suffice as food for one grub two years; but it does, and even more than this, for in at least two-thirds of all the twigs gathered this season containing pupæ or larvæ we found three, and in some instances four, fully developed specimens.

Prof. HALDEMAN, who wrote a brief history of our American Longicorn Beetles in the American Philosophical Transactions for 1837, and other entomologists, have supposed that this insect confined its depredations while in forests to the Shellbark Hickory (*Carya alba*); but we have found it abundant upon the Whiteheart Hickory (*C. tomentosa*) and the Pignut (*C. porcina*); and there is no good reason to doubt but what it lives upon all the different species, preferring those that have rather coarse twigs, as these would furnish a greater amount of food for the larvæ than the slender twigged. It also attacks the persimmon, and will probably be found upon other trees.

How to Check.—The girdled branches can be readily seen in the early part of Summer while they contain the larvæ or pupæ, and it is no great task to gather all these infested twigs from trees of moderate size and burn them with their contents. We gathered a quantity during the latter part of July and the first week in August, and placed them in a box, where they soon passed through their last transformation. Those who may desire specimens for study, or their cabinets, can very readily supply themselves in this way, and have no occasion to hunt the wood or whip the branches of hickory trees in order to obtain them.

ENTOMOLOGICAL NOTES.

Cockroaches.—Will you give me the name of the inclosed insect? I have never seen them in any other house than ours; the first time I saw one in our kitchen was about a year ago, and now there are thousands of them. I have tried several things to kill or drive them away, but have always failed. If you can give me their name and suggest anything by which I could rid myself of them, you would very much oblige—A CONSTANT READER.

THE specimen came to hand, as such things usually do when inclosed loosely in a letter, smashed as flat as Uncle Sam's mail boys know how to do it. Your insect is the common cockroach, and we would advise you to try some one of the many exterminators advertised. We cleared an infested house in three days, at a cost of $1 and the time required in sweeping up the dead bugs, with Isaacsen's Cockroach Exterminator.

The Poultry Yard.

PARAFFINE—DESTROYING LICE ON FOWLS.

A CORRESPONDENT inquires what paraffine is and whether it can be used for the destruction of lice on fowls. Parafline, properly so called, is a solid, and cannot very well be used for the purpose named, but there are numerous *paraffine oils* that might be so used, and with good effect under some circumstances.

Paraffine was first obtained from wood-tar. It is a white, waxy-looking substance, without taste or smell, and it is not at all greasy. It resists the action of acids, alkalies and chlorine, and hence was called *paraffine*, because it seemed to be without *affinity*. It has been procured in considerable quantity from peat, and many of the readers of the RURAL must remember the enthusiasm with which was hailed the announcement that the peat-bogs of Ireland could be made to yield unlimited quantities of a beautiful white mineral wax which was to drive tallow, oil and ordinary wax out of the market for illuminating purposes. The paraffine oils are very similar in constitution to kerosene, and are used in similar lamps.

When oily substances are used for destroying insects, they act in the following way:—Almost all insects breathe through holes in their sides, known as *spiracles*, these spiracles being connected with a curious set of tubes known as *trachea*, which take the place and perform the same functions that the lungs do in the higher animals. When the body of an insect is smeared with oil these spiracles are closed, and the insect is suffocated, and, as it has no power of blowing out any foreign matter from these spiracles, as we do from our mouths and noses, it has no power of resisting the application of oil or grease. Hence grease is one of the best applications when the higher animals are infested with external parasites; but when hens are sitting on eggs for the purpose of hatching it will not do to grease their feathers, as in their case the grease is transferred to the eggs, closes the pores and prevents certain processes which are necessary for successful incubation.

Fine dust seems, however, to be nearly as effectual as grease, for it clogs up the tracheæ of the parasites and kills them. Hence the power of the so-called insect powders, and hence the fondness of hens and other sitting birds for what is known as a dust-bath. The best powder in common use, however, and one that is perfectly safe, is sulphur. It is best applied with a pepper box or flour-dredger, and should be dusted very thoroughly between the feathers and over the eggs and nest. We have tried it and can speak for its efficacy. It is also a good plan to make the foundation of the

SIMPLE READING CHAIR—(SEE PAGE 158.)

nest of the shavings of resinous wood, as the vapor seems to drive away all parasites. Nothing makes such a good bed for a dog as highly resinous shavings—all the better and more pleasant if cedar.

POULTRY NOTES AND QUERIES.

Mosquitoes and Poultry.—The Poultry World says correspondents in the "Gulf States" ask for some remedy or preventive for the attacks of mosquitoes on young chickens. The bite of the mosquito causes a large sore or ulcer so severe oftentimes as to eat the eyes out of the head of the poor chick, which always dies.

Fowl Dead.—I had a light Brahma hen that was sick for a few days and finally died. Symptoms were, weak in legs, pale around the head; would not eat anything unless I forced it down, and drank but very little. Can you tell me the complaint and also the treatment? I lost a valuable game rooster same way last Fall.—A SUBSCRIBER.

HAVE any of our readers had a similar experience, and can they give a remedy?

Farm Economy.

SUBSOIL ATTACHMENT TO PLOW.

I WILL describe a subsoil attachment that I use: It is a stout bar of iron, from 2 to 2½ feet long, with a plate of steel fastened at the lower end, roundish-pointed front, to run nearly flat; from 8 to 10 inches of the front edge of the bar above the foot should be sharpened (not very sharp). The bar is put in between the land-side and mold-board, and held there by a clasp on the inside of the beam, with bolts and nuts to screw it tight, to hold it to any depth you like; a rod of iron running from the king-bolt of the plow, with a hole in the end for this upright bar, to keep it from breaking.

In cross-plowing in manure, we first plow four inches deep, and then put the subsoiler four or six inches deeper. This is a cheap arrangement, costing not over $5, and is worth five times its cost every year to any farmer who will have it attached to his plow for common plowing; but in greensward it is rather snug work for a common team. For such work attach it to a sort of plow-beam with handles, using it as a separate subsoiler. We use it in this way for ditching, to loosen the dirt instead of picking; and when the ditch is too deep for the off horse to go in it, we have a long evener, so that the horses can straddle the ditch; and as we have over 1,500 rods of stone drain, we ought to know something about the cost of loosening dirt.

We subsoiled a lot for corn in 1869 (being greensward, we used 2 teams, that being a very dry season), and planted it to corn. We had a very large crop; where we subsoiled, the leaves did not roll in the dry weather; but where the subsoiler was not used, they rolled badly, showing that subsoiling is a remedy for drouth.

Oneida Co., N. Y. A. D. G.

ECONOMICAL NOTES.

Grasshopper Catcher.—Among the novelties in agricultural machinery is a locust or grasshopper catcher, which, by means of an apron extended in front, catches the creatures and passes them through rollers, reduces them to a paste, which is dried and used for poultry and hog feed.

Rural Architecture.

NOTES FOR BUILDERS.

Excavation and Walls for Barn Basements.—Slant the bank one foot from the bottom to the top; dig far enough back to take in one foot of cobbles or broken stones at the bottom; dig your trench two feet three inches wide, three inches inside of the front of the wall; be sure you dig below the frost, more or less; fill up the trench with field stone broken up; it is as good as cobbles; put in dry, whatever it is. Now commence the mortar wall two feet thick at the bottom; slant it on the back side to eighteen inches on the top; fill in the space between the bank and the wall with cobbles or broken stone clear up to the top; lay your sill three inches back of the front edge of the wall. I have no faith in a concrete wall in such a place as that.—HARVY ADAMS, *Allegany Co., N. Y.*

Protecting Roofs from Fire.—R. J. SUNDERLAND is correct in supposing he has seen a whitewash recommended for rendering shingle roofs not only fire-proof but more durable. We have seen commended by men competent to judge, a wash composed of lime, salt and sand, or wood ashes, applied in the way of applying ordinary whitewash. It is said to render shingles fifty-fold more safe against taking fire from falling cinders or otherwise. It is also reported to preserve shingles against the influence and effect of weather, and is especially beneficial when applied to old and weatherbeaten roofs—taking the warp out of the shingles and filling up the cracks not only renders the roof tighter but prevents warping again.

Scientific and Useful.

"INFLUENCE OF THE MOON."

In the RURAL NEW-YORKER of July 27, under the above heading, a correspondent signing himself J. O. R., in referring to my former communication, says he "would like very much I would explain the *cause* of the effect of the influence of the moon on timber;" states he did not believe I "or any other man can explain it on scientific principles," and proceeds:—"I have always been skeptical on this subject, and expect to remain so until it can be more fully explained."

Now, whoever read my communication must have been of the same "belief" with him in reference to my incapacity to explain the "*cause*" of the effect of the influence of the moon on timber on scientific principles; for I had only stated *facts* that I had proved to be correct by oft-repeated experiments. Is J. O. R. an unbeliever in all and everything that has not been explained on scientific principles? Does he believe in his own existence? Can he explain the cause of the various tints and shades of the growing grass, or the variety of stripes on different blades growing from the same root? In short, "can he comprehend the Almighty, or find out his works to perfection!"

It would certainly be very satisfactory to have the cause of the effect of the influence of the moon on timber explained; but many theories that at first seemed equally incredible, have subsequently been found to be quite in accordance with science. It has, for a long time, been generally believed that the moon had an influence on, or was the cause of the ocean tide; and that it had an influence on persons having an impediment in their speech, called stuttering; and I have myself known, for a long time past, several such persons, who have stated to me that they *knew* that the moon had an effect on them; and, from my experience, I should say it had on the flesh of animals slaughtered in the waning of the moon, causing it to shrink on boiling, sometimes to one-half the length of the bone that had been cut of an equal length. Experience also inclines me to the belief that peas sowed in the waning or dark of the moon grow less straw, are less inclined to mildew, grow more pods, and ripen up better than when sown in the increase of the moon—that is, if the soil and weather are such that the grain will vegetate at once, so that it does not lie in a dormant state until the right time in the moon has passed by, for I have doubts as to the moon having any influence on what lies in a dead or dormant state. Nor do I believe, nor have I ever heard it said, as J. O. R. says he has, "that there was a day in August, when the moon was right, on which, if an ax be struck into a living, healthy tree, it would immediately wither and die;" but I do know, having been taught by experience, that if trees (having but a thin sap) are girdled, as it is termed, or cut round them through their sap, in the dark of the moon, they will wither and die in a few hours, when, if girdled in the same manner at another time, they will remain green and apparently healthy for a week, and sometimes two weeks.

J. O. R. admits the necessity of having this theory investigated, and says, "it cannot be denied that the public need light on this important subject." It was for this reason I sent you my communication at the proper time for investigation—when the bark could be easily peeled off the tree; and I regretted that the press of matter then on hand for the RURAL caused some delay in its insertion; still there was ample time for your correspondent J. O. R. to have tested my theory, and then had the result published to the world. This would have been more in accordance with his professions, than to send you an inconsistent and nonsensical article on a subject he avows himself to be skeptical and ignorant upon. Is it not of more importance to know the best time for cutting timber, than to know the cause of the effect, scientifically?

Port Nelson, Ontario. P. FISHER.

LIGHTNING RODS.

WILL you please give us through your columns some information about lightning rods? Are they any protection against electricity or not? If so, which is the best, which the strongest conductor—iron, copper or mixed metal? Are the twisted rods as good as smooth ones? Does the past history of rods show them to be a protection or not? Did they ever fail to conduct electricity to the earth when put up on scientific principles and in good repair? Would you advise to put them on a building or not? Is it our duty to protect ourselves by their use or not? I have written this much in regard to the utility of lightning-rods, because there are so many being put up all through the country. Now, if there is no protection in them, what an imposition and humbug they must be! And what a shameful waste of property if they are useless! But if they are a protection to life and property, then is it not a duty to understand their value, and to avail ourselves of it.—L. ELLIS.

1. We believe lightning-rods properly made and put up, are a protection to buildings, and that it will pay thus to protect them.

2. Copper is the best material in use. Iron is used, however. A good authority recommends an iron bar one inch wide and three sixteenths of an inch thick; if a copper rod, one inch wide and a twelfth or a tenth of an inch thick.

3. The best authorities do not, however, regard form so important as quantity of metal in securing conducting power.

4. We advise our correspondent, however, if he desires to investigate this subject thoroughly, to send for a little work entitled "Lightning Rods and How to Construct Them," by PHIN. It may be procured at this office.

SCIENTIFIC AND USEFUL NOTES.

For Re-Sharpening Files.—The following is given by an exchange as useful and effective; but we have not tried it.—Wash the files in a solution of warm water and potash until thoroughly cleansed, after which wash the files in warm water; then put one pint of warm water in a wooden dish, in which place as many files as the water will cover; add to this two ounces of borax and two of blue vitrol, finely pulverized together. Stir up the files well and add two ounces of sulphuric acid by weight; to this add one quarter ounce of vinegar The files will turn red. When they again resume their natural color, take them out and wash them in cold water, after which they must be thoroughly oiled with sweet oil, and wrapped singly in brown wrapping paper which will absorb the oil from the files.

How to Fasten Rubber to Wood and Metal.—As rubber plates and rings are now-a-days used almost exclusively for making connections between steam and other pipes and apparatus, much annoyance is often experienced by the impossibility or imperfection of an air-tight connection. This is obviated entirely by employing a cement which fastens alike well to the rubber and to the metal or wood. Such cement is prepared by a solution of shellac in ammonia. This is best made by soaking pulverized gum shellac in ten times its weight of strong ammonia, when a slimy mass is obtained, which in three to four weeks will become liquid without the use of hot water. This softens the rubber, and becomes, after volatilization of the ammonia, hard and impermeable to gases and fluids.—*American Artisan.*

Fire-Proof Wood for Building.—Wood may be rendered nearly as capable of resisting fire as brick or stone, without great labor or expense, by soaking the dried lumber a short time in a solution of soluble glass, a silicate of soda or potash, and afterwards immersing it in lime water, by which the pores of the wood are filled with a silicate of lime. This substance is fire-proof, and cannot be dissolved in water, and its presence and effect in the fiber of the wood are therefore permanent. Soluble glass is readily obtained, being already largely used in this country. This is not patented.

Simple Reading Chair.—A correspondent of the English Mechanic furnishes an illustration of a simple reading chair—devised to correct and prevent round shoulders and curved spines. The illustrations (see page 157) tell the story of construction completely. Evidently any one who knows how to use tools can make one. It may be very plain, or it may be elaborately upholstered. It is a good device, and one or two such chairs in a family would be found convenient and comfortable.

How to Stop a Pinhole in Lead Pipe.—Take a ten-penny nail, place the square end upon the hole, and hit it two or three slight blows with a hammer, and the orifice is closed as tight as though you had employed a plumber to do it at a cost of a dollar or more.

Hygienic Information.

WHAT FOLKS ARE MADE OF.

THE number of bones in a human body is generally estimated at 245, of which there are reckoned in the skull, head and face, 61; in the trunk, 64; in the arms and hands, 60; and in the legs and feet, 60. The weight of the skeleton is about one-tenth the weight of the whole body.

Bone, when used as a lever, is 22 times as strong as sandstone, 3½ times as strong as lead, nearly 2¾ times as strong as Elm and Ash, and twice as strong as Box, Yew and Oak timber.

The number of muscles in man is 540, being more than twice the number of the bones. The bulk of the body, upon an average, is equal to a cube of a little more than sixteen inches on a side, and the amount of water equals a cube a little more than fourteen inches on a side, or nearly three-fourths of the body.

An adult drinks about fifteen hundred pounds of water yearly, and throws off, through the various waste-gates, nineteen hundred pounds. The difficulty of accounting for the four hundred pounds has led some to suppose that the water is formed in the system by the union of oxygen and hydrogen.

The salts that have been enumerated are found in almost every part of the body. Common salt (chloride of sodium) is found in every fluid and solid, except enamel. The whole amount in the human body is 277 grains. It serves many important uses.

Carbonic acid is found in the lungs, alimentary canal, the blood and urine. The amount of carbonic acid, however, varies, being from one to three pounds in twenty-four hours, and the causes of variation are temperature, age, sex, state of health or disease, development of the body, muscular exertion or repose. This gas (carbonic acid) contains in every 100 pounds 28 pounds of carbon (charcoal) and 72 pounds of oxygen (gas). Hence, the maximum weight of carbon which escapes in this form from the lungs of a full-grown man is about fifteen ounces in twenty-four hours.

The average amount of air which passes in and out of the lungs at each inspiration and expiration is about 20 cubic inches; the amount passed through them in twenty-four hours is about 622,000 cubic inches, or, as others estimate it, from 3,000 to 5,000 gallons every day. This varies greatly. In the first place, the lower the temperature the greater the amount of animal heat to be generated, and, consequently, the greater the amount of air to be consumed. Also, a person laboring in the open air breathes more deeply than one confined to the house. From a series of 5,000 observations made by Dr. HUTCHINSON, the following principle is deduced:—"For every inch of stature from five to six feet, eight additional cubic inches of air are given out at a forced expiration after a full inspiration." That is, if a person five feet six inches in hight can expire 422 cubic inches, a person five feet seven inches can expire 430 cubic inches.

The nails of the hand grow about two-fifths of a line per week, while those of the feet require four times that period for the same amount of growth. Cases are on record where the nails have been shed periodically. The time necessary for a nail to grow its whole length varies from twelve to twenty weeks. The nails are thickest at their most convex portions, instead of their edges; they grow only so long as they are cut, and among the literary class of the Chinese, who never cut their nails, they are said to attain only a length of two inches.

In man, the average weight of the brain is 54 ounces; in females, 45. The average capacity of the crania of Germans and Anglo-Saxons is 90 cubic inches. DANIEL WEBSTER'S cranium contained 122 cubic inches.

The amount of blood in a healthy body is about eighteen pounds, or ten quarts. The heart is six inches in length and four inches in diameter, and beats 70 per minute, 4,200 times per hour, 100,800 times per day, 36,-722,001 times per year, 2,565,440,000 times in three-score and ten; at each beat 2¼ ounces of blood are thrown out of it; 175 ounces per minute, 656 pounds per hour, 7¾ tons per day. In an ordinary life of a man, the heart beats at least 3,000,000,000 times, and propels through the aorta 1,500,000 tons of blood.

The amount of gastric juice secreted by the stomach of a well-fed, grown person has been estimated at from 60 to 80 ounces in twenty-four hours. A healthy stomach contains no gastric juice except where food is taken, and by its contact with the surface of the mucous membrane excites the secreting organs to pour out the gastric fluid in the requisite quantity. If the stomach is in a healthy condition, and the brain healthy, the quantity of gastric juice generated or thrown out will be just sufficient for healthy digestion. If the condition of either organ be impaired, the gastric juice secreted may be either deficient in quantity or vitiated in quality.

Let us study ourselves, that we may understand ourselves better. The proper study of mankind is MAN.

LEANDER G. BAGGERLY.

South Butler, N. Y.

HYGIENIC NOTES AND QUERIES.

Anæsthetic Glycerole for Burns, etc.—Dr DE BRUYNE, in the *Journal de Bruxelles*, extols the following liniment for burns, etc.:—

℞ Freshly precipitated hydrate of lime, grammes iij.
Glycerine, " cl.
Mix, and heat moderately, and then add:
Chlorinated chlorohydric ether. grammes iij.

The liquid thus obtained is transparent and clear. A compress of fine linen is thoroughly wet with this and applied on the burnt part. Immediately over this is to be placed a piece of gold-beater's skin, impermeable taffeta, or even flannel, so as to secure complete occlusion, and prevent the evaporation of liniment.

Dr. DE BRUYNE is convinced of the beneficial effects of this dressing, not only in burns, but also in ill-conditional wounds: in atonic, callous, fungous, and foul ulcers; and likewise in certain cutaneous diseases, especially such as are dry and squamous, accompanied with pruritus.

Arsenic in Dyspepsia.—Dr J. C. THOROWGOOD, in the Practitioner, speaks highly of the action of arsenic in many diseases of the stomach. He has found that one-drop doses of Fowler's solution in half an ounce of infusion of Columba had the effect, in a case he treated, of allaying the pain, stopping the vomiting of food, and enabling the patient to eat and digest small quantities of mutton. He states that the small irritable tongue, with projecting papillæ and yellow or gray fur, indicates arsenic. The more purely local the gastric symptoms, the better is the chance of arsenic doing good. Where there is much general exhaustion of the system, with disordered urine or hepatic congestion, it does not promise much.

Remedy for Ague.—I promised some time ago to send you a recipe for ague which I never know to fail. There must be some good brandy, black pepper and a piece of flannel large enough to cover the bowels handy. When the chill is at its hight, let the person go to bed. Now let some other person dip the flannel in the cold brandy. Don't wring out the flannel. Spread it on the table, dust it over with the pepper out of the castor, then spread it over the bowels, pepper side down; at the same time give half a wineglassful of the brandy and half a teaspoonful of the pepper to drink; this must be done when the chill is at its hight.—WILD IRISH GIRL.

Offensive Breath.—For this purpose, almost the only substance that should be admitted at the toilet is the concentrated solution of chloride of soda. From six to ten drops in a wineglass full of pure spring water, to be taken immediately after the operations in the morning are completed. In some cases the odor arising from carious teeth is combined with that of the stomach. If the mouth be well rinsed with a teaspoonful of the solution of the chloride in a tumbler of water, the bad odor of the teeth will be removed.—*Journal of Chemistry.*

Hygienic Rules.—Never eat when much fatigued; wait until rested.

Never eat just before you expect to engage in any severe mental or physical exercise.

Never eat while in a passion, or when under a great mental excitement, depressing or elevating.

Never eat just before taking a bath of any kind, or just before retiring at night.

Never eat between regular meals.

Remdy for Burns.—I send a remedy for burns, which we have tried with perfect success. It is so simple that I think it preferable to anything I ever heard of. Take one teacup of lard and the whites of two eggs; work together as much as it can be, then spread on cloths and apply. Change as often as necessary.—S. L.

Domestic Economy.

STARTING IN MARRIED LIFE.

I WILL tell you a story of my own experience in starting in the world. When I was very young and very poor, I married a very poor young man; he worked out by the day, or by the month, on the farms, and in order that the stormy days should not consume the incomes of the fair ones, something must be done. What should it be? He had no trade for indoor labor, except making shingles. Then he had no shop, and it would cost so much to buy lumber and build one. Heretofore he had spent the stormy days like hundreds of young men in the country, lounging about public places in the village, or at some neighbor's. He had formed the habit, and liked it right well.

"Now," said I, "JAMES, if we ever get anything ahead, the Winter must not consume what the Summer yields."

"True," said he, "but what can I do?"

I hesitated a moment, looked at the neatly scoured floor of our little log cabin, and snow white recess and window curtains, which, by the way, were pieced out from worn-out garments.

"Get neighbor WILLSON to bring you some timber, get it sawed, and make the shingles for half."

"Where," said he; "here in the house?"

"Yes, here in the house," said I.

Year after year passed. In our kitchen barrels were hooped, chairs were bottomed, barley forks were made and sold, and I used to pack the shingles. And what of it if I did help him saw the small timber? All this was done in bad weather, and the children were growing up enjoying the liberty of making all the litter desirable, whenever they were released from their hours of study. No one on earth loves neatness more than I; but I learned, in time, to sacrifice neatness, in a measure, to prosperity and happiness.

Husband is nervous and irritable by nature, and it will not do in all cases to try to teach old dogs new tricks, so I have picked up after him, boots, hats and clothing, washed and combed him almost every Sunday morning, and, as to the boys, they have made all sorts of farming implements in the house when they could not play out-of-doors; and whatever innocent amusement they wished to engage in aside from mental improvement, they have done. I made many efforts to teach the boys order about the house, but never fairly succeeded.

Now for the result of my course:—We have a farm of more than a hundred acres, well stocked; there are several rooms in our house, but shingles are not made in any of them. Sometimes when husband brings in a barrel to hoop for our own use, I tell him to be careful not to scratch the paint off the floor. Husband is a steady, hard-working man, and when night comes he is at home; the boys, or rather young men, are honest, ambitious, home-loving boys. No smoking cigars, or taking a glass, or lounging about, with them. Studious, noble, good and true they are. MARY.

ECONOMICAL NOTES.

How to Make a Bill of Fare.—I will tell you what I have long been wishing to say about this clamor for a bill of fare for farmers. I will give you my plan, which I think will suit all, for a near market: Make a list of all the articles of food in the house, or at your command; then take a little blank book, begin with one article and note all the different ways you can cook that—say potatoes—boiled, baked, fried, in balls, with or without fish; then the meats, after the vegetables are arranged. A lady tells of cooking rice, and salt and pepper it; used as a vegetable. Fish (always for Friday) boiled, broiled, fried, baked in cream, or stuffed, etc. Puddings—say meal—baked, steamed or boiled, fried hasty pudding, or stirred into buttermilk and eaten with molasses.

I have only mentioned the most common; but everything in this way. If more convenient, make a list for dinner, breakfast and tea; lunch separate; then if you are in a study what to cook, look over your list and see what you have not had that week, and you will not be at a loss. Cakes and pies may be followed out in the same way. One woman has fried bread, or bread dipped in molasses and fried; thinks it excellent; buttermilk pop and many things will help you to make a long list. Look over different newspapers and collect all the receipts you can find, and arrange them in the different lists for breakfast, dinner and tea.—C. O. D.

Domestic Inquiries.—CHELLIE asks M. N. R., for her recipe for fruit cake. . . . R. C. C., asks for a recipe for making soft soap with potash. . . . JOSH BROWN doffs his hat to "all and sundry," who have come to his rescue on the fried potato question, and begs, as a favor, that some one will tell his wife how to cook mushrooms. He has them growing, but she never cooked any and don't know how. . . . MR. HAND asks how to keep from a room and destroy the harmless but disagreeable insects known as wood lice. . . . S. C. SMITH asks what will drive away black ants. . . . THOMAS BUTCHER asks some one to tell him how to make a vinegar plant.

Floating Island.—To three pints of milk, take four eggs and two-thirds of a teacup of sugar; separate the yolks and whites of three eggs; set the milk on the stove to scald; beat the whites of the eggs to a stiff froth, drop it on the scalding milk, let it remain a few moments, then remove it; beat up the remainder of the eggs with the sugar; stir in quickly; salt to taste. It is better to add a tablespoonful of cornstarch moistened with milk. Flavor with essence of lemon; place in a dish of suitable size and drop the froth so as to form little islands over the surface.—VIRGINIA.

Preserved Citron.—Cut the citron in regular slices; pick the seeds out nicely; again cut small, steam until they can be pierced with a straw, then add pound for pound of white sugar, and boil slowly for a few minutes; flavor with lemon or cinnamon to suit, and I will assure you, you will be satisfied with the preserves. Some use less sugar, but I could not recommend it as the best method.—MRS. GEO. ALLANSON.

Butter Inquiry.—I also wish to say that I would like a little information on butter-making, if some one of your correspondents would be so kind as to inform me. In the RURAL of August 24, I saw an article on "Profits from Butter-Making." What I wish to know is, how Fancy butter is made or packed, to fetch so much higher price than any extra good butter. My husband makes the butter from our dairy, and it is called *extra good*, and brings the highest price in market. What butter can be better?—J. M. G., *Brookfield, Pa.*

Chicken Cheese.—Did your readers ever eat any? I like it. Boil two chickens till tender; take out all the bones and chop the meat fine; season to taste with salt, pepper and butter; pour in enough of the liquor they were boiled in to make it moist. Mould it in any shape you choose, and when cold turn out and cut into slices. It is excellent for traveling lunch.—SUSIE P. R.

Whortleberry Pie.—Put berries enough for one pie into a dish, with one spoonful of melted butter, two of good, strong vinegar, two of water, and one half cup of sugar. Turn this into a tin (that is lined with crust) and sprinkle a small handful of flour over before putting on the top crust.

Rice and Apple Pudding.—Boil half a pound of rice in half a pint of milk till it is soft; then fill the dish half full of apples which have been pared and cored; sweeten to taste. Put the rice over the fruit as a crust, and bake one hour.—L. E. K.

BURTON & TEN EYCK.

Fashions for Fall and Winter.

1170

GODIVA. This Polonaise is one of our latest Paris Novelties. It contains many new and very valuable features. Without looping it can be worn as a long tight-fitting basquine, or looped (as shown in cut) it is a most elegant Polonaise. The ornamental back piece passes over the shoulders and forms a most novel cape in front and is "adjustable;" may be worn or not as fancy dictates, thus constituting *two* entirely different Polonaises in appearance. The back piece is sometimes made in velvet or satin, and richly trimmed, and completes a brilliant toilet when worn with a house dress. Besides its beautiful variations it is well adapted to any material. Takes six yards of 24 inch goods. Price of pattern with cloth model ONE DOLLAR. See PREMIUM OFFER below.

1165

NEW FALL WRAP, in a sacque and cape, with a thribble box-pleat laid on the under side in the back, and in place of the broad pleat of last season; just the three edges are visible from each side, giving the appearance of six round folds, the cape slopes gracefully to the back, and is left open to trim. The sacque has a large sleeve, which can be used or not, as weather or comfort demand.

We give this as one of the very best for fall and winter cloak made in either velvet or cloth. The original is of dark blue ladies' cloth. Scalloped and bound with velvet and velvet buttons. Takes three yards of ladies' cloth. Pattern, with cloth model, 50 cents. *See premium offer below.*

762

PRESTO. Chemise for lady. Its great success in leading all other styles is owing to its perfect fitting band and sleeve. The curved arm-size is an improvement of *much* value, as it will not *cut* the shoulder or *bind* the arm, and also avoids the homely, perplexing gusset. Takes three yards linen for medium-size. Pattern, with cloth model, 25 cents. See Premium below.

We give a CLOTH MODEL with each pattern which SHOWS every seam, plait, gather, loop, etc., how to put the garment together by the pattern, and how it will look when completed. By the use of our Cloth Models any person who can sew can FINISH the most difficult garment as easily as the plainest. They are PERFECT GUIDES.

Premium Offer!

If you write the following, viz.:

[RURAL, 1170, 1165, 762,]

and sign your name, giving your P. O., Co. and State, and then inclose it, with *One Dollar* and *Ten Cents*, to us, we will make you a *yearly* subscriber to *Smith's Illustrated Pattern Bazaar* (begin with the present No.), and send to you by return mail *all* the patterns, with cloth models complete, of the *three* above engravings, *as premium*. *Now* is the time to *Subscribe!*

Either of the above patterns sent by mail upon receipt of its marked price.

SMITH'S

ILLUSTRATED PATTERN BAZAAR.

ONE DOLLAR A YEAR.

OUT-OF-DOOR NOTES.

An Editor Getting Fresh Air.

WITH all its Babylonish wickedness, with all its political and social corruption, with all the evil influences it exerts upon those who come within its vortex, New York City is full of the sweetest blessings and the most boundless and liberal charities for those who need and know how to enjoy them. Chief among these is

The Central Park.

During the heats of three Summers, our duties to the readers of the RURAL NEW-YORKER have compelled residence in the city—forced us to daily listen to its din, inhale its heated, dusty and noxious air, walk its hot pavements, ride with its sweltering and often unclean population in crowded cars and omnibuses, listen to inane sermons in dimly lighted churches by those who "supply the pulpits during vacation," feel virtue go out of us by constant contact with people who are always wanting something and never giving. But through all this we have lived, and happily, because of this grand, sweet, peaceful, pure, glorious breathing place, Central Park. At dawn, mid-forenoon, mid-day, mid-afternoon, evening and midnight—at all hours of the day and night, we have found welcome, peace, rest, refreshment, pure air, seclusion and content, within its boundaries. Every nook and corner of it is familiar to us; every tree is an individual acquaintance, every flower a fragrant friend, every rock an assurance of firm faithfulness; the wide-spreading lawns with their emerald grasses, the grazing flocks and patriarchal shepherd with his crook, are pictures of pastoral beauty, and repose so in contrast with the torrid, effervescing life of the city, but a mile or two away, that we gravitate there as naturally as the sun sinks in the West, when the earth has rolled over.

Previous to the present year there has been comparatively little freedom to enjoy all that such a breathing place should furnish. True, our senses, through eyes, ears and nose, have feasted upon its varied beauties, its concord of sweet sounds and its fragrance; but our feet have not been permitted to tread its lawns, nor have we had the privilege of reclining in its verdure, and seeking secluded nooks among its trees and amid its wilder tangles. But during the present season a broader and more liberal comprehension of its uses and benefits seems to have come to the minds of the Park Commissioners; the broad, sweet lawns have been made "common," and the appreciative throng has pressed the velvety carpet with its feet; boys and girls have rolled, rambled and reveled at will upon its green surfaces, and enjoyed all the delights which unrestrained country freedom could yield, and more; for the æsthetic beauty of nature adorned, yet unadorned, has wrought its influence on their souls, modified and toned the naturally wild natures, restrained lawlessness, through a natural fear of losing privileges, and aided in the recognition of the untitled rights of all to peaceful, pure enjoyment.

Sitting here in this pure, sweet air sunshine this beautiful Sunday morning, we drink in the sacred draught of elixir Nature furnishes us, with the secure content which comes of "peace within and without." The sunshine glints down upon us through the trees and plays hide-and-seek with the perpetually-moving foliage of the trees and vines and flowering shrubs. Family groups wander here and there upon the lawns, or recline on the shadowed rocks, or lounge in the shaded seats. Hopeful pairs of human doves are mating and cooing in retired nooks. The wrinkles of care, the lines of anxiety, the scars of suffering, the marks of sorrow, all seem to be exorcised by the soothing sermons of these natural preachers, the sacred music of these myriad choristers, and reverential, natural, spontaneous praise fills every heart that enters this sweet, sacred, beautiful and worshipful natural temple—a temple made without hands, whose arches are not to be measured and the mysteries of whose architecture are past finding out.

RURAL NOTES AND QUERIES.

Steam Plowing in England.—Is steam-plowing in England as mythical and rare as in this country? Are the statements made concerning the amount of steam-plowing done there simply false? Do they correspond in practical accuracy with those made concerning the exploits of American plows? Have we been deceived? FAWKES, with his plow in the West, was at first reported as doing, and then as just going to do, wonders with it. He did plow a good many acres of ground, but at such cost that it did not pay to use it. In one or two places—one in Louisiana, one in New Jersey or Delaware, and, we believe, on one farm in Minnesota—steam-plowing is reported as practiced. But we have seen no figures that prove its economy in American farm husbandry. Now comes the statement by a correspondent of The Country Gentleman, that he looked over England recently with especial reference to the use of the steam plow there, made diligent inquiry but obtained very little definite information about it. He could only learn that it was *believed* to be in use on some of the larger farms in the south of England, but this correspondent concludes "that the old fashioned way of plowing is the only one in practice in England." At least he did not see the puff of a single engine propelling a plow, and he kept his eyes open.

Soc.; Fair at Westfield, Oct. 1, 2....Of the South Carolina State Ag. and Mech. Soc.; Fair at Columbia, S. C., Nov. 4, 8. ..Of the Cotton States Ag. and Mech. Asso'n; Fair at Augusta, Ga., Oct. 22, 26....Of the Monongahela Valley Ag. and Mech. Soc.; Fair at Morgantown, W. Va., Sept. 25, 27 ..Of the Northern Ohio Fair at Cleveland, Sept. 10, 14....Of the Calhoun Co., Mich., Ag. Soc.; Fair at Marshall, Oct. 1 and 2.

The Foot-and-Mouth Disease in Great Britain continues to rage with great virulence. In the county of Norfolk the authorities recommend that all Fairs and Markets for store cattle be suspended for six weeks, not only in that, but in adjoining counties. The unusual features of this disease now are said to be its intensity and fatality. Whereas heretofore the deterioration of stock was great and deaths were few, now deaths of sheep and cattle are numerous, and cattle are attacked and die which had recovered from it but three or four months previous—overturning the prevailing belief that a recovered animal will not be again attacked within twelve months. The Report of the Veterinary Department of the British Chamber of Agriculture, for 1871, shows that 1,344,625 animals were attacked with this disease; that 1.136 per cent. died, .337 per cent. were killed, and 98.537 per cent. recovered.

Practical Education for Women at the Illinois Industrial University.—An attempt is to be made at this University, at Champaign, Ill., the coming year to teach, in connection with ordinary branches of learning, the household arts, the principles of culinary science and domestic economy. A boarding-house for ladies is under the supervision of a matron whose duty it is to be to assist the young women in acquiring something more than the ordinary boarding school accomplishments. This will answer several inquiries we have received about such a school. But our correspondents are to remember that in this case it is an untried experiment.

Americans in Europe.—A London paper says an American will meet almost as many known faces in Bond street, London, as in Broadway, N. Y. Hundreds of Americans have arrived in London in a single week; and the paper referred to asserts that a change has of late come over London, it attracting more visitors than Paris. But we were going to say that our friend PATRICK QUINN, with his companions, BLISS and HOOPES, have returned from their European tour, having had a delightful and profitable trip. PETER HENDERSON was also over there, and we notice he has got his name prominently in the horticultural papers there, as giving advice to young English gardeners about the best time to emigrate, etc. Mr. QUINN found Americans everywhere, and found them to be respectfully, and often cordially, received by Europeans—especially such of them as deserved to be so received.

Southern "Dogs-in-the-Manger," who are opposed to white immigration and flow of capital into the South because they are fearful of being crowded out, are thus talked of by a writer in the New Orleans Home Journal:—"It would be a great blessing if those men would emigrate, quit their country for their country's good. If they remain, they will always impede the onward march to peace and prosperity. Like so many curs, they are ever barking at the heels of all progress which does not immediately fill their pockets with gain. Let them know that the people are wide awake to this great question of white immigration, and that whatever they may say or do to obstruct the pathways leading to it will not change the decrees of Providence, and will work to their shame."

Cream Cheese in New York Markets.—I beg to ask you if there are any small cream cheese made and sent to the New York markets, similar to those sent and daily sold at all the country towns in England, and which are delicious? They are easily made and are about ten inches in diameter, and about one or one and a-half inches thick, white on the outside and will keep about a week, good. If there is any place in New York where they can be had, please let me know through your paper. If they are not made and sold, it is time they should be, being profitable and quick sale. Any person who had them for sale properly made, could sell a wagon load every day.—A SUBSCRIBER, *Deer Park, L. I.*

WE do not know that they are made and sold in this country.

The Wheat Corner in Chicago has been smashed and those who built it and upon it have come to grief. The chief promoters of it have been expelled from the Board of Trade. The high prices induced by this corner will have caused heavy loss to speculating buyers who were not in the corner. Farmers may have received temporarily higher prices, but the reaction and the crippled condition of many who bought when they ought not to have done so will be likely to depreciate prices, so that there is really no gain in the end. We, however, believe wheat is to bring a good price. And we do not advise any haste to realize in consequence of the immediate reaction of prices in the great wheat markets, following the fall of the Chicago "corner."

The Milk Producers who sell their milk in New York City, are moving, as we have before stated in these columns, to so organize as to control the sale of their own product through their own agents—sell pure milk—at no lower price to consumers, and pocket a larger share of the profits than they now do. A meeting of those interested in this movement is proposed, and all who will attend such a meeting are requested to send their names to ORIS T. BEDELL, No. 70 Ninth Avenue, New York City. As soon as a sufficient number have responded, the time and place of meeting will be determined, and those who have sent their addresses, notified.

Alexander Hyde's Twelve Lectures before the Lowell Institute, Boston, Mass., have been published in book form. The topics of these lectures are—Agriculture as a Pursuit; History of Agriculture; The Soil; Drainage of Lands; Mineral Fertilizers; The Vegetable and Animal Manures; Hay Crop; Potatoes; The Corn Crop; The Root Crop; Fruit; Cattle Husbandry. No farmer or farmer's son will fail to learn enough from a thoughtful reading of these lectures to warrant the purchase of the book.

Catalogues Received.—From RICHARDSON & VAIL, Geneva, N. Y., Descriptive Catalogue of Fruit and Ornamental Trees, Shrubs, Vines, etc. From BRONSON, HOPKINS & Co., Geneva, N. Y., Descriptive Catalogue of Fruit and Ornamental Trees, Shrubs, Vines, etc. From ELLWANGER & BARRY, Rochester, N. Y., Wholesale and Descriptive Catalogues of Bulbous Flower Roots, Plants and Ornamental Trees and Shrubs, etc.

THE SEASON, CROPS, PRICES, ETC.

Middleville, Barry Co., Mich., Aug. 26.—We are having a very dry Summer; more severe than last year, so far as injury to Spring crops is concerned. Winter wheat was generally good as to quality and yield. Hay, a good crop. Oats, corn and potatoes will be a short crop—not as good as last year. Apples are plenty, but small; no peaches; all other kinds of fruit have suffered by the drouth. Prices of produce are: White wheat, $1.30@1.35; oats, 35c.; corn, 50c.; potatoes, 75c.; apples, 40c.; butter, 13c.; eggs 15c.; wool, 50@55c. per pound.—J. F. E.

Starkey, Yates Co., N. Y.—The wheat is now all drawn and some of it is threshed. The yield will be about ten bushels per acre. The barley is a good crop; the threshers think the yield will be twenty-five bushels per acre. Oats have rusted some on late spots, so the yield will not be as good as last year. Corn was never better than it is this season; potatoes never made a more vigorous growth. The pastures are now quite dry for the want of rain. The price of beef cattle is low; they are not selling at more than three and a-half cents per pound on the foot, which is less than they can be raised for. Wool is selling at fifty cents. I have heard of no sales of sheep.—S. C.

Clyde, Wayne Co., N. Y., Aug. 26.—We are having very hot weather this month. Threshing commenced about two weeks ago. Wheat is poor both in quantity and quality, not averaging over fifteen bushels per acre. Oats are poor also; the Norways are very smutty; indeed all varieties are, except the White Probestier, which more than doubles the yield of the other kinds. The barley crop is medium. Corn is looking very fine. We have all prospects for a large grape crop, this season having been very favorable for them; the Hartfords, Delawares, Adirondacks and Ionas have commenced turning, and are looking very fine.—W. L. D.

Montgomery, Ala., Aug. 26.—Trustworthy reports from all parts of Alabama represent that the destruction of cotton by worms is more thorough than ever before. They have eaten the leaves until the fields are bare as after a frost. The naked condition of the plant reveals the fact that the mature fruitage is not so great as usual at this season of the year. Fears of almost universal bankruptcy among the planters are entertained. No one expects the crop will equal that of last year.

RURAL BREVITIES.

THERE is to be a large sale of Percheron horses at the Maryland State Fair.

THE onion crop of Eastern Massachusetts, it is said, is to be the largest for many years.

SAMUEL A. ECHOLS has retired from the Rural Southerner, Mr. A. C. VAN EPPS succeeding him as editor.

COMMISSIONER WATTS is to deliver the annual address before Minnesota Agricultural Society at its State fair.

MICHIGAN and Iowa hold State Bee Keepers' Conventions at the times and places of their respective State Fairs.

H. L. STEWART, North Shenango, Pa., is referred to page 140, RURAL NEW-YORKER, Aug. 1, first column, for answer to his question.

"OCCIDENT" is the name of a fast trotting horse in California, said to have trotted a half mile recently in 1.06½.

WE have inquiries how to get the Report of the Department of Agriculture for 1871. Write to the Congressman from the District in which you live for it.

W. H. PLATT is informed that we referred to Thomas' Smoothing Harrow; but do not remember the cultivator named, and did not keep the letter making the inquiry.

HOPS of the new crop have been received in New York City, from California, which sold at seventy cents. The new crop received here has sold at a range of 35 to 45 cents.

WE should like our correspondents in the tobacco regions to write us concerning the condition of the crop. We have a good deal of inquiry on the subject from tobacco dealers.

THE beautiful poem entitled "Tired Mothers," which appeared in the RURAL of Aug. 31, should have been credited to The Aldine, we are informed, though we did not copy it from that paper.

WHY did not the Canada Farmer credit an article in its August number, entitled "The English Cheese Trade," to the RURAL NEW-YORKER, in which it first appeared July 20? It would have been a proper thing to do.

PUBLISHER'S NOTICES.

YES, SIR, WE WILL!

"WILL you this year send the RURAL NEW-YORKER for Thirteen Weeks,—say from Oct. 1, 1872, to Jan. 1, 1873,—On Trial, for Fifty Cents, as you did last season? If so, please give notice in your next number."

YES, we will send the Thirteen Numbers of the ensuing Quarter, (Oct. to Jan.) for Only Fifty Cents—or for $3 we will send the RURAL from Oct. 1, 1872, to Jan. 1, 1874. Tell all your friends of this offer!

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

BUSINESS NOTICES.

DR. STRONG'S REMEDIAL INSTITUTE,

Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths, Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Indorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

THE WAKEFIELD EARTH CLOSET.

Get Descriptive Pamphlet at 36 Dey St., New York.

Biographical.

THE PRESIDENT OF THE MEXICAN REPUBLIC.

JUAREZ is dead, and we give a portrait of his successor as President of Mexico. We should be interested in knowing and keeping watch of men and events in our neighbor Republic, no matter how confusing it is; for we believe the time is speedily coming when this Government will have occasion to establish more emphatic relations with this country of turmoil and revolution than it yet has done. The new President, SEBASTIAN LEUDO DE TEJADA, was born at Jalapa, in the State of Vera Cruz, April 25, 1823. His early education prepared him for entering the Church, but having taken a dislike to the ecclesiastical profession, he went to the city of Mexico and studied jurisprudence. Before many years he held a high position as advocate, and between the years 1855 and 1857 he held the position of Magistrate of the Supreme Court of Justice. COMONFORT was then President of the Republic, and Senor LERDO entered on his political life by taking office under him. The ROBLES pronunciamento occurred in 1850, and during the three following years MIRAMON and the Church party ruled the Republic. LERDO withdrew from politics, and gave his attention entirely to his profession, which brought him both fame and a handsome income.

In 1861 he was offered a seat in the Cabinet under JUAREZ; this he refused, but on taking his place in Congress in the same year, he gave his powerful support to the Liberal party, and the most important event of the session was his energetic and successful opposition to the Wyke treaty, which was an arrangement for the payment of dividends on the English debt out of the Customs' revenues. When the French invaded Mexico he threw up his profession and followed the fortunes of JUAREZ. On the northern frontier he did everything to keep alive the spirit of Republicanism, and on the withdrawal of the French army of occupation an army was speedily organized, well drilled, and equipped, which hemmed in MAXIMILIAN at Queretaro. When the United States Minister petitioned on behalf of the fallen Emperor, SENOR LERDO, as Ministro de Relaciones Exteriores, stated his belief that the death of MAXIMILIAN was necessary to the future welfare of the country, inasmuch as it would prevent any further insurrection in his name.

On the Government entering on its duties in the capitol SENOR LERDO was appointed President of the Supreme Court of Justice, and Vice-President of the Republic. The sudden death of JUAREZ has elevated him to the highest position he can attain in his country. Let us hope that he will exercise his talents and patriotism in the endeavor to restore order amongst the discontented factions which perplex and harass the industrious portion of the community. Pronunciamientos and brigandage should be put down with a strong hand, life and property made secure, railways and roads constructed.

PERSONAL GOSSIP.

PROF. CHARLES L. BALCH, a Vice-Principal of one of the New York Public Schools, a young man of culture, and an active and prominent member of the Liberal Club, died recently from the effects of an overdose of morphine, taken to alleviate suffering from neuralgia. The funeral services were held in the meeting-house of the Society of Friends, among whom he had formed strong friendships, though not sympathizing altogether in their doctrines. He was more a positivist. The Liberal Club rooms at the first meeting following his decease were beautifully ornamented with flowers, in his memory, and a touching eulogy was pronounced by Mr. D. B. WAKEMAN, followed by tributes from other members of the Club. He had attended the meeting of the Club but a week before.

E. W. FOSTER, of the Hants Guardian, England, has for many years practiced setting up his leaders from the case direct, without the aid of copy. He asserts that the rate of "composing" coincides admirably with the flow of thought; and that to furnish a good leader, or anything else, it is a great advantage to produce it from the head direct, ignoring the use of pen and paper. It would certainly be a great saving if every editor set up his editorials in place of writing them. We know that, whether such practice is adopted or not, every editor ought to be a practical printer. And every young man or woman ambitious to become an editor will do wisely to learn how to set type well first.

CHARLES FECHTER, the rival of EDWIN BOOTH as Hamlet, and the late CHARLES DICKENS' friend and protegee, is soon to arrive in New York city, where a theater is being rebuilt for him, the front of which is of artificial stone, elaborately ornamented with statuary of the same material. Why don't FECHTER engage MAUVIER NEVILLE, the young Hungarian actor, to support him? Together, they would make a combination rarely seen in the theatres of this country; and together they might elevate the drama to something approaching its legitimate dignity and usefulness as an educational agency.

HARRY FENN, the artist, lately returned from a three weeks' sojourn among the Catskills, where he has been making sketches for the beautiful illustrated work known as "Picturesque America," and has again left in company with O. B. BUNCE (who has written much of the text of the work above named, and of which WM. CULLEN BRYANT is the reputed editor) for an extended tour through Lakes George and Champlain, and among the Adirondacks. There is enough that is picturesque in America to render this a most desirable addition to American libraries.

DR. ASA GRAY, the retiring President of the American Association for the Advancement of

SEBASTIAN LERDO DE TEJADA PRESIDENT OF THE MEXICAN REPUBLIC.

Science, has, according to the reports of the proceedings thereof, given a frank indorsement of the Darwinian theory, without a word of dissent. He expresses the confident hope that "the religious faith which survived without a shock the notion of the fixity of the earth itself, may equally outlast the notion of the absolute fixity of the species which inhabit it." So we came from monkeys to man, and we go from man to—what?

HENRY KURZ, a German, furnishes, for a literary biographical dictionary to the history of German national literature, biographical notices of all poets and prose writers. And this work contains lists of all the works of each author, a statement of all the works which treat of each author, or of any one of his works in particular, and of all the translations of each author's works.

"BEAU HICKMAN," the well-known Washington character, who lived in luxury by assessments levied on verdant Congressmen, and who was regarded "the glass of fashion and mold of form," is now reported to find his abode with a negro family, in a back alley in that city of magnificent distances. His "good things" have passed away.

THE Poet TENNYSON has a serious time getting away from the personal presence of his worshippers—so much so that a recent letter writer refuses to give his whereabouts! What an amount of sympathy must have been awakened in that letter writer, that he should refuse to tell the world what he had succeeded in discovering!

DR. PETERS is announced as having discovered the 124th Asteroid, [which, he says, is "bright, shining as a star of the tenth magnitude." If it is so bright, why has it not been discovered before? Or has it but just appeared within the range of terrestrial vision. All these details are interesting to the unlearned.

MISS KATE FIELD has returned from her sojourn in England and on the Continent, and it is said is to enter the lecture field the coming season. It is to be hoped she has learned more abroad, and will be able to tell it better, than she did "Among the Adirondacks."

THE marriage of the hereditary Grand Duke of Saxe Weimar with the Princess of Oldenburg, fixed for the 28th of August, has been postponed on account of the bride's indisposition; so it is announced. Whether it is indisposition to marry, or illness, we are not informed.

THE reported successor of the belligerent GEO. H. BUTLER, late Consul-General to Egypt, is RICHARD BEARDSLEY, the present U. S. Consul at Jerusalem. During the late war Mr. BEARDSLEY served in the Navy.

The Literary World.

NEW PUBLICATIONS.

The Magazines for September.

THE Atlantic has a gem of a story from Mrs. Lenowens, describing life in the King's harem at Siam. Scribner's has a well-written article on sculpture, profusely illustrated. The Galaxy opens with a fine essay on Mr. Froude, the English historian, from the pen of Justin McCarthy. Harper's has an illustrated article on Venice, and an essay on Poe, from the pen of R. H. Stoddard. Any one of these articles are worth the whole price asked for the magazine.

Stanley's History of the Herald Livingstone Expedition.

THIS work will be published at the earliest moment in this country by Scribner, Armstrong and Co., of New York. It will make a volume of 500 octavo pages, and will be fully illustrated with maps, etc. Mr. Stanley is getting up the book with all expedition in London, and we have no doubt it will be very interesting.

Campaign Hand-Book, and Citizen's Manual.—Hartford: F. C. Bliss & Co.

A HANDSOME, compact, pocket edition, containing much information of importance to all citizens in the pending campaign. It has portraits of the Presidents, and portraits and sketches of the new candidates, with the platforms, etc. It contains 250 pages, and sells for $1.25 per copy.

High Art—Pictures from the Poets.—By LOUIS A. ROBERTS. Springfield, Mass.: D. E. Fisk & Co.

THIS volume embraces quotations from our best poets, burlesqued by the pencil of the author. The engraving is excellent, and the hits happy. It is handsomely printed on good paper, and merits the recognition of all who appreciate humor.

Shakspeare's Tragedy of Julius Cæsar, with Notes by Wm. J. Rolfe, A.M. New York: Harper & Bros.

ANOTHER one of those beautiful and handy volumes of Shakspeare's which every gentleman will delight to possess. The illustrations are excellent and profuse; the notes are copious, historical, and critical, and well worth reading.

Monteith's Comprehensive Geography, with Map-Drawing and Relief Maps. A. S. Barnes & Co., 111 and 113 William St., New York. Price $1.60 by mail.

A CONCISE and comprehensive work, full of finely colored maps and elegant engravings. A more beautiful, useful, or pleasing text book it would be hard to find.

A Smaller School History of the United States.—By DAVID B. SCOTT. New York: Harper & Bros.

A CONCISE outline history of this country, from its discovery to the year 1872. It has many maps and illustrations, and appears to be well adapted for the use of common schools. Its letter press is to be especially commended.

OUR HEARTH AND HOME.

BY C. H. C.

Oh, a beautiful home is mine, is mine,
On an Island fair and bright;
Where the waves roll round with a solemn sound—
The saddest music of night!
And the happiest hearth is mine, is mine,
Where dwelleth no shade of strife,
The music of love comes blest from above—
The dearest of joys in life!

I've a garden fair, with its roses rare,
And its lilies pure and sweet,
With a leafy shade by acacias made—
O'er the bower, my Summer seat.
But our hearth within, GOD keep it from sin!
And the seeds of Piety sow!
There, while we are are blest in our earthly rest,
May the spiritual blossoms grow!

Oh, a beautiful earthly home is mine!
And a grateful heart I bear!
But Father! I pray, oh, teach us the way
To a heavenly mansion there.
From our hearth and home, oh, may we not roam,
While these peaceful joys remain;
But, be it our strife in the battle of life,
A happier Home to gain!

Sycamore Villa, L. I.

Our Story-Teller.

A REVEREND GHOST.

BY O. S. ADAMS.

"I wonder what can keep Mr. DUNLEATH so," said Mrs. REDMOND, looking anxiously out toward the forest.

"I hope he hasn't lost himself in the woods," said her daughter FANNY. "It is as much as three hours since he went away."

"Yes, and here is supper all ready. It would be too bad to have him lose these warm biscuit. Go and ask your father if we shall wait for him."

The REDMOND family lived in a sparsely settled region in one of the Western States. They were on the outskirts of a section devoted mainly to cutting down trees, sawing them into logs, and drawing them to the river four or five miles distant, there to be floated down to a lumber mart. What population there was in the neighborhood numbered not more than three hundred souls, and was chiefly scattered between the Redmond house and the river. Westward lay great forests, and to the South were stretched immense prairies.

A camp meeting was in session for the benefit of the little community, and the REDMONDS had taken under their roof the Reverend ALFRED DUNLEATH, an earnest worker in the cause of his Master and an exhorter of eloquence. The meetings were held mornings and evenings, in a grove three miles distant from Mr. REDMOND'S house.

The brief conversation detailed above was caused by the prolonged absence of Mr. DUNLEATH, who had started off for a ramble in the woods about three o'clock in the afternoon. As evening drew near, and he did not return, there was anxiety on his account, for the woods were deep and thick, and it was no very rare thing for a bear or a catamount to prowl among them, making the place unsafe for any one but a well-armed, steady-nerved man.

Mr. REDMOND, on being spoken to by his daughter on the subject, turned to his man-of-all-work, a burly negro, who stood near—

"SAM," he said, "just run up in the edge of the woods yonder and see if you can see anything of Mr. DUNLEATH. Call him if he isn't in sight."

"Golly! Boss, dis chile ain't ready to be hugged to def by no bar yit! I don't think its scarcely safe to venture too far into dose yer woods."

"There's no danger of your meeting any bear, and if you should he would run at the sight of you. Go along."

"Ha! ha! You'se got it on to me dis time. Run at de sight of me, would he; well, I'se mighty sure I'd run at de sight o' *him!*"

And SAM strode off in the direction indicated, waiting only to step into the barn to shoulder his rifle. He was really no coward so far as any physical danger was concerned, although he was superstitious, and would flee from a ghost with far more promptness and celerity than from a grizzly.

Mr. REDMOND and FANNY returned to the house, and the supper was kept waiting until SAM should return. In the course of twenty minutes he appeared, bringing, however, no tidings of Mr. DUNLEATH.

"I shouldn't think he would go off with any of the neighbors without letting us know," said Mrs. REDMOND.

"No, it wouldn't be like him," said FANNY.

"Well, we'd better eat supper and be off to the meeting," said Mr. REDMOND. "I'll inquire as soon as we get there, and if no one knows anything about him I will get three or four to join me in a search for him. If he has lost his way he may be in a dangerous situation."

In the evening the family repaired to the camp meeting grove, three miles distant, leaving SAM in charge of the house. The grove was provided with rough seats, and dimly illuminated by a few hanging lamps.

Mr. REDMOND made inquiries concerning Mr. DUNLEATH, but without eliciting any information. He was about to organize a small party to start out on a search, when a boy appeared in the assemblage bearing a message. It was addressed to Mr. REDMOND. On opening it he read the following:

"DEAR SIR:—I have received a telegram to join my wife, who is sick. I therefore leave without ceremony. Accept this as an excuse for the sudden departure of yours, &c.,

"A. DUNLEATH."

"Ah, that is sad," said one of the brethren as Mr. REDMOND read the note aloud.

"Where did you see the gentleman when he gave you this?" asked Mr. REDMOND of the boy.

"About four miles South, on the new road."

"Which way was he going?"

"Straight on South. And he seemed to be in an awful hurry."

"Did he appear to be troubled?"

"No, sir, he was laughing."

"Laughing?"

"Laughing!"

The exclamation came in surprised accents from several.

"He wrote it quick and then started on again."

"He must have been going on to Wharfton to take the steamer down the river," said a minister standing near.

"That is full eight miles," said Mr. REDMOND.

"Is it? But he may have thought he could walk it quicker than he could find any one to drive him there."

"That may be. But the boy said he was laughing."

"Pshaw! the boy was mistaken. He couldn't have been laughing."

This explanation of affairs was accepted, and the meeting went on. All soon became deeply absorbed in listening to the words of the exhorters.

In the midst of the exercises Mr. REDMOND, who had not dismissed all anxiety on account of Mr. DUNLEATH, suddenly started as a thought passed through his mind.

"Brother PERKINS," he whispered to one who sat near him, "see here a moment."

The two made their way softly outside the little throng, and Mr. REDMOND said:

"There is something wrong about Mr. DUNLEATH's absence."

"How?"

"The note said that he had a telegram from his wife. But *there is no telegraph line within eight miles of here!*"

"That's true! How thoughtless we were. How could we be so imposed upon? What can it mean?"

"That's the question. And the boy said Mr. DUNLEATH was laughing."

"But that is absurd."

"Of course it is. But that doesn't help matters any. There is some mystery about it."

"Yes—a telegram from his wife with no telegraph station near—and then to think of his laughing while sending such news."

"It can't be that he is playing a joke on us."

"He would be the last man in the world to do that."

"So I should think," said Mr. REDMOND. "It is very strange. I am afraid there has been foul play somewhere."

"It certainly looks like it."

"I am not satisfied," said Mr. REDMOND, decidedly. "I shall take a party of men and go in search of him immediately. The very mystery of the thing alarms me."

In a short time Mr. REDMOND had induced five of his neighbors to join him on an expedition through the woods to search for Mr. DUNLEATH, or any trace that might indicate his whereabouts. They provided themselves with five torches and rifles. The first thing to be done was to convey Mrs. REDMOND and FANNY home, so that they might make ready for the reception of the party when it should return. The men walked in the rear of the wagon in which the two women rode, discussing the best manner of proceeding.

It was finally decided that when they arrived within quarter of a mile of the house the searching party should branch off by a short cut to the forest, leaving Mrs. REDMOND and FANNY to go on. The night was bright and clear. Indians were scarcely ever seen within a circuit of several miles, and no danger was apprehended.

So on arriving at the point mentioned the men branched off toward the woods and the two women proceeded alone toward their destination. The house was in plain sight, and, with a cheerful word, they urged their horses to a quick pace. As they neared the house everything seemed quiet, and they watched for SAM. He would undoubtedly hear the wagon approaching, and come forth to meet them.

But they saw nothing of him. They came within five or six rods of the house, and still he was not visible. Evidently he had fallen asleep. They were just about to call out, when a figure leaped from a clump of bushes near by, uttering a glad cry.

"Misses REDMOND and Miss FANNY, is dat you? T'ank de Lor' you'se come; but don't go near de house!"

It was SAM. He was shaking as if with an ague fit, and his eyes were distended almost to starting from their sockets. The whites of them glistened in the moonlight.

"What's the matter, SAM?" said Mrs. REDMOND; "what are you talking about?"

"De ghost! de ghost! It went clean froo de window, widout so much as crackin' de sash!"

"What do you mean?"

"I seed it! It come stalkin' across de lot, and jest *glode* into de house."

"A ghost?—nonsense!" exclaimed FANNY. "Who believes in ghosts? *I* don't."

"Dat's 'cause you nebber seed none," responded SAM. "You ha'nt been where I has. Oh, it was more'n eight feet tall, and all dressed in white."

SAM was evidently in earnest. He looked the embodiment of terror.

But Mrs. REDMOND and FANNY scoffed at his fears, and told him he had been dreaming. This he stoutly denied, saying that he had not even closed his eyes. He insisted that a ghost had appeared, approached the house, and entered by a window.

"Which window was it?" asked FANNY.

"Dat one right dere next to de side door."

"Well, I'm not afraid of any ghost," she said, spiritedly. "Come, SAM, with me, and we will see what it wants."

She discredited SAM's story, and, as everything seemed quiet about the house, felt little or no alarm.

"Oh, Miss FANNY, you don't mean to ask dis chile ——"

"Yes, I do. But if you are afraid, I shall go alone. And then if it should happen to be an Indian or a robber, what will become of me?"

"Injin or robber," said SAM, brightening up a little; "I ben't 'fraid o' *dem*. Dey shan't harm one har ob your head, neither. I'll go wid you if you'se bound to go."

"I am bound to go. I don't propose to stand out all night."

"All right, "said SAM, "go ahead. I'll keep close to you. But if we *should* run smack up agin' a ghost, I'se sure I'd melt down and run all over de ground, jest like a puddle o' grease."

"Let's find out, any way," said FANNY, leading the way, followed by her mother and SAM, the latter holding his rifle ready for instant action.

They approached very near the house, and were looking intently at the windows, when SAM suddenly gave a cry of terror and dropped flat on the ground. Mrs. REDMOND and FANNY started and recoiled a little, for a face peered out from the window at them, and an arm clad in white waved, motioning them to keep back.

A voice spoke:

"For heaven's sake don't come in!"

FANNY and Mrs. REDMOND were somewhat frightened, and the the former said angrily:

"Come, get up, SAM! There's some one in there, but it's no ghost. Ghosts do not talk. Get your rifle ready, quick!"

"Yes," said SAM, rising cautiously; "'taint no ghost, did you say?"

"No certainly not. Who are you and what do you want," she demanded in a loud voice of the unknown personage inside.

SAM leveled his rifle, and shouted, "What you 'bout in dar? You'd better keep kind o' peaceable unless you want to get shot!"

"Don't you know me?" groaned the voice. "Don't come in, I beg of you. I am in a terrible plight. I have been shamefully treated. I cannot find my room."

"It is Mr. DUNLEATH!" exclaimed Mrs. REDMOND.

"So it is!" ejaculated FANNY. "What can be the matter? What is the trouble, Mr. DUNLEATH?"

"I—I—please remain where you are. I cannot tell you what the matter is. Send SAM in and let him show me my room. Here are two doors locked. I think one of them must lead to it."

"Yes," said FANNY, "mother you locked the chamber doors, didn't you?"

"Yes," replied Mrs REDMOND; "SAM, take these keys and show Mr. DUNLEATH his room. I wonder what *can* be the matter."

"It will doubtless be explained in due season, Madam," faltered Mr. DUNLEATH. "I have been assaulted maltreated—robbed. Please make haste, SAM."

"Yes, sir," responded SAM, "if you ain't no ghost, I'll do anything in the world for you, Mr. DUNLEATH."

"I will show you that I am substantial flesh and blood if you will come in. Do not follow him, ladies."

SAM entered the house, and immediately burst into a shout of laughter.

"Golly, Mr. DUNLEATH, where's all your clothes? You is in a bad plight!"

"Hush! Show me to my room without delay!"

Mrs. REDMOND and FANNY listened in amazement. They heard SAM talking and laughing spasmodically as he accompanied Mr. DUNLEATH up stairs.

He soon returned.

"I'll be done roasted alive," he exclaimed, "if dere warn't de parson widout a rag to his back, savin' and 'xceptin' only jest his shirt!"

"Oh!"

"True as I'm standin' here dis minnit!"

"What *can* it all mean?" exclaimed Mrs. REDMOND.

"He said he had been robbed," said FANNY.

"SAM, fire off your gun several times. That may call the men home. There is no need of their searching any longer."

SAM did as directed, while Mrs. REDMOND and FANNY entered the house and struck a light. They were perplexed beyond measure, and waited for Mr. DUNLEATH to come down. That gentleman declared, however, from the head of the stairs, that the state of his feelings would not permit him to appear before them, even though he had donned his clothes.

In the course of three-quarters of an hour the searching party appeared, having been attracted by the reports of SAM's gun. They came up in great haste, desirous of knowing the cause of the firing.

They were made acquainted with the state of affairs in a very few words, and, of course, were deeply mystified. Mr. REDMOND ascended the stairs, and, after considerable effort, persuaded Mr. DUNLEATH to come down and explain matters. The minister soon appeared, and related to his expectant hearers the following account of his unexplained absence and strange return:

"I was wandering among the woods," he said, "and took no thought of the passage of time or the distance I had strayed. Suddenly I encountered a desperate looking man, who pounced upon me with the ferocity of a wild beast. He held in his hand a large club, and threatened me with instant death unless I remained quiet.

"What do you want?" I asked.

"'Tell me who you are, where you come from and what your business is,' he said.

"I gave him the desired information in as few words as possible. He was particular to inquire my name and that of the good family with whom I am sojourning. After this he looked at me closely, and then said, 'You'll do!'

"He then violently tore my clothing from me, took off his own disgusting garb and clad himself in my garments. I endeavored to remonstrate with him, but he brandished his club and commanded me to keep silent.

"'Now,' said he, 'I guess you are not in a condition to join your friends until after dark, at any rate, and that will give me a pretty good start.'

"When I asked him to give a reason for his strange conduct, he said that his own clothes were not fashionable, and that mine would serve his purpose better. But he did not leave me his. He rolled them up and carried them off, leaving me in a clump of undergrowth with nothing on but a *shirt*." Mr. DUNLEATH blushed violently. His hearers listened with intense interest.

"Of course," resumed the speaker, "I could not return in that condition until after dark, and it seems that when I did come, SAM mistook me for a ghost, and fled. I climbed in at the window, knowing that all would be away at the camp-meeting. I endeavored to find my room, but the door was locked. Finally Mrs. REDMOND and FANNY came, and induced SAM to enter and aid me. That is all. I never, in the course of my life, experienced such outrageous treatment!"

The last remark was delivered in an energetic, injured tone, after which Mr. DUNLEATH subsided into silence.

"Did you not write this?" asked Mr. REDMOND, producing the note which the boy had brought to the grove.

"I never saw it before," he replied, in a decided tone. "It is a base forgery."

All shared in Mr. DUNLEATH's indignation, but some could not help smiling at the sorry plight in which he had found himself.

"How was the man dressed who robbed you?" asked one of the company.

"His clothes were gray, with black stripes, and were sadly tattered."

"I have it!" exclaimed Mr. REDMOND. "A prisoner has escaped!"

"A prisoner?"

"Yes. The State Prison is only twelve miles down the river. One of the convicts must have escaped and made his way up here through the woods. At least I judge so from his dress."

"Yes!" said another, "and he probably thought he would be in less danger of being taken with Mr. DUNLEATH's clothes on."

"To be sure," exclaimed a third. "And he sent the note, thinking it would prevent our searching for Mr. DUNLEATH."

These conclusions were accepted by all, and it was agreed to take speedy measures to recapture the culprit.

"Somebody must mount a horse and ride to Wharfton immediately," said one.

"Yes, let two go to Wharfton," said Mr. REDMOND, "but let also another precaution be taken. The convict must have known that his forgery would eventually be discovered, and he would be very likely to turn back north again after throwing the scent toward Wharfton. We will start out and scour the woods early in the morning."

The course thus indicated was followed. The result proved Mr. REDMOND's surmise to be correct. The prisoner was captured in the woods seven miles in a northwesterly direction. He looked sorry enough when taken, but boasted of his ingenious dodge, even though it had failed. He was safely ensconced again within the prison walls. Mr. DUNLEATH was careful thereafter about venturing alone into unknown regions; nor was he ever known again to personate a ghost.

JUDGE DALY RIGHTLY NAMED.

JUDGE DALY, who sits as presiding Justice of the Court of Common Pleas in New York City, is a lawyer of rare culture, a gentleman of dignity and grace, and a handsome, stern-visaged man. He is withal a man of much humor, and is said to have told about himself this story, which will be better understood when it is premised that his court has always had the reputation of "taking things easy," and its Judges of not being over particular to be in court any too promptly at the hour of opening.

"One morning," says Judge Daly, "I was coming into court a little late, when I heard one man standing at a little distance say to another (he may have been a witness anxious to get away, or a juror zealously desirous to get to work, or perhaps a client weary of the law's delay, but whatever else he was, he certainly was an Irishman),

Och, sure there comes his Honor at last! Be jabers, Judge *De-lay*, ye'r rightly named!'"

MASSA CHRISTOPHER COLUMBUS was a queer man," said a negro orator: "a notion crossed him one day, and den he crossed an ocean."

Sabbath Reading.

A STRANGER IN THE PEW.

Poor little Bessie! she tossed back her curls,
And though she is often the sweetest of girls,
This was something she couldn't and wouldn't endure;
'Twas the meanest, most impolite act, she was sure,
And a thing, she declared, that *she* never would do:
To go to a church where one didn't belong,
Then walk down the aisle like the best in the throng,
And seat oneself plump in another one's pew.

Humph! Didn't her father own his out and out,
And didn't they fill it up full, just about,
When mamma and papa, and herself and the boys,
Were seated? And didn't their boots make a noise
In moving along to make room for a stranger?
And wasn't it cool, with the brazenest face,
To expect at each hymn pa would find out the place.
(If Ben didn't, or Bob, but there wasn't much danger!)

With such feelings at heart, and their print on her face,
Last Sunday our Bessie hitched out of her "place"
To make room for a girl, very shabby and thin,
Who had stood in the aisle till mamma asked her in.
The poor little thing tried her best not to crowd;
And Bessie, forgetting, soon had the mishap
To slip from her drowsiness into a nap,
From which she awakened by crying aloud.

Poor Bessie sat upright, with cheeks all aflame
At sleeping in church, and we felt for her shame;
But 'twas strange at the close of the service to see,
Our Bessie, now gentle, as gentle could be,
Take the hand of the shabby young girl in the pew,
And walk with her out of the church with a smile
That shone through the tears in her eyes all the while,
And brightened her face with a radiance new.

"Good-by," whispered Bessie at parting, "and mind
Our pew's forty-five, with a pillar behind."
Then she stole to her mother:—"Oh, mother, I dreamed
Such a curious dream! 'Twas no wonder I screamed.
I thought I was sitting in church in this dress,
With a girl like a beggar child right in our pew—
We were sitting alone on the seat, just we two—
And I felt more ashamed than you ever could guess;

"When, all in a moment, the music grew loud,
And on it came floating a beautiful crowd;
They were angels, I knew, for they joined in the song,
And all of them seemed to the church to belong.
Slowly and brightly they sailed through the air;
The rays from the window streamed crimson and blue,
And lit them in turn as their forms glided through;
I could feel their soft robes passing over my hair.

"One came to my side. Very sadly she said
'There's a stranger in here.' I lifted my head,
And looked at the poor, shabby girl with disdain.
'Tis not she,' said the angel; 'the haughty and vain
Are the strangers at church. She is humble and true.'
Then I cried out aloud and the minister spoke,
And just as they floated away I awoke,
And there sat that dear little girl in our pew!"

EVERY-DAY TROUBLES.

WHENEVER I feel inclined to think my own lot hardest of all, my mind instantly reverts to a friend—a brave young girl—whose troubles have been *real* ones, and so very many in number, and varied in quality, as to be remarkable. And yet she is cheerful, always full of faith in GOD's mercies and loving kindness.

In a late letter she writes as follows:—"My little 'Daily Food' opened to-day at one of its many land-marks. Six years ago I knew before night all would be decided—my life filled with rich gladness or shrouded in thick darkness. I opened the little book, hoping to find in the verse for the morning an augury for good. It was—'*As one whom his mother comforteth*'—I only glanced at it, and threw the book impatiently from me. It was not *comfort*, but *happiness*, that I wanted. Before noon the blow fell, crushing out of my life forever, as I then thought, all that was glad and sweet. Oh GOD! how much the heart can suffer and not break! I cannot tell you how the day dragged on with its weary weight. At night my eyes fell upon the tiny book, lying where I had thrown it in the morning. Again I opened it almost mechanically, and *to the same text*, but like a ray from Heaven, now came the words—'*As one whom his mother comforteth so will I comfort you.*' They were balm to my bruised heart—gently, like a loving hand soothing away its bitterness, till the tears, which had seemed burnt up all day, dropped like rain on the page."

M. A. E. W.

THOUGHT-SUGGESTING PARAGRAPHS.

IF there be a spiritual world it ought to be "minded." Its bearings on this world ought to be regarded. It is the widest field for human investigation. If it have any existence it is supernal and paramount. To be in the midst of a spiritual world and not know it, is to be blind. To perceive it in any measure, and totally disregard it in all one's habits of thought and feeling and action is not philosophy—it is sheer madness.

NO mind loses its balance so long as it perceives that the Lord is at hand to help. The clouds may gather and the storm may burst, but the Lord is at hand. There may come circumstances in our history which seem to contradict truth and God, and all our hopes and instincts, so that the feet of our minds do well-nigh slip. But the Lord is at hand.

Ladies' Port-Folio.

ELEGIACS.

LIGHT on the western hills!—the crimson glory of sunset
Flinging a mantle of fire over the earth and air,
Red as the blood of the brave that flows in the terrible onset
Leading to victory's crown, or to defeat and despair!

Light on your golden tresses, flashing and gleaming and burning;
Light in your azure eyes, shining in sorrow's despite;
Light on the woods and the waves, and light on the river mist, turning
Its chill into warmth,—all round, ever and everywhere light!

Ah! but within our hearts, (yours and mine,) my darling, my own love!
Parting to meet on earth never, it may be, again—
Not one gleam of the glory that shines around us is known, love!
All is dark as the grave, shadowed and wasted with pain.

One last kiss! . . . Now take this rose I have plucked for your bosom,
Fraught with a fragrance as sweet, love! as your love is for me;
Not a pale, fragile bud, but a full-blown, crimson-dyed blossom
Glowing and bright as my heart's wild adoration may be!

So if I come not when years shall have fled till your cheek shall be faded,
Not till your eyes shall be dim with tears that have fallen in vain,
Not till the gold locks be gray, and the little feet weary and jaded,
Treading a desolate path darkened with tempest and rain;

When you shall take forth the rose, and look at it scentless and withered,
Murmuring words like these:—"Rose, let the world say its say,
We know him not false, but dead; and I know when our Father has gathered
His harvest in, we shall meet in the light of a changeless day."

[*F. Ferguson.*

COMMAND AND OBEDIENCE.

VERY warm; hay and grain in the barn; father and the children taking a ride and rest: little four-year old GUSSY and I at home alone. Work all done? Oh no! never all done here; always tired; always something more to do; can't be smart; try sometimes but it is of no use. When one hour's work is done, strength is all gone; must rest an hour and then commence again, an hour behind. Almost envy those who can do everything when and *as* it should be done, and have a large margin left for reading, writing and fancy work. GUSSY has brought me a pile of old RURALS saying, "Read me a story, please." He has heard his story and lies on the floor saying it over to himself with the oft-repeated question, "What does that mean, Ma?" I am lazily looking here and there for something new or beautiful on these familiar pages.

Ah, here is "Fashion and Folly," by C. H. C., in which such strange incongruities are blended. She says, "I believe that man should always command and woman obey;" and further on she describes, in glowing language, a happy, well-matched pair,

"Where two hearts beat in unison
And two souls seem as one."

—Where only smiling faces are seen, and gentle, loving words are heard. But, ah! my friend, you have forgotten the commands; mix a few of them with your picture, and see how quick the whole is changed. Does a man ever use the tone or language of a command to the woman he loves? Does a woman who loves her husband need to be commanded? If there is a lack of love in the mixture will commands increase the supply? But some will say 'tis a Scriptural injunction. Very true. ST. PAUL exhorts women to submit themselves to their husbands; but does he anywhere advise husbands to command their wives, or are we even at liberty to infer that it would be right and proper for them to do so? A greater than St. PAUL says, "But whosoever shall smite thee on thy right cheek, turn to him the other also." Do we presume from this that it would be right for one man to strike another, that the one so struck may have an opportunity to obey the Scriptural injunction? CHRIST wishes his followers to avoid quarrels and contentions, and teaches them that it is better to *suffer* than to *do* wrong.

PAUL knew that there would be some unhappy matches, in which too little of love, or good sense, or, perhaps, of both was blended, and that both parties would sometimes insist on having their own way: he therefore very wisely advises the weaker party to give up. Because it is right for the wife to obey, it does not follow that it is right for the husband to command. A command is repulsive to human nature. Where commands are common, love is not common, let the relationship be what it may. Genuine obedience is the result of love and respect, and not of fear; and that parent who fails to secure the love and respect of his or her children is never very well obeyed.

Ah, me! I have fallen to sermonizing; did not mean to; and there are so many beautiful thoughts unnoticed! But all that's beautiful will live, and make life happier to some one.

Rural Home, Aug. 13. ATHENA.

THE NEW ENGLAND WOMAN.

FANNY FERN, in the New York Ledger, thus describes the New England woman:—As if one could mistake a New England woman! How can you know her? First, by her wardrobe. She will own a water-proof and India-rubbers, and a nice umbrella, before thinking about a diamond ring, or the last style of dress, hat or gold bracelet. She always dresses with a view to the thermometer, and prefers a blanket shawl of the best fabric, under doubtful skies, to a silk velvet dress and paper-soled boots.

Before deciding on her spring outfit she looks at the capabilities of the dresses already on hand. Over one that has a spot upon it she places a bow, or ruffle; over another a new "top skirt," thus saving the cost of making two dresses at least. She buys the material for two bonnets, and makes them herself with the garnishing of flowers and feathers, quite as tastefully as the best milliner could do. She owns boots and shoes for all kinds of weather, before buying brooches or silk stockings; also a good assortment of plain but well-made underclothes, before "hankering" after a real cashmere shawl.

She has a well stocked library, though not owning a "point lace over dress" for a party.

When she has dressed for the hour of the day and the occasion, according to the best of her judgment, and very good judgment it is too, she never insults your common sense by apologizing for not being dressed in a different manner. In short, after being neatly and tastefully arrayed for the hour, her mind has no further interest in the subject, but has opportunity to consider more important needs.

If you chance to bruise your fingers, the New England woman has a healing remedy at hand. If your character is said to be bruised, she will require proof of the same before she believes it, or turns you the cold shoulder.

The New England woman puts away her furs before the moths get at them, and her cellar floor is as clean as that of her parlor. In short, she is a woman possessing all the virtues and none of the weaknesses of her sex who have the misfortune to be born out of New England. I am myself a New England woman!

"BECOMING AND PROPER."

JOHN BROWN of Haddington, was the author of the "Marrow of Divinity," and other theological books, which are held in high esteem by the Scottish people. He courted a lady upward of six years. He was so singularly modest and bashful that he never ventured to kiss her. One day it occurred to him that it would not be a bad thing to do. So it is recorded that he said:

"Janet, my woman, we've been acquainted now for years, an'—an'—I've never got a kiss yet. D'ye think I may take one, my bonnie lass?"

The reply was wonderfully characteristic of the Scottish maiden.

"Jist as ye like, John," said she, "*only be becomin' and proper wi' it.*"

"Surely, Janet," said John, "we'll ask a blessin'."

The blessing was asked, and the kiss exchanged.

"O woman," said the enraptured but still devout minister, "O woman, but it's good; we'll noo return thanks."

And they did.

FEMININE FELICITIES.

ONE who assumes to know, says that womanly despair for the loss of a lover endures three months in the Winter, and two in the Summer: the second month, a lady becomes interested in the new style of hair-dressing; the third, she burns her love-letters. Twelve months afterward she hears of her former lover's marriage, and wonders "how she could have loved a man with a red moustache."

AN Ohio woman at a recent prayer meeting made a petition in behalf of a graceless nephew, which, after enumerating his many misdeeds, she concluded with telling the Lord that he (the nephew) came home the other night in a beastly state of intoxication and whistling "Shoo Fly," and to illustrate her meaning, that lady herself whistled that popular air.

A THRIFTY Bostonian recently "placed" $10,000 insurance on the life of his wife, took home a box of little red Maryland plums and enjoyed a whole evening in watching his wife eat them. His enterprise had its reward. Deducting $200 for funeral expenses, he is now $9,700 richer than he was a week ago.

A LITTLE girl, daughter of a clergyman, being left one day to "tend door," and obeying a summons of the bell, she found a gentleman on the steps who wished to see her father. "Father isn't in," she said, "but if it's anything about your soul I can attend to you. I know the whole plan of salvation."

THE following colloquy was overheard by a lady:—Sighing lover (before the kitchen): Is it lonely ye are there without me?" A voice within replies: "Not at all, Henry, Willie has been here for an hour."

A WIDOW who has married and lost five husbands, remarks: "Widowers never die of grief; although crushed to the earth by their sorrow, like truth, they rise again and revive."

MRS. PARTINGTON will not allow Ike to play the guitar. She said he had it once when a child, and it nearly killed him.

Reading for the Young.

A CHILD'S HYMN.

Now the day of work is done,
Now the quiet night's begun,
And I lay my tired head
Safe within my little bed,
Saviour, hear me;
Be thou near me,
Till the hours of dark have fled

I can see from where I lie,
Glitt'ring in the dark blue sky,
Here and there a little star
Shining out so clear and high.
Saviour, hear me;
Be thou near me;
Keep me safe beneath thine eye.

If I've grieved thee through this day,
Let my sin be washed away;
Make me meek and pure and kind,
Give me thy most holy mind.
Saviour, hear me;
Be thou near me;
Let me now thy mercy find.

Thou art loving me above,
And I love thee for thy love;
Thou didst leave thy throne on high,
And for me come down to die.
Thou wilt hear me,
And be near me—
I am safe while thou art nigh.

LETTERS TO YOUNG RURALISTS.—XI.

FROM COUSIN JOHNNIE.

WHERE are the Young Ruralists? That is the question I have asked myself many times during the past two months, as I have looked in vain in the children's column for my little cousins' letters. And now, at last, as if to prove that "patient waiting is no loss," the RURAL of August 20th brings us a very nice letter from "A Young Ruralist," telling us of the humane way in which he or she, I don't know which, but *guess* it's she, kills her entomological specimens. This little cousin's enthusiasm in that direction makes me feel like hiding my head, for I am forced to confess that I am actually *afraid* of spiders, wasps, big green worms, and those hard-shelled things with sharp nippers that at night go bumping about against the wall, and dropping down suddenly, with a thump, just where you least expect them to. I don't care how many of these she puts into her case—indeed, if there were to be a choice, I should say, catch *all* these and let the butterflies go; but, perhaps that is because I don't understand entomology.

Let me see; I was telling you last time about some of my childhood's amusement; and now, for fear you may think I cared nothing about girls' plays, I must tell you how, when the sun got too hot, and we too tired to play out of doors, FRANK and I would come into the house and play with my paper dolls. ALLAN would never play with us, though we offered him the inducement of the handsomest and largest number of dolls in our numerous family. He thought such an amusement unmanly; but I never could see why it was any more so for him than for FRANK, especially as they were only paper dolls. I should never have thought of asking either of them to play with my big crying doll, or my wax doll. He did, however, once condescend so far as to cut out and paint for us a fat young woman with very big blue eyes and intensely stiff red ringlets; also a fat infant with features traced in ink—the nose, I remember, painfully one-sided. I think he would have given a good deal to have been able to play with us, and enjoy it as we did; but, as he could not, or would not do that, he used to show something of the spirit of "the dog in the manger." He would come in and tease us in all kinds of ways—call FRANK a "girl-boy," hide our dolls, and make us so uncomfortable that, after coaxing and entreaty failed to have any effect on him, FRANK would go with our troubles to his mother, and ALLAN would be called up stairs to practice a half hour on his five finger exercise, a task he hated most heartily.

THE SHEEP WITH A CART.

"I NEVER saw a sheep harnessed up before," said Harry as he turned over the leaves of a big book on natural history, and found a picture of a sheep drawing a little two-wheeled cart.

Do you know what natural history means? It means a history or description of animals, birds and fishes.

"Let me see," said his mother. So Harry brought the great book and laid it in her lap.

"Ah, yes," she continued, "It is a sheep that lives in Syria and Egypt, and other parts of Asia and Africa, and has a long heavy tail which sometimes trails on the ground. This tail usually weighs 15 or 20 pounds; but when the sheep is fattened, it sometimes gets to weigh 70 or 80, or even 150 pounds. The sheep cannot carry it then, so a little cart is made to lay it on, and the sheep draws it about."

"What is the use of such big fat tails?"

"The people, when they kill the sheep, use the fat of the tail, which is not at all like tallow, for butter."

Harry shut up his book and put it away, and went out to play; and his mother kept on sewing, and forgot all about the sheep with the cart. After a while she heard a great racket outside the window, and looking out, she saw Harry and Nep. He had fastened his cart to the dog, and as Nep would not let his tail lie in the cart he had tied his white lippet to the end of the tail. Nep did not understand these proceedings, and was frisking about and wagging his tail, with every wag selling the lippet flying in the air, and every few steps overturning the cart.

"Never mind, Nep, I'll teach you yet. If you don't be a good dog and let your tail lie in the cart, I'll have to tie it down."

But the next jump brought Nep quite out of the harness, and away he capered, looking back roguishly, as much as to say, "No you don't, old fellow."

Harry was about to follow him, but just then a lady passed by, her long trailing skirt sweeping the walk, and gathering dirt and dust. Harry stood looking at her until she was out of sight, and then turning to his mother, he said:

"Mother don't you think it would be a good plan for ladies who wear tails to their dresses to have a little cart to keep them up out of the dirt?"

GOLDEN PRECEPTS FOR THE YOUNG.

BISHOP MIDDLETON furnishes the following: Persevere against discouragement. Keep your temper. Employ leisure in study, and always have some work in hand. Be punctual and methodical in business, and never procrastinate. Never be in a hurry. Preserve self-possession, and do not be talked out of conviction. Rise early, and be an economist of time. Maintain dignity without the appearance of pride; manner is something with everybody, and everything with some. Be guarded in discourse, attentive, and slow to speak. Never acquiesce in immoral or pernicious opinions. Be not forward to assign reasons to those who have no right to ask. Think nothing in conduct unimportant or indifferent. Rather give than follow examples, preserve a strict temperance, and in your transactions remember the final account.

WHY is a mouse like a load of hay? Because the cat'll eat it.

The Puzzler.

ILLUSTRATED REBUS.—No. 8.

☞ Answer in two weeks.

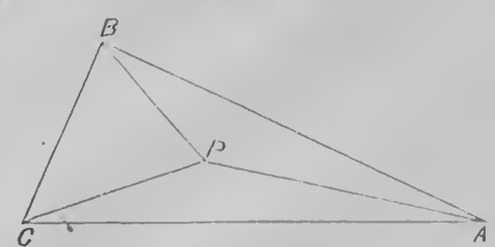
BOTANICAL ENIGMA.—No. 1.

I AM composed of 38 letters:
My 12, 7, 2, 3, 9, 15, 1, 16 is a plant whose leaves resemble a lion's footprint.
My 14, 21, 12, 34 is the Empress of flowers.
My 31, 32, 5, 17, 20, 26, 30 is the misanthrope's flower.
My 6, 8, 25, 11, 36 is a reliable florist.
My 23, 13, 35 is a kind of fruit.
My 36, 18, 4, 22 is the Queen of flowers.
My 20, 21, 37, 8, 3 is an unpleasant companion.
My 28, 28, 26, 14, 34 is a plant much used for Winter decorations.
My 30, 10, 15, 31, 25, 38, 18, 2, 27 is a noble American tree.
My 18, 11, 36, 3 is a delicate evergreen.
My whole is a beautiful passage of Scripture.

☞ Answer in two weeks. A. WAKE.

PROBLEM.—No. 3.

THE three straight lines drawn from the angles of a triangle to a point of intersection, and which divide its area into three equal parts, measure respectively 20, 30 and 40 rods. Required, the sides of the triangle.



Scale of figure, 25 rods to the inch. A P=40 rods; B P=20 rods; C P=30 rods.

☞ Answer in two weeks. B. F. BURLESON.

News of the Week.

CURRENT TOPICS.

The Metis Disaster.

On the afternoon of the 29th of August, the steamship Metis left New York for Providence, *via* Long Island Sound, with 155 passengers on board. The night was very dark and stormy, with a high sea running. At about 3:30 A. M. on the 30th, when the steamer was between Montauk Point and Watch Hill, five miles from the Rhode Island shore, it was struck by a schooner abreast the pilot-house. The steamer commenced to fill with water, and sunk in half an hour. A scene of terror and confusion ensued. The people were roused from their sleep and each tried to save himself. The wind blew a gale, and one life-boat was swamped. Many plunged into the water, while others crowded to the upper deck, which parted from the ship, and floated towards Watch Hill. There were 53 persons on this deck, knee-deep in water. It was constantly swept by the sea. When it reached the shore, at 8:30 in the morning, it went to pieces in the breakers, running 100 feet high. The beach of Watch Hill was lined with people, who did all they could to save the wrecked. Life-boats at the light house, the U. S. cutter Moccasin, and some yachts, hastened to the wreck, picking many out of the water, who were clinging to timber, cotton bales, etc. On September 2d, 147 were known to be saved and twenty-one were dead, as follows: Charles H. Bliss, Providence; Laura E. Brosher, East Boston; Wm. D. Chose, Providence; Henry R. Cross, of Richard Cross & Sons, Providence; Doran, ——; J. T. Eaton, Boston Highlands; R. H., Field, Geneva; Frederic Garraud's two children, Providence; James Harberger, Newark, N. J.; Mrs. G. W. Howard, Rome, N. Y.; S. G. Martin and two children, Philadelphia; James McMichibe, engraver, Providence; Norton ——; Mrs. A. H. Peckham, Providence; Mrs. W. E. Sheridan; Arthur A. and Carl F. Wierum, Brooklyn.

The Meeting of the Emperors.

There is soon to be a meeting of the Emperors of Russia, Prussia and Austria. It has been announced that President Thiers of France has been invited to meet them, and this fact has been discussed as a great step taken in a liberal direction by the monarchs named, because it is a recognition of a Republic in a way which it was supposed royalty would hesitate to do. Later we have the statement that this meeting of the Emperors is a scheme on the part of Bismarck to form an alliance against France. The philosophy of much of the news we receive is past finding out. Is it that Bismarck fears an alliance against Germany with France, on the part of Austria and Russia, that he seeks to forestall such an event? It is curious in this connection that nearly every Russian, and recent American visitors to Russia, and even the Germans, predict a speedy war between Russia and Germany. They assert that it is inevitable. So the result of this meeting of the Emperors will be looked for with great interest. It can but be regarded an important political event by Europeans.

Bloomingdale Asylum.

The Tribune has had a reporter feign insanity for the purpose of testing the workings and observing the treatment of the Bloomingdale Asylum in New York. Two competent physicians declared him insane after a short examination, and Justice Cox made out the legal papers without looking into the matter. The reporter had no difficulty in getting into the asylum as soon as his board bill was settled. With no examination he was thrust into a cell, in the ward with violent patients, and left to himself for a week, with the exception of daily calls from the doctor who asked him how he was. The reporter discovered that he was treated as if in a second-rate boarding house, with poor food, no comforts, a hard bed, no papers or amusements of any sort. The ease with which he got into the asylum, showing how little interest the officers take in such matters, and his treatment afterwards, has produced a marked sensation. The institution will be investigated.

Hope for Cuba.

Spain has got tired of sending troops to Cuba to die there, it seems, from a dispatch recently sent to the Spanish Casino at Havana. This Casino is a political club, composed of slave traders and ultra conservatives, interested in preserving, and determined to preserve, slavery and the slave trade there. This club has been demanding more troops of Spain, in order to quell the insurrection. In response to this demand it is reported to have received a reply from Madrid to this effect:—"Spain can send no more soldiers to Cuba. If you wish to preserve the National integrity, compel the volunteers to take the field." Now, will the volunteers take the field? It is believed they will not, and that Cuba will yet be free and one of the United States.

A Missionary Jubilee Proposed.

A man named Smith has publicly proposed that on one day in each and every year the Christians throughout the earth shall hold a grand Missionary Jubilee, in their accustomed place of meeting, and listen to a sermon and an anthem, to be sent over the telegraph lines to every station in the world by one manipulation of the instrument. All the Nations are to take turns in giving the sermon. Nothing sectarian is to be included in it. He invokes the aid of Cyrus Field to carry out this project, and anticipates from its execution the conversion of the world to Christianity.

SEMI-BUSINESS PARAGRAPHS.

A Hint to the Working Man.—A man with a family, however poor he may be, owes it to his wife to save her health and strength in every way possible. He has no right to allow the mother of his children to wear her life out toiling with her needle to clothe her family. His duty is to buy the New Wilson Under-Feed Sewing Machine, the best machine for family sewing ever invented, and he can buy one for fifty dollars. More than this, he can buy the Wilson machine upon terms which enable him to pay for it in small monthly installments, that he can spare out of his wages without feeling the drain. He will get thereby a machine capable of doing every variety of family work in a most beautiful manner, a machine that even a child can operate, and which will prove a permanent family blessing. Salesroom at 707 Broadway, New York, and in all other cities in the U. S. The Company want agents in country towns.

Humans share with Horses the benefits derivable from the world-renowned Mexican Mustang Liniment. The most irrefragable testimony establishes the fact that this wondrous balm exerts the same soothing and healing influence, when applied to the human cuticle, that it does in cases of spavin, founders, ringbone, poll evil, scratches, wind gall and other ailments of the horse which require outward treatment.

Watch No. 1105, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me eleven months; its total variation from mean time being only seven seconds in the entire time.—A. H. King, Vice-Pres't Elastic Cone Spring Co., N. J. Car Spring & R. Co., 7 Park Place, New York.

Facts for the Ladies.—Mrs. B. H. Man, Westville Center, N. Y., has used her Wheeler & Wilson Lock-Stitch Machine constantly since 1856 in sewing for several families, without any repairs; eleven persons have learned to use it. See the new Improvements and Woods' Lock-Stitch Ripper.

Farms for Sale.—Notice advertisement of J. W. Goodenough, Will Co., Ill. A good opportunity for farmers wishing to locate in the West.

Advice.—Send for free Price List. Jones Scale Works, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

New York, Monday, Sept. 2, 1872.

The trade of the last week was very active in Dry Goods and General Merchandise. The Fall business opens auspiciously, and the prospect is that more Goods will be sold, and more Produce exported, in the next three or four months, than for any Fall season since 1865, after the close of the War, if not in excess of that remarkable season. The Imports from abroad and the productions of our Domestic Manufactories and Furnaces and Rolling Mills are enhanced to the increased demand for consumption.

In Money affairs the Bank movement shows a large contraction in Loans and Deposits, preparatory to the Fall demand for Money, while the rates for Money have not yet been advanced above 5@6 per cent. on Call Loan among the Brokers, and 6@7 per cent. on Short Date Discounts.

The price of Gold continues very steady at 112¼ per cent. The Government Stocks are rather lower than the previous week, while the Railroad and Miscellaneous Stocks at the Stock Exchange have partially improved.

The following are the comparative movements of the City Banks for the past fortnight:

	Aug. 24.	Aug. 31.
Capital	$87,315,700	$87,315,700
Loans	292,428,000	288,812,400
Gold and Greenbacks	226,449,300	219,036,200
Deposits	69,076,200	65,770,200
Circulation	27,371,700	27,475,000

PRICES OF STOCKS AND BONDS.

U. S. 6s of 1881	118¼	N. Y. Central	93¾

PRODUCE AND PROVISIONS.

New York, Monday, Sept. 2, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,705,000	Meal, bbls	3,518
Oats, "	452 800	Flour, "	58,418
Wheat, "	355,000	Eggs, "	5,300
Rye, "	340	Cotton, bales	1,722
Barley, "	—	Hops, "	105
Malt, "	28,850	Wool "	1,120
Seed, "	—	Butter, pkgs	12,580
Beans, "	—	Cheese "	130,210
Meal, bags	700	Lard, "	1,173
Peanuts "	1,002	Dried fruits, pkgs	611
Pork, bbls	331	Cut Meats "	820

Beans and Peas.—Mediums are worked off in small lots, and the light stocks create the impression that current prices will rule until the new crop comes to hand. Prices are:—Marrowfats are again lower; full parcels are offered freely at $2.35@3.00, with small lots exceeding these figures at times. There is little or no important shipping inquiry. Peas are scarce. There is a very fair feeling, and for the few lots of Canada in bulk in bond 90 is freely bid.

We quote Mediums, prime $3.05@3.12 per bushel; good do., $2.90@2.75; fair do., $2.30@2.50; prime marrowfats, $2.95@3.00; good do., $2.50@2.75; common and fair do., $2.20@2.30.

Beeswax.—There is still considerable stock on sale, and prices rule low. Sales of Western at 33½@34, and Southern 35½@36.

Broom Corn.—Most buyers prefer to wait the effect of arrivals of the new crop. The annexed figures are nominal. The nominal prices are 3@5c. for red; 5@6c. for green; and 7@8c. for hurl.

Butter.—There is no quotable change in prices, and the demand continues steady for fine and good table grades. The weather has been decidedly Fall like in temperature, and there is consequently an increased call from market buyers, and even fancy grocers have been persuaded to buy a little ahead of daily wants.

The quotations are:—State pails, choice, 28@30c., other, 23@26c.; State selections, 27@29c.; good to prime firkins, 24@26c.; do. half tubs, 21@26c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 20@21c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.

Cheese.—"Too much cheese" is the expression this week. Stock has come in beyond all precedent in quantity, the arrivals for the week marking something over 130,000 boxes. The export business has been good, about 80,000 boxes taken, leaving a large amount, in connection with the surplus of last week, to be carried over. A considerable amount of the arrivals came to shippers direct, and they find themselves well stocked, as the amount of ocean room offering has been insufficient for their wants. The reports from the other side would be encouraging under an ordinary supply, as they represent the consumption as being large and stocks worked down close, but receivers are averse to carrying over the large stocks on their hands, and at the close, although nominally late figures are quoted, there is an undercurrent of weakness. We quote State factory, fine, at 14c.; good do., 13¼@13½c.; common do., 12½c.; State dairy, 13@13½c.; for prime, fair do., 12@13c.; Ohio factory, prime, 13@13½c.; good, 12@12½c.

Cotton—Has shown slight fluctuations, but closed about as last week. The demand is mainly from spinners.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	17	17⅛	17¼	17¼
Good Ordinary	19¾	19⅞	20⅛	20⅛
Low Middling	21	21⅛	21⅜	21⅜
Middling	22	22⅛	22⅜	22½
Good Middling	24	24⅛	24⅜	24⅜

For forward delivery latest sales on the basis of low middling are at 20½c. for Sept.; 19½c. for Oct.; 19¾c. for Nov.; 19¾c. for Dec.

Dried Fruits.—Trade is still very light, limited to a few small parcels. For blackberries 11c. is paid in a jobbing way, but there is no inquiry for full parcels at over 10c. The best grades of new peeled peaches have been a little scarce and sold at 17c.; common 11c. Prime Southern sliced apples have been sold more freely at 10c.; we quote Southern at 5@7c., and sliced 9@10c. Old unpeeled peaches are dull. We quote quarters at 5@5½c., and 6@6½c. for halves. New cherries bring 21@22c., in a small way. New plums, 13@15c. State apples, quarters, 1871 crop, 8¾@9½c.

Eggs.—The market is lower. The arrivals have been larger, and the stocks show some accumulation. Sales of Western at 23c. State and Pennsylvania, 24@25c. Jersey, 25c.

Flour.—Prices have advanced about 30c. per barrel, with more life to the market. The demand is in part from shippers.

Superfine State	$5 75	@	6 30

Good to choice white wheat extras	7 85	@	9 00
Fair to very choice extra Minnesota	7 10	@	9 35
Common to fair extra St. Louis	7 15	@	9 30
Good to choice do	9 35	@	10 25
Extra Southern	7 25	@	9 50
Good to choice do	9 55	@	12 00
Rye, common to fine	4 20	@	5 05
Corn meal, Western	3 25	@	3 65

Fresh Fruits.—Apples are a little steadier in price but greatly in excess of the wants of trade notwithstanding the falling off in the supply. We quote fancy, including sound pippins, $1@1.75, common, 75c.@$1. Pears are abundant and Bartletts are un-

usually low. The range is $4@7 for good to best, Bartletts, Seckel, Flemish and Duchess rate at $4@6 though mostly too green for use. Common lots will not sell even at $1.50@2 per bbl. Peaches have been plenty and cheap throughout the week, but begin to show firmness. Fancy Delaware, baskets $1.25@1.75; fair, 75c.@$1; N. J., 40c@$1.25. Plums are in large supply; fancy parcels are not plenty. Extras quieter, $7@8. Green Gages, $4@5; common, $3@3.50. Whortleberries not wanted at $1.50@2 per bushel. Watermelons range at $10@35 per 100 for fair to prime, and $5@6 for culls. Nutmegs are very low, 75c.@$1 per bbl. Grapes are arriving early from adjacent vineyards. Southern are not wanted. Prime Delaware, 12@14c.; Catawba, 12@14c.; other, 7@9c.

Grain.—There has been a good shipping demand for wheat, induced by a better foreign market and prices are higher. We quote No. 2 Spring in store, $1.59@1.61; No. 1 do., $1.62@1.63; Winter red Western, $1.59@1.60 for new Amber Western and Southern, $1.60@1.70 for new; white do., $1.70@1.95. Prime State rye quoted at 85c. Corn is in increased demand and prices are very firm. Steamer lots of Western mixed, 62@63¼c.; sailing do., 63¼@64c. Oats are firm at 42@44½c. for Western; 45@49c. for Ohio; 35@43c. for new.

Hay and Straw.—Prime hay is higher under a good sale, while shipping grades are dull in the buyers' favor. Hay, old shipping, $1.05; retailing do., $1.30@1.45; new shipping do., $1@1.05; new retail do., $1.30@1.50; Clover, 80@85c.; Straw, long rye, $1.05@1.50; short rye do., 75@85c.; oat do., 70@80c.; oat new do, 55@60c.

Hops.—A few lots of the new crop have arrived and sold readily at from 55@75c. The stock here is mainly of English growths. It is most too early to give a satisfactory account of the new crop, as picking has only just set in, but the impression is that it will be of fine quality, but less than an average yield in quantity. We quote nominally, New Yorks, growth 1871, 25@35c.; Eastern do., 25@35c.; Western do., 25@30c.; Yearlings do., '70, 10@30c.; Olds do., '69, 10@15c.; Bavarians, 65@75c.; English, 50@65c.

Poultry and Game—is in good demand and higher. We quote live Turkeys, New Jersey, 23@24c. per lb.; Western, do., 21@23c. ₩ lb.; Spring chickens, Western, 21@22c. ₩ lb.; N. J., do., 23@24c. ₩ lb; Fowls, N. J., 20@21c. ₩ lb; Western do., 19@20c. ₩ lb; Roosters, 10@12c. ₩ lb; Ducks, N. J., $1@1.25 per pair; young do., 75c.@1 per pair; Western do., 75c.@$1 per pair; Geese, N. J., young, $2.50@2.75 per pair; Western do., $1@2 per pair. Dressed at 24@27c. for prime chickens; 19@22c. for prime fowls; 21@26c. for prime turkeys.

Provisions.—Mess pork has been steadily held, with a light business. Mess, $14.05@14.15; prime and extra prime, $10.50@11; prime mess, $12@12.25. Dressed hogs firm, at 6¾@6¾c. Cut meats.—There is a fair inquiry, at 13@14c. for hams in pickle, and 11@12c. for do. in salt. Smoked meats at 13@16c. for hams, 8½c. for shoulders, 10½@11 for clear rib. Middles sell freely to exporters and speculators at firm rates; long clear, 8¾c.; do., for Dec. and Jan., 7¾c.; short clear, for Dec. and Jan., 8¼c. Beef is quiet, at $5@7 for plain Western mess, $7@8 for extra mess; tierce beef at $11@15 for prime mess, $16@19 for India mess; beef hams, $20@28 for old Western, $30@31 for new do. Lard is steadily held, with a moderate business; Western steam, 9¾@9¾c. for spot, 9¾@9¾c. for Sept.; city at 8¾@9c. Prime stearine, 10¾c. Tallow is weak, at 8¾@9¼c. for Western.

Seeds.—Grass are in small demand, at 9¾c. for Ohio clover; 10@10½c. for Indiana and Michigan do.; 10¾c. for State. Timothy at $3.25@3.50.

Tobacco.—There is a very good business at full prices. Virginia, common to good lugs, 7½@8¾c.; low to medium leaf, 9@10¾c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

Whisky—is firm at 93½c. for Western.

Wool.—Trade is still slow, and there is a weak feeling. We quote fleeces at 53@58c. for New York and Mich.; 56@62c. for Ohio; 55@58c. for Indiana and Wisconsin; 50@56c. for Illinois; 40@47c. for Texas fine; 30@35c. for do., coarse. Pulled, 52@62c. for extra.

THE COUNTRY CHEESE MARKET.

THE market at Little Falls for the week ending Aug. 31st was brisk, with an advance in price of from ½ to 1c. on best grades of factory above last week's prices. The delivery of farm dairies amounted to upward of 1,300 boxes, and sales were made at 12c. to 13¼c. Factories were well represented, the offerings amounting to 12,000 boxes and upward, 9,000 of which changed hands. We give quotations of leading transactions, as follows:

Spraker	13¾	Manheim Center	14¼
Crabbe's Corners	14¼	Manheim Turnpike	14½
Hates	14	Middleville	14¾
Rathbonville	13¾	Mother Creek	13¾

Flat Creek	14¾	Stratford & Salisbury	14¾
Keys	14	Dairy Hill	14¾

We have advices from abroad to the middle of August. Our London correspondent says there is an active demand for American cheese; all cleared as landed, and prices firm. We quote:—American, extra fine, 60@62s.; fine, 58@60s.; good, 54@56s. The other descriptions of cheese sell as follows:—English Cheddar, 75@80s.; Wiltshire double, 60@68s.; Scotch, 64@68s.; Cheshire, medium, 54@64s.; fine, 68@76s. Dutch cheese:—Edams, 60@70s.; Hondas, 48@60s.; Derby shape, 50@60s. In butter, fine is very scarce. Clonmells is quoted at 112s.; Normandy, 124s; Canadian, 74@84s. The corresponding prices last year were, for American cheese, 90s.; Clonmells butter, 120s.

The weather still continues hot in Central New York, with frequent showers. Grass is abundant, and cows are doing well.

LIVE STOCK MARKETS.

NEW YORK, Aug. 31, 1872.

A SUDDEN change to cool weather improves the demand for meats, while a lighter run of cattle and some other kinds of live stock cause a scarcity, and prices of all kinds have been advanced. There is no disguising the fact that our present consumption of beef is enormous. One thing however must be kept in mind, viz., that a very large number of the cattle are small Texans, requiring three to make two good fat native steers.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	7,857	52	2,413	27,411	37,517
" last week	9,707	98	2,981	28,177	36,279
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—Almost immediately upon the close of Monday's market cattle began to advance. The cause was a lighter run with a favorable change in the weather. The improvement was steady until ½@¾c. were added, and now we find some sales fully 1c. above what the same cattle were selling at one week ago. Texans, for instance, reached 11c. per lb., but they were good. A lot of very poor long-horns, 6½ cwt., and bruised at that, sold for 8½c. Good natives went readily at 12½@13c., with prime at 13½@14c. One drove of 8 cwt, O. grades averaged over 13½c.

There were only 739 head on sale yesterday, and butchers quickly picked them up, the rumor prevailing that the run will be light next Monday, and a very large proportion of them Texans. These Texans are a bitter pill for butchers, but it now looks as though it will have to be swallowed even without a sugar coating. Of the natives received at the great wholesale marts of Chicago, Pittsburgh and Buffalo many are sold for grazing, the feed being good and graziers becoming convinced that fat cattle will be high next winter. In the Far Western States they begin to talk of dry weather, but it is much later than usual for reports of this kind. Some of the Kansas prairies have already taken fire, though no great fears of extensive burnings are entertained. The market certainly closes very strong here.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₩ lb	13 @ 14	13 @ 13½
Good to prime	12¾ @ 13½	12 @ 12¾
Medium	12 @ 12½	10½ @ 11½
Poorest grade	8½ @ 10½	7 @ 9½
Average sales	@ 12½	11½ @ —

Hogs.—With increased receipts the demand improves with the cool weather and prices are higher. Nothing has been sold alive for several days, but they are worth 5½@5¾c. City dressed sell at 6¾@7c., those of 180 lbs. going at 6¾c. There is very little difference now between light and heavy hogs.

Milch Cows.—With a light supply there is a better feeling in the cow trade. Milk is not doing as well since the cold weather set in, but producers are making arrangements for Fall and stocking up somewhat. They are buying many springers and taking them into the surrounding country. Prices range from $30@45 for poor; $50@60 for medium, and $70@75 for good milkers.

Sheep and Lambs.—The improvement noted last week still continues, and something more has been added to the prices. Prime State sheep have been sold at 7@7½c, though good lots are still 6¾c. Some at 8c. were really poor, weighing less than 70 lbs. A car 82½ lb. Mich., the wool, went at 6¾c. with a car 73¾ O., at 6¾. Lambs are also doing very well, rating from 7½ for a lot poor 44 lb. State to 8¾c. for car 54 lb. Ky.; 9c. for 52 lb. State; 9¾c. for car 65¾ lb. Canada; 10c. for car 67 lb. State, and 10¾c. for a dark choice, 70 lbs. Both sheep and lambs are in good demand with an insufficient supply.

Veal Calves.—The feeling is better, very many of the fat milk veals, both State and Pa., selling for 10c. Several car loads, Bucks Co., 130 and 135 lbs. were sold right through at 10c. Grass calves are worth 3½@3¾c. or $4@6 each, 50 head selling for $5. We are getting quite a good many Western calves of 200 and 300 lbs. which butchers object to buy on the scales, so pay $12@16 per head for them. Fair State veals are worth 9@10½c.

LATEST.—Monday, September 2, 4 P. M.—Beeves.—Arrivals to-day, 184 cars at Communipaw, 100 at 100th St., and 51 at Weehawken, making 5,762 for the present market. Notwithstanding this heavy run, there is a further advance of ½@¾c. from Saturday, a few choice bullocks selling up to 15c., with quite a good many at 14c. Texans were very plenty at 9@11c.

Sheep and Lambs.—Arrivals for to-day's market, 15 car loads at Communipaw, 10 at 48th St., and 8 at 40th St., making 6,887 on sale. There is no change in prices, but the feeling is very strong. Fat sheep are scarce. One lot of such sold for 7½c.

Hogs.—Receipts to-day, Sunday included, 47 car loads at Communipaw and 27 at 40th St., making 8,057, and there is a further advance. Some live were sold at 5¾@5¾c. Dressed sold at 6¾@7¼c.

DIED.

CHAPPEL.—At Port Gibson, Miss., July 13, C. G. CHAPPEL, formerly of Ohio, but for many years a resident of Mississippi, in the 38th year of his age.

SPECIAL NOTICES.

The Indiana & Illinois Central

Railway Company's

FIRST MORTGAGE 7 PER CENT. SINKING FUND GOLD BONDS, FREE OF GOVERNMENT TAX.

An East and West Air Line of 152 Miles, Indianapolis, Ind., to Decatur, Ill.

This road passes through a belt of the best settled and richest agricultural and mineral country of Indiana and Illinois, averaging thirty miles in width, with no other East and West railway built or projected through it. It crosses, in Parke and Vermillion Counties, the rich

BLOCK COAL FIELD

of Indiana, which alone will supply an ample business.

Thirty miles through Douglass County, Illinois, just completed, opened and paid for.

Whole Western Division, Montezuma to Decatur, eighty-five miles, to be finished in 1872. Grading nearly done and materials (except iron) already procured; bridge over Wabash ready for superstructure.

Eastern Division, sixty-seven miles, partly graded, and to be finished in 1873.

$1,300,000 IN CASH ALREADY EXPENDED ON THE ROAD, AND $1,500,000 REMAINING TO BE CALLED FROM TWENTY SUBSCRIBERS, AMONG WHOM ARE W. H. GUION, SIDNEY DILLON, JAY COOKE & CO., CLARK, DODGE & CO., J. SELIGMAN, VIBBARD, FOOTE & CO., AND PAEL S. FORBES OF NEW YORK; BENJ. E. BATES OF BOSTON; HENRY LEWIS OF PHILADELPHIA, AND G. M. PULLMAN OF CHICAGO.

Besides its right of way the Company owns 32,000 acres of land, chiefly in Indiana, of which 2,000 acres are the best BLOCK COAL LANDS. It has also SUBSCRIPTIONS IN BONDS AND CASH from counties, towns and individuals of $700,000.

The road connects at both termini with the most important THROUGH RAILWAY LINES of the West, and being by many miles shorter than any other line, will be indispensable to them, while its local business alone will insure good dividends on its stock.

Bonds $1,000 each, payable to Union Trust Company, Trustee or bearer, July 1, 1901, in gold coin. Coupons, also in gold, payable Jan. 1 and July 1, in New York, or at Union Bank of London, at fixed exchange of £7 sterling.

SINKING FUND of 2½ per cent. a year on gross earnings, to be invested by Trustee in Bonds at not exceeding par.

For sale at 90 and accrued interest, by the Financial agents of the Company,

A PRIME INVESTMENT

AT A

LOW PRICE.

THE

CHICAGO

AND

CANADA SOUTHERN

FIRST MORTGAGE SINKING FUND 30 YEARS'

7 PER CENT. GOLD BONDS

AT

90 AND ACCRUED INTEREST.

INTEREST PAYABLE APRIL AND OCTOBER AT UNION TRUST CO.

This road is the western link in the new AIR LINE from BUFFALO to CHICAGO, and runs from the Detroit River to Chicago in nearly a straight line.

The road is a part of the same line as the Canada Southern, and is being built by the same men, viz., Milton Courtright, John F. Tracy, David Dows, Wm. L. Scott, Henry Farnam, R. A. Forsyth, John M. Burke, M. L. Sykes, Jr., all directors either in the Chicago and Northwest or the Chicago, Rock Island and Pacific; Geo. Opdyke of the Midland Road; Sidney Dillon, Daniel Drew, John Ross, David Stewart, Samuel J. Tilden, Kenyon Cox, and other prominent railroad men.

The road, like the Canada Southern, will have steel rails (sixty pounds to the yard) throughout; is practically straight and level, much shorter, and can be run more quickly and with greater safety than any other road connecting Buffalo and Chicago.

Twenty-five miles are finished and running; seventy-five miles more are so far advanced as to be finished by Jan. 1, and the entire road will be completed during the ensuing year. Steel rails and ties for one-half the entire road have already been purchased.

The builders of the road control enough of its Chicago feeders to obtain for it a profitable business from the start, having projected the line to accommodate existing business, and having seen the necessity for another trunk line between Chicago and the Atlantic seaboard, located expressly with the view of obtaining the cheapest transportation practicable.

The branch lines will make the shortest connections between Chicago and Toledo, and Chicago and Detroit, as well as between all these points and Buffalo.

The Canada Southern Bonds, in every particular like these, were eagerly taken, the last of them several weeks ago, by the best class of investors, and were on the market a shorter time than any other railroad loan of like amount for years past.

The proceeds of these bonds will complete the entire line, and we recommend them with the same confidence as we did the Canada Southern, and regard them as in every way a choice security.

FRUIT RECORDER AND COTTAGE GARDENER

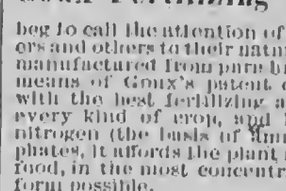
A MONTHLY of 16 pages, at **$1.00** per year, edited by A. M. PURDY—a life-long fruit grower and flower fancier, having now under cultivation at Palmyra, N.Y., and South Bend, Ind., two hundred acres of fruit alone. Big silly pictures, fashion plates, novels, politics, &c., find no room in it, but it is *strictly* devoted to FRUIT GROWING AND HOME'S ADORNMENT. Its high moral tone and rich store of practical, original and copied matter (from some 50 exchanges) endear it to all. To see a copy is equivalent to subscribing. Specimen copies *free*, or an excursion trip of four months (Sept. to Dec.) for only 25 cents. Don't judge it to be of no account because printed in an inland town and the editor a *working, practical* fruit grower, but try it four months, and *be satisfied*. Address,
A. M. PURDY, PALMYRA, N.Y.

SMALL FRUITS! SMALL FRUITS!

THE largest stock in the United States. Plants pure and unmixed. Wholesale and Retail List *free*; also the SMALL FRUIT INSTRUCTOR, a 64 page pamphlet—tells how to plant, grow and market all kinds of Small Fruit—price, post-paid, 25 cents. Private terms to Agents, or those desiring to sell locally, free to all applicants. Parties have realized $400 to $200 in one or two week's time selling our Fruits, while others have got their own plants *free* by selling a few to their neighbors. Address, A. M. PURDY, PALMYRA, N.Y.
or PURDY & HANCE, SOUTH BEND, Ind.

Implements, Machinery, &c.

ATTENTION, OWNERS OF HORSES!



THE ZINC COLLAR PAD is guaranteed to cure the worst case of raw and inflamed sore neck in *Ten Days*, and *work the Horse every day*, or money refunded; and will not chafe or wear the mane off of the neck. For sale by Saddlery Hardware Establishments and Harness Makers.

Manufactured by the ZINC COLLAR PAD CO., Buchanan, Mich.

Dollar Corn Sheller.

Sample sent free, on line of A. M. U. Ex. Co., on receipt of One Dollar. Liberal Inducements to Agents. Address DOLLAR CORN SHELLER CO., Lima, N. Y.

MONEY FOUND IN THE SEWERS!

THE

Goux Fertilizing and Sanitary Co.

beg to call the attention of Farmers, Market Gardeners and others to their natural manure. This manure, manufactured from pure human excreta, collected by means of Goux's patent closet system, and mixed with the best fertilizing absorbents, is suitable for every kind of crop, and being remarkably rich in nitrogen (the basis of ammonia), and soluble phosphates, it affords the plant a liberal supply of natural food, in the most concentrated and readily available form possible.

For further information, apply to or address the Company, at their Office, corner of Varick, Vestry and Canal Sts., New York.

ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats, Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler—No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing

Anderson's Low Pressure Steam Heater,

for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

For further particulars, address
P. P. MAST & CO., Springfield, Ohio.

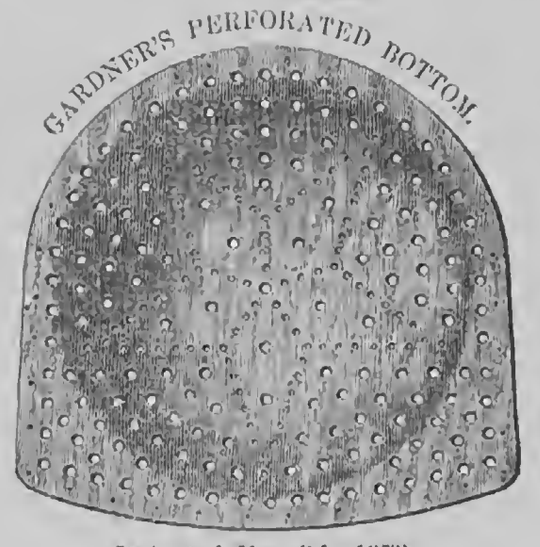
CARHART'S PULVERIZING CULTIVATOR has more practical points than any cultivator in use, and is indispensable as a farm implement. Price, $22.
C. C. BRADLEY & SON,
Manufacturers, Syracuse, N. Y.



Patented May 21, 1872.

GREAT IMPROVEMENT IN CHAIR SEATS.

Various have been the efforts of men to produce a seat which should be comfortable, light, comely, durable, and also admit of universal application. The degrees of success have been as varied as the effort; but within the last year the long-sought was revealed to an observing, practical genius, and is hereby offered to the public, in full confidence of its instant appreciation.

The seat is composed of three layers of veneer (boards as thin as a knife blade), the grain of each lying in an opposite direction to its neighbor, all glued firmly together in a slightly dishing form, adapted to the person. The entire thickness slightly exceeds one-sixth of an inch. We thus have moderate cost, little weight, neatness, great beauty if desired, and a lasting quality which, in usual service, may properly be called eternal. *While it is especially adapted to escaling chairs by any one who can nail down a carpet*, it is coming rapidly into use for the better class of chairs for sumptuous apartments. The slightest observation will convince the most skeptical of its unequaled merits.

Paving and Roofing.

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1863.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY,
ST. LOUIS, Mo., 29th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STONE, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

"FAMILY FAVORITE!"

THE WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

TARRANT'S SELTZER APERIENT. Trade Mark Patented

SIGNALS OF DANGER.

Disease, like the rattlesnake, usually gives fair warning before it strikes. A failing appetite, a furred tongue, nausea, headache, want of proper action in the bowels, feverishness, lassitude, nervousness, an uneasy feeling in the stomach, etc., are all symptomatic of a coming attack of indigestion, biliousness, colic, fever, or some other positive form of disease. When thus menaced, resort immediately to

TARRANT'S EFFERVESCENT SELTZER APERIENT,

and thus avert the attack. Acting simultaneously upon the digestive organs, the liver, the bowels and the nerves, this refreshing and agreeable alterative will soon restore the system to its normal condition of health, regularity and vigor. Sold by all Druggists.

The Herdsman.

SUSSEX CATTLE.

THIS ancient race of cattle, it is generally understood, dates back to the time of the "Conquest." They were formerly bred principally for draft purposes, being used to cultivate the heavy soil of the Weald of Sussex and Kent. They always possessed the finest quality of flesh and were never neglected by the grazier. After they had served their allotted time as oxen they were converted into beef.

But times have changed. They no longer serve (because it is not necessary they should) the purposes of draft, but occupy the position of one of the useful and established breeds of Great Britain for beef. Formerly their color was both light and dark red, sometimes approaching black; but the cherry color is now approved, as denoting good flesh and the better fattening qualities.

This breed is highly appreciated by English farmers. Great pains are taken to alter the style and type by breeding from the smallest cow with the greatest amount of flesh; and this effort has been successful in its results. It is claimed that the Sussex Cattle are second to none as regards early maturity and weight for age, which is proven by the weights of these animals shown at the famous Smithfield Club meetings. They are great favorites with the butcher and consumer. At three years old well-fed steers will weigh from twelve to fourteen score pounds per quarter. Their general features may be described as follows:—Nose tolerably wide; muzzle of a golden color, thin between the nostril and eye; eye rather prominent; the forehead rather wide; neck not too long; sides straight, and not coarse at the point of the shoulder; wide and open in the breast, which should project forward; girth deep; legs not too long; chine bone straight; ribs broad; loin full of flesh and wide; hip bones not too large, but well covered; rump flat and long; tail should drop perpendicular; thigh flat outside and full in; the coat soft and silky, with a mellow touch.

The Sussex cross well with any breed, by using the male animal, imparting substance and firmness of flesh; color of the offspring is generally red. They are of themselves a hardy breed, and have been found to surpass all others in the poorest pastures of their native county. The cows are not good milkers; those with the heaviest flesh are the worst, but produce sufficient to rear their calf. The most successful way of breeding is to calve them down in October and November, let them have their own calf through the Winter, which can be weaned in the Spring, and another calf put to the cow. If managed in this way, each cow will rear two calves, and the number of barrens be greatly diminished, which is one of the greatest evils when cows are allowed to drop their calves all the year round.

There is a Public Herd Book of Sussex stock, which has been established fifteen years. It at present numbers 176 bulls and 1280 cows. It is also a chronicle of all pedigree prize animals, and records the names of the following breeders who have gained honors with this stock:—Rev. J. Gould of Burwash; Mr. H. Hughes of Woodgate; Mr. Tilden Smith of Beckley; Mr. Thomas Child of Slindfold; Mr. G. Jenner of Udimore; Mr. R. Hawes of Westham; Mr. Thomas Buss, Messrs. J. and A. Heasman, Mr. J. Verrall, Mr. J. S. Turner, Mr. Marshall of Bolney, Mr. Wm. Botting, Mr. F. Tupper, Mr. E. Cam, Mr. G. Coote, Mr. R. H. Burgess of Robertsbridge, Mr. J. Stoneham, Mr. J. Blencow, and Mr. A. Agate of Horsham.

The prices realized for the choicest Sussex Cattle range from $150 to $400. We give herewith illustrations of these animals, and suggest that our beef-producing herdsmen may find it profitable to introduce this breed into their prairie herds.

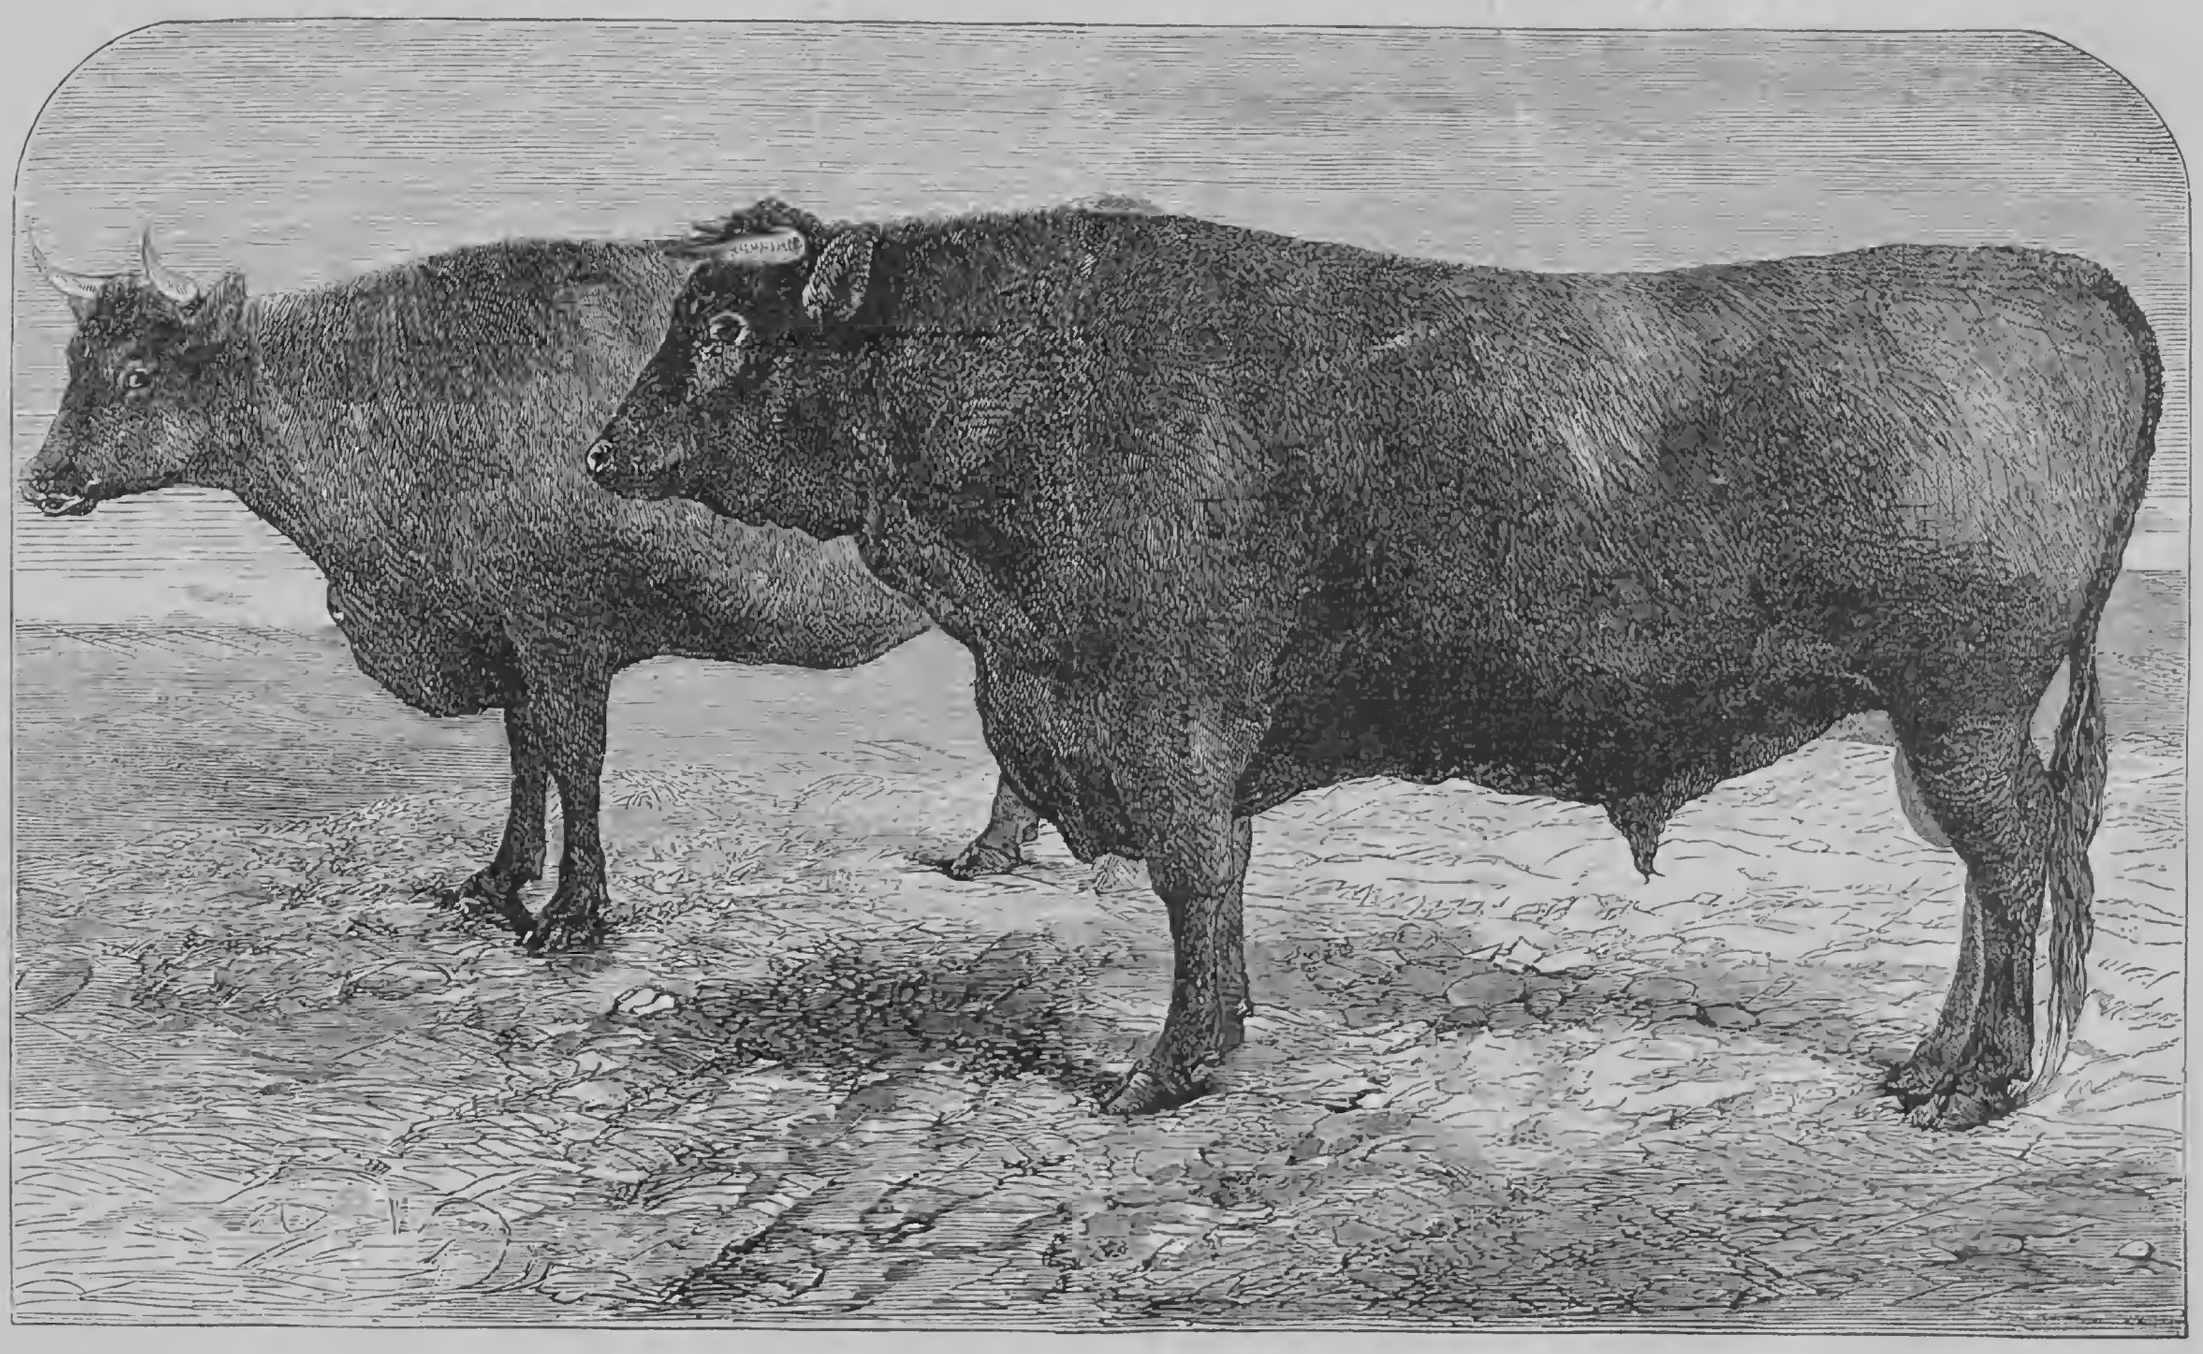
TEXAS CATTLE FEVER IN ILLINOIS.

WE copy the following from the Prairie Farmer of Aug. 31, concerning the statement heretofore made, of the appearance of the Texas Cattle fever among the herds of Sangamon Co., Ill.:—We have the facts from a reliable source concerning the breaking out of the so-called Texas fever among cattle in the vicinity of Springfield, Ill. They are as follows:

In April last, BARNEY HUNTER, an extensive cattle dealer, brought into Sangamon county three hundred head of Texas steers, which he hired pastured on the farm of Mr. ELIJAH ILES, two miles east of Springfield. The cattle have remained there until this time. In the latter part of June some half dozen of the steers, on account of lameness, were culled out and put in an adjoining lot in which were some cows belonging in the city, and a few belonging to Mr. ILES, some twenty-five in all. These cows began to die, and up to August 21st, eighteen of the number had died, though during the last week of that time there were no deaths. The presumption is that it will spread no further. No one doubts that the disease is the genuine Texas fever.

It is given as a fact that corn fed to cattle that have been exposed has proved beneficial; and one of the heaviest owners of Texas cattle in that vicinity says that he is satisfied it will cure a large proportion of those attacked, if fed soon after sickness is manifested.

One dealer who has twenty-five hundred of Texans near there, allows other cattle to run with them, and has as yet had no dis-



SUSSEX CATTLE.

ease among them. As usual none of the Texas animals suffer from the malady.

We also have information that about one hundred head have died at Funk's Grove, McLean Co., supposed to have contracted the disease from a herd of Texas cattle brought there by Mr. HARPOOL.

RED WATER.

WHAT ails my cattle? I have lost eleven head. They all seem to be afflicted alike. The first signs I can see are trembling of head; wild staring looks; breathing hurriedly, and they are in great distress; ears and feet cold; pulse quick; staggering; soon lie down; groan piteously; begin to bloat, and soon die. They all died lying on the right side. I have opened some of them, and have found lungs and blood vessels conjested; wind-pipe highly inflamed. My object in writing is to find out cause and cure.—D. V. F.

WE judge the trouble to be what is known as Red Water, though the symptoms are not sufficiently detailed by our correspondent to enable us to determine. Nor does he tell us how and where they have been kept; whether they have been kept on dry or moist lands; whether the urine is red or claret-color; whether the animal becomes hide-bound and constipated. These are symptoms, together with those he has named, of Red Water. The treatment recommended, supposing it to be this disease, is to give one pint of linseed oil and use freely clysters of soap and water. Give also plenty of linseed tea to drink. If the urine is abundant, give one ounce of tincture of opium with one dram of powdered aloes, three times, at intervals of six or eight hours.

NATIONAL SHORT-HORN CONVENTION.

THE committee appointed by the Indiana Short-Horn Breeders' Convention, held at Indianapolis, on the 21st of May, to correspond with breeders throughout the country on the subject of holding a National Short-Horn Breeders' Convention, said committee being empowered to appoint a time and place for holding such convention, do hereby report, that after an extensive correspondence with breeders throughout the States and Canada, they find that there is an almost universal desire that such convention should be held, also that a large majority of their correspondents favor Indianapolis as the place, and the last of November as the time most suitable for holding the same. They therefore issue a call for a National Convention of Short-Horn Breeders to be held in the city of Indianapolis, commencing on the 27th day of November. The programme of proceedings will be published hereafter.

CLAUDE MATTHEWS, Clinton, Ind.,
GEN. SOL. MEREDITH, Cambridge City.,
J. G. KINGSBURY, Indianapolis, Ind.,
Committee.

Correspondence regarding the convention may be addressed to either member of the Committee.

FOOD FOR DAIRY COWS.

PROF. COOK stated before a Pennsylvania Farmers' Club, that in Scotland he saw in their native locality the celebrated Ayrshire cows. He described these as of small size, varying from 600 to 800 lbs., live weight, and milking, on an average, twenty quarts per day. They are fed largely on cabbage, which is considered there the best food for producing milk. Our dairy farmers here would no doubt find equal benefit from feeding cows on cabbages. As with turnips, there will be no taste in the butter from the cabbage, if the cows are milked before feeding them.

Another fact stated by Professer COOK was, that in the best dairies in England and Scotland it was considered most profitable to give the cows all they could eat, and to induce them by change of food, etc., to eat all they could. The soiling system is of course practiced—and he had seen hundreds of cows tied up in stalls, where they are kept from year to year, no disease or other drawback resulting from confinement. They were not only *healthy*, but *thrifty*—and never leave the stalls till they go to the butcher.

NOTES FOR HERDSMEN.

Cough in Cattle.—Can some one inform me what is the matter with my yearlings; also what to do for them? They have spells of coughing and act very much as if they were choked. They appear smart and well but do not gain. Some of them are losing flesh.—R. C. BULLOCK.

YOU should have told us on what the yearlings have been feeding and how they were kept during the Winter and Spring.

Field Crops.

CURING TOBACCO YELLOW.

The following is N. M. ROAN'S mode of curing what is known as yellow leaf tobacco. MR. ROAN is an experienced tobacco planter of North Carolina:—Curing tobacco yellow, for which this section is so famous, is a very nice process, and requires some experience, observation, and a thorough knowledge of the character and quality of the tobacco with which you have to deal, in order to insure uniform success. Much depends upon the character of the crop when taken from the hill. If it is of good size, well matured and of a good yellowish color, there is necessarily but little difficulty in the operation.

As soon as the tobacco is taken from the hill and housed, we commence—with a low degree of heat, say 95 to 100 Fahr.—"the yellowing or the steaming process." This is the first and simplest part of the whole process, and requires from fifteen to thirty-six hours, according to the size and quality of the tobacco, and this degree of heat should be continued until the leaf opens a lemon color, and is nearly free from any green hue. When this point is reached, the heat should be gradually raised to 105 degrees, in order to commence drying the leaf, and here lies the whole difficulty in curing, (I mean drying the leaf.) The last degree of heat indicated, should be continued five or six hours, when it should again be gradually raised to 110 degrees, when it should be maintained at this point, until the tail or points of the leaves begin to curl and dry. Indeed it will probably be safest for beginners to continue this degree of heat until one-third of the leaf is dried. The temperature may then be gradually increased to 115 degrees, and kept for several hours at that point, until the leaf begins to rattle when shaken, then again raise the heat to 120 degrees, at which point it should be continued until the leaf is dried, after which the temperature may be increased to 150 degrees or 160 degrees, to dry the stem and stalk; the latter should be blackened by the heat before the curing is complete.

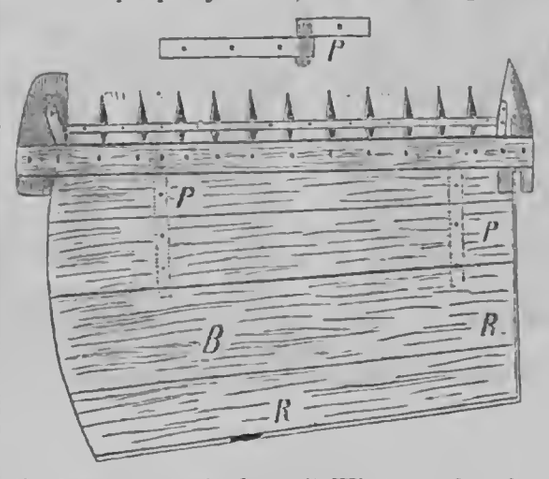
Ordinarily it requires from two and a half to five days to cure a barn of tobacco, dependent entirely on the size and quality. Put seven or eight plants on each stock, and place them eight inches apart on tier poles. In the yellowing process the door of the barn should be kept closed to exclude the air. When the point is reached for drying the leaf, the door may be opened occasionally, and kept open from twenty to thirty minutes at a time, especially if the tobacco gets into a "sweat," as it is called, or becomes damp and clammy. The temperature is raised in the barn by cautiously from time to time, adding coal to the fires, which should be placed in small piles on the floor, in rows, allowing about five feet between each pile, which should contain at first a double handful of coal. In adding coal, you will soon learn the quantity necessary to be applied by the effect produced.

Avoid raising the heat hastily after the drying is commenced, lest the leaf should be scalded and reddened; on the other hand, it should not be raised too slowly for fear of "raising the grain," or the leaf becoming spongy and dingy. Both extremes are to be avoided, and the skill required attained only by experience and observation. We usually cut tobacco the latter part of the week, house it and suffer it to remain until the first of next week, that we may not violate the fourth commandment.

SAVING CLOVER SEED.

J. A. W. ASKS the best way of saving clover seed. Cut the clover when ripe—not so ripe that the seed will shell out by handling, but when the seed can be rubbed out in the hands. The way of cutting practiced by many clover seed growers, is to attach a small platform or apron, B, to the cutting bar of a mower, as illustrated herewith. It is made of half-inch pine boards the length of the cutting-bar, three feet wide—a trifle wider at the outer end, as shown. At the end and rear are nailed, or otherwise secured to the platform, strips of board eight inches wide. P, P, are common strap hinges—the longer portion firmly riveted to the platform, and the shorter bolted to the cutting-bar. A few inches from either end, cleats of hard wood are screwed to the under side of the platform. The clover as it is cut falls on the platform, B, and is raked off into gavels by a man who accompanies the machine for the purpose. If raked off directly opposite each other, at each circuit of the field, they will be left in winrows in better condition for handling than the crop could be put by the use of a horse rake. The cost of this addition to a mower is small, and it can be used in harvesting short grain as well, if desired.

When properly dried, it should be put in



the barn or stacked until Winter, when by using a combined thresher and cleaner it can be removed from the straw. If a combined clover thresher, cleaner and huller is used the seed can be put in marketable condition. These machines are employed where clover seed is grown on an extended scale for market. But if grown in small quantities, or for home use, the seed is run through a thresher, the straw raked off (if a separator is not used), and the seed and chaff run through a fanning mill, according to the directions accompanying all the best modern mills. But many farmers who grow seed for their own use simply, prefer to sow it in the chaff.

FIELD NOTES AND QUERIES.

Spring Wheat Notes Wanted.—It would be gratifying and profitable if those of your readers who grow Spring wheat would give the names of the varieties they grow, the respective localities in which they are grown, soil and culture, specifying which variety they think most highly of, and why. If they would also send a small sample of their best wheat to the RURAL office for the editors to report upon, I think a benefit would be conferred upon each other by so doing. For my part, I have grown but one variety the past season (the Mediterranean, so called) which did not give good satisfaction. It did not stand up nor fill well. It is the first Spring wheat I ever grew.—TYRO, *Northern Ohio.*

WE are glad to second the suggestion of our correspondent, and any well-considered information sent us in accordance therewith shall be given our readers.

Drilling Wheat.—Would you advise drilling Winter wheat or broadcasting it? Please give your reason for your preference.—P. S. COLWELL.

IF land is as well prepared for seeding as it should be, we prefer seeding with a drill: first, because less seed is required to produce a given result, the depth of seeding being so surely and easily regulated; second, because the young plant (especially on light soils) is protected from Winter winds by the drill ridges, and from being uncovered by the heaving action of frost; third, because if the drills run North and South, as they should, the plants make a better and more uniform growth, and develop and mature more equally; and fourth, because we know that better returns are insured at harvest for the money, labor and seed invested.

The Time to Cut Hemp.—At a late meeting of the Lexington, Ky., Farmers' Club, the subject under consideration was: the proper time to cut hemp. It was stated that when the dust, (pollen) was blowing off freely, which may be noticed any morning when a light breeze is stirring, producing a fog like appearance hanging over the hemp, and the leaves turning yellow and falling off, that it is ready for cutting. It was believed that when a farmer has a large crop to cut, that it was better to cut some of it a little green than to leave the last to get too ripe, more injury being done to the crop by the latter than by the former, the lint being barky and harsher.

Cutting Aftermath.—A correspondent in Ohio asks if we recommend cutting or feeding down the aftermath of meadows. It depends upon circumstances. If fodder is scarce and manure plenty, we recommend cutting it, and putting on a good top-dressing of manure after it is cut. If land is to be kept for meadow, we do not recommend, as a rule, feeding the meadows during September. It may be done safely in October and November, if the growth is large. We do not think it benefits the meadow, however, to feed it. If it is fed or shorn of its aftermath, compensation in the shape of manure should always be given.

Winter Oats.—Last year I saw in the RURAL NEW-YORKER some mention made by a correspondent in Illinois of Winter oats. I should like to know if any one has tried them; if so, with what result.—A NEW YORK FARMER.

YES; we received from the correspondent referred to a package which we were requested to try and report upon. We did so. They were given an excellent opportunity to grow, on good soil, in latitude 43½ North. They did not even head out.

When to Sow Orchard Grass.—W. C. ALLEN can sow orchard grass now, or any time between now and May 1. He can harrow the land he describes and sow this fall—one and a-half to two bushels per acre. Good barn-yard manure is as good a fertilizer as he can apply.

The Sportsman.

ATHLETIC SPORTS IN CANADA.

THE following account of what took place at Lachine, Canada, may interest our readers, as it has us, on account of its novelty: A discussion arose at the tea table of HANNA'S Hotel in regard to a match of the same kind that had lately taken place in England. Some Englishmen present spoke rather disparagingly of our Canadian muscle, and expressed the opinion that few, if any, Canadians could perform the feat. MR. J. D. ARMSTRONG, our well-known amateur runner, who happened to be present, quietly informed the young gentleman that a Canadian could do whatever an Englishman could do, and that our amateurs particularly could match the English. He then offered to try the feat himself, though he certainly was not in good trim, having just partaken of a hearty meal.

A match was immediately made as follows:—He (ARMSTRONG) was to hop a quarter-mile, walk a quarter-mile, run a quarter-mile, ride a quarter-mile, and row a quarter-mile, and all this was to be done in "sixteen consecutive minutes." The ground was immediately measured, and the quarter-mile marked. By the time the arrangements were completed all Lachine turned out to witness the exciting match.

ARMSTRONG had the choice of running the races in any order he chose, and selected the hop first. He accomplished his first quarter in 2:36, and immediately walked his quarter, returning in 2:44. He then ran the quarter in 1:30, and immediately mounting his horse, an ordinary carriage horse borrowed from a gentleman who had just driven in from Montreal, showed the bystanders that he was no less a novice on horseback than on foot. He made the most of the animal, and landed him at the end of the quarter in 48 seconds.

He had now to run to the beach, a distance of 100 yards, to get into his boat, which was a common family skiff, weighing about 300 lbs. The water on the course was very shallow, and his boat ran aground several times; but in spite of all these difficulties he got over this last quarter-mile in 5:00, and the whole feat in 12:38, having 3 minutes and 32 seconds to spare.

Taking everything into consideration, it was a wonderful feat, and one requiring great powers of endurance. The feat was accomplished in England in 10:46 by a person who had been in a regular training for it, and who had every advantage in his favor. There is not the slightest doubt that had ARMSTRONG had the same advantage he could have done it in two minutes less, and we would not be surprised to see him do it within ten minutes.

NOTES FOR SPORTSMEN.

The Wisconsin Game Law, as amended by the last Legislature, provides that "No person shall catch, kill or otherwise destroy, or have in his possession, or expose for sale, any grouse, prairie hen or chicken, partridge, ruffled grouse or quail, between the fifteenth day of November and the succeeding twentieth day of August in each year, under penalty of ten dollars for each bird."

Hound Puppies Sick.—WALTER has a hound pup affected with a kind of convulsion; is never still; shakes all the while like a person with palsy, or worse. Asks if any one can give the cause and a remedy?

Dairy Husbandry.

CANADIAN DAIRYING.

THE Report of the Canadian Dairymens' Association for 1872, just now come to hand, is a valuable document and gives a tolerably good insight as to the manner in which dairying is conducted in Canada. The Secretary, Mr. BELL, in his introductory notice to the Report says:—"Great progress is seen in the past few years in developing and perfecting this important branch of Canadian industry. The factory system is being extended, many new factories have been erected, cheaper and better modes of manufacture have been introduced, difficulties have been met and overcome, peculiarities of the markets are better understood, and the general character of Canadian cheese materially elevated." These results he thinks have been owing largely to the discussions and the published reports of the association, and we have no doubt the statement is in every respect correct.

Statistics are given of the operations of sixty-two Canadian factories, and the Secretary regrets that the list is incomplete. We regard it very unfortunate for the dairy interest of America that statistics in respect to the number of factories, the cows employed, and the quantity of cheese made annually are not given fully in the reports of the dairy associations. This work properly belongs to the associations, and could we have reliable statistics showing the quantity of cheese made annually at the factories it would be exceedingly valuable to the trade as furnishing a basis for regulating prices and conducting future operations.

Of these 62 Canadian factories we find from the report that 42 of the number required ten pounds and upward of milk for one pound of cheese, the highest average on the list being eleven pounds, while the lowest average is 9⅛ pounds. These statistics show that it takes a little more milk to make a pound of cheese on an average in Canada than in the States, though perhaps the difference may be accounted for in the fact that the Canadians do not ship their cheese so early as do the New York factories.

We notice one feature inaugurated by the Canadian association which is worthy of adoption on this side the line, viz.: the holding of Cheese Fairs, where premiums are awarded to competitors for the best cheese. Upward of $300 were distributed in prizes to successful competitors at the Cheese Fair of 1871.

These Fairs are modeled somewhat upon the plan of the English and Scotch Cheese Fairs, which have long been regarded as an efficient means of promoting progress in this branch of industry.

That the Canadians are thoroughly aroused to the importance of developing the dairy interest in Canada is manifest from the fostering aid extended by the Government to the Association for the purpose of carrying out the objects of its Cheese Fairs, etc., and the President, Mr. NOXON, states in his opening address that encouragement has been received from the Minister of Agriculture to the effect that if the Association becomes incorporated an annual appropriation of from $300 to $500 might be expected.

The competitors of the Cheese Fair of 1871 were required to give a statement of the manner in which the cheese was made and the dairy generally conducted. The questions and answers are given in full in the report, and are of interest. Of the fourteen prizes awarded, H. S. LOSEE of Norwich took the first and THOS. BALLANTYNE of Sebringville the second.

Method of Making the Canadian Prize Cheese, Etc.—As it may be of interest to know how the cheese was made that took the first prize, we give briefly Mr. LOSEE's statement as follows:—The samples of cheese shown were made July 17, 20, Aug. 15, 16, and Sept. 4 and 5, from the ordinary milk of forty patrons. The night's and morning's milk were mingled together and the milk cooled before setting. Temperature of setting, 84°, and curd cut lengthwise and crossways of vat with perpendicular knife. Let curd settle, and then cut with horizontal knife and apply heat. The highest temperature of scalding the curds was 98°, and one and a-half hours employed in applying the heat. The curd was allowed to become acid before dipping, and the test used to ascertain its proper condition, as to acidity was to apply the hot iron test. When far enough developed, the curd, on applying the iron, will draw out into numerous fine fibers, half an inch long. MITCHEL'S annotto was used, and 2 7-10 pounds of Liverpool salt for 1,000 pounds of milk. The curd was not ground in a curd mill. The cheeses were cured in a curing-room well ventilated from bottom to roof, the temperature ranging from 65° to 80°, and were turned once a day.

The report contains the Annual Address before the Convention, Feb. 7, 1872, by X. A. WILLARD of the RURAL NEW-YORKER; the Address of Mr. L. B. ARNOLD, on Poison Cheese; of S. A. FARRINGTON, on Dairy Farming in Connection with Grain Raising, together with a very full report of discussions, with extracts from Prof. CALDWELL'S Address, the whole making a pamphlet of 129 pages.

As we gave an account of the last Convention in the RURAL, we need not refer again to the matter embraced under this head. On the whole, we think the Report compares favorably with similar publications in the States, both as to matter and the manner in which it is issued.

HOW CHEESE AND BUTTER ARE FLAVORED.

SOME contend that the quality and fine flavor of cheese depend altogether upon its manufacture and curing, provided the milk is in good, sound condition when it comes into the hands of the cheese maker. This is not strictly true, or at least is not in accordance with our experience and observation. We do not question the fact that fine cheese can be made in widely-separated localities, and that skill in making and curing will turn out a fair article from the milk of cows fed on ordinary pasturage. But that the delicate flavor found only in the finest goods can be obtained from milk produced on the coarse herbage of low, wet grounds, is very much to be doubted. We find some very sensible remarks on this question by an English writer in a recent number of the Country Gentleman. In England, he says, "under no circumstances would an old established dairy farm, famed for fine flavored cheese, suffer the peculiar rich and mellow taste imparted by the particular herbage grown in the dairy field, or fields, to be tainted by the product of inferior grass, or, on the other hand, permit the cheese of other parties to be benefited at the expense of this sweet and most pleasant flavor. In parts of England where arable land prevails, and where the land in permanent grass has never produced any cheese of a quality beyond mediocrity, it is possible factories may arise, for doubtless the management in making is superior by far to where only second-class cheese is manufactured." "Good second-class cheese can not be made from clover pasture, or any of the temporary grass land under the usual style of manufacture there, for it will not keep to get old enough to suit the best customers, and cheese which requires eating while comparatively new has to be consumed by the working classes, who will not and can not pay high prices."

The writer, after complimenting the American system of manufacture, and giving due credit to the excellent quality of of our cheese, again goes on to say that "it is an utter impossibility to impart the flavor given by the old natural grasses growing in century-old dairy fields, to cheese made from clover or any artificial or temporary pastures. This is so well known in England, that the dairy cows on the best dairy farms are always, when in milk, confined to the old dairy land, and on most of these farms there are fields, which only a fence divides, which would spoil the uniformity of the cheese, by giving the cows access thereto."

"It makes a difference in butter making, too, for though not quite so quickly shown, yet there is land which will not do to graze with milch cows, from which a genuine good article is required; and though of course both butter and cheese must be manufactured in a cleanly and proper manner, yet as much depends on the food the cows eat, as the best managers can not get rid of impurities which have been brought into the milk from rank, sour or unsuitable forage."

There is a good deal of sound sense in the above remarks, and American dairymen, while striving to secure fine flavor, should bear in mind that this desirable quality in their goods is not wholly due to skill in the cheese vats and at the factory, but that it must come in a measure from the sweet and superior herbage of the fields where the cows are fed. Whatever may be said concerning skill in manipulating milk and the manufacture of dairy products the fact stands boldly out that all the extra fancy factory cheese of America comes from districts where the cows are fed on the fine, sweet herbage of old upland pastures and where good water is abundant. And we have seen cheesemongers who could unerringly point to where the cows had fed on fine old pasturage, simply by testing the cheese in the storehouse after it had been shipped for market.

American dairymen, we are convinced, can greatly improve the character of their cheese by eradicating weeds in pastures and by paying more attention to the quality of herbage upon which the herds are fed. We cannot say but that fine cheese may be made from the milk of cows fed on recently re-seeded grounds, provided the herbage grown be from a great variety of grasses similar to those found in old pastures; but on the other hand we doubt very much whether the best cheese can be produced from recently re-seeded fields of red clover. Such cheese will lack in keeping quality, will soon grow rank in flavor, and must always fail to stand the test for fine, when presented to the examination of competent judges. American dairymen have much yet to learn in regard to the character of herbage best adapted for producing good milk, and especially is this the case in those districts where dairying has been but recently introduced. The subject is an important one, and we may allude to it again.

Domestic Economy.

PRESERVING EGGS.

RECENT numbers of the RURAL NEW-YORKER contain many inquiries and not a few hints and directions upon this subject. But there is one fundamental principle that has not been mentioned, and which, if unattended, to will assuredly prevent success. It is this:—*Do not let your eggs get beyond the power of these recipes before you begin to preserve them.* This sounds very much like a truism. It is a truism, but just in the same way that all clearly expressed truths are truisms. There are three conditions which must be observed if we would succeed in preserving eggs. 1. The eggs must be fresh to begin with. 2. They must be kept cool. 3. The air must be excluded from the interior. Most recipes have the third object set alone in view. There are various ways of effecting it, and some of the best are detailed in the RURAL for July 6th. To the recipes there given we may add the use of lime-water. When eggs are immersed in lime-water the lime fills up the pores of the shell and makes it impervious to air. The same effect is produced by coating the egg with soluble glass, and this material was at one time extolled as the egg-preserver *par excellence*. It is very good, but no better than good grease of any kind; and our readers would do well to remember that all coatings and varnishes produce the same effect, that they are all of nearly equal efficiency, and that the wonderful accounts which we often read of the efficiency of lime-water, water glass, paraffine, &c., are based upon no exceptional virtues in these substances.

In addition to the use of these coatings the eggs must be kept moderately cool—in fact as cool as the means at our command will allow, provided we do not permit them to freeze. The great preservers of all animal substances are low temperature, exclusion of air and dryness. The frozen mammoth of the Lena was as fresh at the date of its discovery, as on the day when it perished, which was unquestionably centuries ago. Our canned meats keep well even when exposed to tolerably high temperatures; and the dried meat used by our hunters and known as "jerked" meat, never becomes offensive until after it has been exposed to moisture. By coating the eggs we virtually "can" the contents, and if, in addition to this, we keep them cool, it will be no wonder if they keep.

The most common cause of the decay of eggs lies in the fact that the eggs have commenced to change before the preserving process is begun; and this evil in general originates in the fact that the hens sit on them to such an extent as to spoil them. Eggs are generally laid away when they are produced in greatest abundance, and this is just the time when a few of the hens become broody. These broody hens visit the nests of the laying hens and sit on the eggs for hour after hour. In a short time the process of hatching has proceeded so far that when the egg is laid away death ensues and decomposition immediately begins to set in. To avoid this see that all broody hens are prevented from having any access to the nests; make sure that the eggs are collected at short intervals and removed to a cool cellar; while still warm coat them with some preparation that will effectually close the pores—a mixture of equal parts of good tallow and beeswax being one of the most efficient—and until you have occasion to use them keep them at the lowest temperature you can command provided this does not fall below 36° Fah. By carefully following these directions eggs may be kept in good condition for twelve months.

J. F.

ECONOMICAL NOTES.

Scientific Coffee-Making.—Prof. LIEBIG, the German Chemist, says good coffee should be rich in two principles, *extract* and *aroma*. When boiled a long time coffee is rich in extract but deficient in aroma; and when boiled only a short time it is rich in aroma but deficient in extract. In order to obtain both of these properties, Prof. LIEBIG directs us to take two-thirds of the ground coffee needed for the meal, put it to the water and boil briskly a considerable time, and when the meal is nearly ready, take the coffee from the fire and add the remaining third of ground coffee; stir it well, let it stand a few minutes and serve.

The above directions will not avail much if the coffee is not properly roasted. Roast often, and in small quantities at a time.

According to M. SCHADLER only half the quantity of finely ground coffee is needed, in order to produce the same strength of beverage obtained by the ordinary coarse-ground article. If, after Oriental fashion, the ground coffee is crushed fine in a mortar, only two-fifths of the coarse is needed. Infusion, boiling, or filtering through a bag, all have the same result as regards strength, except that by filtering the aroma of the coffee is better preserved.

Preserving String Beans for Winter Use.—In the RURAL NEW-YORKER, Aug. 10th, Mrs. M. asks for a method of preserving string beans for Winter use. I will give mine, which I call good. I prepare my beans as for present use, put them in a kettle of cold water, let them come to a boil and boil about ten minutes; then take them out and drain them well, and pack in stone jars and pour over them a brine that will bear an egg, put a weight on them to keep them under brine, and after they have remained about three weeks, I pour this brine off (as it has become so reduced from the juice drawn from the bean that it will sour) and cover them with a new brine of the same strength as the first; then they are ready for Winter use. They will need soaking over night in clear water before cooking. I have put them up for several years in this way, and they have always kept to my satisfaction.

Green Corn Pudding.—I have also a very good recipe for a green corn pudding. Four cups of grated corn, six tablespoonfuls of flour, six of sugar, six cups of sweet milk, four eggs and a very little salt; bake two hours.—MRS. E. A. BENJAMIN, *Reading, Pa., Aug. 30.*

To Keep Meat.—Meat is much better for family use when at least one week old in cold weather. The English method for keeping meat for some time has great merit. Experts say, hang up a quarter of meat with the cut end up, being the reverse of the usual way, by the leg, and the juice will remain in the meat, and not run to the cut and dry up by evaporation. It is worth a trial, and when made will be continued.

That Bill of Fare.—I would like to say to M. N. R., for the benefit of those readers who can appreciate and not ridicule her kind intentions, that she should not stop at Monday's supper but give us a daily bill of fare for a week. I second her motion that "Constant Reader" or Mrs. W. F. T., give us a bill of fare, I being one of those who are glad to have the opportunity of profiting by the experience of others.—A SUBSCRIBER.

Custard Without Eggs.—Boil a quart of milk, except a teacupful in which to put four tablespoonsful of flour. When it boils put in a very little salt and stir the flour just as for starch. Add two tablepoonsfuls of sugar and such spice as you like.—L. E. K.

Silver Soap.—A good article may be made as follows:—Hard soap, 8 oz.; turpentine, 1½ oz.; water, 4 oz. Boil until perfectly dissolved, and add 3 oz. liquor of ammonia.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Success with Tulip Trees.—*Aug. 27.*—Last Spring I transplanted quite a large number of Tulip trees (*Liriodendron tulipifera*) from the woods and fields. Like all forest tree seedlings that have not been transplanted, they had few or no small lateral roots, and to one unaccustomed to handling such trees there would not appear to be much chance of making them live. After cutting off the lower end of the main or tap-root and shortening the stems to a mere stump of a foot or two in length, they were planted in nursery rows and the soil packed closely about them. I mentioned this system of treating forest trees in my Diary at the time of planting, and now refer to it again for the purpose of noting my success. About ninety per cent. of those planted have lived and made a good, healthy growth, some few having produced shoots two feet long. There is no species of native forest tree more difficult to make live when transplanted, either from the woods or nursery, than the Tulip; and if I can succeed in saving ninety per cent. in an unfavorable season, why cannot others do the same?

Millions of forest-tree seedlings can be spared from the Middle and Eastern States, and they are wanted on the Western prairies; but for the want of proper information in regard to digging, pruning and planting, there is scarcely any traffic in these things between the two sections of the country. Those who purchase forest trees should be willing to pay a price sufficient, not only to cover the cost of digging, packing and something for the plants, but for carefully pruning the same at the time. Owing to the ignorance of purchasers, nurserymen are obliged to send trees to their customers entire, while a great saving in cost of packing and freight might be saved if they were pruned before being shipped. For instance, the tulip trees planted by me last Spring varied in hight from one to ten feet; and some of the largest had tap-roots two or more feet long; but when pruned ready for planting, the largest could have been packed in a space of three feet. Had I been filling an order for such trees I would not have dared to prune them in this manner, although they required it to make them live. Of course nursery-grown trees do not require such severe pruning; but all need more or less; and if it is not done before they leave the nursery it must be done at the time of planting. Our people have become so accustomed to purchase trees by the foot or yard that they seldom take any other merit into consideration.

No Name—No Address.—*Aug. 28.*—I am in the receipt of several collections of insects from various sources, the senders of them omitting to put their name or address either inside or outside of the package. This is almost as bad, (yes, it is worse) than sending letters without signing one's name, or giving date or post-office address. The next thing to receiving insects is in knowing from what particular locality they came; and although I can guess pretty near as to the latitude, from the insects, still it is important that one should know positively if we are to learn anything in regard to the geographical distribution of species. It is certainly provoking to receive a half dozen boxes all filled with choice insects, coming from as many different correspondents in different parts of the country, without any mark or word to indicate to whom you are indebted. I am just in this fix to-day with three boxes of beetles which arrived by mail, and I know by their appearance that they came from widely separate regions of the country; but from whom, or where, I shall probably never know. Suppose I should receive three letters from the three persons, each saying that they had sent a package, I would be no better off than before, unless each gave a minute description of the box in which the insects were packed; and this might fail to assist me in determining their identity, inasmuch as the three lots named above were all packed in round tin boxes of nearly the same size. Now the only way to avoid confusion in such matters is, for the sender to put his or her name on the wrapper of each package, or on a slip of paper inside. I wish those who kindly send me packages of any kind would remember this, and then I shall know to whom I am indebted for favors.

Taking Up and Potting Plants.—*Aug. 29.*—A cold rain last night and a sudden change in the wind to the northwest, sent the mercury in my thermometer down from ninety to fifty degrees above zero; and, fearing that it would reach the freezing point, I set to work immediately potting the most choice and tender plants that were planted in the garden. This sudden change of the weather may be a false alarm and no frosts appear for a month; still I dislike to be caught napping; besides I have noticed that plants potted early look better in winter than those put in late. In taking up geraniums, fuchsias and similar plants, all coarse, long branches are removed, and if of scarce sorts, the best portions are saved for cuttings. As soon as the plants are potted they are thoroughly watered, not only to settle the earth about their roots, but to keep them from wilting; then they are set under the stage of the green-house or left in the potting-room, and as much light excluded as possible.

In removing plants with handsome or scented foliage, such as the variegated Geraniums and Lemon Verbena, it is quite important that the leaves should remain upon them; but to accomplish this considerable care is required. The most important points to be observed are, not to let the plants wilt before potting, and then pack the earth firmly about the roots, after which water and put in a dark place for a few days, or until there is no indication of wilting about the leaves. In a moist, dark place evaporation from the leaves is checked, which is always most rapid in a light, dry atmosphere. As soon as the roots have commenced a new growth, the circulation of the sap is restored and the plant may again be placed upon the stages of the house. If plants are large and cannot be lifted with soil adhering to their roots, it is always a safe plan to remove a portion of the leaves and branches; but the greater portion can be saved if care is given to the condition mentioned above.

The Horseman.

NOTES FOR HORSEMEN.

Heaves in Horses.—A Michigan correspondent of the Rural Home gives the following remedy for heaves in horses:—Give once daily a teaspoonful of aqua fortis, prepared as follows: Mix it with a teaspoonful of sour or skimmed milk, and mix this with bran, and the bran with the grain fed. The catarrhal affections of the throat make rapid amendment under this treatment, and the correspondent referred to says he has known a number of cases cured by it. It should be continued, if necessary, until a pound of acid is given.

Corns on a Horse's Foot.—A correspondent asks a remedy. Cut away the corn and burn it out so as to prevent pressure of the shoe; or turn the horse to pasture without shoes.

The Naturalist.

OUR FUR-BEARING ANIMALS—II.

VIRGINIA OPOSSUM.

Didelphis Virginiana.—AUDUBON.

THE Virginian Opossum is the only marsupial animal found in America North of Mexico. Though found in other States it is most plenty in the Southern ones. Its range is nearly the same as the Persimmon tree; but AUDUBON regards this as accidental, since it thrives well in seasons when this fruit fails, though it is very fond of it.

VIRGINIA OPOSSUM.—Didelphis Virginiana—AUDUBON.

It is about fifteen inches long, with a tail, twelve inches long; the orifice of the distended pouch is fifteen inches in diameter. The body is stout and clumsy; head, long and conical; snout, pointed; nostrils, open on the sides of a protuberant, naked and glandulous surface; mouth, wide, with weak jaws; tongue, covered with rough papillæ; eyes, high on the forehead, with no external lids; whiskers on the sides of the face and over the eye, strong and rigid. Nails, curved; soles of hind feet covered with large tubercles; inner toe of these feet, nailless, and opposite the others, forming a kind of hand; female furnished with a pouch containing thirteen mammæ, arranged in a circle, with one in the center; tail, prehensile, very strong, capable of involution only on the under side, long, round and scaly, covered with scant, coarse hairs for a few inches from the base; the remainder with here and there a hair between the scales. The fur is of two kinds, a soft, wooly hair beneath, of considerable length and fineness; this is covered but not concealed by scant, longer hairs. On the upper surface of the body the wooly hair is white at base and black at tips; the long, interspersed hairs are mostly white; eyes, black; ears, black at base, white towards edge, with white patches; snout and toes, flesh-colored; face, neck and nails, yellowish white; a line of dark brown begins on the forehead, widens, extends to the shoulders; also a line of dark brown is under the chest; feet, brownish-black.

The nest of the opossum is found in various localities, usually in some protected situation, such as in the hollow of a fallen or a standing tree. As it is a good digger, it often makes its den under roots of trees and stumps. The material composing the nest is long moss, or various kinds of dried leaves. Sometimes it usurps the homes of other animals, not without suspicion of having first devoured the rightful owner. Though nocturnal in its habits, it is not unfrequently, especially in Spring and Summer, found moving about during the day, often seen, apparently asleep, lying on its back for hours in the warm sun.

It is a voracious and destructive little animal. As it is omnivorous, young birds, eggs, squirrels, young rabbits (which it eats by the brood at a meal), cotton rats, mice, reptiles of various kinds, worms, and insects, are all acceptable in the way of food. Sometimes, climbing over high walls, or through very small holes, it makes a good supper of domestic fowls and their eggs. It is fond of young Indian corn, as well as the juicy stems of many young plants; of chestnuts, acorns, various berries, and especially of the round orange berries of the persimmon tree. If suspecting danger, it carries its food in its fore paws to a safe hight on some tree, and then eats it, suspended, meanwhile, by its tail or hind paws. It is not often seen abroad during the Winter—at this time each one appears to live by himself, though in Summer large broods keep together.

The young are found in the pouches of the mother during the first week of March, of May, and of July. As many as three broods are produced in a season, each often numbering thirteen. When they are first placed in the pouch the young are blind and deaf and the mouth has only a small orifice; the weight of one at this time is three or four grains. For four weeks they remain attached to the mammæ and grow very rapidly. A week later they are often seen on the mother's back with their tails twined around hers or her neck or legs, and in this position she carries her family as she searches for food. She is much attached to them, and exhibits much courage in their defense. They remain with her about two months, though in the meantime a second or a third litter is produced.

War is incessantly waged against the Opossum by men and dogs, besides owls, eagles, hawks and wolves destroy it. When disturbed in its nightly prowlings by dogs, it feigns death, and, rolling itself into a ball, it lies perfectly still; but the dogs, used to "'possum playing," seize and kill it. If tracked to a tree, it must be shaken off in the same manner as the raccoon; with its flexible hind hands and prehensile tail, it holds on with great tenacity. When it falls among shrubbery or is found there, it feigns death so artfully that persons have been known to carry them some distance, supposing them really dead. It displays no cunning in avoiding traps set for it, entering almost any kind, very commonly being taken in a "dead-fall." The skins bring from ten to thirty cents apiece. The flesh is excellent, and when roasted it is like the young pig, and is considered a great delicacy in the South.

We are entirely indebted to AUDUBON for the facts of the above description, as we have never had an opportunity to see this animal and to observe its habits.

Arboricultural.

ARBORICULTURAL NOTES.

Figs in Pots.—I think if any one were to see my fig trees just now they would agree with me, that the proper way of cultivating them is to grow them in pots plunged in the soil. Figs in pots unplunged require great attention as to watering, feeding, &c., and often drop their fruit. Even where the fruit on pot trees is seen in a ripe state it is generally small, and deficient in flavor. On the other hand, figs planted out, as a rule, grow too strongly to fruit well till of considerable age. In large pots plunged deeply enough to hide the rim of the pots, figs root through and over the pots into the soil, being more secure from sudden changes; whilst, if growing too freely, they are easily checked by cutting the roots or replunging them the following winter. I think few have any idea how many fruits a fig thus managed will produce, or how superior it is in quality.—*J. R. Pearson, Chilwell, in Cottage Gardener.*

Mulching Seed Beds.—Please tell me whether or not apple and quince seed should be mulched after planting, and whether sawdust is suitable material?—J. F. JONES, *Dayton, Ohio.*

If you can tell us in advance whether there is to be a drouth during the Summer, after the seed is sown, we can answer your first question. Sawdust will answer for a mulch, and may be used to advantage on soils so shallow that the plants grown thereon are likely to suffer for the want of moisture.

Leaf Blight on Apples.—Will you please inform us what ails the foliage of the apple trees in this locality? The leaves have all turned brown, on some trees looking not unlike trees in the Autumn after a hard freeze; and what is most singular, every tree so affected is of the Baldwin variety.—W. L. D., *Clyde, N. Y.*

LEAF BLIGHT; cause not known, nor any sure remedy or preventive, that we are aware of.

Floricultural.

FOURCROYA LONGÆRA.

This handsome Mexican plant is attracting considerable attention among the gardeners and nurserymen of Europe, and should be more generally known in this country. It is a magnificent species and said to attain a hight of fifty feet in its native climate, although the plant that bloomed in Kew Gardens, England, a few years since, was only about fifteen feet high. In general appearance this plant resembles the American Aloe, (*Agave,*) or Century Plant, to which it is allied, and like it, dies after blooming. It has leaves similar to the Yuccas, and the flowers are large, white and thickly set on the tall panicle, as shown in figure 1. A branch with a few flowers enlarged is shown in figure 2.

The Fourcroyas are readily and rapidly propagated from small suckers that appear in considerable numbers around the base of the old plant, these being removed and potted whenever desired. If the flower stems appeared any considerable time before the plant bloomed, it would be impracticable to keep such a monster in an ordinary conservatory; but fortunately they do not. The blooming usually occurs in summer, and the plant can be removed to the open air where its gigantic stem can grow upward unobstructed. The young plants can be purchased very cheaply in Europe, and we hope our enterprising florists will show the people of this country that they can grow this wonder of the vegetable kingdom as well as those of the same calling in other parts of the world. There is a good opportunity for an exhibition of enterprise in this matter of introducing new, rare and meritorious plants.

FIGURE 2.

FLORICULTURAL NOTES.

New Mignonette.—The Gardener's Monthly says:—Parson's white is not white, but still it is a well marked and valuable variety. They pay more attention to cultivating Mignonette in Europe than we do—a single plant is taken and *grown*. This gives an opportunity to mark the different habits of the variety, as well as any peculiarity of flower, and there is often as much to interest one in the form of the plant as in the color of its blossoms. There are now several new ones with distinct habits. There is the "tall" pyramidal which is of a lance ovate outline when fully grown. The "Pyramidal Bouquet" is broadly ovate, near the form of a fashionable bouquet. The new dwarf compact has the spikes of flowers with a blunt termination, instead of the narrow tapering form of most mignonettes. This gives the plant a massive habit. It appears rather a bunch of mignonette than one growing plant.

Plant for Name.—Inclosed you will find the leaf, flower and flower-bud, (not yet expanded) of a lily that grows here with us. It is hardy, growing about two feet high in good soil. The leaf sent is one growing near the top of the flower stem, consequently not more than one-third the size of those growing nearer the ground. Please give the proper name.—MRS. H. E. EVANS.

Funkia subcordata or White Day Lily. It is a native of Japan and China. An excellent but common old plant.

Ipomopsis in Oregon.—Will the Ipomopsis be likely to endure our long rains in Oregon?—A READER.

WE think not, as it is a native of warm climates; but will succeed where the Summers are long and warm, as, for instance, in the vicinity of this city.

Where to Purchase Plants.—Mrs. G. B. P. should apply to some of our florists who advertise in the RURAL NEW-YORKER for the plant she desires. We cannot undertake to tell subscribers where every plant figured or described in our columns can be purchased, and the price.

Bones and Leaves for Flower Beds.—I have some bones dissolved with ashes; also a collection of last year's leaves. How can they be applied to flower beds to best advantage?—A READER.

SCATTER over the surface, and work in as the beds are hoed during the season.

Perpetual Bloomers.—The Hearth and Home mentions as fine bloomers that are nearly always in bloom, and therefore afford constant pleasure, the Cuphea, Geranium, Verbena, Petunia, Nurembergia, Vinca, etc.

Entomological.

ENTOMOLOGICAL BOOK WANTED.

A "RURAL FRIEND," who wants us to give the name and price of some Entomological book which contains the names and description of all common insects, is informed that no such book has ever been printed, or is likely to be in this or the next century. A hundred volumes, of a thousand octavo pages each, would scarcely suffice for the common insects of this country, to say nothing of other portions of the globe. Very few persons have the least idea of the vastness of the insect world, or the time and labor required to learn the habits of one member of either of the great orders into which insects are divided. The constant labor of the few who devote their lives to the study of entomology accomplishes very little, considering what there is to be learned; still we should be thankful that there are even a few men who are willing to labor for the enlightenment of the masses.

Because there are no books which contain a description of all the insects, it should not prevent nor discourage you from purchasing and studying the few works giving information on this subject. HARRIS' "Insects Injurious to Vegetation" is a good work, costing only $4; PACKARD'S "Guide to the Study of Insects" is another excellent work, price $6. But if one desires to know what is being done by our American Entomologists, they should subscribe for the Transactions of the American Entomological Society of Philadelphia. A complete set of these volumes is a pretty good library in itself.

ENTOMOLOGICAL NOTES.

Insects for Names.—Inclosed in a box I send you a cocoon, and an insect from one of the same kind, which I obtained from the roots of some worm-eaten peach trees; and, as the worm was absent, I have concluded that the inclosed insect was once a peach tree borer. Will you please decide the question? Also, in the same box, I placed a couple of worms, which, with many others, were fast destroying a large apple tree by eating the foliage. My object in sending them was to ask if the moth which they produce is anything conspicuous enough to be easily destroyed or otherwise.—N. E. LOVELAND.

THE moth and chrysalis are, as you suppose, the well-known peach tree borer (*Ægeria exitosa*, SAY). The two worms found feeding upon your apple tree were so dried when received that we could not determine what they were. Always pack the larvæ of insects in vials of alcohol, or in cotton moistened with some kind of spirits.

The Tickler Beetle.—Inclosed find a beetle which I caught to-day in a *Pinus cembra* in the Cambridge Botanic Garden. The tree from which I took this specimen is dying from the attacks of some species of borers, but whether they are the larvæ of this insect or some other of the many species which infest the Pine, I am unable to determine. This one "being found on the premises," it certainly looks suspicious.—P. B. H., *Boston, Mass.*

THE beetle is a fine female specimen of the *Monohammus titillator*, or Tickler Beetle. You will find this insect described in "Harris' Insects Injurious to Vegetation," p. 105; but we know nothing of its larvæ or upon what species or family of trees it lives. It is barely possible, although not probable, that the larvæ live in the Pine; but some one of the entomologists of Boston should examine the tree you mention. Send us any beetle that may be found on it or in the immediate vicinity; also any larvæ from the stems or branches of the tree. Any facts tending towards determining the true history of this splendid insect will always be acceptable.

Concussion as a Means of Destroying Insects.—Our readers will remember that we have given Col. HARDEE'S (of Florida) claim that concussion will destroy insects. Here we have a confirmation of the theory. Mrs. A. W., Belle Plain, Iowa, writes the Prairie Farmer how she clears her garden, as follows:—"My way is to bore a hole in a stump or log in the garden or orchard infested, and put in powder sufficient to make a very loud noise and heavy concussion, whereupon the insects will all leave. Try it. I think all who do will find it to their benefit."

FIGURE 1.

Clytus Speciosus, SAY.—Mr. D. A. MCBETH is informed that the beautiful gold-marked insect he sends us bears the above name with entomologists. Its name means "beautiful," and it is beautiful. It is rarely found, although exceedingly common in some localities. The reason why it is so seldom found is because it is so short-lived. If Mr. MCBETH will look at the Diary of a Ruralist in RURAL NEW-YORKER July 27, page 60, he will find it mentioned and will learn what its larva does for a living.

Striped Blister Beetle.—The insects sent by A. JOHNSON, Yates, Orleans Co., N. Y., are not the Colorado potato beetle, but the well known striped blister beetle (*Lytta vittata*). If crushed on the skin of a person they are likely to cause a blister, hence their common name. They are more or less common in all parts of the United States, and sometimes abundant enough to damage potatoes.

Pomological.

POMOLOGICAL GOSSIP.

Gathering Late Pears.—An English gardener says:—"In reference to gathering pears, I always defer this for late sorts as late in the season as possible, that is, if the weather is mild and they do not drop off. I am convinced the later they are gathered the later they ripen, in proof of which I may say that Winter Nelis has usually ripened with me in November; I gathered them last year on Nov. 5th, which is later than usual, and none of them have yet (December) ripened. I have had quite a succession from the same tree by gathering some two or three weeks earlier than others. We have generally a large supply of Autumn pears, hence my desire to retard the ripening of later sorts."

White Blackberries.—We have in this section a berry similar to the blackberry in all respects except that it is *white*. Is it known in other localities?—WARD BOYD, *Mayfield, Ky.*

VERY common in various parts of the country, and are only sports (albinos) of the common wild blackberry. They are usually not quite as hardy as the black varieties, although some of them are very good in quality and worthy of cultivation.

Hockett's Sweet Apple.—The apple, it is claimed, is a native of North Carolina, and to be one of the best, if not the very best, sweet apple of its season. The flesh is described as crisp, for a sweet apple, a little coarse grained, flavor excellent, and fruit always fair and sound. Season all September. At Summit, Miss., it ripens from Aug. 20 to Sept. 10. It is large, somewhat flat, beautifully striped and splashed with red and yellow.

Pisciculture.

Otsego Bass and White Fish.—SETH GREEN says:—"I think the Otsego bass belongs to the white fish family, and is nothing else than the white fish peculiar to Otsego lake. In shape and size and marks, they are the same. The flesh is decidedly different, owing to the food they live on. I have examined the food under a microscope, and I find they live on a small insect not more than an eighth of an inch long, which belongs to the craw-fish family, and that is what gives the fish a bass flavor. It has not got the oily taste of the white-fish, and I consider it decidedly a better fish to my taste. I have eaten it broiled and boiled, fried and baked, salted and fresh, and it is good any time.

Voracity of the Pickerel.—The rapid growth and extraordinary voracity of the pickerel are well shown by Dr. Sturtevant in the report of Massachusetts Inland Fisheries Commissioners. The doctor investigated their powers of eating in the following manner:—He put two young pickerel, five inches long, in a trough with a great quantity of little minnows about one inch in length; and these two pickerel ate 128 minnows the first day, 132 the second, and 150 the third, and they increased one inch in 48 hours! They were mere machines for the assimilation of other organisms.

The Apiarian.

ARTIFICIAL QUEENS."

My method of rearing queens for the purpose of Italianizing native stock is as follows: I commence feeding on Italian stock in March, placing two frames of drone comb about the middle of the cluster, the first of April, so as to have drones the first of May. As soon as drones fly, I remove the queen from the hive, which I will call "A," to another hive, "B." Six days after the queen is removed I examine each comb containing brood in "A," and find out the number of queen cells I shall be likely to get, and stock as many "nucleus hives" as I can get queen cells for. This brings us to the construction of

"Nucleus Hives."—As I use them, their size depends upon the size of frame in large hive. With combs twelve inches long by ten deep in large hive, I use combs for nuclei, four inches long by five deep, so that one large comb makes six small combs for nuclei. For frames I use strips one inch wide by one-fourth thick, pieces cut as follows:—Top, 5½; bottom, 4¼, and ends 5 inches long; nail top to ends, half an inch from each end of top piece, and bottom on to ends, flush with outside edge of ends. This makes a frame four inches long by five deep, inside measure. I use inch stuff for boxes, and for above-sized frame pieces would be cut. Sides, 7 inches long by 6¼ deep; ends, 5 inches wide by 6¼ deep; bottom, 7 by 7 inches; cover same; half inch from one end of end pieces saw across and half inch deep; clip this out from end, and this furnishes rabbet to support the frames. From the center of the other end of one of end pieces, cut out piece three-fourths of an inch wide by one-half deep; this gives entrance for bees to box. About the middle of the other end piece bore an inch hole, cover it on side, rabbet is made (inside) with wire cloth, and on the other side (outside) with a button; this regulates the ventilation. Nail the sides on to and flush with end pieces; then bottom to sides and ends. I now place three frames in each box, having filled one frame for each box with empty comb.

Before stocking the nucleus hives, I examine hive "A," from which the queen was removed, and find, say, six queen cells, some sealed, others with larvæ. I then remove two combs that have the most sealed brood, with bees just hatching, and in their place put empty worker combs, close up the hive, shake off the bees on the combs removed in front of hive. Lay the combs on a board and with a sharp, thin-bladed knife cut lengthways five inches from top or bottom; then crossways from top to bottom, four inches from both ends. The two combs furnish comb for twelve small frames; fill two empty frames with pieces cut, filling one with a piece cut from the top and the other with a piece cut from the bottom of comb. The top furnishes the honey, and bottom piece the brood. Place these with frame of empty comb before mentioned, into a box, the frame of brood between the others, filling all six boxes in the same manner. Generally in filling the frames with comb, I lay the frame on the comb, and mark the size from inside of frame; cut out; place the frame on the comb and press down on the frame until the comb fills the frame.

The boxes are now ready for the bees, I return to "A," smoke bees well, giving them time to fill with honey; then remove the comb with adhering bees, hold it over the small hive and brush off the bees carefully from the comb into the hive until the combs are covered; then put on the cover and set aside, the entrance having previously been covered with wire cloth and ventilator left open. Stock all the boxes, or nucleus hives, with bees in the same way. I keep them closed up at least two days, (and if the nights are cold, I cover them with woolen cloths,) then just before dark place the hives on stands and give the bees their flight.

I would also say that if the hives are stocked with bees between the hours of ten and four, there will be a greater number of *young* bees secured than if stocked morning or evening, consequently the nuclei will lose less bees by their return to the large hive.

The next day I remove all sealed cells from "A" to nuclei, and continue doing so as the cells are sealed, until all are removed.

Transferring Queen Cells to Nuclei.—If the cell is built on the face of the comb, I cut through the comb, about an inch from the cell, on all sides. Take the middle comb from the nuclei containing brood, lay a piece of comb containing cell on the face of the comb, about the middle; mark the size; cut out, and insert the cell. When the cell is built on the edge of the comb, and projects lower than the comb, a piece must be cut out to match on the comb (lower side) in which it is to be placed, so as not to bruise the end of the cell, care being taken to always place the cell on the comb in the same position in which it was built by the bees; as soon as cell is in place, return the comb to nuclei.

When the queen hatches (which will be in seven days from the time the cell was sealed), I remove the frame with the empty comb, take out the comb from the frame, and fill it with comb containing brood, inserting empty comb from where I cut it out, and return the small frame to nuclei. When this is done, the queen and workers will not desert the hive.

I lost a very handsome queen this season by neglecting to do this, and some years ago, when I first commenced raising queens, I lost a good many in this way. When the queen is left in nucleus hive some time, the bees may make preparations, and swarm the same as in larger hive; but where there is honey and brood they will not desert the hive. In from five to ten days after hatching (according to weather) there will be a laying queen in nuclei, provided she has not been lost in flight, and is then ready to be placed in full or large hive.

Introducing Queens.—I take a piece of wire cloth four and one-half by four inches; roll together long way; pound one end together about half an inch; then flatten it whole length, so that it will be three-eighths of an inch through. Remove the queen from the hive into which the young queen is to be introduced. Six hours after, put the young queen in the cage, and close it up with a paper wad, and suspend it in the hive, between the combs, with a short piece of wire, for forty-eight hours. I then remove the cage, examine the combs, and destroy all the queen cells; remove the paper wad from the end of the cage, and cover it with one thickness of newspaper, tying it on. Wet the paper, and then smear it with honey, and return it to the hive, smoking the bees well, and close up hive.

In taking up the honey, the bees will break through the paper and liberate the queen. As this is done when the bees are quiet, the queen will be very likely to be well received. When the queen cage is first removed from the hive, should the bees seem bent on getting into the cage, it is not safe to liberate the queen. When this is the case, all queen cells should be destroyed, and the cage returned to the hive and left twenty-four hours longer.

I can generally tell by the action of the bees on the cage when removed whether it is safe to give the queen her liberty.

We will now go back to hive A, from which the cells were taken. If more cells are wanted, bring back the queen from B to A, and when the cells are sealed over in B, proceed as before. If no more cells are wanted, one should have been left in A to supply the queen. As the season advances and the nucleus hives become well stocked with bees, pollen and honey, cells can be started in them and as good queens raised as though they had been started in a large hive. This is done by simply taking a piece of comb three inches long by half an inch wide from a large hive containing eggs and inserting it in the comb of nuclei. A piece two inches long and three-fourths wide should be cut out immediately under comb inserted, so as to give room for the queen cells, as they will project below the comb on which they are built. When queen raising is to be continued for some time, it is also best to supply several of the nucleus hives with drone brood so as to have drones; should they be destroyed in the large hive.

The way of introducing queens which I have described is Mr. LANGSTROTH'S; and, although there are other ways, yet for safety from loss, I prefer his method. During the season of 1871 I introduced between thirty and forty queens in our apiary, losing only one. There has been a great deal written of late favoring the raising of queens in full colonies. My experience is that where the nucleus hives are well stocked with bees, brood, pollen and honey, as long-lived and handsome queens will be secured as those raised in full colonies, and at a great deal less expense.

The whole apiary can be stocked with young queens in this way the first season, and should any of the stocks prove hybrids, the queens can be changed next season.

It will pay the bee keepers to keep a record of the date when a young queen is introduced or succeeds an old queen by swarming; and when three years old replace with young queen. For after that age they are less fertile, and may die when it is impossible for them to be succeeded by a fertile queen. I think many stocks are lost every year that would be saved if attention was given to removing queens after their third year. A. E. MOORE.

Rochester, Pa.

Farm Economy.

THE OLD FARM, OR A NEW ONE.

Too many cultivators abuse their farms, because it is easy, in this country, to get a new one. Land, they say, is cheap, and if one farm wears out we can buy another; or, if not, the government will give us a new one. If they do not say this in so many words, they act as if they believe it. But they are wrong at both ends of the story; for they imply that the running-down management is more profitable, for the time being, than the running-up management, which every thorough, calculating, wide-awake farmer knows to be false. Their words, or if not, their actions, imply also, that it is not much of a job to get rid of the worn-out farm and remove, with a family, to another, perhaps a long way off. This, too, is false, and every man who has tried it will tell you so. It is no easy matter to dispose of the old farm, the old implements, the duds and other household matters, too heavy for transportation. It is costly to journey a considerable distance with a whole family. It costs to buy the food, farm implements, household furniture, etc., for the new home. Hardship has to be met; much time is lost; and often sickness, anxious night-watchings, doctor's bills, and undertaker's charges come, in consequence of hardships, privations and change of climate.

If you leave a healthy place for one they tell you is the healthiest in the world, it may not prove so to you. The risk to health and life, by a removal with a family to a climate you know not of, is no small matter. But the main argument to be urged, for the permanent occupation of the same farm, is that it costs the farmer less to increase the productive capability of his soil a little every year, till it becomes decidedly good, than it does to manage so as to leave its productiveness a little less by every crop taken off. The best farmers will sustain this assertion. They know, by fair trial, that it is so. But we wish you to know it; and we will explain:

Suppose farmer A. goes on to a farm, only moderately fertile at present. If he had abundant means, he would hurry up the land to a higher productiveness, in order the sooner to enjoy its income. But he has not, and therefore prudence requires that he should make haste more slowly than he could wish. He cannot buy labor and manure as he desires. But he has industry, and he can employ that; he has good judgment, and can use it; he has strength of body and limbs, and his sound judgment will enable him to use it so as to accomplish a great deal, and yet not injure himself. If a slack, easy, slovenly man held that farm before him, you will see a wonderful picking up and putting things in place. Doors and gates off their hinges will soon be put on; useless lumber will be cut and split into fire wood; if there is a leak in the barnyard, through which the fertilizers are running away, he will stop it as quick as he would a thief caught stealing his sheep. Some farmers let the very essence of the yard run down the road or into some brook, to twice the value of a sheep, every week from February to May. But he is not the man to do it. His manure is his bank. Like money at 7 per cent., it begets money and he will save all and stop all other leaks. If he came there the first of February, you will very soon see quite a change about the house, barn, garden and orchard, and on some portions of the farm; and before April goes out evidence will appear that the land is going to produce somewhat more the coming season than the last, provided the Summer is equally favorable.

We cannot follow him through the whole season, nor tell you of all he does in the way of savings, repairs and preparations, before the Summer's work fairly begins. But he has done enough in February to show what stuff he is made of. When the time for running the plow comes, he will not have to stop the team to get his wife oven wood. One important step towards a good Summer's work is, *to be ready for it*. He will be ready as soon as the soil is dry enough to be worked. If he goes on as he has begun, saving and applying all the manure he can gather up, planting, cultivating, sowing and reaping, all in the most approved ways, stocking pastures with animals that he thinks will pay well in growth or fattening, and in work or dairy products, he certainly will expend more thought, more labor, and perhaps a little more money, than his slack, unthinking predecessor, who ran that farm down. But the crops will be larger, and the profits will have increased more than the cost of their production. With careless, shabby cultivation and little of industry and rightful management, the crops cost all they will sell for, and there will be no profit. But it is all otherwise, under a wise, prudent and industrious manager of a farm. There, the fertility increases, the profits increase in a still greater ratio, the family wants are supplied, comforts are provided, the children are educated, the just claims of society, education and good government are cheerfully met; and under such management as we have hinted, there will be, after all favorable seasons, something to lay by for future use.

Now, suppose that Farmer B., who does not love his employment, but follows it as a hated necessity, comes at some time to a farm naturally a little better than A.'s and in a little better condition, as regards the buildings, fences, garden, orchard, fields, and everything else, but not so perfect but that there are things enough to be done between Feb. 1st and plowing time, if Farmer B. only loved to do them. But you'll not see him stopping leaks, repairing gates and doors, setting trees, laying in fire wood, and scores of other things that should be done and out of his way before the solid farm work for the season begins. Likely as not he'll be loafing half his time, and the other half sitting by the kitchen fire and seeing how the women work, if not sleeping off the stupidity which non-employment induces; or if Somnus has not got hold of him, probably he is half thinking and half dreaming what a detestably hard-working life farming is. Such men as he are always complaining—are idle so long as they can be, and when *work* presses they are not ready for it, and won't but half do it when it can and *must* be done. They degrade farming so far as a noble employment can be degraded. From them goes out the false impression that farming is a hard, low, vulgar occupation, and it is this that leads so many of our young men to prefer the selling of dry goods behind the counter or peddling trinkets over the country, to the ownership and cultivation of land. While such men as farmer A. support their families in comfort, and even in luxury, discharge all parental, social, State and church obligations faithfully, increase the value of their land every year, and lay up something yearly for old age, those like Farmer B. become poor in the occupation; their land becomes poorer; and it is an incontrovertible fact that nearly all the spoiled farms in our country have been spoiled by such men.

True, the earnest, faithful farmer, who honors and loves his calling, expends more money, more thought and more industry in his business, but he gets something for it. He wins respectability, esteem, consciousness of living a useful life, love of friends, respect from all, competency, if not riches, and, above all, the approbation of a good conscience. Such a man as farmer B. expends less money and less industry. But what does he get for what he does expend? Less than will maintain his family comfortably. Nothing to enable him to obtain an honorable position in society, can hardly pay his small town, school and highway taxes, and as for liberality, when the sick and suffering appeal to the neighbors for aid, it is out of the question.

And now, if you would estimate the value of an enterprising, industrious farmer, to himself, to his family, and to the public, and compare the footing with that of a farmer of opposite qualities, what a difference! the former *runs up* the land, and the land runs *him up*: the latter *runs down* the land, and the land runs him *down*. Which is best? Of the two, which will you choose? Think of neighbor A. and his family; then of neighbor B. and his family. Look at their prospects as well as at their present condition, and tell me if you think I have exaggerated. Isn't it more profitable to be a good farmer, loving and honoring his profession, than to be a bad one, hating and disgracing it? Isn't it more profitable, every way and everywhere, to improve land than to spoil it? to make the farm better than to make it worse? J. A. N.

Utilizing Straw Piles.—We have adopted a new plan for using up straw piles: Take what salt is necessary for the stock for the week, and throw it into the base of the stacks, and the cattle will make a clean job of it, and not be so much inclined to climb.—C. D. FOX, *Beloit, Wis.*

Modes and Manners.

OUR FASHION ARTICLE.

SULTANA FASHION is so great a tyrant as to demand a seeming allegiance from even her comfort-loving, rural subjects, and so they, too, must slightly crook the knee and submit to wear the lightest of her chains. However, Fashion at present is very complacent, and can't fail to please every taste and station.

Head Wear.—We'll begin with the head, on which are worn high-crowned, flat hats, with a bunch of hedge flowers growing from the apex, or the most light, airy-looking bonnets, in which latter, beauty and simplicity are charmingly combined. All the new styles in Fall hats have narrow brims. We saw the most ridiculous affairs set right on the top of the head, as that ugly pompadour roll will not let the hat go where it ought to; then there is a great mass of short curls, and crimps all combed out coming from underneath the brim, and this is often pinned in the hat.

Collars and Cuffs, we regret to say, are fast yielding to ruffles and ruffs; linen collars are very narrow, standing, and plain, or edged with lace. Bubinet footing, from an inch to two inches wide, pleated up or box-pleated very full, is worn around the necks of dresses, and inside flowing or other kind of sleeve, that on the sleeves being narrower than that at the neck.

Ties are of faille, a soft, twilled silk, or Canton crape, cut bias, a sixteenth of yard wide, with pointed ends, hemmed or finished with three tassels, one at each point. They are all of the fashionable tints, or ghost-colored—faded blue, pink, green, lavender, etc. The very latest thing in ties is of the same material, in large blocks of two shades of the same color, with tasseled ends. Black lace barbes over Watteau ties are pronounced lovely. Scarfs of black lace, very long, used as fichus, with the ends crossed over the breast and carelessly knotted behind, are very stylish and graceful. In mourning, plain black net scarfs, with light folds of crape at the ends, are greatly used. Black tulle, tacked, and three-eighths of a yard wide and two yards long, is a pretty scarf for mourning.

The Polonaise Blouse is the most popular and simple shape for Summer dresses, being becoming to slender figures, while a plait at the front and one at the back, under the sash, renders it suitable for stout figures also; these are fitted to the figure by only the belt at the waist, and admit of every style of trimming desired. Polonaises, if not self-trimmed, are trimmed with black velvet or gros grain ribbon. Skirts are only gored at the front and sides, the back breadth being left full. A rapid way of making skirts is to stitch up the seams on the right side, then turn and stitch as usual, which method does away with raveling, fraying and over-casting. Overskirts have very short apron-fronts, all the fullness being massed at the back.

Any one having an old black silk skirt, dyed or otherwise, can have a handsome suit at little expense. On this skirt sew black grenadine ruffles, overlapping nearly to the waist, leaving this part of the skirt plain, to allow of the tiny apron-front overskirt, which has nothing at the back but a sash or small basque. Line the sleeves with black silk, and the waist to the neck, as low-necked linings in transparent materials of any kind are in disfavor, fashion requiring linings, not only to the sleeves, but that the waist as well shall be lined quite up to the throat. With grenadines, lace or Swiss ruffs or ruffles are a necessity. Narrow, satin-striped grenadine, good quality, is seventy-five cents a yard. Blouse waists are innumerable, and worn with skirts of every hue and fabric. The loose, slouchy morning-wrapper has given place to the neat blouse waist, with cuffs and collar of the same.

Belts of different colored leather, with strong buckle of jet, steel or silver-plated, are all the mode. Belts for mourning are of heavy black belt-ribbon, embroidered with jet. By the way, jet takes the lead in jewelry—chains, necklaces, bracelets, earrings, sleeve buttons and pins all being of sparkling, massive jet.

Piquant little sleeveless jackets, of lace, velvet, silk, or cashmere, are tasteful additions to any wardrobe.

In Riding Habits black is the newest style. Fine black English waterproof is most useful. In hats the Louis XVI., a high-crowned, narrow-brimmed, black straw hat, with a bird's wing, is best liked, the long feather being less stylish than the pert, saucy bird's wing. For bathing costumes mohair serge is best, as it absorbs no moisture, blue, white and gray being the chosen colors, trimmed with woolen braid; a closely-fitting oil-skin cap and sail-cloth shoes complete the costume.

Braiding and Embroidery will be the fashion for the coming season, coarse embroidery silk and soutache braid being used for the purpose. Those given to ornamentation will economize money and time by purchasing the "standard" trimming, which is simple or elegant, and equally adapted for lawn, cambric, or pique suits and all kinds of underclothing. Enormous quantities of ribbon are worn, bows being in great profusion on the waist, sleeves and shoulders, and the jaunty effect of all this profuseness is indescribable. Three or four yards of heavy, black gros grain or velvet ribbon, made into bows half a yard in length with long ends, all being fastened by a handsome jet brooch to the back, just below the collar, is very "distinguished" for young ladies.

While we are about it we might as well add that ruffles of the material of the dress, with trimmings of black velvet, will be the ruling style this approaching Winter. Undressed kid gloves take the place of kid these warm days, and parasols are fashionable in proportion as they are large. Purchasers should remember that it is always cheaper to pay a fair price for first-class articles than a mere trifle for what is worthless after but a single wearing. ARUAL.

New Publications.

RURAL AND OTHER GOOD BOOKS,

For sale at the RURAL NEW-YORKER Office, No. 5 Beekman St., New York, or sent by mail, postpaid, on receipt of price:

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer on Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **340 Large Octavo Pages,** is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—Or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,

Fashions for Fall and Winter.

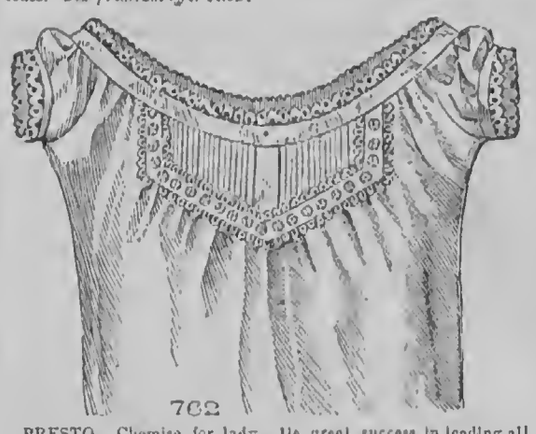
1170

GODIVA. This Polonaise is one of our latest Paris Novelties. It contains many new and very valuable features. Without looping it can be worn as a long tight-fitting basquine, or looped (as shown in cut) it is a most elegant Polonaise. The ornamental back piece passes over the shoulders and forms a neat Fichu cape in front and is "adjustable;" may be worn or not as fancy dictates, thus constituting *two* entirely different Polonaise in appearance. The back piece is sometimes made in velvet or satin, and richly trimmed, and completes a brilliant toilet when worn with a house dress. Besides its beautiful variations it is well adapted to any material. Takes six yards of 24 inch goods. Price of pattern with cloth model ONE DOLLAR. See PREMIUM OFFER below.

1165

NEW FALL WRAP, is a sacque and cape, with a thibble box-pleat laid on the under side in the back, and in place of the broad pleat of last season; just the three edges are visible from each side, giving the appearance of six round folds, the cape elopes gracefully to the back, and is left open, (o trim. The sacque has a large sleeve, which can be used or not, as weather or comfort demand.

We give this as one of the very best for fall and winter cloak made in either velvet or cloth. The original is of dark blue ladies' cloth. Scolloped and bound with velvet and velvet buttons. Takes three yards of ladies' cloth. Pattern, with cloth model, 50 cents. *See premium offer below.*



762

PRESTO. Chemise for lady. Its great success in leading all other styles is owing to its perfect fitting hand and sleeve. The curved arm-size is an improvement of much value, as it will not cut the shoulder or bend the arm, and also avoids the homely, perplexing gusset. Takes three yards linen for medium-size. Pattern, with cloth model, 25 cents. See Premium below.

We give a CLOTH MODEL with each pattern which SHOWS every seam, pleat, gather, loop, etc., how to put the garment together by the pattern and how it will look when completed. By the use of our Cloth Models any person who can sew can FINISH the most difficult garment as easily as the plainest. They are PERFECT GUIDES.

Premium Offer!

If you write the following, viz.:

[RURAL, 1170, 1165, 762,]

and sign your name, giving your P. O., Co. and State, and then inclose it, with *One Dollar* and *Ten Cents*, to us, we will make you a *yearly* subscriber to *Smith's Illustrated Pattern Bazaar* (begin with the present No.), and send to you by return mail *all* the patterns, with cloth models complete, of the *three* above engravings, *as premium*. *Now* is the time to *Subscribe!*

Either of the above patterns sent by mail upon receipt of its marked price.

SMITH'S
ILLUSTRATED PATTERN BAZAAR.

ONE DOLLAR A YEAR.

Premium! See above "*Premium Offer.*"

It is the *best* and *cheapest* fashion *magazine* in the *world*. It is the *New York City* ladies' *authority* in *all* matters pertaining to toilets. It is the *only* fashion publication in this country that *imports Styles* and *sells* patterns of them.

The present number contains a large double-page *fashion plate*, 11 by 22 inches, printed on beautiful, heavy, rose-tint paper; Foreign Correspondence; Criticisms; Stories, Hints, Etc., Etc.—with information in detail upon all parts of ladies', misses' and children's dress and dress making

Also a *Half-price Check*, which entitles each holder to select any pattern contained in this number by sending half price.

Single Copy 25 Cents.

The American News Co. supply the Trade.

☞ *Catalogue of Fall and Winter* Styles mailed upon receipt of *stamp* and address.

Be *particular* to address, very *plainly*,

A. BURDETTE SMITH,
Smith's Pattern Bazaar,
914 Broadway, New York.

SATURDAY, SEPT. 14, 1872.

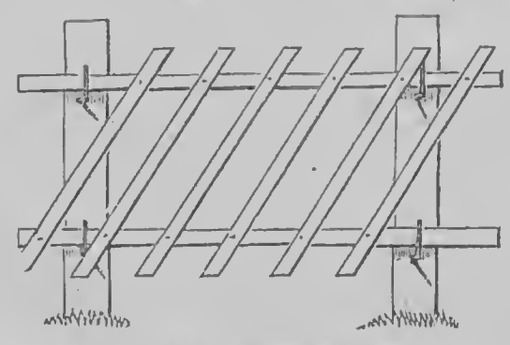
YES, SIR, WE WILL!

"WILL you this year send the RURAL NEW-YORKER for Thirteen Weeks,—say from Oct. 1, 1872, to Jan. 1, 1873,—On Trial, for Fifty Cents, as you did last season? If so, please give notice in your next number."

YES, we will send the Thirteen Numbers of the ensuing Quarter, (Oct. to Jan.) for Only Fifty Cents—or for $3 we will send the RURAL from Oct. 1, 1872, to Jan. 1, 1874. Tell all your friends of this offer!

AM. INST. FARMERS' CLUB.

SEPTEMBER 3d this organization met after a long vacation. There was a fair attendance of its old habitues. Chairman ELY presided and welcomed the members back to their duties, asserting that the Club was a ponderous body, and that those who did not get on and ride with it would be crushed under its wheels. This seemed rather far-fetched and gratuitous, considering the fact that but for the prominence given its proceedings by the Press of the city, the Club could not survive a week. The fact is that if the reporters of the daily and weekly Press of this city were to withdraw from this organization it would cease to exist; and since the Press has in a large degree (with one or two exceptions) vetoed the grinding of axes, the outside interest in the meetings has, to a large extent, subsided. The men who came there formerly to foist upon the attention of the country their schemes, their fruits, plants, machines and nostrums have, in a large degree, ceased their efforts, since they have found that they cannot get free insertion of their advertisements to a million or two of readers through the papers represented by the reporters who attend the Club. It will be well for the country if the reporters, with strict fidelity to the interests of their readers, allow these ax-grinders to "waste their sweetness on the desert air;" for



MOVABLE GRAPE TRELLIS.

more people have been injured than benefited by the reports of committees who did not know what they were talking about, and the laudations of projects, machines, plants, fruits, nostrums, etc., by persons who had only an individual interest in attracting the attention of agriculturists to their wares. Hence when the respected Commander of the Club asserts that those who do not work with, fight for and submit to the dictum of the Farmers' Club, will be ground to powder, we, so far as this journal is concerned, accept the challenge, and propose to show precisely what good the Club does, and what injuries it is an agent in inflicting. In all this we shall aim to be courteous and just.

Movable Grape Trellis.

P. STEWART, a prominent Shaker, sent the Club a model of an improved grape trellis. It consists of a light frame of slats, constructed so that the horizontal slats of the frame work slide into iron supports in the sides of the posts which support the trellis, as shown in the engraving (our sketch is made from memory), the object being to enable the vineyardist to lift the trellis from the posts and lay the vines down in the Winter without untying them or removing from the trellis.

Heading off the Peach Borer.

Mr. STEWART prevented the borer working in his peach trees by the use of a composition consisting of one quart of fine salt, one pint of flour of sulphur, four quarts of bone meal or phosphate, and two quarts of "finished" sea gravel or sand. He digs close about the roots of the trunk of the tree and puts one pint of this mixture compactly about the stem where the borer usually works. He thus preserved all trees to which it was applied from the ravages of the borer, while those to which it was not applied were successfully attacked.

What Peaches Perpetuate Themselves from Seed.

A Virginian asks the Club to name peaches and other fruits that will perpetuate their characteristics from seed. A majority of the members of the Club asserted that they knew of none that would infallibly do so. One member knew of a popular peach in Southern Illinois (which he could not name) that invariably reproduced itself from the pit; but, as a rule, it was not, in his opinion, safe to rely upon seed for perpetuating the characteristics of any of the stone or orchard fruits.

Napoleon Bigarreau Cherry.

LEWIS W. BURWELL asks if the Napoleon Bigarreau cherry is a good variety to plant for the neighborhood of Richmond, Va. Mr. FULLER replied that it was an excellent, large cherry; but he did not know how it would thrive in Virginia. It is handsome and productive, and he would not hesitate to try it.

How to Organize a Farmers' Club.

A. KENNEDY of Nebraska asked for instructions how to organize a Farmers' Club. The inquiry was referred to a member of the Agricultural Press, who is to report thereon hereafter. Meantime we advise those who desire to form such a club to meet together, select a chairman and secretary (as for any other meeting) and a subject for discussion, and go right straight to work to elicit all the facts and experiences from members that can be obtained upon that subject; then, when that subject is exhausted, select another. Constitutions, by-laws, etc., etc., are the death of more clubs than they keep in working order. A fair, just and intelligent chairman is the main thing.

Kansas Sod Corn.

JASON YURANN of Marshall Co., Kan., exhibited stalks of sod corn, grown upon prairie sod plowed last September, and which was taken from the field July 31st, which measured thirteen feet in hight. Mr. ROBERTSON, who grew this corn, had the year previous grown a crop of sod corn which yielded nearly seventy-five bushels per acre. The sod had been turned over two to three inches deep, and a trench plow, following in the same furrow, had thrown the subsoil on top of the furrows. In soil thus prepared this large crop had been grown. Mr. YURANN did not think the September plowing of prairie sward for corn as likely to bring good crops as the Spring plowing—from the middle of May to the middle of July. He knew of no instance where trench-plowed prairie sod (done in Spring) had produced good crops of small grain; but it did work well in producing a good corn crop. Prairie soil corn, as the land is usually plowed—two to three inches deep—rarely yields over twenty-five bushels per acre; it is plain, therefore, that if the double plowing—with surface and trench plow—will, say, double the yield, it is the most profitable way of subduing prairie, and is a far better mode of breaking it than of doubling the surface broken to secure the same or less results.

Miscellaneous Talk.

Some of the European tourists who had returned, talked of what they had seen and heard, but furnished the Club no practical information of value. There was a laudation of Western lands, an exhibit of grains and trees grown on Western plains, where it was supposed neither would grow, and where no one with good sense wants to go to grow them. There was also an ax-grinders' exhibition of an ex-ax-grinder's apples and corn, and a good deal of the usual fol-de-rol accompanying such efforts. But we have neither inclination to give nor space for such.

Premium Lists Received.—Of the New Jersey State Ag. Soc.; Fair at Waverly Station, Sept. 17-20....Of the Calhoun Co., Mich., Ag. Soc.; Fair at Marshall, Oct. 1-3....Of the Hemlock Lake, N. Y., Union Ag. Soc.; Fair at Hemlock Lake, Oct. 9.... Of Union Ag. and Hort. Soc. of Ulysses, Covert and Hector, N. Y.; Fair at Trumansburg, N. Y., Sept. 18-20.

RURAL NOTES AND QUERIES.

The Hop Market.—Judging by the inquiries of our correspondents, there is a large interest in the future price of hops. Our market reports are carefully made; but as supplementary to what is therein recorded, we may quote from WELLS' circular of September 5, as follows:

About 250 bales of the new growth have been received in this market during the past week, from which small sales have been made at prices ranging from 45 to 55 cts. per lb. The first arrival of new hops in market usually causes a heavy decline in the price of yearlings and olds, but this season has proved an exception to the rule; and instead of a heavy decline in the price of 1870's and '71's, the few remaining in market are held at almost as high prices as new Hops; this is especially the case with yearlings; there being scarcely any demand for them at present, however, our quotations are nominal. Brewers who require old hops on the start, for mixing purposes, will soon realize the scarcity of yearlings and '70's, and the market being bare of foreign hops, scarcely anything remains on hand of old stock excepting 1868's and '69's; of these, large quantities will be required during the season. No reliable estimate can yet be made of the extent of the new crop, though we are inclined to believe it will not exceed 60,000 bales, which will be about the same as last year's yield. Should all the old hops in this market come into use this season (and there are yet 20,000 bales,) we shall require at least 20,000 bales of foreign hops to carry us through. Foreign letters state that the Western provinces of the German Empire promise from two thirds to three-quarters of a full crop, which will be 150 per cent. more than last year's yield. England reckons upon £350,000, old duty, or about double last year's yield. With so large a crop in Europe, prices are likely to decline, and those growers who, this season, take advantage of an early market, will, in our opinion, get the best prices. We hear of purchases and contracts for future delivery of about 5,000 bales of new hops, in the interior of this State, at prices ranging from 10 to 45 cts. per lb.

National Swine Breeders' Convention.—The Secretary of the Committee calling the National Swine Breeders' Convention at Indianapolis, Ind., Nov. 20, has received no declinations to serve on the committees to report on the respective breeds of swine at that Convention. He has, however, notice of the death of Dr. CALVIN CUTTER, Warren, Mass., of the committee on Chester Whites. The names of the other members of that committee are THOMAS WOOD, Doe Run, Pa., and W. W. THRASHER, Groves, Ind. He suggests that these gentlemen consult with each other and select a third member of that committee. He does this without consultation with the committee naming these committees. We trust the swine breeders in the different States will not neglect to select delegates in accordance with the report of the committee which appeared in the RURAL NEW-YORKER, Aug. 10, and generally in the Agricultural Press of the country simultaneously. The Secretary has no other than a general interest in the objects of this Convention, and trusts that his brethren of the Agricultural Press will keep before swine breeders the importance of representation from their respective States in the Convention.

The Ohio State Fair for 1872 was held at Mansfield on the first week in Sept. The weather was very good, except on the morning of the third day, which opened with rain, but soon cleared off. The attendance of visitors on the principal days was fairly good, going up to some twenty-five thousand on the best day. The show of live stock in all departments was large and excellent. The exhibition of farm implements and other mechanical devices was highly creditable to the manufacturers, but the number and varieties on the ground were not up to former years. Domestic goods were just middling. All other departments were lacking in the fullness and quality of average yearly exhibitions. The total cash receipts of the Fair were about seventeen thousand dollars.—S. D. H.

Newark, N. J., Industrial Exposition.—This exhibition has been in progress since August 20. It is a great success as an exhibit of Newark industry, which it is purely; and it astonishes some of the older inhabitants familiar with its industries, by the variety, number and excellence of its manufactures. But it is not so great a financial success. It cost about $16,000, and the expenses are about $200 per day. The receipts up to September 6 were about $6,000, the average number of visitors per diem being about 2,000. The goods on exhibition are estimated to be worth about a half million of dollars. Newark ought to be proud of, and support, this exhibition. It will greatly benefit the city, and enhance the reputation of its manufactures. We trust it may yet prove as great a financial as it is an industrial success.

The American Institute Fair—the 41st Annual Exhibition—opened at the exhibition building of the Institute, corner of Third Avenue and Sixty-Third St., September 4. Hon. F. A. P. BARNARD, President of Columbia College, delivered the Annual Address. There was not a large attendance; nor was the interior of the exhibition building in a condition to attract visitors. It is asserted by the Secretary that the applications for space have been more numerous than ever before, exceeding the capacity of the building; but exhibitors have been tardy in appearing with their articles, and a full week must elapse ere things are settled.

The New England Fair opened at Lowell the 3d inst. The distinguished Agricultural Address-Maker of the East, Dr. GEO. B. LORING, President of the Society, delivered the annual address, discussing the necessities of New England farmers, the changes in the crops produced and the steady improvement of New England Agriculture, and in the agricultural taste (whatever that is) of the community. The show of horses is said to be the best ever seen at a New England Fair; a creditable show of cattle, a fair show of sheep, agricultural implements, fruit, vegetables, &c. There is nothing to signally distinguish it from other Fairs.

Two National Short-Horn Conventions.—In another place we publish a call for a National Convention of Short-Horn Breeders to be held at Indianapolis, Nov. 27; now we see it announced that the Short-Horn breeders of Kentucky have issued a call for a National Convention to be held at Cincinnati, Wednesday, Oct. 16. Gentlemen, hadn't you better consolidate these conventions?

A Live Stock Infirmary is connected with the Iowa Agricultural College, wherein sick horses and cattle are examined and prescribed for at certain hours, free of charge, by a competent instructor, who thus educates his class, by the aid of objects, in veterinary science.

Catalogues Received.—From BRIGGS BROS., Rochester, N. Y., Catalogue of hardy bulbous flowering plants for 1872.....From HENRY A. DREER, Philadelphia, Pa., Catalogue of Bulbs and Flower Roots, etc.

THE SEASON, CROPS, PRICES, ETC.

South Trenton, Oneida Co., N. Y., Aug. 21.—The past month has been the warmest August for a decade of years. The mean or average temperature is 71° and 24'. It has rained thirteen different days, and the amount of water fallen is 5½ inches. Thunder and lightning on twelve different days. Winds all points of the compass, yet prevailing West. Only six clear and cloudless days. The barometer and hygrometer changes frequent and unsteady. One of the grandest displays of the aurora ever known in August before. A number of solar and lunar halos, etc. One slight hail storm. More damage done to property and more lives lost in this month by lightning than in any August for forty years. An unprecedented number of casualties for the month, such as railroad smash-ups, steamboat burnings, vessels lost at sea, camphine explosions, fires, etc—a very chapter of accidents. The farmer has abundant reason for gratitude for a prolific Summer, a full flow of milk from his cows, an abundant hay crop, gathered in season and good condition. Corn is mostly out of the way of frost; potatoes, ripe and very good; oat crop rusted and badly down; acres yet unent. A cold Winter, wet Spring and warm Summer thus far may be recorded of 1872.—STORRS BARROWS.

Gallatin Valley, W. T., Aug. 23.—We have had an unusually late and cold season. Grain is very backward; crops are not ripe yet. Some few harvesting barley. Oats and barley 3c. per lb., wheat $2 per bu., potatoes 3½c. per lb., butter 60c., eggs 50c. per doz.; wages by the month $50@55, by the day $3 and scarce; good cows $60@80; good horses $100@250.—W. C.

RURAL BREVITIES.

POTATOES are said to be rotting badly in Maine.

A KANSAS farmer is reported as having eight acres of "big sunflowers."

The Patrons of Husbandry have invaded Canada, a Grange having been organized at Stanstead, Aug. 16.

MR. X. A. WILLARD of the RURAL NEW-YORKER delivers the Address at the Cattaraugus County Fair, at Little Valley, Sept. 19th.

ONE young lady has been admitted as a member of the Freshman class of Agriculture and Mechanical Arts of the Maine State Agricultural College.

MESSRS. CARTER & CO., Windsor, O., have just made a cheese which weighs 3,500 pounds, which required the milk of 2,000 cows, or the product of five townships.

We are glad to see that the managers of Agricultural Fairs are setting their faces against the lotteries and gambling on Fair grounds, which have so long disgraced many of these exhibitions.

SAMUEL EDWARDS, La Moille, Ill., a veteran Western Arboriculturist, has been invited to talk about Tree Planting at the State Fair of the tree planting State of Nebraska. He is qualified to do this well.

THE cranberry crop, according to the Tom's River Courier, is hardly expected to reach half the usual average. The extreme heat has scalded the berries. Young bogs have suffered more than old ones.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

The Traveler.

OUR EUROPEAN LETTER.

The Sea Voyage.

LONDON, Aug. 11.

WE had a model sea voyage of eleven days—seven days of perfect calm, with a head wind that retarded our progress, one or two days of wind and rain, and one of a magnificent sea, during which we were lashed to the deck, the ship threatening every now and then to capsize, while the waves would sweep over with a vengeance. I had secretly been wishing for a storm and rough sea—for I dislike tame things of any sort—and when the elements gave us warning I likewise rejoiced. The warning, however, was significant. Two balls or stars of fire (electrical light) were visible the night previous at each mast head, for the length of two or three minutes. The sailors said they meant "bad," and the Captain declared that we should have a heavy sea, and that in his sea life of twenty years he had but twice seen a similar phenomenon.

Floral Tribute at Sea for the Dead.

On the third day out, when the Wyoming was nearest "off" Sable Island, a memorial service was performed, full of touching sentiment. A few moments before the ship sailed from New York harbor, a gentleman handed me a box of flowers, asking me to give them to the sea, in memory of his beautiful child, a little girl of four years of age, who in making the voyage a few months before with her mother, had sickened the first day out, died on the second and been buried the third in the ocean. The morning was lovely, the sea lay sparkling beneath the sun, and among the passengers looking on was a lovely fair haired child of the same age as the little FLORENCE whose body the sea guarded with such terrible power. GOD comfort the hearts that Death so bereaves, and doubly so when the hungry sea swallows up the pitiful remnant left. A grave above which the grass grows and birds sing and flowers bloom, yields its consolation, but the sea bears no mark and its awful sublimity feeds the heart with despair.

Not a Tow-Boat.

We had two Sabbaths at sea. On the first we had religious exercises, the Captain reading the Episcopal service. On the second Sunday at Church time we "sighted" a ship which ran up the flag of distress, and as we neared her it was feared she was fast sinking. Conversations by means of flags were carried on between us, an order was given to lower one of our life boats, and for a time the excitement was intense. But presently information was received that the ship's lading had shifted to one side, and would we tow her to Liverpool? Not doing that business the Captain answered "No," spoke another ship in her behalf, and we sailed on.

The Last Night on Board Ship.

We stopped at Queenstown to land a few passengers, and after reaching that port nearly everybody felt that our dangers were over. But with my usual perverseness, or held in check by some evil premonition, I went to my berth that last night out with fear for the first time in my heart, and never slept a wink until we arrived at Liverpool next morning at four o'clock. The ship rocked as never before; the sea washed over the decks with a fearful rush; a terrific gale was blowing; there was constant rushing to and fro; the ship's whistle blew, and suddenly the ship struck—what, I did not know, but fancied it was a rock in the Channel, and then the engine stopped. I could hear the water running, and, almost frenzied with horror, I expected every moment to hear the command to leave the ship. My pretty companion, BESSIE, lay sleeping as calmly as a child, and there was no one to speak to. At length the harbor lights of Liverpool gleamed through the port-hole—we were safe at last, and I slept. I expected to find my hair white when I arose, but as I did not I suppose I have yet to experience the limit of fear. I was much consoled, however, to hear the Captain say, in his quiet manner, that our escape from sudden and complete destruction was fearfully narrow. No life boat could have withstood such a sea, and only four or five feet of water intervened between the ship's bottom and a fearful bed of rocks. The sudden shock was produced by the ship striking the wall near the harbor entrance.

Why the Voyage was a Model.

So I call the voyage a "model" one, as it comprehended such a variety of experiences. Then we had social variations—pastors, lawyers, consuls and business men all contributing their share of the "fun." Although escaping sickness, I found the voyage at times almost undurable. I would as soon think of prescribing a sea voyage to a sick man, as close confinement in a foul cell. The mere fact that one cannot escape from it is most tantalizing. We had been provided most bountifully with sea-sick recipes, which we studiously avoided putting into practice. We were glad as for Winter, ate regularly the food we were accustomed to, refrained from wines and liquors, lived on deck, and resolved that double-loaded wills never to yield to Old Neptune. And we didn't, although most of our sister and many of our brother passengers did. One man, with tears in his eyes, declared that he would never, never cross the sea again if GOD would forgive him for the present folly; and one quaint little girl begged her papa when they returned to go by railroad.

Shopping in Liverpool.

At Liverpool the custom house officers demanded our keys, opened our trunks, made two or three dives in our dry goods and passed us. It was very trying to my temper to stand calmly by and see that sacrilegious "Hinglishman" upset my finery. But that is one of the penalties of foreign travel. We had two or three hours in Liverpool, which we improved in investigating the city, making trifling purchases here and there, so as to see the shops and shop women. The hirsute structures the latter carry on their heads were something wonderful to contemplate. But their politeness was admirable. An American lady asked for stockings, and in return was asked if she wanted "inside, middle, or outside women's stockings?" Having a curiosity to know what the last named might be, she signified such, and was shown stockings large enough to jump into, she being somewhat small in stature. Another lady asked for Canton flannel, but the shopman declared there was no such goods. She finally described it, "yes, they had that," but they called it "white swan's down calico."

Railroad Impressions.

The road from Liverpool to this city is delightful. The fences are hedges, the trees magnificent, the bridges miracles of strength, and the whole country a garden. The husbandry is of the most precise character, everything being done after a geometrical pattern. Grain and hay stacks are shaped and trimmed to perfect angles, and even the wheat sheafs (it was harvest time) were laid in even rows on the wagons. In matter of speed (the cars making forty miles an hour) and railroad construction the English are in advance of us. But the cars—the compartments for passengers—are enough to disgust the humblest American. They are simply a box, with two rows of seats or benches facing each other. Aside from their being upholstered, there is not another element of comfort or convenience. The engines are small in comparison to ours, and a long trough filled with water runs at intervals between the rails, from which the engine supplies itself with water, by means of a tube and without any slackening of speed.

London Experiences.

We have been in London three days—only stopping for rest—and have "done" something incidentally, such as going through the "Tower" and "Westminster Abbey," where half the English nobility are buried. It seems a great wrong that DICKENS lies in this dreary place, or anybody else who loved flowers and sunshine and children. Then, too, his request was to be buried at Rochester.

London differs from New York in being cleaner and older and more somber. Only the first story of dwellings are painted, and that commonly a sort of cream color. Of course everything is built of brick or stone. But there are flowers everywhere—the windows and gardens are full of them. My first London purchase was a splendid damask rose set in geranium leaves. The price was one penny (two cents). English men have none of the hard, keen, eager overworked look of Americans. They smoke little in the streets, preferring to smoke in some place "quietly and dreamily." English women are the most outrageously dressed women in the street that one can imagine. Their costumes are neither graceful, elegant or tasteful. They wear quantities of cheap white lace, their feet are enormous in size, and their shoes are correspondingly ugly, although sensible in having low heels and broad soles. The men, including the boys above fourteen years of age, all wear the stove-pipe hat, but less of black clothing than Americans. The latter are quite notorious abroad for their black pantaloons.

English Servants

Are models of neatness and good breeding. The men wear a black suit, swallow-tail coat and white necktie. The women wear dresses of light calico, neatly starched, and trim, tasteful caps on the head. BESSIE is thoroughly disgusted with

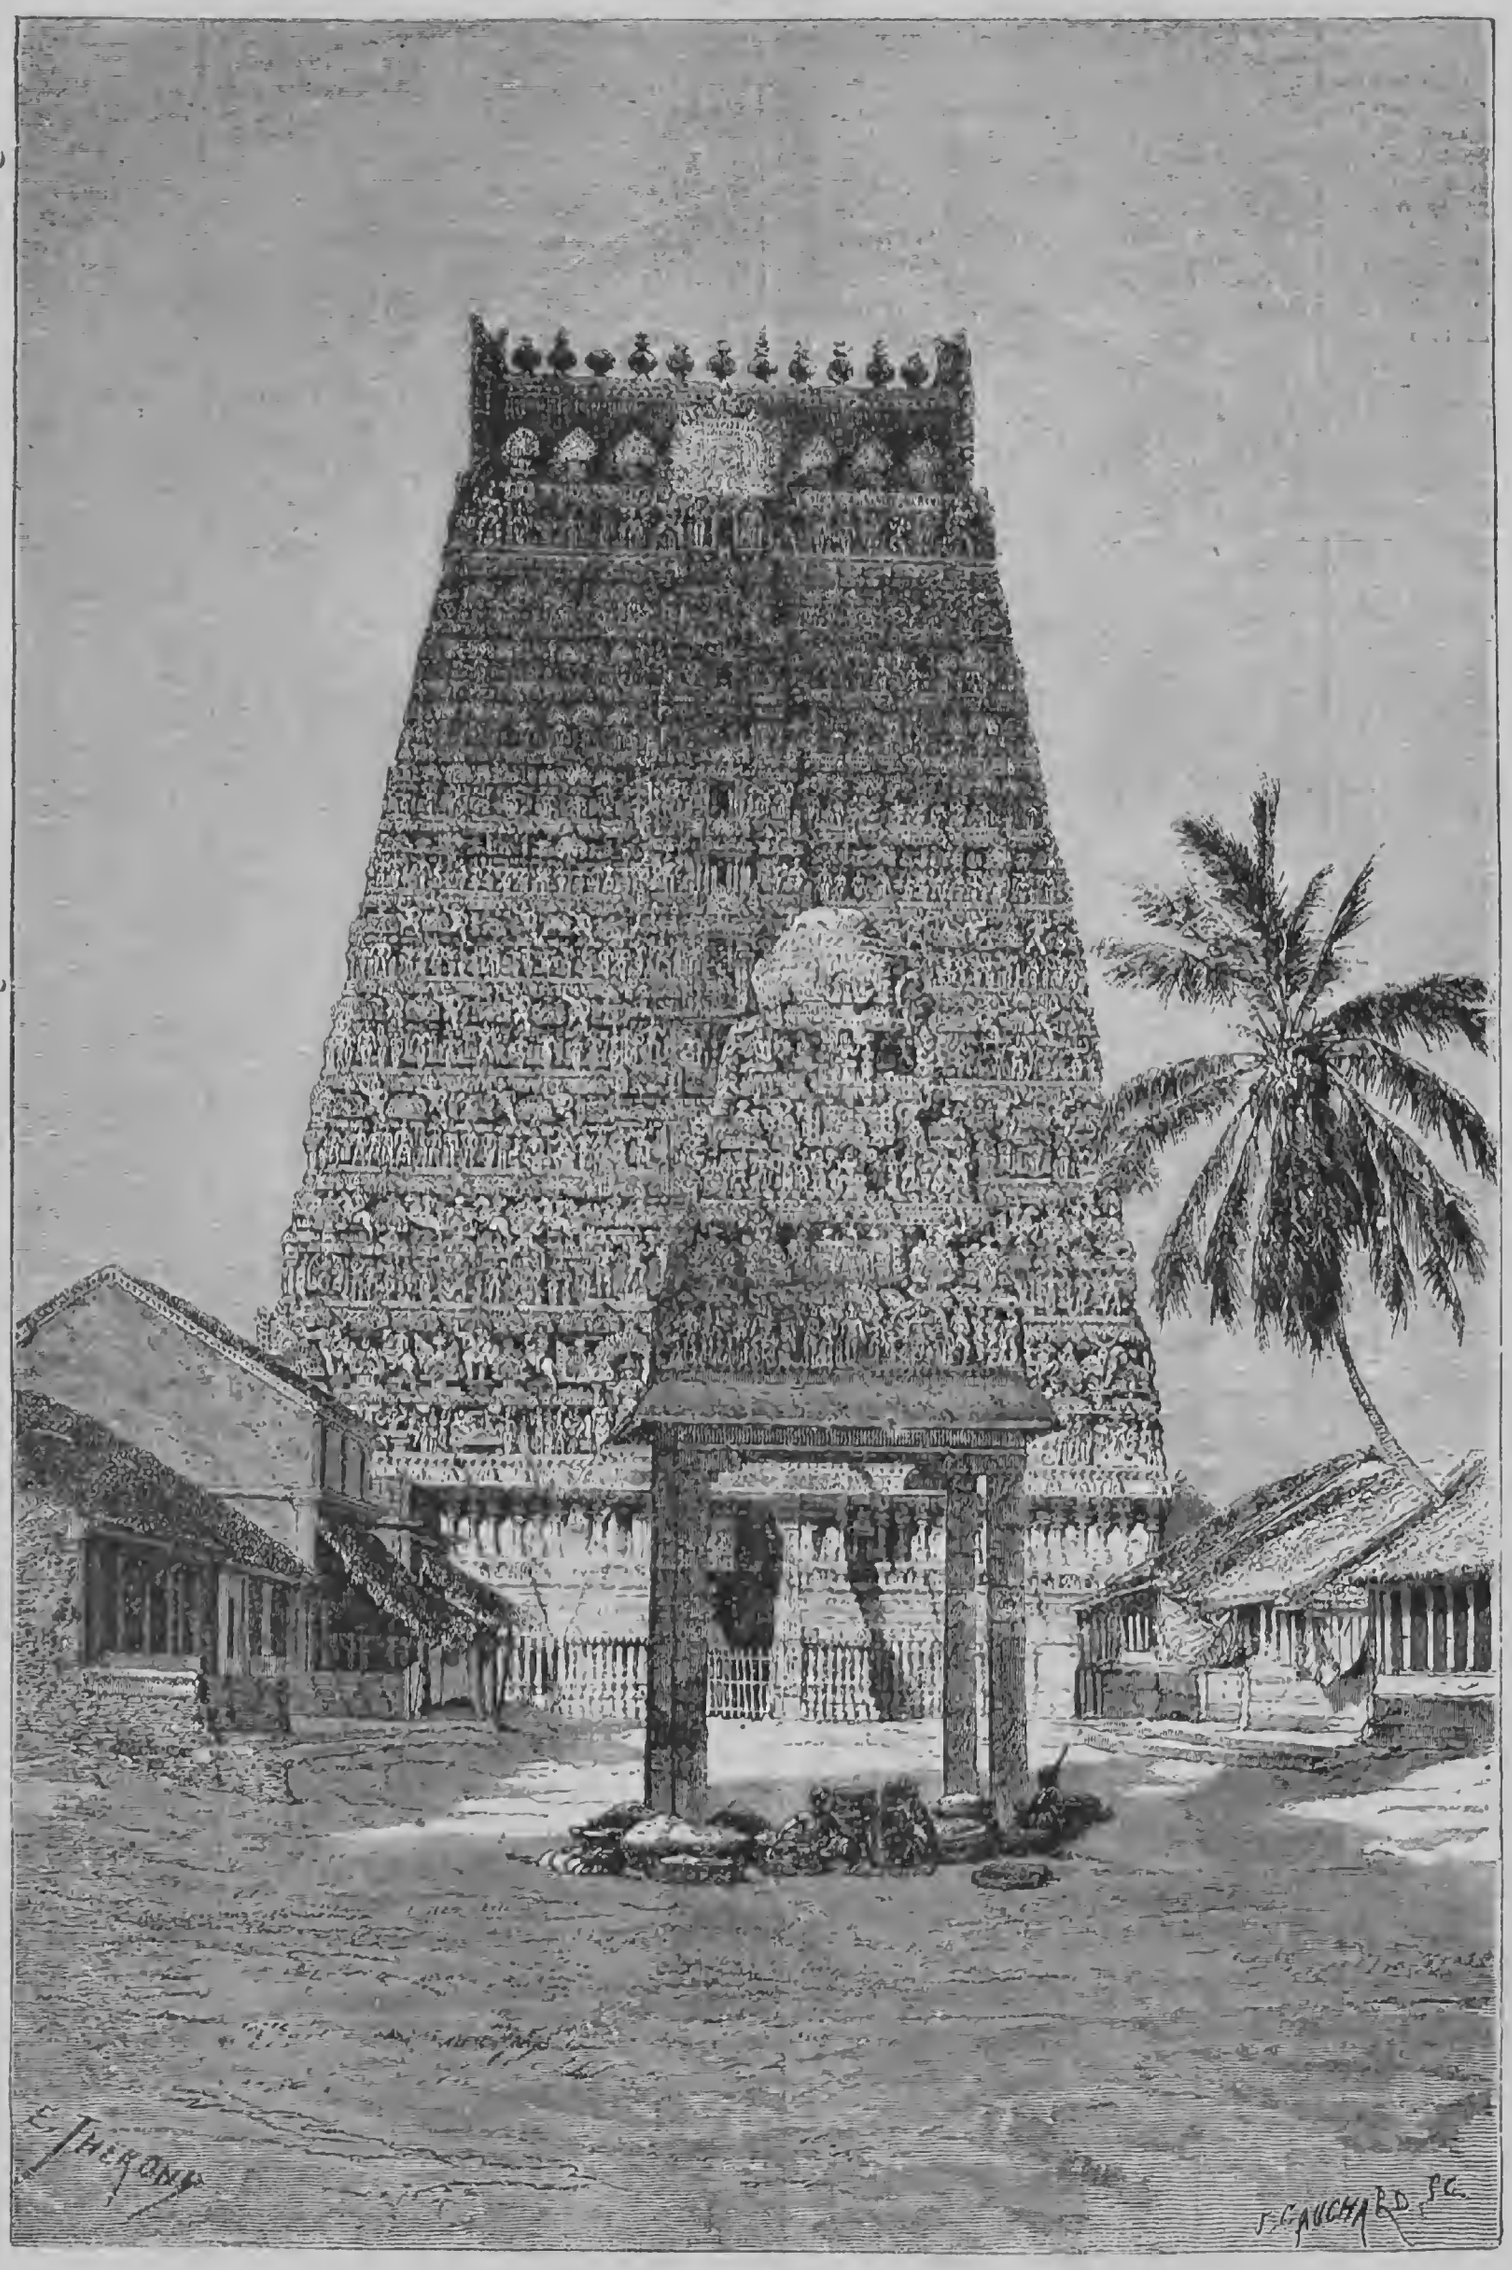
English Cooking,

And relieves herself daily of a volly of invectives. "The meats are raw, vegetables underdone, nothing seasoned, no salt in the butter, coffee wretched stuff that no one but a tasteless idiot could drink, and tea strong and bitter enough to float an ironclad,"—all of which is nearly the actual truth. The China, silver, table linen and attendance are immaculate, but, as she despairingly sighs, "I could do without style forevermore for the sake of another American dinner." We ordered a fruit dessert for our dinner to-day, and were served with two pears, two apples and a few plums, for which luxurious indulgence we were charged seventy-five cents. Apples are imported here from America, and peaches lie in the green grocers' show windows swathed in tissue paper. Writing paper and flowers are the only two articles here which are "amazingly cheap." To-night we leave for Brighton, the Newport of England, where the aristocracy go for sea air.

Brighton Experiences.

BRIGHTON, Aug. 16.

Since arriving here we have been delighted and distracted. The city is beautiful, and our apartments front the fashionable drive and the sea. Everybody is here, including the Emperor NAPOLEON, EUGENIE, the Prince Imperial, HENRY STANLEY the finder of LIVINGSTONE, CARL BLIND the Revolutionist, LOUIS BLANC of Paris (who was exiled from his native land by NAPOLEON), a member of the Assemblage Nationale, and who arrived here on the same day with the dethroned Emperor; LYDIA DECKER of Man-



A HINDOO TEMPLE.—(See Page 178.)

chester, a Woman's Rights leader; Sir JOHN and Lady BOWRING, Prof. and Mrs. FAWCETT, Baroness BURDETT COUTTS, WM. ALLINGHAM the lyric artist, MONCURE D. CONWAY the American journalist, and nearly all the scientific men in England, including many from abroad. The British Association for the Advancement of Science is in session here.

I have seen the "Imperial" party as yet but once. They attended one of the Association meetings yesterday, at which STANLEY read a paper. Seats had been reserved for them, and they entered, eliciting great applause. I think the English a race of snobs. They cheered, and cheered when the party left, at the close of the meeting, and ran after their carriage in the street, and upon his arrival besieged his hotel. The Empress was very plainly attired, in black, wearing a peaked black hat, bound with a scarf and a dark green feather at one side. She presented a marked contrast to the fussy purple and white and green and blue toggery of the English dames around her. She kept her veil down, throughout, but through that looked very well indeed. The Emperor, a pudgy fellow, looks very like his photographs. The Prince, now a lad of fifteen, perhaps, has a prominent nose, abundant dark hair, and looks as if he might some day make an effort to gain the French throne. They are expected to remain here some time.

Mr. STANLEY is a small, dark man, with thick black hair, tinged in spots with gray—he is young—with black eyes, a square forehead, wears a moustache and goatee, and looks plucky and resolute. He is quite the sensation now in England, and the English, much as they admire his Yankee pluck, never in their honors forget the fact that he is one of those "dreadfully enterprising Americans." If the RURAL NEW-YORKER only had more space for such gossips as I, it should be told all about the other notables here. MARY A. E. WAGER.

A HINDOO TEMPLE.

ONE of the finest types of ancient Indian architecture, the Pagoda of Combaconum, in a village of the same name, is represented in our illustration this week. The structure has four pyramidical doorways, built of brick, which give entrance to the inner court. One of these is seen in the picture, the view being had from the interior of the court. The connecting walls between these great doorways are so poor and insignificant, they appear to have no relation to what might otherwise be considered as isolated towers in a desert. These great doorways are completely covered with statues, as shown in the picture. They are made of fine-grained lime stone, and are arranged like a regiment under arms. The southern entrance to this temple is the most curious, the heads of the hooded viper being sculptured in great numbers over the whole surface. The portion of the pagoda shown in our picture (see preceding page) is dedicated to the god Rama. The stone dias, on four pillars, is used for kindling the sacred fire; and another fire is kindled at the same moment on the upper story of the doorway, as a signal to distant worshipers. The building is vast in dimensions, has eleven stories, and is decorated with eleven bulls and innumerable statues. The statues are life size on the first floor, but diminish in size upwards.

PLEASANT PARAGRAPHS.

AT a certain church fair a set of Cooper's works was promised to the individual who should answer a list of conundrums. A dashing young fellow was pronounced the winner, and received a set of wooden pails. The young man received his award with a sardonic smile, and would have been angry, but one of the sweet-voiced sisters standing near suggested that they might be useful for housekeeping some day. The conundrum eliminator suddenly discovered that the lady had pretty eyes.

A NEW ORLEANS mother was recently questioning her little girl in Geography as follows: "Who went first through the straits of Magellan?" Daisy quickly answered, "Magellan with his squadron." "What do you understand by his squadron, Daisy?" The question was not in the book, but Daisy was ready for the emergency. "Oh, I know; it's one of those women that ain't quite white."

A LITTLE girl, when her father's table was honored with the presence of an esteemed friend, began talking very earnestly at the first pause in the conversation. Her father checked her rather sharply, saying, "Why is it that you always talk so much?" "'Cause I've dot somesin' to say," was the innocent reply.

AN Illinois editor thus sarcastically speaks of the marriage of a professional brother in Indiana:—"He stepped upon the hymeneal platform, adjusted the fatal noose, and was swung off into that unsilent bourne, whence he can never return, save by the Indianapolis connecting lines."

A SCHOLAR in one of Danbury's schools being asked a rather difficult question, hammered at it for a while without success, and then pettishly inquired, "Am I hot or cold?" A moment later he was quite hot.

THERE is a town out West called Random. A resident of the place being asked where he lived, said he lived at Random. He was taken up as a vagrant.

WHY is a newspaper like an army? Because it has leaders, columns and reviews.

Our Story-Teller.

LAUGHING IN MEETIN'.

A Reminiscence by Mrs. Beecher Stowe.

WE were in disgrace, we boys, and the reason of it was this: We had laughed out in meeting time! To be sure the occasion was a trying one, even to more disciplined nerves. Parson Lothrop had exchanged pulpits with Parson Summeral, of North Wearon. Now, Parson Summeral was a man in the very outset likely to provoke the risibles of unspiritualized juveniles. He was a thin, wiry, frisky little man, in powdered white wig, black tights, and silk stockings, with bright knee buckles, and shoe buckles, with round, dark, snapping eyes, and a curious, high, cracked, squeaking voice, the very first tones of which made all the children stare and giggle. The news that Parson Summeral was going to preach in our village spread abroad among us as a prelude to something funny. It had a flavor like the charm of circus acting; and on the Sunday morning of our story we went to the house of God in a very hilarious state, all ready to set off in a laugh on the slightest provocation.

The occasion was not long wanting. Parson Lothrop had a favorite dog yclept Trip, whose behavior in meeting was notoriously far from that edifying pattern which befits a minister's dog on Sundays. Trip was a nervous dog, and a dog that could never be taught to conceal his emotions or to respect conventionalities. If anything about the performance in the singers' seat did not please him, he was apt to express himself in a lugubrious howl. If the sermon was longer than suited him, he would gape with such a loud creek of his jaws as would arouse everybody's attention. If the flies disturbed his afternoon's nap he would give sudden snarls or snaps; or, if anything troubled his dreams, he would bark out in his sleep in a manner not only to dispel his own slumbers, but those of certain worthy deacons and old ladies whose sanctuary repose was thereby sorely broken and troubled. For all these reasons Madam Lothrop had been forced, as a general thing, to deny Trip the usual sanctuary privilege of good family dogs in that age, and shut him up on Sundays to private meditation. Trip, of course, was only the more set on attendance, and would hide behind the doors, jump out of windows, sneak through byways and alleys and lie hid till the second bell had done tolling, when suddenly he would appear in the broad aisle, innocent and happy, and take his seat as composedly as any member of the congregation.

Imagine us youngsters on the *qui vive* with excitement at seeing Parson Summeral frisk up into the pulpit with all the vivacity of a black grasshopper. We looked at each other and giggled very cautiously with due respect to Aunt Lois' sharp observation.

At first, there was only a mild, quiet simmering of giggle, compressed decorously within the bounds of propriety, and we pursed our muscles up with stringent resolution whenever we caught the apprehensive eye of our elders.

But when, directly after the closing notes of the tolling second bell, Master Trip walked gravely up the front aisle, and seating himself squarely in front of the pulpit, raised his nose with a critical air toward the scene of the forthcoming performance, it was too much for us—the repression was almost convulsive. Trip wore an alert, attentive air befitting a sound, orthodox dog, who smells a possible heresy, and deems it his duty to watch the proceedings narrowly.

Evidently he felt called upon to see who and what were to occupy that pulpit in his master's absence.

Up rose Parson Summeral, and up went trip's nose, vibrating with intense attention.

The parson began in his high-cracked voice to intone the hymn—

"Sing to the Lord aloud,"

when Trip broke into a dismal howl.

The parson went on to give directions to the deacon, in the same voice in which he had been reading, so that the whole effect of the performance was somewhat as follows:

"Sing to the Lord aloud,"

"(Please to turn out that dog)—

"And make a joyful noise,'"

The dog was turned out, and the choir did their best to make a joyful noise; but we boys were upset for the day, delivered over to the temptations of Satan, and plunged in waves and pillows of hysterical giggle, from which neither winks nor frowns from Aunt Lois, nor the awful fear of the tithing man, nor the comforting bite of fennel and orange peel, passed by grandmother, could recover us.

Everybody felt, to be sure, that here was a trial that called for some indulgence. Hard faces, even among the stoniest saints, betrayed a transient quiver of the risible muscles, old ladies put up their fans, youths and maidens in the singers' seats laughed outright, and for the moment a general snicker among the children was pardoned. But I was one of that luckless kind whose nerves, once set in vibration, could not be composed. When the reign of gravity and decorum had returned, Harry and I sat by each other, shaking with suppressed laughter. Everything in the subsequent exercises took a funny turn, and in the long prayer, when everybody else was still and decorous, the whole scene came over me with such overpowering force that I exploded with laughter, and had to be taken out of meeting and marched home by Aunt Lois as a convicted criminal. What especially moved her indignation was that the more she rebuked and upbraided the more I laughed, till the tears rolled down my cheeks, which Aunt Lois construed into wilful disrespect to her authority and resented accordingly.

By Sunday evening, as we gathered around the fire, the reaction from undue gayety to sobriety had taken place, and we were in a pensive and penitent state. Grandmother was gracious and forgiving, but Aunt Lois still preserved that frosty air of reprobation which she held to be a salutary means of quickening our consciences for the future. It was, therefore, with unusual delight that we saw our old friend Sam come in and sit himself quietly down on the block in the chimney corner. With Sam we felt assured of indulgence and patronage, for, though always rigidly moral and instructive in his turn of mind, he had that fellow feeling for transgressors which is characteristic of the loose-jointed, easy-going style of his individuality.

"Lordy massy, boys—yls," said Sam, virtuously, in view of some of Aunt Lois' thrusts, "ye ought never to laugh nor cut up in meetin', that are's so, but then there is times when the best on us gets took down. We gels took unawares, ye see—even ministers does. Yis, natur' will git the upper hand afore they know it."

"Why, Sam, ministers don't ever laugh in meetin', do they?"

We put the question with wide eyes. Such a supposition bordered on profanity, we thought; it was approaching the sin of Uzzah, who unwarily touched the ark of the Lord.

"Laws, yes. Why, ha'n't you never heard how there was a council held to try Parson Morrel for laughing out in prayer time?"

"Laughing in prayer time!" we both repeated, with uplifted hands and eyes.

My grandfather's mild face became luminous with a suppressed smile which brightened it as the moon does a cloud, but he said nothing.

"Yes, yes," said my grandmother, "that affair did make a dreadful scandal in the time, on't. But Parson Morrel was a good man, and I'm glad the council wasn't hard on him."

"Wal," said Sam Lawson, "after all, it was more like Babbit's fault than 'twas anybody's. Ye see, Ike, he was allers for gettin' what he could out o' the town, and he would feed his sheep on the meetin' house green. Somehow or other, Ike's fences allers contrived to give out, come Sunday, and up would come his sheep, and Ike was too pious to drive them back Sunday, and so there they was. He was talked to enough about it, case ye see to have sheep and lambs a ba-a-in' and a blatin' all prayer and sermon time, want the thing. 'Member that are old meeting house up to the north end, down under Blueberry hill, the land sort o' sloped down, so as a body had to come into the meetin' house steppin' down instead o' up.

"Fact was, they said 'twas put there 'cause the land wa'n't good for nothin' else, and the folks thought puttin' a meetin' house on't would be a clear savin'—but Parson Morrel he didn't like it—and was free to tell 'em his mind on't, that 'twas like bringin' the lame and the blind to the Lord's service,—but there 'twas.

"There warn't a better minister nor no one more set by in all the state than Parson Morrel. His doctrines was right up and down good and sharp, and he give saints and sinners their meat in due season, and for consolin' and comfortin' widders and orphans Parson Morrel hadn't his match. The women set lots by him and he was allus' ready to take tea round, and make things pleasant and comfortable and he had a good story for every one and a word for the children, and may be an apple or a cookey in his pocket for 'em. Wal, you know the' ain't no pleasin' everybody, and ef Gaberiel himself, right down out o' heaven, was to come and be a minister I expect there'd be a pickin' at his wings, and a sort o' fault findin'. Now ann Jerushy Scran and Aunt Polly Hokum they said Parson Morrel wan't solemn enough. Ye see there's them that thinks that a minister ought to be jest like the town hearse, so that ye think o' death, judgment and eternity, and nothin' else, when ye see him round; and ef they see a man rosy and chipper and havin' a pretty niece, sociable sort of a time, why they say he ain't spiritooal minded. But in my times I've seen ministers, the most awakenin' kind in the pulpit that was the liveliest when they was out on't. There is a time to laugh, scripture says, tho' some folks never seem to remember that are."

"But Sam, how came you to say it was Ike Babbit's fault? What was it about the sheep?"

"Oh, wal yis—I'm comin' to that are. It was all about them sheep—I expect they was the instrument the devil set to work, to tempt parson Morrel to laugh at prayer time.

"Ye see there was old Dick, Ike's bell wether, was the fightin'est ole critter that ever you see. Why Dick would butt at his own shadder and everybody said it was a shame the old critter shou'd be left to run loose, 'cause he ran at the children and scared the women half out their wits. Wal, I use to live out in that parish in them days and Lem Sudoc and I used to go out sparkin' Sunday nights to see the Larkin gals—and we had to go right cross the lot where Dick was—so we used to go and stand at the fence and call, and Dick would see us and put down his head and run at us full chisel, and come bunt agin the fence and then I'd catch him by the horns and hold him while Lem run and got over the fence t'other side the lot, and then I'd let go and Lem would holler and shake a stick at him and away he would go full butt at Lem, and Lem would ketch his horns and hold him till I came over—that was the way we managed Dick—but ef he come sudden up behind a feller, he'd give him a butt in the small of the back that would make him run on all fours one while—he was a great rogue Dick was. Wal, that summer I remember they had old Deacon Titkens for tithingman, and I tell you he give it to the boys lively. There warn't no sleepin' nor no playin,' for the deacon had eyes like a gimblet, and he was quick as a cat, and the youngsters hed to look out for themselves. It did really seem as if the deacon was like them four beasts in the Revelations that was full o' eyes behind and before, for whichever way he was standin', if you gave only a wink he was down on you, and hit you a tap with his stick. I know once Lem Sudoc jist wrote two words in the psalm-book and passed it to Keziah Larken, and the deacon gave him such a tap that Lem grew as red as a beet, and vowed he'd be up with him some day for that.

"Well, lordy mussa, folks that is so chipper and high steppin' have to have their comedowns, and the deacon had to have his."

"That are Sunday, I remember it now jest as well as if 'twas yesterday. The parson he give us his great sermon, reconcilin' decrees and free agency—everybody said that are sermon was a masterpiece. He preached it up to Cambridge at commencement, but it so happened it was one o' them bilin' hot days that come in August, when you can fairly hear the huckelberries a sizzlin' and cookin' on the bushes, and the locust keeps a gratin' like a red-hot saw. Wal, such times, decrees or no decrees, the best on us will get sleepy. The old meetin'-house stood right down at the foot of a hill that kep' off all the wind, and the sun blazed away at them great west winders, and there was a pretty sleepy time there. Wal, the deacon he flew around a spell, and woke up the children and tapped the boys on the head, and kep' everything straight as he could till the sermon was 'most through, when he rally got most tuckered out, and he took a chair and he sot down in the door right opposite the minister and fairly got asleep himself, jest as the minister got up to make the last prayer.

"Wal, Parson Morrel had a way o' prayin' with his eyes open. Folks said it was'n't the best way but it was Parson Morrel's way anyhow, and so as he was prayin' he couldn't help seein' that Deacon Titkins was a noddin' and a bobbin' out toward the place where old Dick was feedin' with the sheep, front o' the meetin'-house door.

"Lem and me was sittin' where we could look out, and we jest see old Dick stop feedin', and look at the deacon. The deacon had a little round head as smooth as an appte, with a nice powdered wig on it, and he sot there makin' bobs and bows, and Dick begun to think it was suthin' sort o' puissonal. Lem and me was sittin' jest where we could look out and see the hull pictur, and Lem was ill to split.

"'Good, now,' says he, 'that critter'll pay the deacon off lively pretty soon.'

"The deacon bobbed his head a spell, and old Dick he shook his horns and stomped at him sort o' threatenin'. Finally the deacon he gave a great haw and brought his head right down at him, and old Dick he sot out full tilt and come down on him ker chunk, and knocked him head over heels into the broad aisle, and his wig flew one way and he t'other, and Dick made a lunge at it as it flew, and carried it off on his horns.

"Wal, you may believe, that broke up the meetin' for one while. For Parson Morrel laughed out, and all the gals and boys they stomped and roared, and the old deacon he got up and began rubbin' his shins—'cause he didn't see the joke on't.

"'You don't orter laugh,' says he, 'It's no laughing matter—it's a solemn thing,' says he. I might have been sent into 'tarnity by that darned critter' says he. Then they all roared and haw-hawed the more to see the deacon dancin' round with his little shiny head, so smooth a fly would trip upon't. 'I believe my soul, you'd laugh to see me in my grave!'

"Wal, the truth on' was, 'twas jest one of them lustin' up times that must'nt has, when there an't nothin' for it but to give in; 'twas jest like the ice brakin' up in the Charles River it all comes at once and no whon to't. Sunday or no Sunday, sin or no sin, the most on 'em laughd till they cried, and couldn't help it.

"But the deacon he went home feelin' pretty sore about it. Lem Sudoc picked up his wig and handed it to him. Says he, 'Old Dick was playing tithing man, was'nt he, deacon? Teach you to make allowance for other folks that get sleepy.'

"Then Mrs. Titkins went over to Aunt Jerushy Scran's and Aunt Polly Hokum's and they hed a pot o' tea over it, and 'greed it was awful of Parson Morrel to set sich an example, and suthin' had got to be done about it. Miss Hokum said she allers knew that Parson Morrel hadn't no spiritooality, and now it had broke out into open sin, and led all the rest of 'em into it, and Mrs. Titkins she said such a man wa'nt fit to preach, and Miss Hokum said she cotldn't never hear him again, and the next Sunday the deacon and his wife they hitched up and driv eight miles over to Parson Lothrop's and took Aunt Polly on the back seat.

"Wal, the thing growed and growed, till it seemed as if there warn't nothin' else talked about, 'cause Aunt Polly and Miss Titkins and Jerushy Scran they didn't do nothin' else but talk about it, and that set everybody else a-talkin.'

"Finally, it was 'greed they must hev a council to settle the hash. So all the wimmen they went to chopping mince, and making up punkin pies and cranberry tarts, and bi'lin doughnuts, getten ready for the ministers and delegates—'cause councils always eats powerful—and they had quite a stir, like a general trainin.' The hosses' they was hitched all up and down the stalls, a stompin' and switchen' their tails, an all the women was a-talkin' and they hed everybody round for witnesses, and finally Parson Morrel he says: 'Brethren,' says he, 'jest let me tell you the story just as it happened, and if you don't every one of you laugh as hard as I did then, I'll give up.'

"The parson he was a master hand at setten' off a story, and afore he'd done, he got 'em all in such a roar they did'nt know where to leave off. Finally they give sentence that there hadn't no temptations took him but such as is common to man; but they advised him afterward allers to pray with his eyes shut, and the parson he confessed he orter'n done it, and meant to do better in future, and so they settled it.

"'So, boys" said Sam, who always drew a moral, "ye see it 'arns you you must take care what ye look at, ef ye want to keep from laughin' in meetin."

Ladies' Port-Folio.

THE OAK AND THE ROSEBUSH.

FROM THE FRENCH OF LA FONTAINE.

A FRAGILE rosebud her fair arms held out,
Beneath a rugged oak, who, old and stout,
Was lord of all the region round about.

One time, gray clouds above the sun climbed high,
And all the white and blue fled from the sky,
While weird elves with hoarse shouts went hurrying by.

The oak shook out his branches wide, and said
To his fair neighbor, "Well, it is, oh! lovely head,
That you beside me found a bed!

"You are so gentle that you rock and sway,
If faintest breath of wind doth come your way,
Even if it be the softest breeze of May.

But I the storm king's anger mock,
I laugh at his fierce roar and shock,
My roots reach deep—they clasp the rock.

"I'll care for you, dear neighbor; do not fear," he said,
When swift along the grass the wood folk sped,
Crying, "Oh, flowers! oh, trees! quick, bow the head!

"Oh, birds! it is the storm king! fly! oh, fly!
'Tis death to meet his awful, violet eye,
Or touch his long, gray hair, as he rides by."

Ah! swift the storm king came. He stopped beside
The giant oak, and, laughing at his pride,
His branches tore, and threw them far and wide.

Then, turning on the oak his fierce, dark face,
He wrapped him round about in his embrace,
And wrenched his longest roots from out their hiding place.

Then flung him down to die, across the way;
And, drawing all his clouds about him, fled away,
And left the world to gladness and to day.

When at last the rose bush raised her head,
And found her stern old brother dead,
Her bright leaves on the ground she shed,

And, weeping, cried, "My joy hath end.
Alas! that when the storm descends,
There's mercy only for the head that bends."

E. C. PIERCE.

COUNTRY WOMEN.

I HAVE read for a long time, in the RURAL, of the trials our farmers' wives have, to get along with their work, how little their labor is appreciated, etc.; and I cannot help thinking there is cause, way down below the surface, that they fail to get at. Why, only see how times have changed! I am not as old as METHUSALEH, and I can remember when my mother did the work for twelve—I mean the washing, ironing, baking, sweeping, sewing and knitting, and in the season of it, would, in addition, spin her three run of yarn, and not think she worked very hard either.

But some one says the sewing then was nothing compared to now. I know that very well. The little Miss of ten years has a more extensive wardrobe than the young lady of eighteen used to have; but the sewing machine is, in a great measure, the cause of it. The tucks, ruffles, and flounces of to-day could never be made by hand. How few there are, too, who find time to knit; it is so much cheaper to buy stockings; or, if they do not wear so well, get a knitting machine. See, too, the washing machines, churn powers, butter workers and other conveniences—and yet the woman of to-day has less time than the one of fifty years ago. Why is it? "Oh," she says, "woman's work is never done till she lies down in her grave." I say, "Fudge!" There is a principle that has taken root in our minds that it is a little more genteel to be delicate and to not work any more than we can help. I know there are honorable exceptions; still it has thrown out fibers all over our country, affecting men, and women too, and no where more than in the Rural districts. The great amount of Irish help that has drifted among us has helped it along very much. Nearly every family can hire a girl, and mother can oversee Bunny in the kitchen, while the young ladies of the family crochet, play croquet, drum on the piano, and are tired to death all the time.

Does some one say, "This does does not apply to common country people; they live upon farms and are obliged to work." I say it does apply to just such people. You will hardly go into a house in your neighborhood, or mine, but you hear about the hard work they have to do. Now, I have no patience with these puttering women, who will run all day in a half bushel. Don't be afraid of work; teach your girls to work, and don't be everlastingly complaining, in these days of machinery, that your work is never done. Go at it with a will, and do it.

CAYUGA.

THE LOVELESS LIFE.

READING in the RURAL NEW-YORKER of Aug. 24th the incognita's sad letter to "LEAH PENCIL, Esq., I could not forbear writing a few words, in the hope that it might meet her eye. Dear soul, whoever or wherever you may be, my heart aches for you wearing on through a loveless, aimless life! O why is it altogether loveless? What though *the* love that is so much to every woman be denied you, is that *all* of life? Is it the *only* love? Is there not all around you, if you but seek it, the love of good men and women—of little children—of the poor and wretched? Is there not above you an Infinite Love? Is there not before you, if you will, an Eternity of Love, with Him who is Love? Your tears, it seems, can flow; then be thankful, dear soul, for there are depths of suffering that know not the relief of tears, and

"The eyes that cannot weep
Are the saddest eyes of all."

And now will you let me share with you some "thoughts" that I have found in one of Mrs. WHITNEY'S delightful books? "Ye who have missed out of your actual living the answer to your soul's passionate asking—ye whom something afar off, that ought to be your very own, passes by like a mirage, who see, away off upon the distant horizon, like dwellers in a wintry Arctic, a sun circling over happier zones, that never comes nigh your zenith—see here! where the unsetting Sun of the Kingdom sends down its full and glorious rays into the secret cold, and ache within you!".....'Outside may be cold and darkness. Your hands may stretch into an unresponsive void. Yet in your spirits are ye blessed. There find ye, wide open, the door into the Kingdom! As out of a dream, paths impossible to sense and every-day, show plain and sudden transit into distant places,—so from your shut souls widens out an entrance way into GOD'S everlasting joy!".....'Yours is the kingdom! Because earth is so little, the world that lies in and about this visible that we call earth becomes so much. What is this Kingdom of Heaven? 'It is within you.' It is that which you hold and live in spiritually; the *real*, of which all earthly, outward being and having are but the show. It is where we are when we shut our eyes and pray in the words that CHRIST taught us."... ,"What matters, then, where your feet stand or wherewith your hands are busy, so that it is the spot where GOD has put you and the work he has given you to do? Your real life is within—hid in GOD with CHRIST—ripening and strengthening and waiting, as through the long geologic ages of night and incompleteness waited the germs of all that was to unfold into this actual, green and luminous earth!"...."The narrower your daily round the wider may be the out-reach. Isolated upon a barren mountain-peak, you may take in river and lake, forest, field and valley. A hundred gardens and harvests lift their bloom and fullness to your single eye. There is a sunlight that contracts the vision; there is a starlight that enlarges it to take infinite space."

"GOD sets some souls in shade, alone;
They have no daylight of their own;
Only in lives of happier ones
They see the shine of distant suns.

"GOD knows. Content thee with thy night.
Thy greater heaven hath grander light.
To-day is close. The hours are small.
Thou sit'st afar and hast them all.

"Lose the less joy that doth but blind;
Reach forth a larger bliss to find.
To-day is brief; the inclusive spheres
Rain raptures of a thousand years."

COUSIN JOHNNY.

A PIONEER WOMAN IN WASHINGTON TERRITORY.

I HOPE that the novelty of a letter from this out of the way corner of the world, will cause it to find excuse at least, if not favor in your eyes. I live in the extreme North-Western corner of Washington Territory, fifteen miles from the British line, and with grand Mt. Baker looming up so close to us in the South-East that it looks almost within walking distance. I think I may call myself one of the pioneer women of the West, for there are but two white women within twenty-three miles of me, and the nearest post-office is twenty-five miles distant. Our only means of communication with the outer world is through the Indians, who are constantly passing up and down the river in their canoes. I have visited every section of the United States, but everything combines here to surpass them all—the delightful climate, magnificent scenery and luxuriant vegetation. Kidney potatoes grow a foot long, peach blows average six hundred bushels to the acre, and hay averages three tons to the acre. I think if you could give me place in your paper I might write something that would interest your readers, and perhaps call a little attention to this great country which has not received half its share so far.

Noot Saak River, W. T. NELLIE S. COUPE.

FEMININE FELICITIES.

A LAWYER, having some legal business to transact with a widow lady, took occasion to inquire her age. The matron, who had not long since doffed the "widow's weeds," attempted to look prim and much younger than she really was, as she replied: "Thirty-five, sir." Then turning to the daughter, he said: "May I be so bold, miss, as to inquire your age?" "Certainly; I am a little past thirty-two—most three years younger than mother."

OLD LADY—"When does the next train stop here?" Porter (explaining)—"Well, 'm, you see the next train dont stop 'ere at all, and the next train as stops 'ere don't go no farther, and the next train is a through express." The old lady is much better for the explanation.

A WIDOW who has married and lost five husbands, remarks:—"Widowers never die of grief, although crushed to the earth by their sorrow, like truth, they rise again and revive."

WHY should a man with a termagant wife be considered a smart fellow? Because he's a shrewd individual.

Reading for the Young.

"GOING INTO BREECHES."

"JOY to Philip! he this day
Has his long coats cast away,
And (the childish season gone)
Put the manly breeches on.
Officer on gay parade,
Red-coat in his first cockade,
Bridegroom in his wedding trim,
Birthday beau surpassing him,
Never did with conscious gait
Strut about in half the state
Or the pride (yet free from sin)
Of my little manikin;
Never was there pride or bliss
Half so ratbiond as his.
Sashes, frocks, to those that need 'em,
Philip's limbs have got their freedom.
He can run, or he can ride,
And do twenty things beside,
Which his petticoats forbade:
Is not he a happy lad?
Now he's under other banners
He must leave his former manners:
Bid adieu to female games,
And forget their very names;
Puss-in-corners, hide-and-seek,
Sports for girls and pussies weak!
Baste-the-bear he may now play at,
Leap-frog, football, sport away at;
Show his skill and strength at cricket;
Mark his distance, pitch his wicket:
Run about in winter's snow
Till his cheeks and fingers glow;
Climb a tree or scale a wall
Without any fear to fall;
If he get a hurt or bruise,
To complain he must refuse,
Though the anguish and the smart
Go unto his little heart;
He must have his courage ready,
Keep his voice and visage steady;
Brace his eyeballs stiff as drum,
That a tear may never come;
And his grief must only speak
From the color in his cheek.
This and more he must endure,
Here he in miniature.
This and more must now be done,
Now the breeches are put on."

MY KITTY.

BY MARY S. BARKER.

WHEN I was a little girl about eight years old, I was sent to a neighbor's one day with a basket of eggs, and when the lady had taken out the eggs she asked me if I didn't want a kitty. Of course I said "yes," so she told me she would put it into the basket for me, as it was so wild I could not carry it in my arms. She caught it, put it in my basket, tied the cover down, and off I trudged home, stopping every few steps to peep at my treasure through the wicker-work of the basket. Kitty didn't understand matters at all, and mewed and scratched and tried to get out of his prison, but could not. When I reached home I carried the basket into the kitchen, shut all the doors and windows, and then opened the basket, and out sprang kitty, and the way he flew round the room! He was so frightened I thought he had a fit. He jumped over tables and chairs, ran right up on the window, and jumped down on my head, making me scream with fright, and at last crouched up in the corner under the table, and no coaxing would make him come out; even a nice saucer of milk was not any temptation to him; he wouldn't even taste of it. By-and-by some one came in and left the door open just a minute, and quick as a flash kitty darted out and into the yard. I ran after him and almost caught him, but just as I was putting my hand on him he turned round, stood upon his hind feet and spit at me so fiercely that I screamed right out, and before I could get over the fright he was gone, I could not tell where. He was too small to find his way back home, so I thought he must have got killed or starved to death, for I could not find him anywhere round the barn or house.

But one day, more than a week after, I was hunting hen's eggs, and I heard a feeble little "mew-ouw." I looked all round, behind the barn-door, under the steps, and out in the barn-yard, and at last I found him behind the big water-trough. He was so weak he could not stand, and did not try to get away, but only "purred" when I took him up. Don't you guess I ran into the house just as fast as I could, and cried:—"Oh! Auntie, see! see! I've found him, and he's so hungry. Mayn't I have some milk right off for him?" Poor Kitty. Auntie gave me the milk, and I held it to him, and he ate it as if it was good; and when he had eaten it all up, he just curled himself up in my lap and went to sleep, as if he had never been afraid of me; and always after that he loved me as well as cats can love. He would follow me round everywhere, so I would have to shut him up when I went after the cows, for fear he would get lost, and he would seem so lonely if I was out of his sight; and as soon as he found me, he would jump right on my shoulder, put his face into mine, and kiss me; but he never would kiss any one else. He wanted to sleep with me, but Auntie said, "No, no; I can't have a cat in the house at night." So, every night before she went to bed, she put him out in the coal shed; but there was a broken pane of glass in one of the windows, and just as soon as the light was out, and all was still, he would jump in through that, come up stairs and jump on my bed, put his face up to mine and purr so softly, as if to say, "Hush! don't tell:" and then he would curl up on my pillow, close to my face, and be still as a mouse till morning, when he would wake me up kissing me, and purring softly for a moment; then he would jump off the bed, run down stairs, and out through the window, and be mewing to come in when Auntie came down to make the fire. I suppose I ought to have told Auntie about it, but I loved him so, and I thought it was so cunning in him, that I could not bear to. I had no brothers or sisters or little playmates, so I was often lonely before I had Kitty.

I used to tell him all my troubles, and I really thought he understood me, for he would put his face close to mine and curl up close to my cheek as if he wanted to comfort me. He would play with me just like a dog. I would call "Kitty, kitty! see who'll get to the barn first," and off he would start with his tail straight up, and run for the barn. If he got there first he would stop and wait for me and seem as proud as could be. He had a great many tricks such as opening the door, but I never knew him to steal. He caught mice when he was just a kitty, and one day before he was grown up, he brought in a rat and laid it at my feet. How proud he was! He rubbed against my dress and purred "out loud," and said as plainly as he could, "Just see that, will you! That's some of your small fry." When he had grown to be quite a big kitty we got another cat with her little kitty. It was a tiny thing and the prettiest kitty I ever saw. A Maltese with just the whitest paws and breast that ever a kitty had. The old cat stayed one night and then went off back to her old home and left her little baby with us. Did she know we would take care of it? Kitty—"*my kitty*," I called him now, and the other only "kitty," seemed to pity it, and let it eat his milk, and brought it mice. But it was so funny to see them play together. I suppose the big one played too roughly and the little one would get mad and spit at him and box his ears, and he would take it all so provokingly cool—sitting up there, wagging his tail, as if to say, "now *ain't* you mad?" and then little kitty would run off and lie down by herself, just as you have seen a little boy or girl do when they "got mad" at play. But in a few minutes she would get all over it and be ready for another frolic, which would be sure to end in the same way.

Kitty had grown to be a big cat when I left Auntie's, and it was three years before I came back on a visit, and then he remembered me, for he came right to me, and jumped up on my shoulder to kiss me, just as he used to, though Auntie said she never could get him to do it even to her. And he was always afraid of strangers; would not even come into the house while they stayed; but he knew me, and was as glad to see me as a cat could be. He was so big I should hardly have known him. Auntie had a pitiful story to tell me, of how he had caught his foot in a steel trap they had set to catch a skunk, and it broke his leg and tore it most off. But they made him a bed in the kitchen, behind the stove, and nursed him till he was well again because he was "MARY'S KITTY," they said. It was a great many years ago, and, of course, Kitty is dead long ago, though I did not hear when he died. I have seen a great many cats, and kitties too, and a great deal prettier ones than mine, but none that I could love, and never one loved me as he did. If kitties ever *do* go to heaven, I am sure mine will be there.

The Puzzler.

HIDDEN NAMES.—No. 1.

1. WHY art thou so sad? I entreat thee to tell me.
2. Can you play on the viol? I've heard say that you can.
3. He is not so bad a man as I.
4. Do you feed that hen rye or barley?
5. A woman can do what a man dare not.
6. What a lovely dianthus you have there.
7. Will you with me wed, warden of my heart?
8. Is it age or genius that you refer to?
9. That huzzar. Oh! he has stolen my heart.
10. Did Shem make all this disturbance?

☞ Answer in two weeks. J. M. S.

RIDDLE.—No. 2.

I AM captain of a company
That counts full twenty-six;
And also with a party five
I deign to intermix.
With Adam I was seen to stay,
But Eve I do not like;
I'm always seen throughout the day,
But never in the night.
From sun and moon I stand afar,
While you may see me in a star.

☞ Answer in two weeks. L. E. K.

ANAGRAM.—No. 4.

En dartpieces yerev saps and rawd,
Ot rustht, ot kiters, ot nitef, ol drugu;
Hlwel sels peexrt, ghthuo gonerstr arf
Het Glae dematmain gevennal arev.

PUZZLER ANSWERS.—August 31.

HIDDEN MOUNTAINS No. 1.—1, Atlas; 2, White; 3, Green; 4, Etna; 5, Snowdon.

PUZZLE No. 5. The season is backward.

News of the Week.

CURRENT TOPICS.

Marriage of Pere Hyacinthe.

FATHER PERE HYACINTHE was married in London, Sept. 3d, to Emilie Jane Merriman, aged 39 years, an American widow, daughter of Amory Butterfield of Ohio, we believe. The lady is known in Paris as one of Pere Hyacinthe's church converts. At any rate he has converted her into Pere Hyacinthe's wife. A few years since, (in 1869 we believe), when he came to this country, he caused a sensation here because of the attitude in which he stood in relation to the Roman Catholic Church, whose practices he had denounced and with the Episcopal rule of which he had come in conflict. It was then said that "a woman was at the bottom of it;" and now we have what seems to be confirmation thereof. It is said the most prominent texts of the Pere, of late, have been single words or brief sentences, given out pretty much in this style:—"Love! Fidelity! Marriage! Union of the Sexes! Increase and Multiply!"

The Meeting of the Emperors.

THE Czar of Russia and the Emperor of Austria have arrived in Berlin, and have been received by Emperor William of Germany with imposing ceremonies and great cordiality. It is asserted that the Emperors embraced each other, that they have exchanged ceremonial visits; that the Premiers of the three Empires are present and are exchanging opinions and courtesies. The diplomatic work has begun, and what will come of it all is what all Europe—indeed all the world—is anxious to know. England has betrayed her curiosity, and Odo Russell has asked and obtained an interview with Emperor William, with a view, it is said, of obtaining an explanation of intention. What information he did obtain is not yet the world's property.

Burning of the Canterbury Cathedral.

THE Cathedral of Canterbury, England, which was the first seat of Episcopal authority in Great Britain, and whose site was that of the first Christian temple erected in England, the builders of which are reputed to have been the Christian soldiers in the Roman army, was partially burned September 3d—The fire originating from the accidental upsetting of a charcoal furnace in use by workmen repairing the roof. The roof, to the extent of 150 feet, was completely destroyed. This cathedral was the seat of the shrine of St. Thomas a' Becket, and of the tombs of the Black Prince and other warriors. We have no space for the history of this ancient specimen of church architecture, although it would be interesting intelligence.

The Internationalist Congress.

THIS Congress commenced its session at The Hague, Sept. 5. It is composed of 61 delegates, including three women. A resolution was adopted expressing admiration for the heroism of the champions who have fallen in the battle for the people's rights. Its president denounced Gen. Trochu as a traitor and Jules Favre as a wretch; called Bismarck a spy-in-chief of the German Empire. And this Council, in its report to the Congress, declares that the Government at Berlin projects another war, while the Congress has for its object the preservation of peace, and that never since 1848 have the masses of the people been so united as now under the red flag of the Commune.

The French Loan.

THE success of the French Loan, hitherto chronicled in these columns, it is asserted, has surprised the German creditors and enemies of France. It has furnished an unexpected revelation of the recuperative power of the Republic, and of the faith of financial Europe in her resources and stability. In Germany it was predicted by the press there would be few German subscribers to this loan; but German subscriptions were large, much to the chagrin of the ultra press and politicians. The result of the loan has been a vast amount of bombastic boasting on the part of a portion of the French press, and of revengeful threatening, while the more injudicious and irritable German press has hurled irony and incredulous taunts upon the French in return. All of which does not serve to diminish either the burthens the French must bear, nor relieve the Germans of apprehensions of attempts at retaliation and revenge in the near future.

There has been another advance in coal. Some 20,000 miners will strike for higher wages ...No Egyptians have entered Abyssinia....Spain will not part with Cuba on any consideration.

SEMI-BUSINESS PARAGRAPHS.

The United States Watch Co., (Giles, Wales & Co.,) of Marion (Jersey City), N. J., are distancing all competitors. They now employ some 600 hands, making 300 of their celebrated Watches daily, and have recently issued a new Trade Price List of their productions, which, in addition to the extensive line of full plate movements heretofore manufactured by them, embraces four new models and sizes of ¾-Plate, ¼-Plate and Bridge movements, viz.: 10, English size (Ladies'); 11 size (For Boys and Young Gents), and 16 and 18 sizes, all of which are made in all the different grades and trade marks of the full plates, both brass and nickel, stem and key winding, the 16 and 16 size being 18,000 trains, and all with the Straight Line Lever Escapement Visible Pallet Jewels, making a line of goods which, for variety of sizes, styles and range of qualities, exceed the combined production of all the other watch factories of America, were they all placed together under one roof, while for beauty of design, elegance of finish, including the beautiful damaskeening process (a secret known only to this Co.,) they stand unapproached. The extraordinary record of these Watches as fine time-keepers, in the pockets of the American public, including many of the leading men of our city, R. R. Engineers, Conductors, Expressmen, and others whose occupation renders it absolutely necessary they should have the most accurate time, speaks volumes—in fact, renders further comment on that point superfluous, and readily accounts for the Company being unable, with all their facilities, to keep pace with the rapidly increasing demand for their popular goods.

It has remained for this Company to supply two serious wants, long felt by both dealer and consumer, but which have heretofore been unattained; one of which is a Patent Reversible Barrel, to prevent damage to the train, in case of breaking the mainspring. This (which they now put in all their Watches,) is quite an ingenious contrivance, extremely simple, and so arranged that it is always *free* and *ready to act*, even though the Watch may have run for years, unlike other appliances for similar purposes, which, after the Watch has been wound a few times, become *set* and entirely useless, so far as accomplishing the purpose intended. The other is a Patent Double Index Regulator, beautiful in design and finish, while in novelty of construction and the *results* obtained, it is a little wonder, and we are sure will be hailed with delight, not only by our watch wearers, who appreciate fine time, but by the seller, who, with the old style of regulator, is often exceedingly annoyed (even with Watches that are otherwise fine), and in fact is often unable, even after repeated trials, and consuming much time, to touch the regulator fine enough for a small variation, getting it first too far one way and then too far the other, backwards and forwards, sometimes for months,—while this ingenious device, which is arranged with double Indicators and Index Plates combined, the main one of which (without disturbing the other in the least,) operates exactly the same as an ordinary Regulator, and is used the same for the purpose of what is called coarse regulating, or bringing the Watch to very near correct time; then, when it becomes necessary to touch extremely light for a slight variation, the finer Indicator is used—the turning of which the *entire length* of the Index Plate, only moves the main Regulator *one degree*. This is the first and only thing of the kind ever offered the trade or the public, where a combination has been made of a main Regulator for ordinary regulating, with a fine Regulator capable of meeting the smallest variation, all in one.

This Company is now also putting Patent Dust Protectors on all the Full and ¾-Plate Movements—the ¼-Plate and Bridge models being made with solid plates, do not require them. In the hand setting mechanism of the Pendant Winders, they have introduced quite a novel feature. In place of the large push pin coming through the edge of the case outside, the connection is made by a neat little pin and steel eccentric, under the bezel inside, quite out of the way, and out of sight.

This House makes a specialty of Stem Winders, for which they own patents, and the mechanism of which, for simplicity, durability, strength and smoothness of action, excels anything yet produced, either at home or abroad, and is becoming quite a feature in the trade—so much so, that prominent dealers predict that in less than five years there will be none but stem-winding watches sold. Nickel work and damaskeen finish, with frosting and enameling, are also a specialty with them—they being the only Company making either Stem Winders or Nickel Works to any extent. Their enterprise and energy has placed them in the leading position, and their success and popularity is well deserved.

Equal to the Best and Cheaper than all others. Such is the New Wilson Under-Feed Sewing Machine. Perfected after years of study and experimenting, simple, light running and durable, does every grade of light and heavy sewing, and equal to the best sewing machine made for family use, and is sold fifteen dollars cheaper than all others. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

Have It Always at Hand.—Accidents will happen in the best regulated families, and for this reason, among many others, the Mustang Liniment should find a place in the cupboard of every household. In all the world there is nothing comparable to it as an application for cuts, contusions, burns, spasms and scalds, and when every other preparation that medical ingenuity can suggest has failed.

Facts for the Ladies.—Mrs. Rika Levy, New York, has supported herself and family for fourteen years with Wheeler & Wilson's Lock-Stitch Machine, without any repairs, and the machine is still in good order. See the new Improvements and Woods' Lock-Stitch Ripper.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

PRODUCE AND PROVISIONS.

NEW YORK, Monday, Sept. 9, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,734,000	Meal, bbls	4,785		
Oats, "	365,000	Flour, "	70,085		
Wheat, "	375,000	Eggs, "	4,925		
Rye, "	2,800	Cotton, bales	4,070		
Barley, "	—	Hops, "	284		
Malt, "	46,350	Wool "	3,016		
Seed, "	1,220	Butter, pkgs	15,765		
Beans, "	1,130	Cheese "	70,850		
Meal, bags	581	Lard, "	2,010		
Peanuts bu	1,082	Dried fruits, pkgs	1,640		
Pork, bbls	205	Cut Meats "	2,110		

Beans.—Small lots of new mediums are arriving, but late prices are sustained. Marrowfats are in large stock for the season and lower. Large parcels could be bought at $2.75.

We quote Mediums, prime $3.05@3.12 per bushel; good do., $2.50@2.75; fair do., $2.30@2.50; prime marrowfats, $2.75@2.95; good do., $2.40@2.75; common and fair do., $2@2.25.

Beeswax.—Sales are fair at 31@35c. for Western and Southern.

Broom Corn.—Is dull and nominal. The nominal prices are 3@5c. for red; 5@6c. for green; and 7@8c. for hurl.

Butter.—There has been a good steady trade in butter; cool weather and full receipts have given buyers an opportunity to secure just the qualities they require, and market men have been stimulated to buy to some extent ahead through the favorable turn in the weather. The receipts include a larger proportion of State, and the extreme price is not so readily obtained as before. Receipts for August were 13,300 pkgs., about 4,400 pkgs. less than for August, 1871.

The quotations are:—State pails, choice, 28@30c., other, 22@26c.; State selections, 28c.; good to prime firkins, 24@26c.; do. half tubs, 24@26c.; do. Welsh, 23@25c.; other grades of State, 15@22c.; Western Reserve choice, 20@21c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.; Pa. and N. J. pails, medium to fine, 23@30c.; poor, 15@18c.

Cheese.—"The market has been working at a great disadvantage the past week. The stocks carried over from last week were so large that shippers have been reluctant to meet late prices and plead lighter margins. The absence of demand induced a few holders to shade prices, but a larger part of the stock is carried with confidence, as it is known that the English market is in a firm position, the arrivals there going readily into consumption, and aside from this the arrivals the past few days have been so light that even with the moderate export inquiry stocks show some decrease. The indications are that for some little time the arrivals will be small, taking last year as a guidance. At this time the factories had all their August make on the shelves, this year they are about bare. We quote State factory, choice, 13½@15¾c.; good to prime, 12¾@13¼c.; fair lots, 11½c.; State dairy, 12½@13c. for good to prime, 11½@12½c. for fair lots; Ohio factory, 11½@13c. for good to prime.

Cotton—The market is a trifle better for prompt delivery, with small stocks, but for forward delivery there is a weak feeling.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	17¾	17¾	17½	17½
Good Ordinary	20	20	20¾	20¾
Low Middling	21¾	21¾	21¾	21¾
Middling	22¾	22¾	22¾	22¾
Good Middling	24¼	24¼	24¼	24¼

For forward delivery latest sales on the basis of low middling are at 20½c. for Sept.; 19¾c. for Oct.; 19¾c. for Nov. and Dec.; 20c. for Jan.

Dried Fruits.—We are beginning to have full supplies and prices rule a little irregular. Blackberries are offered at 10½c. in a small way. Cherries are down to 20c. The best lots of peeled peaches will not bring over 10c. Prime Southern sliced apples 9@10c.; other Southern apples 4@5c. Old unpeeled peaches, quarters 5@5½c., and 6@6½c. for halves. New plums 13@15c.

Eggs.—Trade is starting up and prices have improved. Sales at 24½@25c. for Western, 25@26c. for State and Pa., 26@27c. for Jersey.

Fresh Fruits.—The weather for most of the past week has been too cool to allow a good fruit trade, and though the supply of items outside of peaches has fallen off, we have been again greatly overstocked. Peaches have averaged ninety cars per day, including New Jersey stock. Some fine large fruit is arriving, but is unfortunately picked too green for the style of weather we have had. We quote Delaware extra, $1@1.25; common to fair, 50@70c.; Dela-

ware crates, $1@2; New Jersey, 25@75c. The N. J. crop will run below last year in quality. Apples of fancy variety are selling a little better. Common have no chance of sure sale even at the low rates. We quote Alexander, Maiden's Blush, and Porter, $1.75@2.25 per bbl.; Fall Pippins, $1@1.50 do.; common river stock, 70@75c. do. Grapes are in good supply, but few prime ones are in market. Concord and Isabella, 6@8c.; Delaware, Iona, and Catawba, 12@14c. Plums have had a brisk sale, and for the present are doing better. Egg and Magnum Bonum, $7@9 per bbl.; Green Gages, $6@7 do.; Damsons, $5 do., common, $3@4. Pears are coming forward in better condition, and $12 has been obtained for selected Bartletts. Flemish and Duchess are too early in condition to sell. A car load of fine Seckles, from the Reed nurseries, Sacramento, Cal., have been sold at $5 per box. We quote Bartletts, prime, $10@12; do., fair to good, $6@8; Flemish Beauty, $6@10; Duchess, $4@8; Seckles, $6@10. Melons quoted at $15@25 per 100 for watermelons. 50@75c. per bbl. for nutmegs. Peanuts dull and weak at $2@2.25 for fancy Norfolk, $1.60@1.90 for good. Wilmington range at $1.40@2.00.

Flour.—There has been a fair shipping movement and prices have improved, closing with some decline from the highest figures as the arrivals are increasing.

Superfine State	$6 00 @ 6 40
Common extra do	7 00 @ 7 20
Good to choice do	7 25 @ 7 40
Fancy do	7 15 @ 7 90
Superfine Michigan, Indiana, Ohio, Iowa	6 00 @ 6 10
Extra do	7 80 @ 7 25
Choice extra do	7 00 @ 8 15
Shipping brands round hoop Ohio	7 55 @ 7 65
Trade brands do	7 70 @ 9 25
Good to choice white wheat extras	8 15 @ 9 40
Fair to very choice extra Minnesota	7 50 @ 10 00
Common to fair extra St. Louis	7 10 @ 9 65
Good to choice do	9 80 @ 10 40
Extra Southern	7 50 @ 9 75
Good to choice do	9 80 @ 12 25
Rye, common to fine	4 20 @ 5 05
Corn meal, Western	3 25 @ 3 65

Grain.—For wheat prices are in the seller's favor. Spring grades show most improvement. No. 2 Spring in store, $1.58@1.63; No. 1 do., $1.63@1.66; Winter red Western, $1.155@1.62; amber Western and Southern, $1.63@1.70. Rye is in fair demand, at 73c. for Canadian in bond, 75@78c. for Western, in store and afloat. Barley malt is firm, at $1@1.10, for two-rowed State, $1.25@1.35 for Canada West. Corn is in good demand and firm, at 64@64½c. for steamer lots of Western mixed, 63@64½c. for sailing do. Oats are firm, at 45@47c. for Western, afloat, 44½@45½c. for do. in store; 43@46½c. new white, 46@52c. for Ohio.

Hay and Straw.—Shipping is weak with a dull trade. Prime qualities are in the seller's favor with a good trade. Hay, old shipping, $1.05; retailing do., $1.30@1.45; new shipping do., 95c.@1; new retail do., $1.30@1.50; Clover, 80@85c.; Straw, long rye, $1.05@1.50; short rye do., 75@85c.; oat do., 70@80c.; oat new do, 55@60c.

Hops.—Now begins to come in sufficient quantities to establish a market. The market is so bare of stock that no difficulty is found at the moment in sustaining the ruling prices for old on all that comes forward. The impression is, however, that next week we will have lower prices. We quote new crop 50@55c. for prime, with some ordinary lots at 40c. Crop of 1871, fair lots 44@45c., with no prime here. Two bales of new California have been received; sold at 70c.

Poultry and Game—Is in good demand but with a good supply. Selling lower. We quote dressed poultry at 20@22c. for prime State chickens; 19c. for fair lots do.; 18@20c. for prime State fowls; 18c. for fair do.; 23@25 for prime turkeys; 22c. for common. Live poultry at 17@19c. for spring chickens, Western; 18@20c. for Jersey; 19@20c. for fowls; 22@23 for Jersey turkeys; 21@22c. for Western. Ducks at 75@$1 per pair. Geese at $1.75@2 for Western per pair; $2.50@3 for Jersey do. Prairie chickens, 88c. per pair. Woodcock, $1.37@1.50. Partridges, $4.25.

Provisions.—Mess pork has been very quiet, there being no disposition on the part of sellers to operate, since the stock reported Sept. 1st shows a reduction of 55,000 bbls. We quote mess in round lots $11.10@11.15 cash, or Sept. jobbing lots, $11.25; Western prime, $11; prime mess, $12.25@12.62½, according to brand. Beef is a shade firmer in tone; thieves are very scarce. Barrels quoted 6@7c. for plain, 7@9c. for extra mess. Tes, India mess, $16@20. Cutmeats quiet at former quotations: few Western goods in market. Bacon has sold very liberally for forward delivery of Winter cured meats. For lice, short clear has sold at 8½c., and long and short together, 8c. Spot, city long clear, 8¾@9c. Lard is firm at 9½c. for Western, and 8¾@9c. for city. Tallow weak at 9¼c. Stearine, 10@10¾c.

Seeds.—Timothy is higher, selling up to $4.20 for prime, down $3.90 for fair lots. Clover at 9¾c. for O., 10@10¼c. for Indiana and Michigan, 10½c. for State.

Tobacco.—Sales are made to a liberal extent to the home trade, but the shipping demand is restricted. Virginia, common to good lugs, 7¼@8¾c.; low to medium leaf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.	Heavy Grades.
Lugs	8½@9 c.	9 @ 9½c.
Common to medium leaf	9½@10	9¾@10¾
Good do	10¾@11	11 @12¾
Fine do	11½@12¾	13 @11
Selections	13 @14	15 @16
New crop Seedleaf.		
Connecticut and Mass. fillers	14	@16
seconds	26	@35
New York State running lots	10	@13¾
Pennsylvania do medium	12	@11
fair	15	@17
fine	18	@22
Ohio, running lots	10½	@15
Wisconsin and Western	8½	@10

Vegetables.—There are not many potatoes coming in, but there is quite enough for the demand. Tomatoes are higher. Sweet potatoes are selling rather more freely.

Early Rose, bbl., $1.75@2; Jackson White, $1.37½@1.50. Tomatoes, 50@60c. Squash, per bbl., 75c.@—, white and yellow. Cucumbers, ¥ bbl., 25c.@$1. Turnips, ¥ bbl., $1.00@—. Cabbages, $3@10. Marrow squash, ¥ bbl., 75c. Onions, red, ¥ bbl., $1.75@2; yellow, $2@2.25. Sweet potatoes, $3.50@6. Pickles, $1 per 1,000. Pumpkins, $7@8. Garlic, per 100 bunches, $10@12. Russia turnips, per bbl., $1@1.25.

Whisky—is steadily held at 95c.

Wool.—Trade is very dull, manufacturers buying only small lots. The stocks are very fair, and freely offered. We quote fleeces at 53@55c. for New York and Mich.; 50@62c. for Ohio; 55@58c. for Indiana and Wisconsin; 50@55c. for Illinois; 40@47c. for Texas fine; 30@35c. for do., coarse. Pulled, 52@62c. for extra.

ROCHESTER, N. Y., Sept. 6.—Flour active and firm, $8.25 for Spring; $9 red and amber Winter; $9.50@10 for white. Wheat is quiet and firmer at $1.50@1.55 for red; $1.60@1.70 for white. Old wheat sells at 5@15c. higher. Oats dull, 38@40c. for new, and 42c. for old. Corn dull, 60@62c. per bushel. Barley nominal at 75c. for two-rowed and 80@85c. for four-rowed. Butter is becoming scarce at 20@21c. for best; poor selling down to 18@20c. Eggs, 18@19c. per doz. Potatoes plenty at 50c. per bushel. Tomatoes, 75c.@$1 per bushel. Peaches are yet scarce, but will be plenty in a few days; they sell at $1.50@2 per basket of half bushel. Hay is scarce at $16@20 per ton.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Sept. 7, 1872.

THE market at Little Falls, for the week ending Sept. 7, was exceedingly dull, with a falling off in prices from last week's sales of about ¼c. on farm dairies and 1c. on best factories. The buyers' figures were so low that most of the factorymen refused to sell, preferring to hold for another week. The delivery of farm dairies amounted to 353 boxes, and sales were made at 11 to 11c.—four lots only realizing the latter price. The offerings of factories were between 7,000 and 8,000 boxes, but we heard of only five or six sales. We give the transactions as follows: Bethel, 13¾c.; Snyder & Maxtlebl, 12½c.; Van Hornsville, 13c.; Warren Center, 12½c.; Stratford & Salisbury, 13¼c.

The weather is cool and wet. There is a good growth of afterfeed, and the herds are yielding a good flow of milk for the season.

LIVE STOCK MARKETS.

NEW YORK, Sept. 7, 1872.

WITH a supply of cattle never before reached, and free arrivals of sheep, lambs and hogs, the markets are drooping. It is the opening season for poultry and some varieties of game birds, but still the demand for meats is very large, though not sufficient to prevent a decline. After cool weather, which gave a stimulus to trade, we now have it warm again. There have been rumors of the Texan cattle fever at the West, and positive proof is now given by a feeder who lost one-half of a drove of native cattle grazed after Texans, though the latter remained healthy. Too great care cannot be used to keep native and Texan stock apart, and not let the natives feed after the Texans until cold weather shall have destroyed all the ticks.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	11,963	76	2,895	34,031	38,797
" last week	7,837	53	2,413	27,411	37,317
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—We have several times announced the largest run of stock ever known; but the present week largely eclipses them all. Just think of about *twelve thousand* cattle in a single week, and then imagine where they all go to. True, about 3,000 of them were Texans, which fail to weigh down the native steers, but quite a good many of them were heavy, grades of 8@8¾ cwt. Notwithstanding that butchers bought largely, frequently taking a second lot at very low rates, to cheapen the first purchases, the stock was not all sold, and a heavy run is looked for next week. The prices obtained are far from uniform, holders being very anxious to close out, but the close is about 1½c. lower than the rates of last Monday, when we had a very strong market. Many native cattle were sold at 10@11½c., with fat lots at 12½c. and very few above 13c. Texans were 7½@9½c. The market was a dwelling one from the opening on Wednesday morning, when 60 cars arrived, until the close, Friday night, with 60 cars, the offerings on Thursday being 230 cars. It is really matter of surprise that the yards were so nearly cleaned out. The tendency is still toward a lower rate, for we hear of very large numbers pressing forward. In some parts of the West the pastures are drying up, and feeders are hurrying off their stock, but in most places the feed is very good. We have had an unusual fine summer for stock.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₩ lb	13 @ 13¼	13 @ 11
Good to prime	12 @ 12½	12¾ @ 13¼
Medium	11 @ 11½	12 @ 12½
Poorest grade	7½ @ 10	8½ @ 11¼
Average sales	@ 11½	12½ @

Hogs.—Arrivals are larger, but there is not much change in prices. Several cars heavy State hogs were sold alive at 5¾c. Prime Ohio would bring 5½@5¾c. City dressed Western are quoted at 6¾@6¾c., light pigs selling at 6¾@7c. Jersey dressed are worth 8@8¾c., if light. Trade good.

Milch Cows.—Two things materially injure the fresh cow trade. First, milk has declined to an unheard of price—fifty cents per forty quart can, and even then hundreds of cans were sent back—and the heavy decline in all kinds of cattle, but more particularly those with which cow beef competes. It is hard to sell the comparatively few cows offered, even at $30@50 for ordinary to medium, and $55@65 for good to prime milkers.

Sheep and Lambs.—Arrivals show quite an increase, and lambs are ¼c. lower, with an easier feeling in sheep, though they are not as plenty as lambs. Some of the prime 85 lb. Ohio sheep still sell for 7c., but it is rare that 7¼c. is reached. Poor go at 5½@6c., and fair to good at 6½@6¾c. Thin lambs run down to 6¾c., with medium at 8@8¾c., good to prime at 9@9½c., a few extras going at 10c.; but at the close, 9½c. is fairly the top of the market. A lot of 50 lb. Ohio sold at 8¾c.; some 70 lb. Shute at 9c.

Veal Calves.—Trade was good early in the week, and prices sustained, but now, with a decline in beef and mutton, veals are easier. Still the very finest milk calves are worth 9¾c. and occasionally sell at 10c., but prime go at 9½c. Grass calves vary from $5@8 each, very few of them being weighed.

LATEST.—Monday, September 9, 4 P. M.—Beeves.—Arrivals to-day, 135 cars at Communipaw, 103 at 100th St., and 30 at Weekawken, making 4,540 for the present market. Trade could scarcely be worse. The weather is very hot; dressed beef low and hard to sell at any price; very few live cattle go above 13c., and common sell at 9@10c., for natives and 8c. for Texans. Can't possibly close out.

Sheep and Lambs.—Arrivals for to-day's market, 12 car loads at Communipaw, 19 at 48th St., and 9 at 40th St., making 8,127 on sale. Sheep are ½c. lower, and lambs have declined a full cent from Saturday, it taking prime lots to exceed 8¾c., with good at 8c. Fat sheep sell at 6¾c.

Hogs.—Receipts to-day, Sunday included, 41 car loads at Communipaw and 23 at 40th St., making 7,026. Market steady at 5¾@5¾c. for live, and 6¾@7¾c. for dressed.

MARRIED.

FISKE—GOULD.—At the English Chapel, Geneva, Switzerland, on the 15th of August, by the Rev. Dr. DOUNTON, in the presence of Mr. HORACE UPTON, United States Consul, CAROLINE E., second daughter of JOHN P. GOULD, Esq., to JOSEPH W. FISKE, all of New York.

SPECIAL NOTICES.

Address F. P. Follett, 3 Asylum St., Hartford, Ct.

$5,000,000.

A PRIME INVESTMENT

AT A

LOW PRICE.

THE

CHICAGO AND CANADA SOUTHERN

FIRST MORTGAGE SINKING FUND 30 YEARS'

7 PER CENT. GOLD BONDS

INTEREST PAYABLE APRIL AND OCTOBER AT UNION TRUST CO.,

AT

90 AND ACCRUED INTEREST.

This road is the western link in the new AIR LINE from Buffalo to Chicago, and runs from the Detroit River to Chicago in nearly a straight line.

The road is a part of the same line as the Canada Southern and is being built by the same men, viz.: Milton Courtright, John F. Tracy, David Dows, Wm. L. Scott, Henry Farnam, R. A. Forsyth, John. M. Burke, M. L. Sykes, Jr., all directors either in the Chicago and Northwest or the Chicago, Rock Island and Pacific; George Updyke of the Midland Road; Sidney Dillon, Daniel Drew, John Ross, David Stewart, Samuel J. Tilden, Kenyon Cox, and other prominent railroad men.

The road, like the Canada Southern, will have steel rails (60 pounds to the yard) throughout; is practically straight and level; much shorter, and can be run with greater speed and safety than any other road connecting Buffalo and Chicago.

Twenty-five miles are finished and running; seventy-five miles more are so far advanced as to be finished by January 1, and the entire road will be completed during the ensuing year. Steel rails and ties for one-half the entire road have already been purchased.

The builders of the road control enough of its Chicago feeders to obtain for it a profitable business from the start, having projected the line to accommodate existing business, and having seen the necessity for another trunk line between Chicago and the Atlantic seaboard, located expressly with the view of obtaining the cheapest transportation practicable.

The branch lines will make the shortest connections between Chicago and Toledo, and Chicago and Detroit, as well as between all these points and Buffalo.

The Canada Southern Bonds, in every particular like these, were eagerly taken, the last of them several weeks ago, by the best class of investors, and were on the market a shorter time than any other railroad loan of like amount for years past.

The proceeds of these bonds will complete the entire line, and we recommend them with the same confidence as we did the Canada Southern, and regard them as in every way a choice security.

TO DAIRYMEN AND CAPITALISTS.

1,000 Acre Dairy Farm for Sale, with Stock, Implements, &c.

PRICE..... $40,000.

The subscriber offers for sale SPRINGWATER FARM, consisting of 1,000 acres, situated on Scugog Island, Ontario Co., Canada, and distant three miles from Port Perry, the terminus of the Whitby & Port Perry Railway, and close to the waters of Lake Scugog, where there is an abundance of fish and game.

This farm is specially adapted for dairy purposes, being watered with numerous springs, all the buildings being supplied with water from this source, conducted through pipes, as well as cattle yards, &c. There are on the place twelve houses for workmen, five large barns, horse and cattle stables, sheds, pens, &c., and one large dairy building, through which a stream of water constantly runs. The soil is first-class, never failing to produce heavy crops. There is a reserve of wood land in connection with it, sufficient to meet the requirements of the place. The farm would be sold in one, or two blocks of 500 acres each, the purchaser having the option to take cattle, stock, horses and implements at a fair valuation, made by disinterested parties.

TERMS OF SALE.—For the Land—$10,000 down, balance on mortgage for from 5 to 10 years, with interest at 7 per cent. per annum. For Stock, Implements, &c.—$5,000 down, balance in one year, without interest. Parties desiring to see the place, or to purchase, will please address WM. S. SEXTON, Port Perry P. O., Ontario, Canada.

A CHOICE FARM FOR SALE.—Situated 1½ miles south of the County Seat, Girard, Crawford Co., Kansas. Mo. River, Fort Scott and Gulf R. R., runs on the east side of the farm, about 200 feet from the east line. Contains 160 acres, all under fence; 125 acres under cultivation; 1,300 apple trees; 200 standard pear trees; 500 peach trees; with house, good corn crib and granary, hog lots, &c. It is well watered, and I will sell it at $40 per acre; one-third down, the balance in one and two years. Apply to H. W. CONVERSE, Fort Scott, Kansas.

FARM FOR SALE.—A GOOD DAIRY Farm, situated 4 miles from the Erie Railroad Depot, at Friendship, N. Y., containing 350 acres. Well watered, good orchard, buildings, and stabling sufficient for 90 cows. For particulars, address BUTTS & McCLUMPHA, Friendship, N. Y.

A NEW COLONY IN KANSAS!

At "SKIDDY," in Neosho Valley, on Missouri, Kansas and Texas Railway.

Under the auspices of the NATIONAL BUREAU OF MIGRATION.

THE AMERICAN COLONIST AND HOMESTEAD JOURNAL, containing Maps, with full particulars as to the Organization of the Colony, the Lands, Productions, Climate, Wood, Water, etc., SENT FREE on application to S. R. WELLS, Secretary of the National Bureau of Migration, 389 Broadway, New York.

Musical Instruments.

New Publications.

MUSICAL PEOPLE EVERYWHERE

Are invited to examine our new Collection of Church Music, entitled

THE STANDARD!

The following gentlemen, well known in Musical circles, contribute Tunes, Sentences or Anthems to its pages:

H. K. Oliver,	L. H. Southard,	C. P. Morrison,
L. W. Wheeler,	Nathan Barker,	M. Shuson,
T. H. Tanner,	A. C. Guttersen,	H. M. Monroe,
J. H. Tenney,	F. C. Cushman,	L. W. Ballard,
S. F. Merrill,	W. P. Dale,	Otto Lobb,
Dr. M. J. Munger,	S. Wesley Martin.	

The Editors are

L. O. EMERSON of Boston,
H. R. PALMER of Chicago,

of whose former publications 1,500,000 copies have been sold.

While designed to supply the wants of Chorus Choirs, Singing Schools and Conventions, its large supply of new Sentences, Motets and Anthems, render it an excellent

Book for Quartette Choirs.

Price, $1.50; Per Doz., $13.50. For $1.25 specimen copies will be mailed, for the present, post-paid, to any address.

We also commend our new **Sparkling Rubies,** (35 cts.) for Sabbath Schools, **Pilgrim's Harp,** (60 cts.) for Vestries, and **Hour of Singing,** ($1.) for High Schools.

MARION

UNITED STATES WATCH CO'S WATCHES.

REPORT OF JUDGES

AT THE SECOND

INTERNATIONAL INDUSTRIAL EXPOSITION

OF THE

MECHANICS' INSTITUTE:

TO THE EXHIBITION COMMITTEE:

Gentlemen: The undersigned, Judges in Department 1, Group 7, report that they have carefully and impartially examined, according to the "Instructions to Judges" transmitted to them, the several competing articles submitted for their judgment, and that the following are their conclusions:

No. 795. American Watches. Entered by

T. & E. DICKINSON,
Buffalo, N. Y.

"T. & E. Dickinson, exhibit American Watches, manufactured by the United States Watch Co., (Giles, Wales & Co.) Marion, N. J.

"These Watches are, without doubt, the best manufactured in this country."

ALLEN CHURCH,
GEO. I. BENTLEY,
B. S. BENTLEY,
} *Judges.*

I hereby certify, that the above is a correct copy of the report of Judges on Entry No. 795, and that the same was awarded First Premium. (Large Medal.)

D. B. McNISH,
Secretary.

Buffalo, N. Y., Dec. 29th, 1871.

Price List furnished the Trade on application, inclosing business card. For sale by the Trade generally.

Ask your Jeweler to see the MARION

WATCHES.

BEWARE of worthless imitations with which the country is flooded. To avoid imposition, see that the words MARION, N. J., are engraved on the plate over the Main-Spring Barrel. All others are spurious.

No. 13 Maiden Lane, New York.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and completeness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

LADY, EXCITEDLY.—Bridget! Bridget! Quick! Gracious me! Oh, Oh! There's Fido in the water. Drop the baby quick, and run for him, or he will get wet.

A SAFE AND RELIABLE ILLINOIS INVESTMENT, YIELDING 9 1-2 PER CENT. INTEREST.

We recommend the Bonds of the JACKSONVILLE, NORTHWESTERN AND SOUTHEASTERN RAILWAY, running from Jacksonville, Ill., to Mount Vernon, a distance of 125 miles, as ABSOLUTELY SAFE, on the following grounds:

1. Because they are the FIRST MORTGAGE on a railroad running through a thickly populated section of country, rich in agriculture and minerals. The Counties of Morgan, Macoupin, Montgomery, Bond, Clinton, Marion and Jefferson, all of which are intersected by the road, are all remarkable for their agricultural productions, some of them raising wheat which commands a higher price in the market than that produced in any other locality. At Virden, where the deposits of bituminous coal are seven feet in depth, a large business will be created so soon as cheap transportation is assured by the construction of this road to accessible markets.

2. Because the need of additional railroad facilities in that quarter, for the purposes of travel and for the transportation of minerals and the surplus crops, has been so strongly felt that the municipalities and prominent inhabitants have subscribed the money wherewith thirty miles of the road has been already completed, and is now in operation, and material purchased and arrangements made for the laying of twenty additional miles of track in time to move the autumn crops.

3. Because the following great railroads act as feeders to the road, viz.:—The Toledo, Wabash and Western Railroad; the Peoria, Pekin and Jacksonville Railroad; the Chicago and Alton Railroad; the Indianapolis and St. Louis Railroad; the Terre Haute Railroad; the Vandalia and St. Louis Railroad; and the Illinois Central Railroad. Moreover, the road forms a part of a through route from St. Louis to the seaboard.

4. Because it is a well-ascertained fact that nine-tenths of the earnings of Western roads arise from local traffic, and one-tenth only from through traffic. The great State lines of Illinois are probably the strongest corporations in the country, and their bonds are at a high premium. After completion, this road will unquestionably take its place among them.

By investing in these bonds, holders of Government and other high-priced securities will still hold a first-class security, while adding largely to their principal and income.

Price, 85 and accrued interest in currency. Pamphlets on application.

GIBSON, CASANOVA & CO.,

No. 50 EXCHANGE PLACE, NEW YORK.

TARRANT'S SELTZER APERIENT

SIGNALS OF DANGER.

Disease, like the rattlesnake, usually gives fair warning before it strikes. A failing appetite, a furred tongue, nausea, headache, want of proper action in the bowels, feverishness, lassitude, nervousness, an uneasy feeling in the stomach, etc., are all symptomatic of a coming attack of indigestion, biliousness, colic, fever, or some other positive form of disease. When thus menaced, resort immediately to

TARRANT'S EFFERVESCENT SELTZER APERIENT,

and thus avert the attack. Acting simultaneously upon the digestive organs, the liver, the bowels and the nerves, this refreshing and agreeable alterative will soon restore the system to its normal condition of health, regularity and vigor. Sold by all Druggists.

AGENTS WANTED FOR

"JESUS."

By CHARLES F. DEEMS, D. D.

His divinity established and rationalism routed. The most popular and rapidly-selling religious work ever issued. For Circulars, address UNITED STATES PUBLISHING CO., 411 Broome St., New York.

MINTON'S ENCAUSTIC TILES, FOR FLOORS.
GARNKIRK VASES, for Lawns and Gardens.
CHIMNEY TOPS, Etc.
MILLER & COATES, 279 Pearl St., New York.

"BEST" THRESHING MACHINES and Clover Machines. G. WESTINGHOUSE & Co., Schenectady, N. Y. ☞ Circulars sent.

GREAT REDUCTION. DUTY OFF TEAS AND COFFEES

Increased Facilities to Club Organizers. Send for New Price List.

THE GREAT AMERICAN TEA CO.

(*P. O. Box* 5643.) 31 & 33 Vesey St., New York.

BUY THE

Iron Clad Milk Can

The only one ever manufactured that will stand the hard usage to which they are subjected. For sale by all can makers. Stock and Trimmings for sale only by the IRON CLAD CAN CO., Send for Circulars. 51 Dey St., New York. ☞ All genuine are stamped I. C. C. Co.

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired, is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of fog, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY, St. Louis, Mo., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

SAM'L N. PIKE, Pres't.
DAVID ALLERTON, Vice-Pres.
W. C. MOORE, Treasurer.
A. WELLES, Secretary.

Arboricultural.

THE PASHIUBA PALM.

THE singular aspect of vegetation in the tropics is a theme which travelers seem never to tire of describing. Luxuriance of growth is seen everywhere, and even the mosses, which in temperate regions are very small and insignificant plants, in the tropics assume almost gigantic proportions, or at least spread so rapidly that the aerial parasitic forms cover and weigh down many a lofty denizen of the forest. The Brazilian forests are probably not surpassed by any in the world for luxuriance of its Palms; and one of the most curious of the many species to be found there is the one shown in the accompanying illustration. It is known as the *Pashiuba*, or Palm of Brazil (*Iriartea exorrhiza*). At first sight one might suppose that stakes had been driven around the stem for protection, but upon a closer observation these stakes are found to be true roots disposed in this strange fashion. Every one who has ever examined a corn field must have observed large aerial roots spring from the stalks near the ground, which occasionally reach the earth and penetrate and become true roots, supplying the plant with nutriment the same as those produced from the seed. Now these roots on this species of the Palm are produced in the same manner, but the first, or earlier roots, die and decay, leaving the outside row to support the stem, as shown. These roots are produced successively, each row springing from a point higher up the stem; as the fresh ones appear those underneath die off until on very old ones they are so high above the surface of the soil that a man can stand in the center with the stem immediately over his head. The roots are covered with small, hard prickles, which the natives of Brazil use as graters, upon which they reduce the cocoanut to a pulp.

THE LARCH PROBLEM.

I READ an article in the New York Weekly Tribune of July 24, 1872, with the above heading, in which it was stated by Prof. MATHEWS of Iowa Agricultural College, that European Larch used for grape stakes rotted at the ground so as to fall down in about three years (1). But he does not say what particular kind of European Larch he used. Now, to me, the words European Larch are quite indefinite. It is true it belongs to the genus Larch, but what species and variety does he mean? It is well known that there are several species (2), three or more in Europe, as well as in the United States. The Duke of Athol raised, on his plantation, the Brown Larch, which was excellent for cabinet work, and very durable; also the Pendulous Larch (sometimes called the Red Larch), excellent for ship timber, and quite durable for all purposes; also the common or White Larch (3), a small tree, the timber quite inferior, decays or rots early, being almost valueless. In the United States we have the two last named species, if not more. Would it be fair to condemn the whole genus on account of one or two inferior species while the remaining ones might be of superior quality? Rather let us abolish the names European Larch, American Larch, and give the name of the species as European Pendulous Larch, American Pendulous Larch, European White Oak, American White Oak, Southern Yellow Pine, Georgia Yellow Pine, not Southern Pine, or Georgia Pine (4), which would be too indefinite.

About one year ago I examined a gate post, one foot in diameter, of the Pendulous Larch species (sometimes called Red Larch), set in dry soil in 1844, which was perfectly sound, and appeared as though it might do good service for many years longer. For the last twenty years I have known many excavations made in St. Joseph Co., for buildings, fences, watering places, and ditches. In several instances, when getting from three to five feet below the surface, Larch trees would be found, the trunks quite sound, having to all appearances and according to the judgment of the oldest settlers, laid there from 50 to 100 years.

WILLIAM CRUM, Esq., made an excavation on his farm in 1871, and when about four feet down found the trunk of a Larch, about thirty feet long and eight inches in diameter at the large end, which was perfectly sound and nearly as hard as horn. In attempting to nail it on the fence, 20-penny nails would bend and break before half driven in, so he had to bore holes in the Larch to get the nails through; and many similar cases in St. Joseph Co., Indiana, could be cited, both in moist and dry soils. I have been told by several persons in this county that Larch fence posts that were set from fifteen to forty years ago are yet, to all appearances, quite sound.

WILLIAM W. BATES of Chicago, in an article on ship timber, as published in the report of the Agricultural Bureau for 1866, says:

"Hackmatack, or Tamarack, is the American Larch. It is a very important wood to the ship builder, every way superior to the European Larch, and is becoming rare in the United States. In the British Provinces it is a flourishing tree, not unfrequently found growing on hard and dry soils, and of superior quality. But in the United States Hackmatack is confined in its growth principally to the swampy parts of the pine districts of the Northern States. The timber is not large, but well adapted to the top and deck framing of vessels; it is also used for ceiling, beams, and stanchions, and the roots are excellent for knees, breast-hooks, sharffloors, and futtocks. For lightness, strength, tenacity and durability combined, Hackmatack is unequaled. It is cheaper in price than any other standard timber. Vessels have been built of Hackmatack in every port. The extreme stiffness of the planks was modulated for bending by the use of steam in the customary way, except that a moderate quantity of fish oil was supplied in the boiler for the purpose of aiding to soften the wood.

"Hackmatack is more tenacious of spike, or square bolt iron fastening, than most kinds of oak; and, weight for weight, in the green state or half seasoned, is considerably stiffer and stronger than White Oak. This is due, no doubt, to the gummy nature of the wood, as well as to the closeness and compactness of its fiber. The sapwood should be excluded in building. The heartwood requires no seasoning before use, as the shrinkage in weight in seasoning is less than two pounds per cubic foot. It affords very good treenails for fastening soft wood planks."

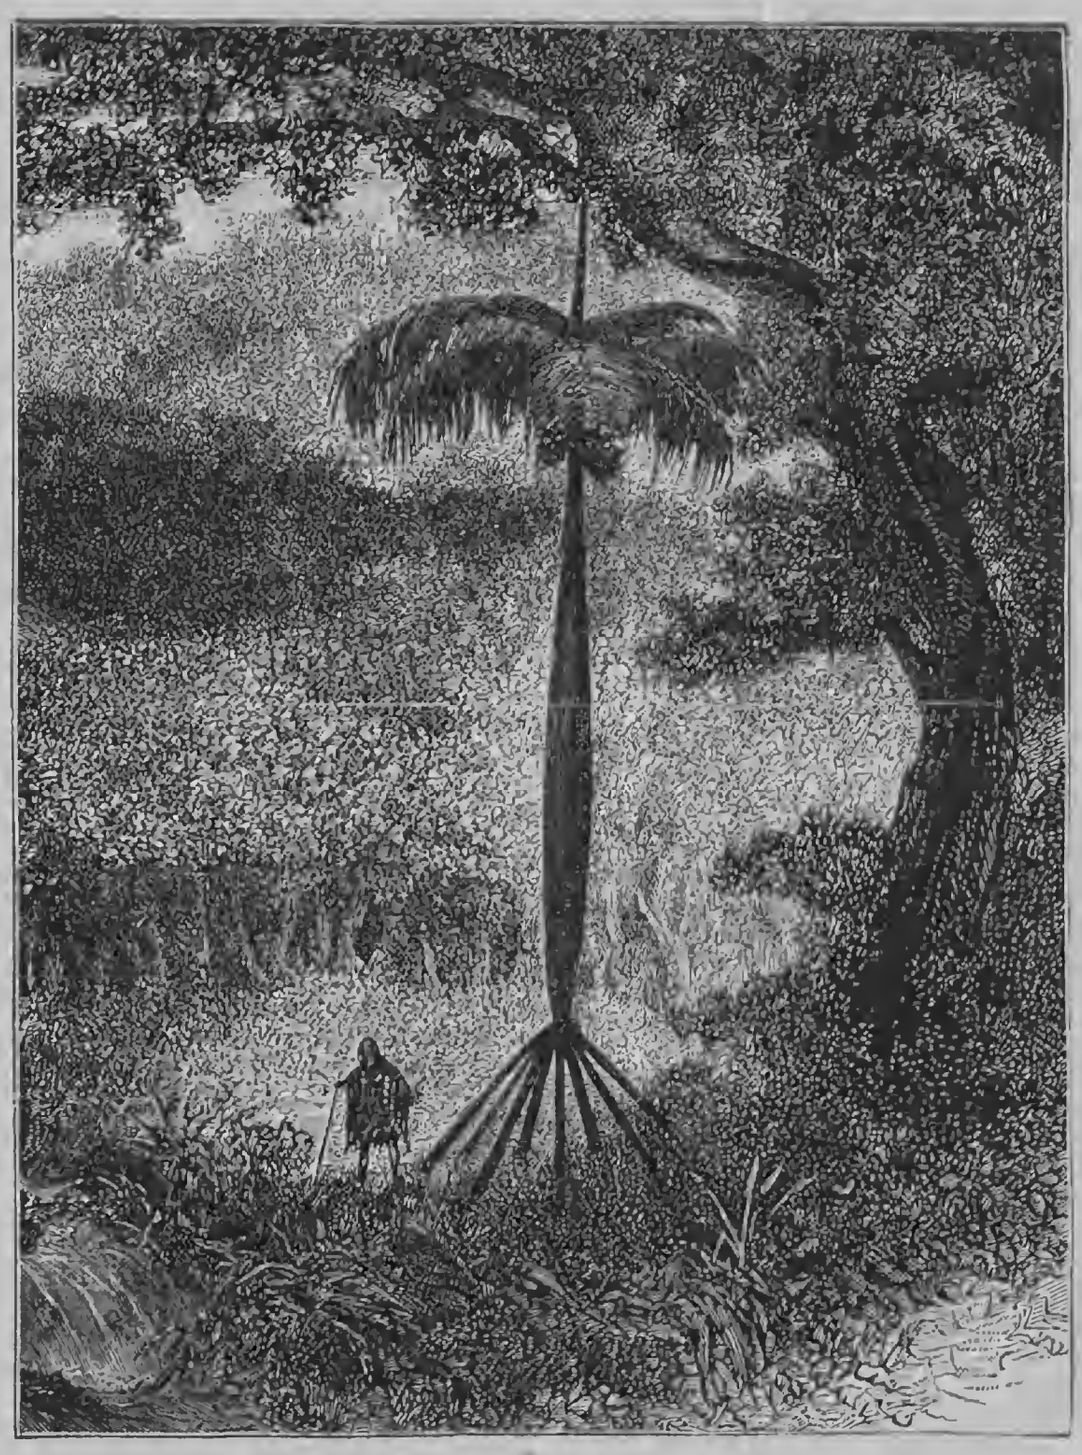
The American LLOYDS rate Hackmatack (the American Larch) as first-class, or standard for ship timber.

MICHAUX & NUTTALL, on the Sylva of Europe and America, also "Loudon's Arboretum, on the Forest Trees of Europe and America," contain lengthy articles on the Larch, fifty or more large octavo pages each; and, according to their accounts, the native Larch found in the United States is fully equal to that found in Europe or elsewhere, and both speak very highly of Larch timber, which was cut in the State of Maine and shipped to Europe at an early day as being of excellent quality and very durable for ship building and many other uses to which it was applied.

As for low and moist lands being the poorest places to grow the Larch, I think it a mistake; for it is conceded by most timber getters and ship builders that timber grown within sixty miles of a large body of salt water, or within a less distance of a large body of fresh water, is the best for durability. Only a few years ago France had timber getters getting out Pine, Oak and Larch ship timber, in the northern part of Michigan, where the land is low and swampy and surrounded on three sides by fresh water.

There has also been considerable ship timber got out, of late years, in Northern Indiana and Wisconsin, mostly on low and moist lands, and, as nature has located the Larch in low and moist soils in these States, therefore I should think such lands would be the proper place for its perfect production. Or have the annual fires destroyed the Larch on the dry soils and left it on the low and moist? At all events, I am sorry that some of our American writers will persist in extolling the European Larch above the American, and then say that their experience in the matter and knowledge on the subject is quite limited, and that we must rely upon European history for a full and better description, when, in point of fact, the Europeans make very little, if any, difference, rating the American Larch as of superior quality and fully equal to the European. Judging from the European writers, the American Pendulous Larch and the European Pendulous Larch are in all respects very much the same.

There is another species of Larch found in the United States—the small or White Larch, *Larix microcarpa*; this species is much smaller, grows only thirty to fifty feet high, with limbs well down toward the ground, the color of the wood a dirty white, and is quite inferior, in point of durability and usefulness. This species may have been confounded with the American Pendulus Larch. From what I have seen and learned about the American Pendulous Larch, I believe it to be a valuable, useful and durable timber tree, whether under ground, under



THE PASHIUBA PALM.

water or where the tide ebbs and flows, being wet and dry alternately, exposed to the weather or in the dry. Yet it may be that different soils affect it differently; but certainly it is a valuable tree, and its preservation and cultivation ought to receive more general attention. — ISAAC ESMAY, *South Bend, Ind.*

THE author of the above appears to be very anxious to have his opinion of the "Larch Problem" well known, for he has sent a similar article to several papers; and while we shall ever be ready to aid those who seek information in regard to the cultivation of the Larch, still we hope to correct errors such as are found in the above.

(1) We believe that Prof. MATHEWS' experience was not an isolated instance of the rapid decay of young Larch stakes; for even our Red Cedar, which is considered a very durable timber, will decay rapidly under like circumstances. When they are grown in rich soils the wood is of a soft, spongy nature, and trees only large enough for garden stakes are no more durable than any of our common forest timber; but upon the rocky or poor sandy soils of the east, where it requires twenty to fifty years for a tree to acquire a stem two to four inches in diameter, the wood becomes very compact and durable. If Prof. MATHEWS had used the heart wood of large trees the results would no doubt have been quite different.

(2) We are curious to know where Mr. ESMAY obtains his botanical information in regard to the different *species* of the Larch. It is true that writers in European Magazines sometimes refer to the different varieties as *species;* but no one need fear of obtaining seeds or seedlings of more than one species in ordering either from any foreign nursery. The same is true in regard to our native species, there being but one, not several as stated. In the older works of our botanists, reference may be found to *Larix microcarpa* of LAMBERT; but it was long ago decided to be only a variety of our common *L. Americana*, and all this talk of Mr. ESMAY about our several species is sheer nonsense which may mislead some one into purchasing trees of certain parties who may pretend to keep the trees for sale.

(3) Judging from the manner in which Mr. E. speaks of the Red and White Larch we conclude that he supposes these terms refer to the wood of these varieties; but it happens to be the flowers that gives these varieties their names. It is certainly true that the Red Larch has been for many years considered to be the best for timber; still both varieties are raised from seed gathered from the same tree. That the White Larch is only a variety of the Red is proved in every European plantation of this tree.

(4) When our learned arboriculturist shows to the world that all of the varieties of Larch which he names as species will come true from seed without any greater variation than can be found in White Oak seedlings, then we will be willing to let him have a hand in correcting the works of our great botanists. That our native Larch is a good timber tree, no one will deny; but experience has proved over and over again that it is inferior to the European for dry upland cultivation. Ours is a native of swamps and low grounds, while the European grows naturally on lofty mountains. When Mr. E. shows us the numerous species and varieties of our native species which he so glibly talks about we will test their value.

TO KILL AILANTHUS TREES.

I HAVE four Ailanthus trees that are very troublesome when they throw off their leaves in the Fall. I thought I would like to use their stems as posts upon which to train some vines, such as the American Ivy, Trumpet vine, etc. I shall cut off their tops, and will some of your people tell me how to preserve the stems and yet take away their vitality so that they may not sprout or throw off any branches or suckers from the bottom or roots? They are six or eight inches in diameter.—READER.

To kill Ailanthus or other trees, and at the same time to prevent the roots throwing up suckers, it is only necessary to girdle the stems in Spring, allowing the branches and entire top to remain intact through the Summer. In girdling, cut a narrow incision entirely around the stem at any desirable spot from the ground up to the lowermost branches. The incision should be about an inch deep and the same in width. The philosophy of the operation is simply this:—The sap runs through the inner sap wood up to the leaves, where it is assimilated preparatory to becoming woody fiber; but its descent to the roots, which is through the bark and outer sap-wood, is cut off by the incision, and thereby the roots obtain no supply of the needed nutriment during the entire season, and they die in consequence. The following Spring they can gather no sustenance from the soil to support either stem or branches, and these die. Now if you will girdle the trees next Spring, as we have directed, you can cut off the tops next Fall without fear of being troubled with suckers. Not far from where we write we saw this experiment tried upon a number of large Ailanthus trees with perfect success. We know of at least one gardener and writer on vegetable physiology who may take exceptions to our theory of the circulation of sap in the trees; but the effects of girdling are as we have stated, nevertheless.

Grafting or Budding.—Which method of propagating fruit trees is most practiced by nurserymen—budding or grafting—and which makes the hardiest, longest-lived and most productive tree?—L., *Milton, Vt.*

THERE cannot possibly be any difference, all theories to the contrary notwithstanding. A bud is only a modified cion inserted into a stock in Summer, instead of in Winter or Spring, as in ordinary grafting. The mode of grafting cannot have any effect in making a tree hardy, tender, long-lived or productive.

The Horseman.

THE TEETH OF YOUNG HORSES.

FROM what I have learned from the best veterinarians in the United States, and from the best authors in this and the old country, combined with my own experience, I am satisfied that the so-called wolf teeth in horses are nothing more nor less than supernumerary or sucking tusks, and appear on the upper jaw, about midway between the front and back teeth, in the mouths of colts between the ages of two and four years, and remain until crowded or pushed out by the permanent tusk; and as a great many horses never have permanent tusks, they remain all of the animal's life. And they also appear more frequently in the mouths of horse than of mare colts.

Perhaps some farmer will say, "I had a colt whose eyes began to discharge a thin, whitish fluid, and the eye became swollen and somewhat inflamed. I examined his mouth, and found that he had wolf teeth; I immediately took my hammer and punch and knocked the teeth out, and the colt soon got entirely well. I am satisfied that if I had not taken them out he would have become blind."

Another man may say, "I had a colt whose eyes began to discharge, and I examined his mouth and found that he had wolf teeth, but did not take them out then, and in a few weeks my colt became blind in one eye; I then extracted the teeth, and the other eye got well." Both of these men may say, "I know that wolf teeth will make horses blind."

While I respect their opinions, yet I say it far from proves that the wolf teeth were the cause of the trouble. Every parent well knows that when children are cutting teeth the gums are sometimes inflamed and very sensitive, and when the child brings his jaws together, or bites anything hard, it causes great pain, and starts the tears in the eyes. Indeed so painful are the gums that the physician has to be called in and the gums lanced. Now if the mother did not wash the face of the child and cleanse the eyelids of the dried tears and dirt, the eyes would soon become badly inflamed; and it is the same with the colt to a certain extent, as with the child. He attempts to chew his food, which gives him pain, the tears start in his eyes and soon dry upon the lids and collect dirt sufficient to cause inflammation of the eyes, which many times terminates in blindness.

But the question arises—Why did the eyes get well when the teeth were extracted? My answer is, in extracting the teeth you also extracted a small quantity of blood from the inflamed gum, thereby removing the cause, when the effects ceased in the eyes.

Then another qustion arises:—Is it not well to extract the teeth? I answer, No; there is an easier way: examine the mouth, and if you find that the colt is cutting a back tooth and the gum is badly inflamed, take a sharp knife and slightly cut the gum over the incoming tooth, wash the dried tears and dirt from the eyes a few times; or if you find the gums but little inflamed, feed the colt for a few days upon soft food, and wash the eyes with simple cold water. If the eyes have reached the stage of inflammation, cutting the gums or extracting the tooth will do no good to the eye, as it is then a disease of itself, and you had better go to a reliable veterinarian, or in his stead to your family physician, and get him to prescribe for you.

There is still another reason why I say let the teeth alone:—Many breeders are unable to distinguish the difference between a permanent tusk and a so-called wolf tooth; the result may be that the permanent tooth is broken off, thereby adding fuel to fire, and causing great pain to the colt. A portion of the first grinder is also sometimes broken off, the operator supposing it to be wolf tooth, when the front edge presents a sharp projection caused by its overlapping the tooth on the opposite jaw, which soon causes the tooth to decay and as a consequence the colt suffers with toothache for weeks. C. D. SMEAD, V. S.

Logan, N. Y.

REMARKS.—Here is a very fair statement of the whole matter of wolf teeth in horses; but as those teeth seem to be superfluous and the taking of them out is usually followed by good results, we should say—take them out when it can be properly done. —EDS.

LINSEED TEA FOR SICK HORSES.

WE find the following in an Agricultural paper, credited to an Exchange. We do not know its origin, but know enough of the matter to know that what is said in the extract is worth knowing:

"Linseed tea is not only a valuable restorative for sick horses, but is exceedingly useful in cases of inflammation of the membranes peculiar to the organs of respiration and digestion; it shields and lubricates the same; tranquilizes the irritable states of the parts, and favors healthy action. We have prescribed linseed tea in large quantities, during the past month, for horses laboring under the prevailing influenza; they seemed to derive much benefit from it, and generally drank it with avidity. 'Aside from the benefit we derive from the action of mucilage and oil which the seed contains, its nutritive elements are of some account, especially when given to animals laboring under soreness in the organs of deglutition, which incapacitates from swallowing more solid food. In the event of an animal becoming prostrated by inability to masticate or swallow more food, linseed tea may be resorted to, and in case of irritable cough, the addition of a little honey makes it still more useful. In the latter form it may be given to animals laboring under acute or chronic disease of the urinary apparatus, more especially of the kidneys.

"**To Make Linseed Tea.**—Put a couple of handsful of the seed into a bucket, and pour a gallon and a half of boiling water upon it. Cover it up a short time, then add a couple of quarts of cold water, when it will be fit for use."

"HIP-SWEENEY."

I HAVE a fine horse that received a severe fall about two months since. His right hip has shrunken greatly in the flesh, and it is pronounced "hip-sweeney." Can I get information from you by which I can effect a cure?—B. J. T.

THE "shrinking of the flesh" is due to the wasting away or lessening of the muscles, consequent upon the injury received by falling. If the animal ever regains the use of the limb as before the injury, these muscles will resume their normal size. No such disease as Sweeney exists—at least it is not recognized among Veterinarians as a disease. The horse's injury may be in the knee or the foot. If the horse picks up the foot clear of the ground the injury is not in the shoulder, but if the leg drags, with the toe on the ground, the injury may be in the hip. If the injury is in the hip or shoulder, a liniment composed of one pint of linseed oil, one ounce of chloric ether, and one-half ounce of oil of cedar, mixed, and applied night and morning to the shoulder, is good. If the trouble is in the joint, a counter-irritant of the acetate of cantharides should be applied occasionally over the parts affected; or the following stimulating liniment may be used:—Olive oil, spirits of camphor, and tincture of ginger—equal parts.

NOTES FOR HORSEMEN.

Horse Trouble.—Can you tell me what is the trouble with my horse? Sometimes, when he has been worked quite hard, he will have a sort of a fit. It will come on all of a sudden; he is taken with trembling, will shake all over, and will keep walking backwards, and sometimes it is a very difficult matter to hold him. Sometimes he falls down and seems to be blind; his tongue will turn black and the beating of his heart can be heard several feet. These fits seldom last more than ten minutes. If any one can tell me the cause and remedy, they will very much oblige.—A SUBSCRIBER.

OUR experience does not enable us to aid our correspondent by advice.

The Brain of a Horse.—We find the following in the Scientific American:—The brain of a horse seems to entertain but one thought at a time; for this reason continued whipping is out of the question, and only confirms his stubborn resolve. But if you can by any means change the direction of his mind, giving him a new subject to think of, nine times out of ten you will have no further trouble in starting him. As simple a trick as a little pepper, aloes, or the like, thrown back on his tongue, will often succeed in turning attention to the state of his mouth.

Horse that Kicks at Night.—R. P. S. is informed that the cause of a horse's kicking at night is oftener the result of nervousness and restlessness than of vicious propensities. It is a form of hysteria of the limbs. We have cured animals of this by attaching a round ball of wood weighing two pounds to the hind fetlock of the limb most used in kicking, by means of a strap two and a-half or three feet long. When he kicks he administers to himself a blow from the ball. He quickly finds that if he keeps still he receives no blow and ceases to kick.

Horse Gnawing his Shoulder.—I have a horse, who, when in the harness, when standing and sometimes when in motion, will lick and gnaw at the lower part of his shoulder. Can you, or any of your readers, tell me what is the cause of it and what will cure it.—A. P. COLE, *Wellsville, Allegany Co., N. Y.*

It is probably pain of some sort, though we cannot give any opinion without seeing the animal.

The Poultry Yard.

POINTS OF HOUDANS.

A CORRESPONDENT asks:—"How do you distinguish the sex of Houdan chicks?" We can only answer this question by giving the approved features of the sexes of these birds. Those of the cock are:—*Crest*, composed of hackle feathers, full and well arched, falling back, and right and left of comb, clear of the eye rather than over it. *Comb*, well developed, large, red and branching, broad at base, well indented, looking like a mass of coral with antler-like branches, inclining rather backward into the crest. *Beak*, curved, with nostrils wide and cavernous and of dark horn-color. *Eye*, large, full, bright and lively; color various. *Wattles*, thin, rather long, neatly rounded and bright red. *Muffling, or Beard*, full and thick under beak and reaching well back in a curve to the back of the eye. *Face*, red; the less seen the better. *Breast*, deep, full and plump. *Back*, wide and straight. *Wings*, moderate and carried well up. *Tail*, moderate, erect and well sickled. *Thighs*, the shorter the better. *Legs*, fine in bone, white shaded. *Toes*, five in number, the fifth curved upwards at the back. *Color*, broken black and white, as evenly broken as possible, free from colored feathers, which, however, though objectionable, are not a disqualification. *Carriage*, lively, brisk, well set up and spirited.

The marks of the hen should be:—*Crest*, large, compact and even, as in Polish. *Comb*, small, branching and coral-like. *Eye*, full and bright. *Wattles*, small, red and neatly rounded. *Muffling*, full, forming a thick beard reaching back to the eye. *Neck*, rather short, full-feathered and arched. *Breast*, full and deep. *Back*, wide and straight. *Wings*, moderate and carried closely to the body. *Tail*, moderate, fan-like, carried well up. *Thighs*, short. *Legs*, fine in bone, white, or shaded in color. *Toes*, five, the hind, or fifth claw, curved upward. *Color*, as in the cock. *Carriage*, brisk and rather upright.

Rule for Exhibition Coops.—Has the N. Y. State Ag. Soc. any rule governing the size of coops for fowls at its exhibition at Elmira? Please answer.—S. V. R.

WRITE to the Secretary of N. Y. State Ag. Soc., Albany, N. Y., who will inform you authoritatively.

Dairy Husbandry.

ABOUT BUTTER, AND HOW TO KEEP IT.

THE London Milk Journal gives several curious processes for preserving butter. They may not always be of the highest practical utility, still they afford more or less useful hints, and we present several of these methods, not only to show our readers what has been done in this direction, but to call the attention of experimenters and inventors to a branch of dairy economy quite too much neglected. During the past ten years there has been great improvement made in the manufacture of butter, and much interest is felt by dairymen in obtaining information concerning the best practice, from the setting of the milk to the salting and working of the butter; and here the matter has not unfrequently rested. What is needed now perhaps as much as anything connected with butter making, is a knowledge of the best plan of butter preservation. The loss, from ignorance or want of attention on this one point, is enormous, and it seems astonishing that people should take so much pains to manufacture a good article, and then allow it to run the chances of spoiling by being imperfectly packed, or put up poorly for market. We need to know much more than we do about the proper preservation of many kinds of food, but especially of butter, which so easily deteriorates from a luxury into a state intolerable for human food. We must regard, therefore, any attempt at the better preservation of this food as praiseworthy, and we think the Milk Journal is doing important service to manufacturer and consumer in opening up this most neglected branch of the dairy. We condense the account of the several preserving processes, giving simply the main features of each.

Daudrant's Method consists in rolling the butter in an envelope of thin vegetable paper, or tissue of some kind. The package is then plunged into a bath of liquid resin, and if it is found necessary to form a thicker crust of gum or resin, it is subjected to a second immersion.

In Girard's Method the butter requires to be well washed, so as to extract from it all the milky particles, and when this is satisfactorily done, the butter is spread out and a quantity of brandy or alcohol is poured over it. It is then kneaded together or worked up so as to effectually mix the two substances together. It is now made up into balls, and these are wrapped in paper which has been previously steeped in brandy or alcoholic spirit. This is afterward folded in another paper which will exclude the air as much as possible. For long sea voyages these packages are recommended to be packed in air-tight packages.

Belin's Process is first to beat up the butter between two linen cloths within 3 days after it is churned, in order to remove the whey or other matter which might cause rankness of flavor. The butter is now enveloped in paper prepared for the purpose by being coated with albumen made from the white of eggs. For every egg whose white is beaten up, about fifteen and a-half grains of chloride of sodium and half that quantity of salt of niter is dissolved in this albumen, but the niter need not be used except the butter shows signs of rancidity. The paper, however, is not to be considered ready until it has been before and after its preparation subjected to a great heat by means of a hot smoothing iron or some other contrivance. For long preservation, the rolls are to be kept in a dry place, especially if the weather is hot.

Redwood's Process consists chiefly in covering the butter with paraffine.

Brining Butter.—Butter is sometimes effectually preserved from the Summer to the Winter time by mixing it with salt and by merely inclosing lumps of it in canvass wrappers and putting these in jars containing a quantity of brine. The brine does not enter into the substance of the butter or render it in any way disagreeable. In the preparation of brine for butter we find it best to heat the brine scalding hot, skimming it and then allowing it to cool and settle, pouring off the clear, cold brine, which is then fit for use.

Sugar and Saltpeter.—These substances are regarded by many old and experienced butter makers as important aids in the preservation of butter. In one town among the butter factories of Orange Co., N. Y., the account of which was given in last year's RURAL NEW-YORKER, we referred particularly to these preservatives, naming the proportion to be used as thought best by Orange Co. dairymen. We now present the Milk Journal's formula. To ten ounces of fine salt add two ounces of saltpeter and two ounces of best brown sugar. The different ingredients are to be evenly mingled together and an ounce of this mixture used for every pound weight of butter and well worked in. Butter so treated, if close packed and kept in a cool, well ventilated place, it is said will keep sound for several years.

Another Rule—Is to mix one ounce of a finely powdered white sugar with one ounce saltpeter and two ounces large-grained Cheshire salt, and after incorporating them well together one ounce of the compound is used to every pound of butter. The mixture must be well worked into the butter, which is then closely packed into clean earthen crocks or jars. These are then set aside and kept in a very cool place, and the butter, it is asserted, will remain in good condition for years, and has been borne a voyage to the East Indies and still been serviceable. Butter thus packed, it is recommended, should stand untouched for two or three weeks after being packed, or it will taste rather unpalatable, but after that time it is said to acquire a fine marrowy flavor.

The French Method—Is to take one part sugar, one part niter, and two parts salt, and reduce them by grinding to a fine powder. Two ounces of this mixture is kneaded into about two and a quarter pounds of butter.

Restoring Rancid Butter.—Rancidity is caused by the presence of butyric acid, and such butter is well washed with good new milk, in which substance the acid is freely soluble. After this treatment it is to be washed with cold spring water.

Another Plan—Is to beat up a quarter of a pound of good, fresh lime, in a pail of water, and after allowing it to stand for an hour, until the impurities have settled from off the clear portion, wash the rancid butter in that.

Other processes for preserving butter are given, but we have selected those which seemed most practical and useful, adding remarks of our own when deemed necessary.

IMPROVING CHEESE HOUSES.

How to regulate temperature in curing rooms, for the hot weather cheese, has been a question of great interest to cheese manufacturers and dairymen for a long time. What is needed is something simple, cheap, and which requires but little attention. There are very few curing rooms in the country that are constructed with any regard to preserving an equable temperature. In hot weather they vary in temperature with the surrounding atmosphere and the cheese is often overheated, thus causing rapid fermentation and deterioration in flavor. The principle has been abundantly established by experiment that cheese will not retain a sweet, clean and nutty new milk flavor if exposed to high degrees of heat in curing. It has also been demonstrated by experiment that a temperature of about 70° Fahr. is the best range of heat in the curing process for desirable results. Notwithstanding these facts are generally known, little or no effort is made to improve cheese-curing rooms, and, in consequence, serious losses obtain year after year on account of cheese getting off flavor before it can be sold.

A large number of factories, on account of imperfect curing rooms, put their cheese forward in market during hot weather, at low prices, and often below its true value, because it is feared bad flavor will result from holding. The main question which is considered, it would seem, is whether to accept a known loss in making immediate sales, or to run the risk of holding and marketing an inferior-flavored product. In either case, a loss must result; whereas, if proper curing rooms were constructed so that cheese would not deteriorate, the matter of holding it must, not unfrequently, appear to be the better course. A very few factories have adopted the plan of double walls in the construction of curing houses, and they are of considerable service in regulating temperature. But for upper rooms something more is needed, and perhaps the plan proposed by a correspondent of the Nation may offer suggestions to inventors for arranging a cheese-curing house where temperature in hot weather may be controlled. It is as follows:

"It is proposed to lead a considerable number of small air-pipes several times through a very large box or bin, which is to be packed full of some light substance—moss, for instance—through which air could easily find its way. Water from above will be suffered to drip all over the top of this moss and will trickle through it to the bottom of the bin. Through the moss, from the bottom upward, a current of air will be forced, and thus produce rapid evaporation. This will cool the air-pipes, and they will cool the air which passes through them. To force a current through these pipes, and to force another through the moss, a very large, but light pair of bellows will be used, worked by a sort of clock arrangement in which the immediate motive power will be heavy weight. A horse will, with ten or fifteen minutes' heavy pull (once a day or once a week, according to the heat of the weather) wind this clock affair. It has a pendulum, and can be started or stopped at pleasure, and by altering the length of the pendulum, will run fast or slow, according to the heat. The cold air which the air-pipes furnish will be let through cheap wooden pipes to the various rooms of the house, always near the ceiling, and be turned on or off like the hot air of ordinary furnaces. The doors and windows will be kept closed in the hottest weather as carefully as in the coldest. There will be no flies or mosquitoes nor dust. The blinds will be open and rooms light. The air will be as dry as that outside, and the temperature will be between 60 and 70 degrees, according to what degree may be the healthiest. Such a machine will not cost much, and the projector thinks that the extra work it will enable him to do in the hottest weather will soon repay him for the outlay."

Mechanical powers like that above referred to for working the bellows, have been exhibited at some of our recent State Fairs applied to the common dash churn. This mechanical movement consists in a system of gearing driven by a heavy weight attached to a stout rope which is wound about the cylinder of the machine. The Scientific American, in speaking of the merits of this machine, says:—"Mechanical powers of this character have not heretofore been very acceptable for domestic purposes, some requiring too heavy weights and thus using too much rope. The inventor of this movement has produced a churn-power that seems very free from the objections named. It is very compact, occupying a space only of 18 by 20 inches, applicable for pumping water, and many other kinds of light work."

There may be other and better ways for regulating temperature in curing rooms during hot weather, and the plan suggested may be too complicated or faulty when put to a practical test, still we are in hopes that some plan will be inaugurated for overcoming the bad influences of heat in curing rooms. What is especially needed in this direction at the present time is a plan that may be easily applied to old factories so that the buildings now in use may be utilized. Considering the immense losses that are sustained every year in overheated cheese, and the great desire of cheese manufacturers for suitable curing rooms, the subject is well worth the attention of inventors. A cheap, simple and efficient plan, one that could be easily adopted at the factories, could be made to pay largely, not only to the dairy interest of the country, but to the inventor. Will not some ingenious Yankee turn his attention to this branch of dairy economy?

Industrial Machinery.

STEAM MOTOR FOR THE FARM.

HON. M. L. DUNLAP, Champaign, Ill., in an article on Steam Plowing, in the Chicago Tribune, after reviewing the various American steam plows, speaks of what is required of steam on a farm, and of a new steam motor he had recently seen tried at Peoria, Ill., in the following language:—We must have a farm engine for farm work that can grind and steam food for our animals, that can do our threshing, the pumping of water for stock, the making of cider and of wine, the sawing of wood, the pressing and bailing of hay, the cutting of forage for Winter feed, the making of drains, the grading of highways, and, lastly, for cultivating the soil and the preparing of hemp, flax and cotton for market. All these things the coming motor must do, and do them well and cheaply—more cheaply than the same work can be done by the use of horses, mules, or oxen. Nothing short of this will satisfy the American farmer, or induce him to invest in that poetic steed.

In "Parvin's Steam Motor" I think we have a traction engine that can be made to do all these things in the most satisfactory manner. I say that I think so, for this is simply an opinion, after having seen it in operation and moving six plows through tough sward land, at Peoria, and that with a ten-horse-power engine that had been made for the use of hard coal, but which had to be run with Illinois river coal—an article not suited to such an engine. But nothing short of a long-continued and thorough trial will make the opinion conclusive, or break its force.

The farm engine must have the power to move itself from field to field, from farm to farm, up hill and down hill, over uneven roads and soft meadows. This the Parvin motor will do, and it is only the question of the power of steam to propel it up hill and over rough grades, for it will not slip any more than if on a segment track, as in the railway up Mt. Washington. So much we know of its capacity, and it is on this fact that I predict its success as a farm engine, for all the work that may be reasonably demanded of it. If it can ascend steep grades, it cannot be expected to haul the same load as it would on level land; if it can go over soft ground, it cannot haul the same load that is possible on a smooth, solid road. I am aware that the opinion is general that no traction engine is capable of hauling a load over soft meadow or plowed fields, on account of the yielding nature of the surface, or up the more moderate grades of the prairie-swell, as it would be liable to slip on the hill-side, or sink into the soft soil; but such is not the case.

In this engine of PARVIN'S we have a solid truck like a railroad tie, upon which the engine moves—not like a sled-runner or a moving series of logs, as in some of the traction engines. This tie or track, in the engine that I saw at Peoria, is fourteen inches wide and four feet long, and has a small roller at each end, upon which the frame rests and moves along. This gives sufficient base for ordinary work, but may be greatly increased in size, if occasion should demand. There are five of these logs, or ties, that revolve on an elliptical frame, and are thirty-two inches from center to center. One of these is brought forward and dropped in front of the frame that sustains the hind part of the engine, and remains stationary until the engine has passed over it, when it is replaced by another, and this is taken up and again passed forward in turn. The front part of the engine rests upon two broad wheels, that sustain the coal and half the boiler,—the other part, including the machinery and water-tank, resting on this truck, as mentioned.

The engine is in no way attached to the track, but is operated as in a common locomotive, the track being simply laid down and taken up as the engine moves forward. The weight may be three or four tons. As I said before, the log, when it forms the track, does not move until the engine has passed over, when it is taken up and makes a forward motion of thirty-two inches at a revolution, until it comes again in place for the track, and does not move until the engine has made a forward motion of thirty-two inches, when another log takes its place; and thus, by an endless chain of five links it is kept in place. This is the great feature of the engine, and distinguishes it from traction engines that have thus far been put on trial. It will be seen that the power is in no way applied to the track as a moving power, but simply rests on it, and is applied to the engine direct by the means of endless chains that move the machine. Imagine, if you please, a locomotive moving over a twenty-foot section of rail, and some Titanic power dropping a section of rail in front and taking up one in the rear, as the engine moved forward, and you have an idea of how this new farm engine is to be propelled. It can be seen how this engine is to pass over soft meadows, through prairie sloughs, and over plowed land, and yet be able to have heavy loads after it.

Of its capacity for work, just what it will cost to do a given amount of work, and the profit it will be to the farmer over the use of teams, are questions yet to be settled by actual trial, and I leave this part of the discussion out of sight. That it will do all the things named in a satisfactory and workmanlike manner, I have no doubt.

Gordon's Self-Binding Harvester is the name of a harvesting apparatus recently tried near Toronto, Canada. A trial of three days occurred in wheat so ripe and dry that it could not be bound by hand in the ordinary way. It cut and bound the whole field, leaving the sheaves in good order and ready for the barn. It weighs 1,100 pounds, appears to be of light draft, does its work smoothly and easily. The bundles are tied with No. 19 iron wire. It is a new machine not yet on the market—not even patented.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Sowing Grass Alone.—*Sept.* 2.—In sowing a field of oats last Spring, I adopted the old plan of seeding down the land, by sowing grass seed at the time. I remarked at the time, in my Diary, that I had little faith in this plan, and wondered why farmers would stick to this old system of sowing grass seed with grain, instead of sowing it alone. I notice that my remarks in regard to this old-fogy system attracted the attention of at least one man, who writes to a Philadelphia paper that some folks make flippant remarks about things of which they know nothing; but he would really like to know if it would do to sow grass seed alone. All I have to say is, that if he don't believe that the best way to get a good stand of grass is to sow the seed alone, let him try it. To please my man JOHN, I allowed him to sow grass seed with the oats last Spring, but a severe drouth followed, and what little moisture there was in the soil the oats took out, and there was none left for the young, tender grass, and, of course, it died. As soon as the oats were cut and drawn into the barn, I said, "Now, JOHN, for an experiment, as you had several quarts of grass seed left over from your Spring sowing, I want you to sow it on an acre of that oat stubble."

"It's no use," said JOHN; "there is nothing to shade the young grass when it comes up, and it will surely die."

The seed was sown, however, and came up splendidly; and when the rag and other weeds appeared I had them mown and spread over the surface. To-day I have had coarse manure drawn from the barn-yard and spread thinly over the young grass. Now, if I do not cut a good, heavy crop of hay from that field next Summer, I will say so. The month of September is the time to seed down land to grass, and if no grain is sown with it, a good crop of hay can be secured next Summer. Sow the seed early enough to allow the grass to become well rooted before cold weather, and it will pass through the Winter uninjured. If the land is poor, top-dress it with manure at the approach of cold weather, or even after the ground is frozen If clover is desired, then sow the seed early in Spring, as the frost is leaving the ground.

That Pig-Pen.—*Sept.* 3.—All of my neighbors keep pigs or hogs; which of course is not a very strange thing to do in the country; but there is one among the number that, in addition to the pigs and hogs, keeps a very filthy pig-pen, and every time the wind comes from that direction the odor that flows into my office window is anything but agreeable. Now this very same neighbor has some land upon his farm that is so poor that it will not produce the lowest order of weeds; and he can ill afford to permit the fragrance of his pig-pen to escape, even if it annoyed no one but himself. The disagreeable gases that have escaped from that pig-pen in the past two weeks, I should think would have produced at least forty bushels of corn if condensed and put into some available form; but the owner of that laboratory has no faith in chemistry or scientific farming, therefore he puts no muck, soil, or other substance into his pig-pen to absorb both liquids and noxious but valuable gases, which might be saved in sufficient quantity to produce corn enough to fatten an equal number of hogs another year. Every hog will, during its life, manufacture and produce manure enough to raise sufficient feed to keep another the same length of time. I wonder how many farmers know that this is a well established fact? There are, it is true, a few men who understand the general principles of manufacturing fertilizers from the waste materials of the farm; and their lands grow richer and their purses heavier, while neighbors wonder at such great success, and think there must be some great secret at the bottom of it which only the few are permitted to know. My neighbor with the filthy pig-pen is very penurious—so much so that he wont subscribe for the RURAL NEW-YORKER, consequently will never see this account of his doings, nor profit thereby; but with all his close-fistedness he is blind in his economical eye, and cannot see the great ears of corn, the pumpkins, melons and plump grains of wheat, rye and oats that are constantly floating out of that pig-pen. If I was good at a lecture I would go through the Southern States and "cry aloud and spare not" those planters who allow their land to become poorer and poorer each successive crop, while rich fertilizing materials abound on every hand. It is a sin to treat mother earth in the way she is in many parts of the country, but the men who do it get their reward in poor crops and worn-out land.

Sports Among Plants.—*Sept.* 5.—Sports or variations from the natural forms and colors are common among all cultivated plants. A sport of the European Beech gave us the purple-leaved variety; another, the weeping; several other sorts originated in the same manner. Sometimes only a small twig or a few leaves will show some peculiar variation from the original type, and the gardener secures these and perpetuates them. In taking up some bedding plants to-day, I found two branches of an *Achyranthes aureus*, the leaves of which were dark purple, showing, what florists have claimed, that the *aureus* was originally a sport of the *A. verschaffeltii*; and in this instance it had gone back to the original. By taking cuttings from these purple-leaved branches, I could perpetuate this freak if it was desirable. All these sports are more or less inclined to change or run back to the original; and the gardener, in propagating, must be careful in selecting cuttings, in order to preserve the leading characteristics of the type. Hundreds of the beautiful variegated-leaved plants in cultivation are only sports of some plain-leaved sort; but they are none the less beautiful or valuable; and, knowing their origin makes them more interesting, and quickens our perception in looking for other freaks of nature.

The Garden.

THE VEGETABLE GARDEN.

BECAUSE the Winter is near at hand it is not best to forget that garden vegetables will be wanted next Spring and Summer. Everything that can be done this Fall to lighten next Spring's work will be so much gain; besides, there are other advantages in addition to that of saving time and labor. The garden plot, if manured and plowed this Fall, will be in a better condition for the reception of seeds next Spring than if this operation is delayed until planting time. The rains and frosts of Winter aid in the disintegration of the soil and spread of the liquid portion of the manure, and when again stirred in Spring it will be of a more homogeneous nature than if hurriedly plowed and planted in the usual manner of treating farmers' gardens.

Fall Planting of Seeds.—Those who have no hot-beds will find it advantageous to sow many vegetable seeds in Autumn. Lettuce, if sown now, and then given a slight protection by covering with hay or straw, will come forward very rapidly in Spring, and be in a condition for the table weeks before that sown next Spring. Every person who has a garden must have noticed that self-sown tomatoes come forward much earlier than those sown in the usual way in the open ground; and we have known them to give ripe fruit as early as plants started in a hot-bed. Few persons, however, seem to think that tomato seeds can be sown advantageously in Autumn, but the plan is perfectly practicable and should be tried by those who have no other way of obtaining early plants. The seeds should not be sown until the soil has become so cool that no growth will occur before Winter; then cover the entire surface of the seed-bed with coarse manure to the depth of one or two inches, a part of which may be removed in Spring. A warm, protected situation should be selected for the purpose.

Spinach for early Spring use may be sown now, and in the richest soil at command. When the ground begins to freeze, cover the plants at least two inches deep with dry, clean straw. If the weather should be favorable a portion of the plants will grow large enough for use during Winter, or as soon as they can be obtained in Spring.

Horse-radish roots that will be wanted for use next Winter should be lifted before the ground begins to freeze and stored in sand where they can be reached when wanted. All the small crowns and side shoots, not large enough for use, may be planted again this Fall.

Cabbage and cauliflowers for an early supply next season should be started now; and when the plants cease growing, lift and set in cold frames. The plants during Winter should be kept so cool that they will not grow, and be given light and air every warm day. They will withstand a pretty hard freeze without injury. Next Spring they are to be planted out the same as the late sorts.

Asparagus beds may be made this Fall, and the plants set out. Fall-planted roots will make a better growth next year than if the operation is delayed until next Spring. Those who have raised asparagus plants from seed sown in Spring know that they are very slow in making their appearance, and the chances are that one has to fight Summer weeds or see his plants smothered when not more than two or three inches high. But by sowing the seed in the Fall, in good, rich ground, the plants will get such a start in Spring before the rapid growing weeds appear, that keeping them clean is comparatively an easy task.

Those who have vegetable gardens may find plenty to do in them at this season, preparatory for Spring operations; and it is not best to wait until the last hour has arrived before making a beginning.

GARDENERS' NOTES.

Elevated Hot-Beds.—JAMES WEED, Muscatine, Iowa, writes the Gardener's Monthly:—"In a former communication I ventured the opinion that the use of stable manure for heating hot-beds is a wasteful practice, and that fire heat can be substituted to great advantage, especially for forwarding plants in Spring, when the season may require only a low degree of artificial heat, or a full amount. The objection to "fire hot-beds," for forcing in Winter, that they are inaccessible, I propose to obviate by elevating hot-bed frames on posts seven or eight feet high, with walks between them; each frame being provided with efficient shutters; the walls of the enclosure to be made as perfectly non-conducting and tight as possible, also the floors constituting the walks between the frames above, so that when the shutters are closed over the sash, frost will be excluded in the coldest weather, without the aid of artificial heat."

Brussels Sprouts.—*Brassica oleracea.*—Will you please tell me what are Brussels Sprouts, and how to cultivate?—TRUCY DORR, *Lewis Co., N. Y.*

BRUSSELS SPROUTS are a variety of the cabbage, and distinguished from other sorts of the cabbage tribe by their manner of growth, the tall stems being covered by small buds of an inch or two in diameter. These sprouts are the parts used. This vegetable is seldom cultivated for market, although largely grown in some neighborhoods for home use. The same cultivation is required as for the common varieties of cabbage. Sow seeds in April or May, and plant out in July.

Caterpillars on Cabbages.—One of my friends, a landed proprietor in the Ardennes, informs me that, one day, having observed in the garden of a peasant that the cabbages were covered with fronds of the common bracken (*Pteris aquilina*), he inquired the reason, and was told by the owner that it was a certain and easy way to get rid of the caterpillars. My friend made a trial of the remedy himself, and he assures me that in one hour after the bracken-fronds were lain on, not a caterpillar was to be seen. Elder leaves are said to be equally efficacious.—E. M., "*Belgique Horticole.*"

Club-Foot in Cabbage.—Will some of your many readers be so kind as to inform me what is the cause of cabbage heading in the ground.—A SUBSCRIBER.

THE large excresence which you call "heading" at the roots, is known as club-foot, and is caused by an insect which punctures and deposits its eggs in the root of the plants while they are small. The free use of lime and salt upon the seed-bed will sometimes entirely prevent the attacks of this insect.

To Destroy Ants.—Fill small vials two-thirds with water, and add sweet oil to float on the water to within half an inch of the top. Plunge these upright in the ground, leaving only half an inch standing out, near the nest or runs of the ants. The ants will come for a sip, and go home to die. No insect can exist with oil stopping up its spiracles or breathing pores.

Fall Planting Onions.—A correspondent of the RURAL NEW-YORKER prepares his ground and puts out onion sets in the Fall. He says they may be planted under grape vines, out of the way of the plow, and will be all pulled, bunched, or sold before the vines have put forth their foliage in Spring

Entomological.

THE HARLEQUIN BUG.

TO MR. BUG CATCHER OF THE RURAL NEW-YORKER:—DE FOE, in his modern History of the DEVIL, speaks of the old Cloven Foot as a noun of multitude, and says the DEVIL and his angels are certainly no inconsiderable number. He relates a conversation between a Venetian nobleman and a priest, where the exact number was given—so many millions, thousands and hundreds, down to seventy-five and *a-half*. The half, in my humble opinion, I send you in a vial of alcohol. If I am mistaken, please tell me what it is, where it came from, and, above all, how to get clear of it.

SHERMAN, in his "march to the sea," opened PANDORA'S box in North Carolina, and among the lesser evils this bug stands foremost. No one ever saw it here till after the war; and no one has ever found any means against its ravages, save catching them one by one and killing them. No kind of poultry will touch one, not even to the Muscovy duck, whose capacious maw is the general receptacle of all kinds of garbage, both animal and vegetable.

Now for a few of its habits. It is deceitful beyond measure, indicating its close relationship to the old gentleman in black, and, I doubt not, with a good lens you could see its hoof parted in twain. It is tormented with an insatiable crotomania, and its procreative powers seem to be unlimited. Where there were but few yesterday, appear hundreds to-day; and when they fairly take to a garden, you may say "good-by, vegetables." Its favorite food is the broad-leafed collard, and, without mutilating the plant, it seems to suck its life-blood, when it withers and dies. We call it the Terrapin Bug in this country, because it resembles the speck-backed terrapin. The different sizes are the same bug of different ages.—N. B. H., *Stanhope, Nash Co., N. C., August 24.*

YOUR guess that the bugs sent were some relation to the "Evil One," is not far out of the way, inasmuch as it is known as the Harlequin Cabbage Bug (*Strachia histrionica*, HAHN). Its beautiful colors remind one of a clown dressed to personate his Satanship, as pictured in books written for feeble minds. The first account we have of the habits of this bug appeared in the Practical Entomologist of 1866, Vol. I., p. 110, from the pen of Dr. GIDEON LINCECUM of Texas. He stated that two years before it appeared in his garden, attacking and destroying cabbages, radishes, mustard, and other cruciform plants. Since the date named, this insect has been gradually making its way East and North, and has already reached Southern Kansas at the West and Virginia and North Carolina at the East. We have had occasion to mention it several times during the past two or three years, but do not know of any better way of destroying than to gather by hand or with small sweep-nets. If the people in the infested regions do not begin to do something towards its extermination, they will have to abandon all plants belonging to the cabbage family.

STINGING ANT.

(Mutilla Coccinea)

I SEND you what I consider a rare insect; it is considered very poisonous. I kept it alive for several days in a glass jar; was going to inclose it in a vial, but it was too small, so I send it to you in a corn cob (there's no patent on the envelope), with a little earth at the bottom. I intended to send it alive, but was afraid it would gnaw its way out, or somebody might get stung by it. If you put your heel upon it on the ground, and the ground is not very smooth and hard, it will run along unharmed, apparently. Corner it, and it will fight like a savage, not only with "tooth and toe nail," but sting also. Please state whether it is beneficial or not. I have a suspicion it lives upon cut and other worms.—D. D. HENRY, *Arkansas.*

THE common and scientific names of this insect are given above. The specimen you send is a female. The males have wings but cannot sting. It is not a rare insect, for it is found in all parts of the country, and we have frequently taken it near this city. The females have a very powerful sting, but are no more poisonous than many of the large species of wasps. In some of the Southern States this Mutilla is called the "Cow Killer;" why, we do not know.

LLOYD ARNOLD is informed that the "Cow Killer," which he sends with a few beetles, is the same as mentioned above in our reply to Mr. HENRY.

To Destroy the Rose Slug.—The Practical Farmer says:—"We absolutely know, and have proved, that carbolic acid soapsuds, injected over the bush through the rose of a common syringe, is an effectual cure for the rose slugs, and also death to caterpillars."

Floricultural.

FASCIATION AND HYPERTROPHY.

PROBABLY there are very few readers of the RURAL NEW-YORKER who have not noticed plants in their gardens with stems that appeared to have been made up of several, combined and growing together, often flattened out in a ribbon form; these are known among scientific gardeners as fasciated stems. We have often seen beets set out for seed producing fasciated stems; and it is not unfrequently the case that believers in signs and witchcraft look upon such freaks among vegetables as sad omens of death in the family; or that something very bad is going to happen to the one who set out such plants. Asparagus beds, which are highly manured, are more or less likely to produce plants with fasciated stems, and such instances come more particularly under the head of hypertrophy, which means an over or excess of a nutriment.

Weeds along the roadsides are often seen with fasciated stems, but less common than among cultivated plants; and although among vegetable physiologists these peculiar forms are considered as the legitimate results of disease, still the horticulturists accept them as varieties that can in many instances be perpetuated as unique additions to our gardens. The *Lilium monstrosum rubrum* and *album* are probably the most familiar instances of the fasciated stem among our more common plants, although such forms are not wanting in other families and orders.

SEDUM VIRESCENS, COCKSCOMB FORM.

Perhaps one of the most singular, unique and beautiful instances of fasciation is that of the Cockscomb variety of *Sedum virescens*, as shown in the accompanying illustration copied from the Gardener's Magazine. The natural form of this species gives us only small slender stems and leaves; but the specimen from which our illustration was taken measured seventeen inches broad, and was one solid pulpy mass. Of course cuttings taken from this plant are likely to perpetuate the freak; and in a few generations the habit becomes fixed. Now when any of our readers happen to meet with specimens of fasciation among plants we hope they will not consider it the work of the Devil, or a sign that some one of the family is to die prematurely, but look upon it as no uncommon freak among plants.

FLOWERING PLANTS IN TEXAS.

WILL you please give a list of twelve of the best flowering plants to give a constant supply of flowers during hot, dry weather? I have tried a great many kinds, and find but few that will "fill the bill." The Petunia and the Gomphrena will withstand hot and dry weather, and Zinnias, Dianthus, Phlox, Portulaca and Balsams will withstand any amount of hot weather if it is not too dry. Many flowers that are indispensable in your Northern gardens are worthless under our hot sun—such as Asters, Stocks, Pansies, etc. I would like very well for some of your numerous Southern readers, who have more experience than myself, to give a list of the flowers best suited for a long, hot, and sometimes dry season.

Also, in reply to a former query, you say you think all the Amaryllis would be hardy in Texas "where the ground does not freeze over two or three inches." But we are told to plant Amaryllis so that the "neck will be even with the surface of the ground." If the ground then freezes "two or three inches" will not the Amaryllis be killed? Or must I cover with straw to prevent freezing?—DICK HOPSON, *Sherman, Texas.*

HAD you merely asked for the names of twelve good plants for your locality we should have tried to answer the question; but your comments on those named show that you are far better qualified to give the desired information than ourselves. Such notes and comments about the plants you cultivate are just the information that many of our subscribers in the Southern States desire, and we hope to hear from you again on the same subject. Of course, where there are severe frosts in Winter, Amaryllis bulbs would require protection.

FLORICULTURAL NOTES.

Best Roses at a London Show.—At a London exhibition of roses, Mr. B. R. CANT exhibited 48 superb cut roses, "of large size and full substance," which are thus referred to:—The following were extra fine:—Mdlle. E. Verdier, Marquis de Mortemart, a beautiful white Rose; Horace Vernet, Barronne de Prailly, salmon pink, very fine; Marie Baumann, Duke of Wellington, Black Prince, Elie Morel, Marguerite de St. Amand, Ferdinand de Lesseps, Antoine Ducher, Abel Grand, Prince Camille de Rohan, Fisher Holmes, Mons. Noman, Beauty of Waltham, and Mdlle. Therese Levet, all hybrid perpetuals. The following Tea Roses were also good:—Marechal Niel, Souvenir d' Elise, La Boule d'Or, Souvenir d'un Ami, and Rubens. Messrs. Paul & Son, Cheshunt, were second, with Oliver Delhomme, Madame Laurent, Marie Baumann, Paul Verdier, Xavier Olibo, August Newman, Francois Louvat, Alfred Colomb, Beauty of Waltham, General Jacqueminot, Duc de Rohan, Dupuy Jamain, Marie Rady, Souvenir d' Elise Vardon, and Marie Van Houtte, very fine, the two last named being Tea-scented varieties.

Dicksonia Antarctica of Australia.—This, (see engraving), which is one of the noblest, is perhaps the hardiest of the tree ferns. The trunk varies considerably in thickness, and in its native country attains a hight of thirty feet or more, bearing at its summit a magnificent crown of dark-green lance-shaped fronds from six to twenty feet long, beautifully arched, and becoming pendulous with age. The crown itself is frequently ten or twelve feet across, and is evergreen.

DICKSONIA ANTARCTICA.

Striking Cuttings in Wardian Cases.—It is probably not generally known that cuttings of many kinds of plants not usually increased with facility by amateurs, may be rooted easily in a Wardian case in the sitting-room. I have just seen several of the simplest kinds of these cases filled with nicely rooted little plants of Conifers, Hollies, and various other choice evergreens.—W. R.

The Naturalist.

THE WOODPECKERS.

THESE I deem very useful in destroying injurious insects infesting forest trees; they may be seen, according to their habits, climbing a tree or seeking caterpillars on a post. They are divided into the Ground, and the Tree Woodpeckers. The Golden-winged Woodpecker is one of the most common of our ground Woodpeckers. It is about 10 inches long from the tip of the bill to the end of the tail; it is brown above, with lines and streaks of black, crossing horizontally; the head is pale bluish-ash, and has a movable crest, margined with deep scarlet; tail black, of which the under part is rich golden yellow; throat and neck is of a yellowish-red color, with a slight pink tinge; the upper throat has two black streaks, about ⅜ inch wide and extending in an oblique direction from the bill; breast, white, with a dull yellowish tincture, and spotted with round spots of black. The first and second quills are longest, and each has a yellow stripe in the center of each quill; the wings underneath are also of a rich yellow color. The Latin name is *Colaptes auratus*, SWAINSON.

The Red-headed Woodpecker, *Melanerpes formocivirus*, BONAPARTE, is the handsomest Woodpecker we have; it is black above, with the exception of a white band, which crosses the back just above the tail; below, it is white, rather dusky; the head in Autumn is rich scarlet, but in Summer is more pale; its habits are similar to those of the former, with the exception that this is not a ground Woodpecker.

There are two other Woodpeckers found about here; these are the Hairy Woodpecker, *Picus villosus*, LINN, which is smaller than either the Red-headed, or the Golden-winged Woodpeckers, and the Downy Woodpecker, *Picus pubescens*, LINN, which is even smaller than the Hairy Woodpecker. There are many other kinds of Woodpeckers found in the North and South, but these are the only ones that are found in the Atlantic States. S. L. WILLARD.

Utica, N. Y.

SAGACITY OF THE CAT.

How many times we are almost made to think that certain animals are possessed of reason in lieu of instinct. If one has a favorite animal that can be taught to perform many feats, he is certainly fond of the animal; but when he performs some act which seemingly indicates thoughtfulness, we almost believe he has reasoning powers.

Such an animal was our old cat, Tabby. She seemed to know whether a thing was right or wrong. We all had a great aversion to kittens around the house. We liked them well enough in their place, but did not want them under foot, and Tabby found it out by experience; so she kept her two black little ones at the barn, safely nestled in the straw, out of sight (as she thought), until they were of sufficient size to help themselves a little, when one day she brought one to the house and showed it to some of the family to ascertain if it was welcome. When she found that it met with a good reception she made her joy manifest in many different ways, and soon brought the other kitten to bear the first one company.

After that she lived as happily as a cat matron usually does, except that her path was occasionally crossed by the dog who delighted in teasing her "kittys." But she was always on hand to punish him if he attempted to molest them.

One day the dog, as usual, left a part of his food in his dish, and went away a short distance and sat down to watch it. Then the kittens, thinking no harm, emerged from their hiding place and were quietly eating when the dog flew at them with all his might, intent on a good race; but he no sooner reached them than Tabby (who had been watching) flew at him and he was obliged to stand back. Then she hurried her little ones along to a secure hiding place and leaving them went back to further punish the dog. Tabby scolded a long time with angry looks, and then finding him still obstinate she stepped up to him and gave his ears a sound cuffing, scolding away all the time. At this he sneaked off and she went back to comfort her "kittys."

Beaver Dams, N. Y. E. S.

Educating Birds to Sing Tunes.—This is done in the town of Fulda, Germany, where they keep regular educational institutions for bullfinches. They place the young birds into classes of six to ten each, and keep them in the dark, turning a little hand-organ for them when they are fed. Finally, the birds commence to associate the music with the feeding, and when hungry commence to sing a few notes of the tunes they hear daily. Those who do this are at once placed in a more cheerful room, when some light is admitted. This encourages them and makes them more lively; then they like to sing and are soon taught more. The most difficult part is the first starting of the birds, some of which have to be kept a long while in the dark, and on starvation rations, before their obstinacy is overcome. In order to teach them several tunes they receive (after being thus first taught in classes) private instruction from the little boys of Fulda, each of whom has a few private pupils of this sort. Their education lasts nine months, when it is completed, and the birds sent into the world as accomplished performers. The principal markets are London, Paris, and New York. They are valued in Europe at twenty dollars for every tune they can sing, so one who can sing three tunes costs sixty dollars.

Domestic Economy.

TO COOK MUSHROOMS.

Our friend Josh Brown has asked for modes of cooking this fungus. No one has sent us any reply. We know there are others who will be glad to learn, through the Rural New-Yorker, how to do it. Hence we copy from an English paper the following modes:

The peasants of a great portion of Europe eat mushrooms raw with salt and dry bread, and wholesome and good they are. The true flavor of mushrooms, nevertheless, is greatly hightened by cooking; and cook them how you may—a broil, a stew, or a fry, with the simple addition of butter, salt, and pepper, and they are excellent. There is one rule that should always be observed in whatever mode they are cooked, and that is that they should be served up quickly and hot. The following modes of cooking mushrooms may prove useful at this season of the year.:

Mushrooms au Gratin.—Take twelve large mushrooms about two inches in diameter, pare the stalks, wash, and drain the mushrooms on a cloth; cut off and chop the stalks. Put in a quart stew-pan an ounce of butter and half an ounce of flour; stir over the fire for two minutes; then add one pint of broth; stir till reduced to half the quantity. Drain the chopped stalks of the mushrooms thoroughly in a cloth; put them in the sauce with three tablespoonfuls of chopped and washed parsley, one tablespoon of chopped and washed shalot, two pinches of salt, a small pinch of pepper; reduce on a brisk fire for eight minutes, put two tablespoonfuls of oil in a *saute* pan; set the mushrooms in, the hollow part upwards; fill them with the fine herbs, and sprinkle over them lightly a tablespoonful of raspings; put in a brisk oven for ten minutes, and serve.

Curried Mushrooms.—Peel and remove the stems from a dish of full-grown mushrooms, sprinkle with salt, and add a very little butter; stew them gently in a little good gravy or stock. Add four tablespoonfuls of cream, and one teaspoonful of curry powder, previously well mixed with two teaspoonfuls of wheat flour; mix carefully, and serve on a hot dish, with hot toast and hot plates attendant. Mind the "curry stuff" is good, says an Indian friend, and not too much of it. The word "curry," by itself, it seems, being merely the Tamul word for "meat." The large horse mushroom, when half or three parts grown, and curried in this fashion, will be found to be delicious.

To Pot Mushrooms.—The small open mushroooms suit best for potting. Trim and rub them; put into a stew-pan a quart of mushrooms, three ounces of butter, two teaspoonfuls of salt, and half a teaspoonful of Cayenne and mace mixed, and stew for ten or fifteen minutes, or till the mushrooms are tender; take them carefully out and drain them perfectly on a sloping dish, and when cold press them into small pots, and pour clarified butter over them, in which state they will keep for a week or two. If required to be longer preserved, put writing paper over the butter, and over that melted suet, which will effectually preserve them for many weeks, if kept in a dry, cool place.

To Pickle Mushrooms.—Select a number of small, sound, pasture mushrooms, as nearly as possible alike in size; throw them for a few minutes into cold water; then drain them; cut off the stalks, and gently rub off the outer skin with a moist flannel dipped in salt; then boil the vinegar, adding to each quart two ounces of salt, half a nutmeg sliced, a drachm of mace, and an ounce of white pepper-corns; put the mushrooms into the vinegar for ten minutes over the fire; then pour the whole into small jars, taking care that the spices are equally divided; let them stand a day, then cover them.

Another method.—In pickling mushrooms, take the buttons only, and while they are quite close, cut the stem off even with the gills, and rub them quite clean. Lay them in salt and water for forty-eight hours, and then add pepper and vinegar, in which black pepper and a little mace have been boiled. The vinegar must be applied cold. So pickled they will keep for years.

Mushroom Stems, if young and fresh, make a capital dish when the supply of mushrooms is limited. Rub them quite clean, and after washing them in salt and water, slice them to the thickness of a shilling, then place them in a saucepan with sufficient milk to stew them tender; throw in a piece of butter and some flour for thickening, and salt and pepper to taste. Serve upon a toast of bread, in a hot dish, and add sippets of toasted bread. This makes a light and very delicate supper dish, and is not bad sauce to a boiled fowl.

Breakfast Mushrooms.—Clean a dozen or so of medium-sized, place two or three ounces of nice clean beef-dripping in the frying pan, and with it a tablespoonful or more of nice beef gravy. Set the pan on a gentle fire, and as the dripping melts place in the mushrooms, adding salt and pepper to taste. In a few minutes they will be cooked, and being soaked in the gravy and served upon a hot plate, will form a capital dish. In the absence of gravy, a *soupcon* of "extractum carnis" may be substituted.

Mushroom Soup.—Take a good quantity of mushrooms, cut off the earthy end, and pick and wash them. Stew them with some butter, pepper, and salt in a little good stock till tender; take them out, and chop them up quite small; prepare a good stock as for any other soup, and add it to the mushrooms and the liquor they have been stewed in. Boil all together, and serve. If white soup be desired, use the white button mushrooms and a good veal stock, adding a spoonful of cream or a little milk, as the color may require.

Mushrooms and Toast.—Peel the mushrooms, and take out the stems. Fry them over a quick fire. When the butter is melted take off the pan. Squeeze the juice of a lemon into it, Let the mushrooms fry again for some minutes. Add salt, pepper, spices, and a spoonful of water, in which a clove or garlic, having been cut into pieces, has soaked for half an hour; let it stew. When the mushrooms are done make a thickening of yolks of eggs. Pour the mushrooms on bread fried in butter, and laid in dish ready for them.

Baked Mushrooms.—Peel the tops of twenty mushrooms; cut off a portion of the stalks, and wipe them carefully with a piece of flannel dipped in salt. Lay the mushrooms in a tin dish, put a small piece of butter on the top of each, and season them with pepper and salt. Set the dish in the oven, and bake from twenty minutes to half an hour. When done, arrange them high in the centre of a very hot dish, pour the sauce round them and serve quickly and as hot as you possibly can.

Mushrooms a la Creme.—Trim and rub half a pint of button mushrooms, dissolve two ounces of butter rolled in flour in a stew-pan, then put in the mushrooms, a bunch of parsley, a teaspoonful of salt, half a teaspoonful each of white pepper and of powdered sugar, shake the pan round for ten minutes, then beat up the yolks of two eggs, with two tablespoonfuls of cream, and add by degrees to the mushrooms; in two or three minutes you can serve them in the sauce.

Mushrooms on Toast.—Put a pint of mushrooms into a stew-pan, with two ounces of butter rolled in flour; add a teaspoonful of salt, half a teaspoonful of white pepper, a blade of mace powdered, and half a teaspoonful grated lemon; stew till the butter is all absorbed, then add as much white *roux* as will moisten the mushrooms; fry a slice of bread in butter, to fit the dish, and as soon as the mushrooms are tender serve them on the toast.

To Stew Mushrooms:—Trim and rub clean a half pint of large button mushrooms; put into a stew pan two ounces of butter, shake over the fire until thoroughly melted; put in the mushrooms, a teaspoonful of salt, half as much pepper, and a small piece of mace pounded; stew till the mushrooms are tender, then serve them on a hot dish. They are usually sent in as a breakfast dish, thus prepared in butter.

Mushrooms a la Provencale.—Take mushrooms of good size. Remove the stems, and soak them in olive oil. Cut up the stems with a clove of garlic and some parsley. Add meat of sausages, and two yolks of eggs to unite them. Dish the mushrooms, and garnish them with the forcemeat. Sprinkle them with fine oil, and dress them in an oven, or in a *four de campagne*.

Mushrooms En Ragout.—Put into a stew-pan a little stock, a small quantity of vinegar, parsley, and green onions chopped up, salt, and spices. When this is about to boil, the mushrooms being cleaned, put them in. When done, remove them from the fire, and thicken with yolks of eggs.

Mushrooms with Bacon.—Take some full-grown mushrooms, and having cleaned them, procure a few rashers of nice streaky bacon, and fry it in the usual manner. When nearly done, add a dozen or so of mushrooms, and fry them slowly until they are cooked. In this process they will absorb all the fat of the bacon, and with the addition of a little salt and pepper, will form a most appetizing breakfast relish.

Mushrooms En Caisse.—Peel the mushrooms lightly, and cut them into pieces. Put them into cases of buttered paper, with a bit of butter, parsley, green onions, and shalots chopped up, salt and pepper. Dress them on the gridiron over a gentle fire, and serve in the cases.

HOW TO PICKLE PORK.

The first essential is a good sweet barrel—not a molasses barrel, but a new barrel, made from well-seasoned white oak staves without any sap in them. If there is any sap in the staves the brine will leak through and the pork will be spoiled with rust. Good salt is another requisite for pickling pork. Salt known in the West as "ground alum," or the salt made at Syracuse, N. Y., is good.

When the hogs are killed and the flesh perfectly cold (not frozen), lay the hog on his side and cut straight down the center of the back until the knife strikes the bone. Then turn him on his back and cut through the ribs close to the back-bone, so as to meet the cut made from the other side. Cut off the head, and your pig will be in halves; cut the leaf lard from the ribs; cut off the shoulder and ham; cut out all the lean meat from the side; then cut the side in strips about three inches wide, cutting across from back to belly. When you have your sides all cut in this way, take your barrel and cover the bottom three-fourths of an inch deep with salt; then take your pieces of pork and set them on edge, the skin next to the barrel, and bind them round in the barrel, making the circle smaller and smaller, until you have a perfect layer, and as close together as you can well press each piece with the hand; then fill all open spaces with salt. Then, with a square-ended stick or maul pound the pork down until it is smooth on the top. Then cover with salt about five-eighths of an inch deep. Then proceed with another layer, as before, and so on till the barrel is filled to within three or four inches of the top. Then make a brine as strong as can be made with salt and boiling soft water; skim the brine and let it cool. When cold, pour it on the meat until the barrel is filled to within two inches of the top. Put a board, cut to fit the inside of the barrel, on top of the pork, and lay upon it a "nigger-head" rock weighing about forty pounds. Keep the barrel in a cool place if you have one; if not, keep it almost anywhere out of the sun, and you will have good pickled pork as long as you keep it *completely covered with brine*. I have never lost any pork put up in this way, and I have kept it in cellars, on the first floor, and in the garret.

Lysander W. Babbitt.

Council Bluffs, Iowa.

A Good Cement.—The following has been tested for cementing wood, iron, leather, glass, paper and almost all kinds of household materials: Best isinglass, half an ounce; rub it between the hands until it breaks down into a powder, put in a bottle, and put as much common acetic acid to it as will just wet the mass through, stand the bottle in some boiling water, and the paste will dissolve and be fit to use at once; it will be solid when cold, but is easily warmed up the same as before. Leave the cork out when warming, or there is danger of bursting the bottle.

The Swine-Herd.

PIG-PEN PAPERS.

A Swine Herd-Book—Is kept by Mr. W. Smith, one of the most extensive breeders of swine in Michigan, in which a regular record is kept of every boar or swine selected for breeding. How many breeders of swine do the same thing. How many exercise the same care in selection and intelligence in breeding that breeders of Short-Horn, Jersey, Ayrshire, and Devon cattle, and of thoroughbred horses find it profitable to do? We should like our swine-breeders who are systematic and have such records to tell our readers about them.

Inquiries for Swineherds.—W. P. S. asks if any one has given in our columns the history of the Jersey Reds. No.

Pomological.

POMOLOGICAL GOSSIP.

Pioneer Peach.—A correspondent of the Kansas Farmer at Fort Scott, Kansas, speaks of a seedling peach which he has propagated by budding, and to which he has given the above name as surpassing "everything in the line so far." He adds:—It ripens the last of July; a free-stone, three times as large as Hale's Early, beautiful and excellent; color, where exposed to the sun, white, with a shade of yellow and very deep blush on cheek; in the shade the coloring is in stripes, that run together, making it rather mottled with pink and white; flesh white, or a very little inclined to be golden; deep red about the stone, which is of medium size. I have four trees. They are four years old from setting, and bore, perhaps a little more than a peck of peaches each, this season. The tree grows well, has fine, large deep green leaves, the fruit disturbed but little with curculio. This peach is certainly twice the size of any other of its season, and of very superior quality. It is said to be the best by all who have seen and tried it."

The Triomphe de Jodoigne Pear.—The Horticulturist says:—Dr. Swazy, of Louisiana, says that as a market fruit it lacks color, as a dessert fruit, quality, but accords to it great value for hardiness, productiveness, and large size. In a specimen orchard of a hundred varieties of pears on quince, set out in 1854, there were but two trees that outgrew the Triomphe de Jodoigne, and not a dozen that excelled it in productiveness—most of them were as good and nearly all of them better. This was in our garden. Out in the big orchard, where we had over five hundred varieties of the pear in bearing, the Triomphe de Jodoigne did not equal either in beauty or quality one fifth of them. Few excelled it in soundness, productiveness or vigor or luxuriance of growth. Our experience has been on a strong clay loam—a light sandy soil may produce a different result.

Peter Wylie No. 1 Grape.—The Gardener's Monthly says:—We have from Dr. Wylie, July 31, a bunch of this new grape, which reached us in excellent condition. It weighed half a pound. It is a white grape, or as some of our modern critics would say, a green grape. The berries are about the size of the Royal Muscatine, and the flavor so delicious, that if we could always depend on its doing as well as this in the open air, we might shut up our cold graperies at once. Though the skin is as thin, and the appearance much as a foreign grape, it still retains somewhat the firm flesh of the American parent; and it also has, but in a less degree, the peculiarity of dropping some of its berries easily from the stems, after a long voyage."

The Best Blackberry.—In answer to an inquiry, Maj. Freas of the Germantown Telegraph says:—"We have tried them all, we believe. Our last love is with the "Missouri Cluster," we think it is called, sent to us by our friend Sam. Miller. It was certainly larger, and we thought more luscious. We doubt, however, if there is any really better, all things considered, than the New Rochelle or Lawton."

New Peaches.—The Rural World says:—We have fruited Busky Hill, Moore's Favorite and Harker's Seedling peaches this season for the first time. We cannot conceive of anything that took us as much by surprise as these fruits. Busky Hill is one of the most delicious peaches we have ever tasted. Their only fault is coming during the hight of the season.

Figs in Ohio.—Gen. Jas. T. Worthington is successful as a grower of figs on the high cliffs on the banks of the Scioto, near Chillicothe, O. His fruit is very fine this season. He says high lands should be chosen for fig planting.

Ford's Hoosac Thornless Blackberry is highly spoken of by a Western paper: "For prolific production, and sweetness of taste, it rivals all varieties of which we have knowledge."

Legal Fruit Weights in Iowa.—The Iowa Legislature is reported to have passed a law fixing the legal weight of a bushel of undried apples, pears, peaches or prunes, at forty-eight pounds.

Farm Economy.

ANALYSIS OF CORN COBS.

CONSIDERABLE discussion has recently arisen in Agricultural journals and at farmers' meetings upon the nutritive value of corn cobs when ground and fed to animals. It is a very common practice among farmers to grind the whole ear of corn, and feed the product to milk cows, working oxen and often to horses. This plan we have adopted to a considerable extent at our own farm, but we have had some misgivings as to the utility or advisability of the practice. With the view of ascertaining as nearly as practicable the exact nutritive value of cobs, we selected a nice ear of Lakeshine corn from a bundle hanging in our counting room, and removing the kernels, subjected the cob to analysis. It gave of—

Water	7.48
Crude fibre	30.95
Ash	1.16
Carbohydrates, fat and albuminoids	60.41
	100.00

The amount of fat was not accurately determined; but it was proved to be more than one per cent. The amount of water is probably smaller than it would have been had the corn been taken directly from the grain house instead of the warm room in which it had been hanging for some weeks. The result of the analysis proves that there is in corn cobs a considerable amount of fat-producing and flesh-forming constituents. In the sixty per cent. of carbohydrates, albuminoids, fat, etc., are found the elements which have nutritive value. In order that we may obtain some idea of its comparative worth let us contrast it with dry straw of some grains.

Wheat straw contains about 30 per cent. of carbohydrates, 2 per cent. of albuminoids, and 1½ per cent. of fat; oat straw, 38 per cent. of the first named substances, 2½ of the second, and 2 of the third; rye straw, 27 of the first, 1¼ of the second, and 3.10 of the third. It is shown that cobs have a higher value than wheat or rye straw, and they equal in nutritive constituents the best quality of oat straw.

These results indicate the utility of feeding them to our animals, provided there are no objections arising from the bulk and difficulty of reducing the cob to a sufficiently fine powder. It is not probable that cob-meal can be perfectly digested unless comminution is carried to an extreme point; and therefore, the finer the cobs are ground the higher the value, and the less the liability of gastric disturbance. It is certain we do not give sufficient attention to the matter of grinding any of the grains fed to our animals. They should be ground as fine as possible, in order that they may be easy of digestion, and in order that the nutritive substances may be fully utilized. There is a positive loss in feeding out coarsely-ground grains of any kind, and in grinding the cob with the corn, give special attention to the work of comminution. The corn in the ear should be thoroughly dry before it is carried to the mill, and there will be less difficulty in reducing it to a fine powder.—*Boston Journal of Chemistry.*

ECONOMICAL NOTES.

The Application of Lime to Soils.—W. asks:—"Does lime benefit all kinds of soils? If not, what soils are not benefited by it? When is the best time to apply lime to meadow lands, and how is it applied to get the best results?" Lime does benefit all soils—that is, lime is an essential to the productive power of all soils. But all soils do not require that it be applied to them; for some soils contain lime enough for plant food—such as limestone and marly soils. But lime may be applied profitably to all soils that have not a limestone base. It affects most favorably those soils which contain the most organic matter, which it assists in decomposing. It renders sour soils sweet. It should be applied as a top dressing in dry weather—say the last of Summer or early Fall. Stiff clays and tenacious loams, in sandstone regions, and where felspar, mica and quartz predominate, are greatly benefited, and more lime may be applied to them profitably than to light, sandy soils. From 50 to 200—and sometimes more—bushels per acre are applied by farmers accustomed to use lime. But it is not necessary that these amounts should be applied annually. Once in five to twelve years many farmers think often enough to apply it. We shall be glad to publish the practices of our readers who use lime.

☞ Any Books desired, not named in this List, will be furnished on receipt of price.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.
BY X. A. WILLARD, A. M.,
Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer on Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential Journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address
D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE RURAL'S FALL CAMPAIGN!

ANOTHER TRIAL TRIP!

NEW QUARTER—NEXT YEAR.

A SPLENDID PREMIUM

FOR EVERYBODY!

THE RURAL NEW-YORKER is offered for the ensuing Three Months, from October to January, On Trial, for ONLY FIFTY CENTS; and for Fifteen Months—say from Oct. 1, 1872, to Jan. 1, 1874—for $3. This is giving Thirteen Numbers for Fifty Cents, and Sixty-Five Numbers for $3. To every person sending $3 for fifteen months, as above, or $5 for ten Trial Subscribers (from Oct. to Jan.) we will send as a Premium, postage paid, the Splendid Steel Engraving entitled

BIRTH-DAY MORNING,

OR THE GARDENER'S PRESENT.

Size 24x30—retail price $5. This beautiful engraving is illustrated (on a small scale) and described on next page. Every non-subscriber to MOORE'S RURAL should note this announcement—and every subscriber can secure the picture by either obtaining Ten Trial Subscribers, at 50 cents each, or subscribing for 15 months, (and selling or giving away the paper for the next three months, or until his present subscription expires.)

THIS RARE OFFER

Is worthy the attention and effort of every reader. The engraving is first class in every respect, and, if sold, would be worth at least $5 per copy; but copies are not for sale, and, as we own the plate, this beautiful and artistic Picture *can only be obtained by subscribing*, or procuring subscribers, as above stated.

AM. INST. FARMERS' CLUB.

SEPTEMBER 10th the Club met for the second time since vacation. There were, in the outset, perhaps a dozen present outside the reporters. Later the room filled up. The proceedings were not notable, except that an hour's time was consumed by a gentleman who glorified North Carolina for its resources, detailing them, and comparing the advantages it offers to immigrants with those offered by the Northwest. The comparison betrayed great ignorance of the Northwest, and, of course, great partiality for North Carolina. There is little doubt that that State has great resources—what State has not?—but freemen will go where there are free schools, free speech and liberality and hospitality on the part of the people among whom they settle. They will, also, as surely follow the isothermal line of population as the sun will rise and set; and although the elevated lands of North Carolina may bring its temperature to the average of that of the zone of population, it is one side of the great central artery of travel, and will not readily divert emigrants thither until this country has more than doubled its population. There is no doubt that the vast and superior resources of North Carolina and other Southern States will ultimately be appreciated and utilized; but it will be when a broader spirit of enterprise, a more Christian charity, more liberal notions of the rights and privileges of free men, and when the love of, and respect for, universal education shall have taken possession of the people and stimulated the making provision for furnishing it to every child within its boundaries, free.

Osier Willow.

A Virginian asked how to prepare Osier willow for market, price, etc., etc. He was informed that if a half-dozen men in that section were to devote all their farms to its culture they would flood the market; that the Hartford Willow Ware Co., Hartford, Conn., grow on the Connecticut bottoms all the willows they use, and can probably give him information concerning price and demand. But he was not informed that there are machines made (which have been advertised in this paper) by which the willow is rapidly and cheaply stripped of its bark, and prepared for market; that in almost every Northern State willow ware is manufactured from American (and some imported) willows, and has become an important industry; nor was he advised to gain correspondence with some manufacturer who will start a factory near him, buy and make up his willows, create a demand for labor, and hence for farm products at home. But that is what we should advise. The inquirer's address is S. W. SEMPLE, Hampton, Va. We give it in order that those who may desire to correspond with this enterprising Virginian may do so.

Cabbage Worms and Cabbages as Food.

A New York correspondent asked if cabbage-worms were poisonous, and if it would be unsafe to eat cabbages infected with them. One member advised feeding cabbages and worms to cattle. Another, who was called by the respected Commander of the Club "a high authority in entomology," (which, by the way, is very much further from the truth than the Commander generally strays,) asserted that the worms were not poisonous, "but just as good as the cabbages and a little better."

Land Laudations.

The Club was bored with long letters from Tennessee and Kansas, puffing soils, climate, and depicting the advantages of these respective places for settlement. Indeed, the Club has become, to a large degree, the organ of railroad land companies, land agents, colonization societies, etc., etc. And it will continue to be so as long as the papers continue to publish their long-winded advertisements—a practice we shall not adopt.

Culture of the Norway Spruce.

An Ohio correspondent asks some one to tell him how to cultivate the Norway Spruce, beginning with planting the seed; also, whether seeds a year old would germinate. It was replied that seed a year old, if carefully kept, will germinate; but fresh seed is better. He was advised to pay $1.50 for some one of the practical works on Forest Tree Culture—FULLER'S or BRYANT'S—and read all that has been said on the subject; or, better still, visit some practical propagator and learn the trade, just as other men, in this and all other professions, have to do.

Ashes, Lime and Plaster for Fall Wheat.

A New York correspondent asked the best time for sowing a mixture composed of two parts of lime, two parts wood ashes, and one part plaster, upon Winter wheat—whether in the Fall, just after the wheat is sown, or in the Spring. He was advised to apply his lime and ashes to the soil before sowing the wheat, and the plaster as a top-dressing to the plants, late in the Fall or early in the Spring.

RURAL NOTES AND QUERIES.

Bonds of the Cincinnati, Richmond and Fort Wayne R. R. Co.—To investors in Mortgage Bonds, a thoroughly safe security, with profit combined, is most desirable for permanent investment. A rare chance for such investment is afforded in the Cincinnati, Richmond and Fort Wayne Railroad Company's First Mortgage Seven per cent. Gold Bonds, offered for sale by Messrs. WINSLOW, LANIER & Co., at 92½ and interest. They are a First Mortgage on a finished road, which, by a contract for interchange of business with three prosperous and powerful corporations, controls in its favor a vast amount of business; and they are guaranteed, by indorsement on the Bonds, by the Cincinnati, Hamilton and Dayton R. R. Co., the Pennsylvania Co., and the Grand Rapids and Indiana R. R. Co. The road is entirely completed and in operation, and extends from Fort Wayne, Indiana, to Richmond, ninety miles, in the State of Indiana, and connects the Pittsburg, Fort Wayne and Chicago Railway, the Grand Rapids and Indiana Railroad, and the whole system of roads under the control of the Pennsylvania Company in Indiana and Michigan, with the Cincinnati, Hamilton, and Dayton Railroad to Cincinnati and Southern Ohio and Indiana. The road is leased for 99 years to the Grand Rapids and Indiana Railroad Company, and operated by it for the joint account of the guarantors, and by a contract entered into between the Grand Rapids and Indiana Railroad Company, the Pennsylvania Company, lessees of the Pittsburg, Fort Wayne and Chicago Railway, and the Cincinnati, Hamilton and Dayton Railroad Company, for reciprocal interchange of business, all these Companies agree to throw all their freight and passenger traffic which may be appropriately done over this road.

The National Agricultural Congress has issued a circular to its Vice-Presidents in the respective States, urging each to issue a short address to the agricultural societies and farmers embodying the following points:

First—The necessity for organization and co-operation on the part of agriculturists.

Second—The advantage to be derived from co-operative effort, not only within the State, but in the country at large.

Third—The influence that the Congress has already exerted, even in its infancy, and its power for good, when all the Societies throughout the country will give it their active endorsement and support.

Fourth—The necessity for the organization of Societies and Clubs in every township and district that they may not only derive benefit from local association, but that they may become participants in the benefits of the Congress.

Now, we have full sympathy with whatever tends to elevate the position of agriculturists and unite them in the prosecution of whatever work it is desirable they should unite to accomplish. But what has this Congress done? What is it likely to do that may not and ought not to be accomplished through the agency and with the aid of the Department of Agriculture as a nucleus? It looks to us much like a scheme similar to that which has resulted in the Patrons of Husbandry—an effort to combine farmers for the aggregation and direction of power for personal purposes. We do not assert that this was or is the sole purpose of those controlling the organization; but judging by the evidence that comes to us, it is being, to a considerable degree, at least, used for this purpose. And is this Congress to be a rival of that organization? What are the "benefits" this Congress is going to bestow upon farmers?

How Hobbies are Ridden.—"If a man gets a hobby, that's an end of him," said our friend JONES the other day. We are reminded of it by one circumstance among a hundred others going to confirm JONES's opinion. A year or two since, a gentleman connected with the Farmers' Club of this city, appeared to (talked as if he did) believe that castor oil beans were a preventive or remedy for all the evils which afflict a farmer. Among other things they would prevent moles working in a garden. Here comes, now, a correspondent who says moles like castor oil beans so much better than anything else that other seeds have time to come up and get out of the way while the moles are consuming the beans. His castor oil bean crop was nearly destroyed by moles.

Death of an Old Butter Merchant.—Many of our readers, who send their butter to this market will regret to learn of the death of THERON S. DOREMUS, the senior partner of the firm of T. S. DOREMUS & Co., produce dealers in New York City. He died Friday, Sept. 13, at his home in Hamburg, N. J. Mr. DOREMUS came to New York thirty years ago, and at the age of 16 entered the house of JEWELL, HARRISON & Co. as a clerk. After an honorable service of ten years the firm gave him their entire trade in butter and cheese. Mr. DOREMUS was highly respected on 'Change as a prompt business man.

A Wayne Co., N. Y., Pear Orchard.—A correspondent writes us of T. G. YEOMANS' (Walworth, N. Y.) dwarf pear orchard—that "there is the most beautiful show of fruit on well grown trees that ever was seen in this county—either on standards or dwarfs. Mr. YEOMANS has about 3,500 trees in one orchard, that are loaded to the ground, with large, smooth, handsome fruit of the Duchesse de Angouleme variety." Mr. YEOMANS has 35 years experience in fruit growing, and he is a good man to visit by those in search of orchard information.

Angora Goats.—A correspondent asks us where there is a market for Angora goat wool. He is in California. We cannot answer. Sometime since we cautioned a Californian against becoming a victim of this Angora goat fever. It will not pay—at least we have no evidence that it will, and we saw it rise in certain localities ten years ago; but we do not know a man who has made any money out of Angora goats, except such as could dupe other people into buying them as he had been duped.

Tree Planting Along Railways.—We see it stated that the Michigan Central Railway Co. is setting a row of American chestnuts along its line of road. No better deciduous tree could be planted for the Company's uses—for tie timber and for use in car manufacture. It grows rapidly and will be speedily available for these uses. But other varieties, equally useful, might be added.

The Splendid Steel Plate Engraving offered (see first column of this page) to every person sending either $3 for the RURAL NEW-YORKER fifteen months from Oct. 1st, or $5 for ten Trial-Subscribers, (Oct. to Jan.,) is a beautiful Picture, such as usually sells at $5 per copy, but (as we own the plate) it cannot be obtained even at that price. It is designed exclusively for the Agents and Friends of the RURAL, to whom it is offered as above.

Catalogues Received.—From JAMES VICK, Rochester, N. Y., Illustrated Catalogue of Hardy Bulbs. From R. H. ALLEN & Co., New York City, Fall Circular of Grains, Seeds and Small Fruits.... From A. BRYANT, Jr., Princeton, Ill., Retail and Wholesale Price List and Catalogue of Fruit and Ornamental Trees, etc.... From R. B. PARSONS & Co., Flushing, Long Island, Descriptive Catalogue of Ornamental Trees, Flowering Shrubs, Fruit Trees, Evergreens, etc.

Nebraska State Fair.—This Fair was held at Lincoln. There were 1,300 entries. The fruit feature of the exhibition is reported notable—especially of apples. Vegetables and grains were also exhibited in large quantity, and of excellent quality—the size of the vegetables being extraordinary. The stock departments were well filled, and the crowd of visitors is reported as having been "unexampled."

Premium Lists Received.—Of Seneca Co., N. Y., Ag. Soc.; Fair at Waterloo, Oct. 8-11... Of Ontario Co., N. Y., Ag. Soc.; Fair at Canandaigua, Sept. 18-20.... Of Oxford, Pa., Ag. Soc.; Fair at Oxford, Oct. 2-4 ...Of the Grand Union Fair of Michigan; Fair at Grand Rapids, Sept. 16-21.

THE SEASON, CROPS, PRICES, ETC.

Crawfordsville, Ind., Sept. 9.—The grain crop here is more than an average. The yield of wheat on many farms was thirty bushels per acre. The season has appeared dry, yet just enough rain has fallen to produce a splendid corn crop. Some kinds of late potatoes will be light, owing to drouth; the Colorado beetle has injured all kinds; no remedy except Paris green; arsenic, either dry or in solution, has no effect. The gardens have caused the tables to groan with the luxuries of life. All kinds of berries, grapes, peaches, pears, apples, melons, in profusion. I shall be ready to give some experience, soon, with light Brahma chickens.—H. HYATT.

Crawford Co., Pa., Sept. 10.—Very hot, rainy weather the last week. Corn partly ripe; crop not very good, having light stalks and little ears. Fruit abundant, and much of it ripe, apples especially. Pumpkins are a poor crop, and so are cucumbers and vines generally. Farmers will soon cut their corn. Potatoes are a middling crop. Wheat and oats, wherever they are threshed, are pretty poor, not yielding near as well as expected.—YOUNG AMERICA.

RURAL BREVITIES.

COOK'S Evaporator patents have been extended seven years.

THE New England Homestead calls the late New England Fair "a pecuniary success and an agricultural failure."

THE Western (Wis.) Farmer announces that the State Ag. Soc. will call a State Swine-Breeders' Convention at the State Fair at Milwaukee, to elect delegates to the Swine-Breeders' Convention at Indianapolis, Nov. 20.

GEO. O. CATLIN asks PETER BIRKEY the number of pounds of grass seed he would sow to the acre when he sows thickly without Winter grain, or what percentage he would add to the quantity generally sown with Winter grain?

EVERY BOY OR GIRL who has an eye for the beautiful, should secure a copy of "Birth-Day Morning;" and many a boy or young man will find it an appropriate present for his Sister, Cousin or —— Sweetheart! "A word to the wise," etc.

THE thanks of the RURAL NEW-YORKER are due to W. K. HAWKES, general agent of the Excelsior Lawn Mower, and C. W. BURBANK of PARKER & GANNETT'S Agricultural Warehouse, for the courtesies extended to its representative during the New England Fair at Lowell, Mass.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS Co., 119-121 Nassau St., New York.

CURRENT COMMENTS.

Henry Stanley, the Livingstone Discoverer.

NOW we have a new sensation. The Sun, Aug. 24, publishes a three column communication from LEWIS H. NOE, Sayville, L. I., who makes the gravest charges against the character of HENRY STANLEY, the Livingstone discoverer. He charges that STANLEY once induced him to desert from the U. S. Navy, tried to induce him to engage in bounty-jumping, to desert from the army after he had entered, seduced him to go with him to Smyrna on false representations, made him his slave in Turkey, flogged and threatened to kill him, attempted highway robbery and the life of a Turk, got several hundred dollars from Hon. E. JOY MORRIS, American Minister to Turkey, by false representations and a fictitious draft, and performed other ignoble acts, indicating an utterly unscrupulous man. He gives all this with circumstantial detail, and sums up as follows:

To sum up his character. Stanley is a daring adventurer, bold and unscrupulous, but intelligent and specious. His manners are those of a quiet man. In disclosing his infamy to the world, I have but a single object and purpose, and that is, as far as I can, to prevent the subjection of others to the outrage and wrong I was compelled to submit to at his hands. More than once he has threatened to kill me if I exposed him. With his cruel and revengeful nature I believe he would not hesitate to carry his threat into execution, if a favorable opportunity occurred in which he could do it with impunity. And I am not without my fears of assassination. Indeed, I should confidently expect it were we to meet without the bounds of civilization or in a sparsely-settled country where crimes would not be quickly discovered or where the avenues of escape were open.

Our Common School System at the Vienna Exposition.

A LETTER has been received in Washington, by the Bureau of Education from the Hon. JOHN JAY, Resident American Minister at Vienna, embodying a suggesstion made by Baron Schwarz, and stating that the Baron had expressed a desire that the United States Government would present at the Vienna Exposition a perfect representation of the system of common school instruction adopted in the United States—a system the results of which, he said, had been so wonderful. He stated that he had received with singular interest the report on American popular education recently published in Paris, and which has attracted so much attention upon the Continent, and that an exposition of that system, illustrated by a schoolhouse and its appurtenances and results, would be a matter of profound interest and importance, not only to Austria and Hungary but to the Eastern people who adjoin that Empire. The American Minister concludes by urgently recommending the adoption of the suggestion, which in all probability will be carried out.

The Diamonds of Arizona.

A COLD water bath on the diamond excitement is the statement publicly made in the London Times by a firm of diamond brokers, that a few months ago an American visited London, and bought a large number of diamonds in the rough, paying no attention whatever to the weight or quality of the stones. These diamonds, it is intimated, were used by the alleged discoverers of the diamond mines in Arizona, to sustain their assertions. It will be well for the young men of the country to wait before they invest their money, or enlist in any adventure in search of Arizona diamonds. Gen. McClellan, whose name has been associated with this diamond Company, says he knows but very little about diamond matters, and is not certain that the diamonds exhibited came from Arizona.

BIRTH-DAY MORNING.

WE present herewith a wood engraving of our Premium Steel Plate Engraving entitled "Birth-Day Morning; or, The Gardener's Present." The steel plate from which this was photographed and engraved is a beautiful home picture and worthy a place in any living room or boudoir. It is morning—the birth-day morning of the young lady. She may be eighteen years of age. She has sauntered out into the sunshine and the garden, where she looks like a flower among flowers. The loyal, warm-hearted and gallant old gardener has hastened to cull and cut, with his garden knife, her (and his) favorite buds. She has arranged them artistically and with one dimpled hand holds them to her breast—seeing reflected in their freshness, delicate beauty and fragrance, symbols of her own blooming beauty—while the other is held out for a pin with which to fasten them. The gardener stands with his eyes fixed upon the freshly cut buds, his knife in his mouth and both hands searching for a pin in the folds of his waistcoat. His bronzed face, with its lines of experience and wrinkles of wear and tear, is the impersonation of devotion—full of futherly comprehension of the bright hopes and present joys of the beautiful girl whose presence and dependence for the time being makes him a protector; and yet one needs little imagination to see that he thinks, too, how little this blossoming woman knows of the real life that lies before her. No doubt in his heart he says, "GOD bless the child!—GOD protect her!" One can almost see the moisture in his eyes, like the dew upon the foliage, as this strong, homely man's heart enters with full sympathy into the significance of the day, and wishes for his favorite "many returns."

Such is the scene, the spirit, and the action of as beautiful a picture as ever came from the pencil of an artist. The conception is of a high order, the grouping is excellent, the tone is pure and sweet, while the execution is all that could be desired. As a work of art it is a gem fit to adorn the walls of any mansion, cottage or farm-house in city or country—a picture that will prove a constant reminder of the beautiful in Nature and Art to both the risen and rising generation. We hope to send this splendid Engraving to tens of thousands of homes from Maine to Texas and Canada to California, and that each will find it a promoter of education and refinement—an instructor and elevator which will benefit both parents and children all over the Continent.

It should be noted that this Premium (see offer on first column of preceding page) is a large, fine and very costly Steel Plate Engraving—such as sells for at least $5 per copy—and hence far more rare and valuable than the cheap chromos given by many publishers of late years. The RURAL NEW-YORKER has always been more liberal to its Agents and Friends than any contemporary, and in presenting this Magnificent Picture to every person who subscribes for the ensuing fifteen months, fully maintains its reputation in that direction.

BIRTH-DAY MORNING, OR THE GARDENER'S PRESENT.

(ENGRAVED FROM THE RURAL NEW-YORKER'S BEAUTIFUL AND COSTLY STEEL PLATE PRESENTATION ENGRAVING—SIZE 24x30.)

Our Story-Teller.

JOHN LEARD'S TROUBLE.

BY BERTHA SCRANTOM POOL.

THE sun set with a flashing, "as of fire," that afternoon. It reminded me, in its pageantry of color, of "an army with banners," that the good old psalmist took for his metaphor.

So few pretty things came into ZILLAH LEARD'S life that she always took note of the sun's setting. Besides it meant that JOHN would come home to tea.

You would not understand her, I fear, if she came to you unexplained. You who read of the latest scientific discoveries, the announcement of another asteroid, or the state of the London markets, at your breakfast tables; you to whom nothing is astonishing in this progressive day and generation, and who live more in one month than this woman in a lifetime.

There are far away towns on our own seaboard, where the quiet of every week-day is like a Sabbath—towns as far removed from bustle or worldly life as night from day, as heaven from earth; where only a chance stranger or fishing vessel awakens echoes of the world outside. Did you ever think, hurrying home in the crowded thoroughfare at dusk, that the same sun was setting on quaint, still grave-yards, on grass-grown roofs of old houses, and flushing its red fires on low, wet sand dunes and salt marshes, where this city life with its daily clamor would come as startlingly as bugle sounds at night?

Look at the breakfast dish of cod or mackerel some morning, and think what hardy lives are yearly risked and lost at the fishing banks that you may live in ease at home.

If ZILLAH LEARD came of a rough race, it was a long-lived, clean-blooded one. They had "followed the sea" for a generation back. When she read of CHRIST among the fishers, eating of their bread, sleeping on their sailor pillows, she grew proud of her ancestry. She had never seen a great painting or read a fine poem in her life. But there was something akin to her in a sunset, or the sea in a storm, or the wet sands glowing red in the early morning. There wasn't anything handsome about JOHN LEARD. His face was tanned to the color of a red herring and seamed and mottled from wind and weather till it looked nearer fifty than thirty-five. He hadn't any fine points in the way of eyes or teeth, and his hair was grizzled already a little. But if you came to take measure of his chest, to note how he had to stoop to go in at house doors, and if you felt the sinews of his arms and hands, like iron, you would begin to look at him in wonder.

To JOHN'S eyes, ZILLAH was just the most beautiful woman in the world. JOHN had never heard of the French opera, had never seen an actress in his life. ZILLAH was his all. Hair like wet sea sand, eyes blue as deep water, skin like some pink and white shell, and the sweetest mouth, and the only one he ever had kissed. For they were man and wife, and had been for three years, when I first introduce them to you.

I'm afraid if ZILLAH had wanted a poetical, knightly hero, JOHN wouldn't have been the one. But she used to tell other women she never brought in an armful of wood or shoveled a winter path when JOHN was at home. And only *she* knew how once, when she had been ill for twelve long, tiresome nights, he never had slept; and how, when she was gaining again he, carried her in his arms till she fell asleep like any babe. And all this JOHN LEARD would

have said "was nothin' particular to brag on."

They had no child. But there was a small—a very small—mound in the bleak hill burying ground, where ZILLAH used to go once in awhile, alone. JOHN never went. But he always knew when ZILLAH had been there, for she sighed so in her sleep. And there was a big ache in his honest heart as he said, "Poor ZILL! poor little girl,"—a bigger ache than most men feel in a lifetime.

But there was a deeper trouble than the little mound in JOHN'S life, because it was a living trouble; and that was his brother—his only brother BEN. These two were left alone in the world; and after BEN came of age and had shipped for a whaling cruise, JOHN, ten years his senior, had married ZILLAH LEE. He had loved her a long, long while. And after BEN came back—sooner than he ought to have done, with rumors that he had given the slip at the last and never been all—it was easy to see how he had fallen into bad ways. JOHN and ZILLAH nursed him through a fever, and now he was as bad as ever again; idling his days in drunken, reckless misery, and waiting for a chance to ship again. Handsome BEN LEARD! Rumor said some disappointment had driven him "to the bad." He had the mother's face, great earnest eyes and a pretty, womanish mouth. He avoided JOHN, and evidently dreaded him. They never met if BEN could sneak away. And after JOHN had taken him, in his delirium, to his home, as soon as he could walk he had stolen away, unthankful and without a word.

It was coming Fall. Soon the Winter cruise would be at hand. JOHN'S snug little vessel, smelling of salt fish and brine, was repairing, and nearly ready for service again; and since the night BEN left in silence the brothers had not met. Faithfully JOHN tried to face him, but the other lurked and hid, and kept the silence unbroken between them.

To-night, for the first time in several months, ZILLAH had been up to the little mound. There was something about her mouth, quivering and sweet as it was, that grew bitter as from hidden pain. She came down the bleak hill with weary, heavy feet. She felt loth to let JOHN go this cruise. But had he not been dozens of times before? Something rose and choked her as she looked at the dappled streak of blood-red light, where the sun was setting. And JOHN'S trouble! If she only knew—if she only dared tell him just *all* she knew!

The lonely hillside, with the sea view, and the high walls shutting in the graves, straightway went out of her mind, for there before her, in the path, haggard and wan, stood BEN.

"I thought I should find you here, ZILLAH, when I saw you come out of the house this afternoon, and I gave you time to get through your work here before I came. No, I ain't drunk; you needn't shrink back so. I'll stand here, as far off as you please; only, for GOD'S sake, let me have a word with you."

"BEN!"—her sweet pink color coming to her cheeks—"why, poor BEN!"

For the miserable boy—and they were the same age—was shaking with sobs, covering his face with his old hat. Slowly ZILLAH drew her fingers together. Her thoughts were never swift.

"It will be right," she thought, so she laid a hand on his arm. At her light touch the miserable wretch drew himself up, the wreck of a better man in his handsome face. After a few minutes, he said: "For GOD'S sake, girl, why didn't you keep JOHN from taking me where your face would be the first I'd see when I came out of the fever? I hoped I'd 'a died. You oughter let me. And I hain't come to reproach you now, only why, when you refused me three years ago and over, didn't you tell me it was JOHN as was your lover?"

A cry broke from her suddenly.

"He wasn't *then*, and O, BEN, it was you who first made me love him, telling me how good he was, and how noble and unselfish. You talked of him in those days so much, I thought when you went away that you would forget all about the talk we had. And afterward, JOHN came to me; I was lonely; I began to love him, and——"

"Curse him," said the man, suddenly.

"Hush!" said ZILLAH, growing paler yet; "he is my husband, and he is a good man! There never was any promise between us, BEN. It may be hard to tell, but I didn't love you, and you came so sudden with your words that time."

"ZILLAH," he said, looking quickly up, "I'd ha' died for a mere hope then."

"There was nothing to hope for," she answered, growing very white, "besides——" she was shrinking back, thinking JOHN would be coming home to tea and she was late.

He saw it instinctively. Something in her touched him, as he saw her pity in her face.

"I know; he is—a—good man," he said in a low, honest voice; "and I know you are thinking I am weak and foolish to let the loss of a girl's pink and white face send me to perdition; but you don't know, O you don't know how I loved you!"

A shadow startled them. It was only a dead leaf rustling down on the girl's shawl,

"I am going to-night. I hope I'll never come back. I can part in silence from JOHN. I loved him, too, GOD knows, once. But *you*, ZILLAH; much as I wanted to say one word, I never want to see your sweet face again. Don't start; I'm going now."

"O BEN," she said, catching at his arm, "don't lay this sin on my head. Say you won't, BEN."

An intense pity, a deep pain, but nothing more, lay under her words.

"Do BEN," she pleaded, as she saw him turn away in silence, "and try and give up drink. Try and be your old self again. There are better, far better women than me——"

He raised his head, a quick, sad smile swept his face like a cloud over a summer sky.

"Don't ask me to, ZILLAH. I can't promise. I 'spose its wrong, but I couldn't keep it. I won't blame you; there, there, don't sob."

It was BEN who was dry-eyed now.

"JOHN will be a waitin'," she said, holding out her hand.

He didn't touch it; he didn't move toward her.

"I ain't worthy, ZILLAH," he said; and after she had gone, he gathered up the dead leaf that had fallen on her shawl and took it away with him.

JOHN wasn't waiting. He had started the fire and gone in search of ZILLAH. Somehow he knew where to go, and he had heard only a word of the two voices—her's and BEN'S—talking, and crept away to battle out the rest.

I know you think he went away with a great and grievous load on his soul, and never saw her more. But he didn't. He walked it out in the wind and dark, and then he made up his mind.

"I'll do my duty. ZILLAH shan't know it. I won't blame her. Why, hain't I rough and old, and hain't he a king to me? But why didn't she tell me? My poor little ewe lamb!" And I daresay the story of the rich man and the poor man, and the little ewe lamb, seemed no sadder to him than his own. But even then JOHN loved his brother—loved him as few brothers love.

"Poor BEN!" he said, and his eyes grew wet. "But she's my wife, and once there was something she'd a told me afore we two was married, and I said 'no, it's not your past, it's your present and your future I want;' so I sealed her lips unknowing. I'm to blame, not my little girl. But I wish I'd he' died, and the two children could a been happy afore I ever loved her."

He went home. The shadow of the woman's head on the curtains made him falter, but ZILLAH'S face, white and anxious at the door, drew him into the warmth and light. ZILLAH was usually very quiet and still after these hillside visits. To-night there was a fluttering color coming and going on her cheeks, and her hands trembled.

When he told her his vessel was ready, and he was going next morning, she drew a quick breath and sat still. He tried to make this last evening just as usual. But in the midst of his smoking and talk, she crept to his knee. Laying her hand hesitatingly on his sleeve she stopped.

"JOHN," she said.

He didn't look at her, he couldn't. But he felt her hand quiver.

"I've something you must know, JOHN," she said. "At last, dear."

He interrupted her. "don't tell me nothin', sweetheart. I heard you two talkin' to-night, just enuff to know I oughter left you and BEN to each other. But we're man and wife. I'll do my dooty, ef you can only be happy like-agin'."

"*Happy?* O JOHN," said ZILLAH. And there was a long pause.

Then she told her story. I wont tell you any more about it. And I don't suppose JOHN thought he had been magnanimous or self-sacrificing in the least. And then after that they went back to talk of kindling wood and flour and winter stores, and the chance of a good haul this cruise. After they had quite done talking JOHN still kept her on his knee, ever and anon shading his eyes to let the happiness dry a little in them.

News came a year later that BEN was swept overboard in a gale and lost. But JOHN always kept thought of him as the fair-faced boy that used to sleep at his side in the years long back; and the ache never quite wore away from his heart—not though he lived to come home from many a brave cruise to take ZILLAH next his heart and thank GOD for her—once to wonder and smile over a little bundle that lay on her arm, that made him go and lay his cheek down against her pillow, remembering the little mound, and how this had come to comfort her for it. They were not afraid to trust GOD for the child, and for his future, so they called him BEN.

COLORED PHILOSOPHER.

An elderly darkey, with a very philosophical and retrospective cast of countenance, was squatting upon his bundle on the hurricane deck of one of the western river steamers, toasting his shins against the chimney, and apparently plunged in a state of profound meditation. His dress and appearance indicated familiarity with camp life, and it being soon after the siege and capture of Fort Donelson, I was inclined to disturb his reveries, and on interrogation found that he had been with the Union forces at that place, when I questioned him further. His philosophy was so much in the Falstaffian vein that I will give his views in his own words as near as my memory will serve me.

Were you in the fight?

I had a little taste of it, sa.

Stood your ground, did you?

No, sa, I runs.

Run at the first fire, did you?

Yes, sa, an' would hab run soona had I know'd it was comin.'

Why, that wasn't very creditable to your courage.

Dat isn't in my line, sa—cookin's my profession.

Well, but have you no regard for your reputation?

Reputation? nuffin to me by de side of life.

Do you consider your life worth more than other people's?

It's worth more to me, sa.

Then you must value it very highly?

Yes, sa, I does; more than all this world; more dan a million dollars, sa; for what would dar be wuth to a man wid de bref out him? Self-preserbashun is the first law wid me, sa.

But why should you act upon a different rule from other men?

Cause, sa, different men'sets different value upon derselves; my life is not in de market.

But if you lost it, you would have the satisfaction of knowing that you died for your country.

What satisfaction would dat be to me, when der power of feelin' was gone?

Then patriotism and honor are nothing to you?

Nuffin whatever, sa—I regard dem as among de varieties.

If our soldiers were like you, traitors might have broken up the government without resistance.

Yes, sa; der would hab 'ceen no help for it. I wouldn't put my life in de scales ginst any guberment dat ever existed, for no guberment could replace de loss to me. Spect, dough, dat de guberment safe, if da all like me.

Do you think any of your company would have missed you if you had been killed?

May be not, sa. A dead white man ain't much with dese sogers, let alone a dead nigga; but I'd a missed myself, and that was the pint wid me.

It is safe to say that the darkey corpse of that African will never darken the field of carnage.

DIABOLIC DUALITY.

A good story is told in Washington of a genial young gentleman, unwilling to omit recognition of an acquaintance who at a wedding reception, caught sight of a gray-whiskered and rather stately person, and being satisfied by inquiry of his identity immediately edged along to his side.

"Good evening," says he, extending his hand with cordiality. "I am delighted to see you! We haven't met since we parted in Mexico."

"I rather fear," said the gray-whiskered magnate, "that you have me at an advantage."

"Why don't you recollect? But then I was very much younger," said the other, "with my father in Mexico."

"And, to tell the truth," said the other gentleman, "my remembrance of ever having been in Mexico is very indistinct."

"Excuse the question," said the young man, rather desperately—"are you not Sir Edward Thornton?"

"By no means. I am Judge Poland of Vermont."

"A thousand pardons!" and the discomfited youth moved away.

But a few nights afterward, at another reception, his eye was similarly caught, and, the edge of his mortification having been worn off, he could smile at his mistake; and he accordingly once more made his way to the side of a gentleman with gray mutton-chop whiskers, and after a word or two on the weather and the scene, he suddenly said:—

"That was an awkward thing of me to take you for old Thornton, the other night."

"And who do you take me for now, may I ask?" said the companion.

"Why—why," said the embarrassed young man of society, "you told me you were Judge Poland of Vermont."

"On the contrary, my name is Thornton," was the rather annihilating response. And the young man at this day calls it a case of diabolic duality.

HOW HE KNEW HIM.

A distinguished professor in one of our theological seminaries relates the following:—Being in Germany, with a red-covered book in his hand, a German, supposing the book to be "Murray," asked in English, if he was not an Englishman? The professor replied in German that he was not. The conversation presently turned upon an object of architectural beauty near at hand, in the course of which the professor incidentally raised the question of its cost. "Sir," exclaimed the German instantly, "you are an American!" "How do you know that?" rejoined the professor. "Sir, continued the German, striking an attitude, and assuming a tone of great solemnity, "upon the resurrection morn, when we stand before the Great White Throne, the first question of every American in the whole assembly will be, 'How much did that throne cost?'"

As a Yale Professor was passing out of his recitation room, the other day, a freshman dropped slyly into his hat a piece of paper on which was written "monkey." Tickled with his joke, he told it to all his student friends. But at his next recitation the Professor addressed his division in his sweetest tones:—"Gentlemen, as I was passing out of the room yesterday, one of your number did me the very high honor of leaving with me his card."

THE Hartford Times tells of a gentleman in that city who, on getting a glass of soda, was retiring from the store without the usual little ceremony which follows that operation. "Recollect, sir," said the polite proprietor, "if you lose your pocket-book, you didn't pull it out here."

Sabbath Reading.

TRUST.

I KNOW not if or dark or bright
Shall be my lot;
If that wherein my hopes delight
Be best or not.

It may be mine to drag for years
Toil's heavy chain,
Or day and night my meat be tears
On bed of pain.

Dear faces may surround my hearth
With smiles and glee,
Or I may dwell alone, and mirth
Be strange to me.

My bark is wafted to the strand
By breath divine;
And on the helm there rests a hand
Other than mine.

One who has known in storms to sail,
I have on board;—
Above the raging of the gale,
I hear my Lord.

He holds me when the billows smite.
I shall not fall;
If sharp, 'tis short; if long, 'tis light—
He tempers all.

Safe to the land—safe to the land—
The end is this;
And then with him go hand in hand
Far into bliss.

[*Dean of Canterbury.*

THE STONE ROLLED AWAY.

LESS loving hearts than those which prompted the preparation of the spices wherewith to embalm their LORD, might—knowing the greatness of the stone at the door of the sepulchre—have deemed it useless to attempt to visit His tomb, or bear the fragrant gifts to anoint His body. How many a faithless one would have folded their hands in mute despair, and felt the obstacles in the way insurmountable. Not so with those women who were first at His sepulchre. With loving hearts they came, and richly was their faith and love rewarded. For while they asked themselves, "Who shall roll us away the stone?" when they looked they saw the stone was rolled away. And when their LORD himself appeared unto them, how must their hearts have exulted, and their sorrow have been turned to joy!

And is not the LORD still equally ready to reward the devotion of those who trust and honor Him? Yet how much do His children suffer from their gloomy apprehensions of evil; their dread of what the future may bring; their anxiety: who shall roll away the stone? Many a trembling disciple has gone mourning all his days from fears never realized; or found, when trials came, that the Angel of the Covenant had gone before him, and the presence of his risen LORD made light the way. Blessed are all they who put their trust in Him. LINA LEE.

LOOK UNTO JESUS.

BEECHER says:—"If you have no need of looking unto Jesus, it is because you are without aspiration; it is because you are degraded; it is because you do not understand either your present condition or the dangers which fall upon you in consequence of it; it is because you have not a touch or taste of the divine nature in your souls. He who has no occasion to look unto Jesus is degraded and vulgar—for vulgarity does not mean poor clothes. Vulgarity means a poor soul. A mean soul in broadcloth is vulgar. A mean man who has a crown on, is vulgar; and a pauper with a king's soul in him is royal. He who can live in this life and say, 'Husks are good enough for me, and the pigs that I associate with, and that are my companions, are good enough for me; I have no need of looking unto Jesus'—woe be to that man! Woe be to him whose heart does not ring out every day, in every time of need, 'Look unto Jesus—*look unto Jesus.*' Woe be to the man who has no time of conscious need."

THOUGHT-SUGGESTING PARAGRAPHS.

THESE poor, restless hearts, how they need keeping! Our desires and loves and hates, how they run us wild at times! How these hearts swell, almost to the bursting! The peace of God shall keep them! Shall keep them steady and true, when temptations and troubles and bereavements seem bearing them away from God.

WE are always able to propose more than we have the power to accomplish. Our work is to do all we can by the best employment of our best powers now. That best employment can never be, without a feeling that the world of spiritual things is upon us, that the Lord is very, very nigh.

THE men who have been spiritually-minded have become poets and philosophers and prophets, winged souls, living on land, on water, in air—have led the way of human progress, shining at the head of the marching column of humanity.

NOTHING gives such elevation of character, and such power, and such consistency of living, as a real sense of the presence of the spiritual world.

THE present use of the spiritual world to us is the influence it has upon our modes of existence in the natural world.

Ladies' Port-Folio.

"AFTER A DAY LIKE THIS."

"After a day like this," dost thou,
When counting sweet your blessings—
After the sunlit day,—
Dost wait for the caressing
Of life so far away?

Doth ever long to measure,
In one deep, soul-drawn kiss,
The love *this* heart doth treasure
To crown thy life with bliss?

Dost think upon the blossom
That once, a withering bud,
Was moldering in the darkness,
Its leaflets stained with mud—

Was shrinking from the sunshine,
Shrank shivering in the rain,
Was waiting for the love-wine
To make it whole again?

And when the warm life-red shower
Fell from thy tender hand,
Each hidden petal felt the power
Like zephyrs angel-fanned.

And slowly, leaf on leaf unrolled,
With fragrant, quivering thrill,
Till boundless wealth of love untold
Now waits thy wish and will!

Would come and linger near thee,
Like incense in the air—
But burthen—never fear me;
To *bless*, is all my care.

Thank GOD for all your blessings
For all your loved ones care,
I bless their sweet caressings
And *you*, in love-light there!

EVERY-DAY LIFE.

BY LEAD PENCIL, ESQ.

Cost of Living.

I MET TIM JONES the other day, who is a well-to-do young farmer, industrious, sensible, economical, but not penurious.

"Why don't you get married, TIM?"

"That's a direct question," was the reply, "and I am willing to answer it directly. I don't dare do it."

"Why not?"

"Because I cannot find a girl who will have me and whom I can love, whose education and habits at home have fitted her to become a wife, mother, and the economical and wise manager of household affairs. I want to marry; would be glad to marry, and would try to make the woman happy whom I should ask and who would consent to become my wife. But there is such a state of unrest about women—such inquietude, desire for something they have not, to go where they are not, to see what they see not, to be what they are not and cannot be, to live in a style they cannot afford, to lead artificial and superficial lives, to see and be seen, to dress and bedizen themselves with fol-de-rols that I cannot furnish from my resources, that I despair of marrying. I tell you the whole American system of education, both of boys and girls, needs remodeling, or increased celibacy and fearful licentiousness will be the result."

"But there are some sensible girls left."

"Perhaps; and doubtless as many as there are sensible boys; but they are far too rare. If I find one she is without health; or she has a 'mission' to fulfill; or she don't want to live on a farm; does not like or knows nothing about farm life; or—well, the fact is, I can't find one who will accept a man for what he is and adapt herself to his condition and circumstances, unless he happens to be as rich as CRŒSUS."

"Well, what are you going to do about it?"

"I am going to hire some old-fashioned housekeeper to take charge of my household affairs; and whether she stays with me will depend upon her economy, good sense, and the kind of home she makes for me. True, it is a dreary kind of prospect; but I know that such relation will only exist as long as I will it shall."

I know several TIM JONESES.

"To Be Remembered."

A YOUNG bachelor of fine culture met the wife of one of my friends and her lady friend during one of the past Summer excursions. The husband visited New York and in due time received a letter from his wife, in which she expressed a wish (for herself and her lady friend) to be remembered to Mr. ——, the young bachelor; whereupon the latter handed the husband the following impromptu to be transmitted as a response. The husband met me and stated the circumstances and I at once saw in it one of the unostentatious and unrevealed phases of Every-day Life which are common among the more cultivated, but which are too rarely taken into our estimate of the features of American Society. Here it is:

I am not likely to forget
The perfect day when first you knew me,
With all its loveliness; and yet
You ask "to be remembered" to me.

Ah! in the book of life, where brief
The pleasant chapters are, and fleeting,
Reluctantly we turn the leaf
Which holds the tale of some kind greeting.

But days are nimble things to fly,
And all too soon the page is hidden;
Yet oft is memory, with a sigh,
To tell its happy story bidden.

And so you need not fear at all
(Sure, there is time enough to try me),
That many a season's leaves shall fall
And you shall be remembered by me.

"The Loveless Life."

I THINK "Cousin JOHNNIE" entirely mistakes the cause of the "loveless life" of my correspondent. I have evidence that this cry for love was not simply the result of that natural and common yearning for a mate which prevails among young women—not a morbid sentimentalism, but the unburdening of a soul that had passed through deep waters—that had tasted the dregs of a bitter, burthened, barren life—that was yearning to lift its heart and head above the thorns and thistles which surround it into the sunlight where it may bloom and gain a healthful vitality. Nor was this wail the result of "disappointed love," but one of a hungry soul crying for food, for compensation for the years of self-sacrifice and self-abnegation which have made up her life. The remedy must be of a practical character—practically applied. No sentimental preaching will comfort such a heart. With that it has been gorged; it must be real food, full of nutrition, and which will both strengthen and comfort.

WOMAN PERSONALS.

MRS. DRAKE MILLS, who fell from her window at the Metropolitan Hotel in Washington, on the 4th of July, and was killed, was a very wealthy widow, and very eccentric. She had a fortune of millions from her husband, yet she occupied one small room, up four flights of stairs. She had more fine diamonds and jewels than any woman in America. One of her bracelets once belonged to RACHEL. She was fond of rich and rare laces, having an immense amount, and her dresses were of the richest silks and velvets. She was coarse looking, with a red face, and a fat body. She had one of the finest furnouts in Washington, with a coachman who was once in the service of Lord NAPIER. Her lap robes were made of white ostrich feathers and satin. She had been nearly all over the world, and had crossed the Atlantic twenty-four times. She was very benevolent, and spent her last years in doing good. She was constantly among the poor and suffering, and befriended many poor chambermaids, scrub girls and laundry girls. She educated many girls and boys. Several hundred young women look to her as a benefactress. She was a well-read, well-educated woman, whose one fault is said to have caused her death.

MADAME PAULINE LUCCA is famous for her kind-heartedness, affection, generosity and courage. She usually lives in the Victoria Strasse, Berlin. Last Spring she had a country house just outside of the city. One night it so happened that she was alone in the house, with the exception of a chambermaid. While sitting at her table, before a glass, reading some letters, she looked up and saw a man's face passing from a cupboard in the rear of the room. She recognized him as a servant who had been discharged for general bad conduct, and knew he meant to rob her of her jewels and perhaps murder her. What should she do? The chambermaid coming in, the thief withdrew into the cupboard. She requested the maid to go and fasten the door opening into the garden, and then saying that she would take a short walk before retiring, she went out of her room, fastening the door behind her. The thief was caught. Taking a revolver from the study table, she went to the window, and threatened to shoot the man if he attempted to escape. She fired at him once, shivering the glass. Watching him all night, the servants arrested him in the morning when they returned.

IT is now asserted that Mrs. EMILIE J. MERRIMAN, who has married PERE HYACINTHE, was separated from her husband some years before his death, sold a small house and lot in Brooklyn, and went abroad with her daughter, acting as agent for a patent corset and endeavoring to act as correspondent for papers, in which last she was not successful. She was converted to Romanism while abroad; then returned to New York and relapsed into Protestantism under the ministration of the pastor of the Church of the Tabernacle; she again returned to Paris, where PERE HYACINTHE converted her back to Romanism and was converted by her into her husband.

THE loss of Mrs. GEO. W. HOWARD of Sharon Springs was one of the saddest events connected with the Metis disaster. She was married on Wednesday, and starting for Pawtucket, R. I., was drowned on Friday morning. What was supposed to be her body was found, and as there was a ring upon her hand with the initials "N. A." upon it, the same as the bride's, it was sent to Sharon Springs for the funeral. When the coffin was opened at the residence of her parents, the discovery was made that it was not Mrs HOWARD. The body of Mrs. HOWARD was picked up by a schooner, and taken to Newport, where the afflicted husband found it.

MRS. HENRY KEEP of New York has just finished a $75,000 mausoleum to the memory of her husband. It is erected at Brookside cemetery, Watertown city, N. Y. It is a granite tomb in the form of a Greek cross, with a dome in the center, and stained glass windows in the ends of the cross. The tomb contains three stone sarcophagus, one for each member of the KEEP family. Life size statues of Mrs. KEEP and her daughter, in Cana marble, by VOLK, are kneeling by the side of Mr. KEEP's coffin. The tomb is open to the public.

Reading for the Young.

THE SHEEP, CAT AND HEN.

A Nursery Song.

I.

As I walked over the hill one day,
I listened and heard a mother-sheep say:
"In all the green world there is nothing so sweet
As my little lammie with his nimble feet;
With eyes so bright,
And wool so white;
O! he is my darling, my heart's delight."
And the mother-sheep and her little one
Side by side lay down in the sun,
And they went to sleep on the hill-side warm,
While my little lammie lies here on my arm.

II.

I went to the kitchen and what did I see,
But the old gray cat with her kittens three?
I heard her whispering soft; said she,
"My kittens, with tails so cunningly curled,
Are the prettiest things that can be in the world.
The bird on the tree,
And the old ewe—she
May love her babies exceedingly;
But I love my kittens there,
Under the rocking-chair.
I love my kittens with all my might,
I love them at morning, noon and night;
Now I'll take up my kitties I love,
And we'll lie down together beneath the warm stove."
Let the kittens sleep under the stove so warm,
While my darling lies here on my arm.

III.

I went to the yard and I saw the old hen
Go clucking about with her chickens ten.
She clucked, and she scratched, and she bustled away,
And what do you think I heard the hen say?
I heard her say, "The sun never did shine
On anything like to these chickens of mine!
You may hunt the full moon and the stars, if you please,
But you never will find ten such chickens as these.
My dear, downy darlings, my sweet little things,
Come, nestle now cosily under my wings."
So the hen said,
And the chickens all sped
As fast as they could to their nice feather bed.
And there let them sleep in their feathers so warm,
While my little chick lies here on my arm.

[*Woman's Journal.*

LETTERS TO YOUNG RURALISTS.—XII.

FROM COUSIN JOHNNIE.

THREE cheers for my irrepressible little Cousin MAY M., who, though "her last letter was rejected,"

Picks up her pen
And writes again!

And now, behold her perseverance has been crowned with success, as all perseverance is sure to be, sooner or later. But Cousin JOHNNY doesn't like her staying out of school to take music lessons. Could she not keep on with her studies and still find time for her music? Cousin JOHNNY knows a dear little girl of eleven years, who rarely ever misses a lesson in school, who practices two hours a day on the piano, and yet is as playful and healthful and happy a child as one could wish to see. The great secret of having "time enough" is to have a regular time for everything and to use up all the little odd moments. I hope MAY will succeed with her skeleton bouquet....H. W. S. must save all the curiosities he finds that tell us of races of men or animals who formerly existed on the earth. I know a very learned gentleman who from some old bones found in the marl pits and clay banks can describe the animals to which they once belonged but which are now extinct.... CHARLEY C. will please accept Cousin JOHNNY's thanks for trying to follow her suggestions about letter writing. It is very gratifying to her that her little cousins think enough of her to remember what she says and do what she suggests....I am sorry J. FRANK L. should have lost his little wrens, but I feel almost certain that though he felt very much grieved he did not have any hard feelings towards the old cat.

OUR LETTERS FROM BOYS AND GIRLS.

A Little Student.

DEAR RURAL:—I began the study of botany last Spring, and went out on the banks to get some buds. I gathered some sumach buds, and, after examining them, not knowing what they were, I must have rubbed my eyes, for they were poisoned so badly as to prevent my going to school for a week. I thought I would tell you, for fear some of the boys or girls might take hold of sumach and get poisoned, too. Cousin JOHNNY expects to have her music scholars come to her house at the end of the quarter and play for their parents, who are invited to come and hear them. I have some pretty pieces among them. One is the "Chalelaino Waltz" and "Recollections of Vienna." I would like to know of some more, if any of the girls can tell me any pretty pieces. Cousin JOHNNY is a very good teacher, but she does not approve of giving too many pieces. I would like to know if any of the girls can find four-leafed clover. I have found a great many here this Summer—four and five both. I like to make fancy work after the patterns in the RURAL. I copied a very pretty pattern for braiding and am going to try it on cloth. I would like very much to correspond with Wild Rose, if it would be agreeable to her.—SARAH V. W., *Matawan, N. J.*

A Southern Orchard.

LYDIA D. O., of Tilton, Ga., writes as follows: Well, Mr. RURAL, if you could observe us every Saturday morning, when Pa comes from the P. O., you would laugh to see sister MARY, Ma and I grabbing to get you first. Our RURAL is the only one that comes to this P. O. I think I shall try to form a club. I must tell you something about my Pa's orchard. We have 80 pear trees, 31 cherry trees, 75 grape vines, 25 plum trees, 15 quince trees, 600 apple trees, 600 peach trees and a great many other kinds of fruits. We have a nice flower yard. We have a walk with about twenty colors of phlox bordering it; five nice beds of petunias; a large bed of verbenas; a nice bed of grass pinks; a large bed of prairie pinks; a pretty bed of carnation pinks, and a very nice bed of love-in-a-mist, and a great many of JAMES VICK'S flowers. I have a large water and muskmelon patch. I have some cucumber patches and some nice tobacco. It grows very fast.

About a Turkey Gobbler.

I AM a little boy 10 years old. I live in Berlin, Erie Co., Ohio. Pa takes your paper, and we like it very much. I like to read the letters from the Girls and Boys. I will write to them about our turkeys. We have a gobbler that has set and hatched a brood of young turkeys—he is proud, I tell you. He comes to the kitchen door three or four times a day to have his little ones fed. He will call and make a great fuss until we feed them. He is a tip-top mother. If any of the readers of the RURAL have a gobbler that has done as well, I would like to hear from them.—G. E. C.

From a Young Shepherd.

DEAR ED. OF THE RURAL:—I am a boy 12 years old. My father follows farming and owns two farms and 230 acres of land. Last Winter we had upwards of 600 sheep—300 ewes and 300 lambs. My part of the work was to feed the lambs every morning and evening. We expect to keep sheep again next Winter. I think the answer to the Puzzle No. 3, in the RURAL of April 20, is "Turkey." Please excuse all mistakes, for this is my first attempt.—NATHAN G. R., *Pottstown, Pa.*

The Puzzler.

ILLUSTRATED REBUS.—No. 9.

A CLEAR explanation.

☞ Answer in two weeks.

BIBLICAL SQUARE WORD.—No. 1.

A VILLAGE of Palestine.
An ancient man.
A mountain which overlooked the promised land.
A Bible tree. ISOLA.

☞ Answer in two weeks.

CROSS-WORD ENIGMA.—No. 3.

My first is in locust but not in pine,
My second is in dollar but not in dime;
My third is in milk but not in dairy,
My fourth is in cheerful but not in merry;
My fifth is in tune but not in sing,
My sixth is in Winter but not in Spring;
My seventh is in stick but not in drum,
My eighth is in pear but not in plum.
My whole is a city in Asia. WHITE LILY.

☞ Answer in two weeks.

PUZZLER ANSWERS.—Sept. 7.

BOTANICAL ENIGMA No. 1.—Consider the lilies of the field how they grow.

ILLUSTRATED REBUS No. 8.—Cupidity.

PROBLEM No. 3.—

48.41478 rods.
43.72616 "
20.29776 "

In connection with the answer to problem No. 3, we have received the following from its author, simply stating that the error is the author's, not the printer's. He says:—"Please insert with the answer to Problem No. 3, of the present volume, the following correction:—The lengths of the three straight lines, drawn from the angles to a point of intersection, should measure respectively 16, 20 and 30 rods in this problem, instead of 20, 30 and 40 rods, as printed.—B. F. BURLESON."

A MAGNIFICENT PREMIUM.

EVERY reader will please note the offer (page 192, first column,) of a copy of the beautiful Steel Plate Engraving entitled "THE BIRTH-DAY MORNING." This is a finely-executed Steel Plate Engraving—size 24x30—worth $5: but, as we own the plate, it cannot be obtained except by subscribing or procuring subscribers for the RURAL NEW-YORKER.

SEMI-BUSINESS PARAGRAPHS.

The Queen of all Sewing Machines.—In speaking of the merits of the New Wilson Under-Feed Sewing Machine, it is sufficient for us to say that we think the invention of this machine marks one of the most important eras in the history of this country; and when we consider the influence it has upon the social well-being of the masses, it is difficult to conceive of an invention of more importance. It has a beautiful, noiseless movement; it makes the genuine "Lock-Stitch" alike on both sides, and does to perfection all kinds of plain and fine sewing; it needs no commendation; its rapid sales, the increasing demand, and the many flattering testimonials from those who have used it, is sufficient proof of its merits. The want of a sewing machine is deeply felt in every household, and as the Wilson Sewing Machine, on account of its extreme simplicity and less cost of manufacture, is sold at a much lower price than all other first-class machines, it is meeting with the extensive patronage that it so justly deserves. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

Death from Lead Pipe.—Mr. George Osgood, formerly proprietor of the Summit House in Athol, died last week at New Salem, Mo. His death resulted from the use of water drawn through a new lead pipe, about two years since. This poison first showed itself at the tip of his fingers, gradually working into his arms and neck, thence into his heart, resulting in his death. To avoid such poison, use tin-lined lead pipe.

Watch No. 1788—bearing Trade Mark "Frederick Atherton & Co., Marion, N. J."—manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me five and a-half months; its total variation from mean time being twenty seconds, being compared by me personally with Greenwich time, London, April 24, 1871.—HENRY MORFORD, 120 Broadway, New York.

Facts for the Ladies.—Mrs. M. L. Thomas, Middletown, N. Y., has used in dress-making nearly every machine invented, and finds Wheeler & Wilson's Lock-Stitch the only one fit for woman's use for ease of operation, simplicity of make, and beauty of work. See the new Improvements and Woods' Lock-Stitch Ripper.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Sept. 16, 1872.

THE general trade of the city is active and as a rule satisfactory to the importers and Domestic Commission people. There was never so large a business done in New York in foreign goods as in August, and the present month is not much behind it. The Domestic Cotton and Woolen Goods trade is also large, while the Iron Manufacturers are employed to the full capacity of their furnaces and rolling mills. The Customs Revenues of the Treasury, notwithstanding the reduction of the Tariff on Cotton, Woolen and Metal Goods and the enlargement of the free list by making Tea and Coffee free, are looking in the direction of $192,000,000 per annum, or $16,000,000 a month, and the Internal Revenues, under large reductions by Congress last Summer, promise $12,000,000 a month. The large reduction in Customs and Taxes by Congress is being compensated to a very important extent by the growth of the trade and prosperity of the country, and the consequence is that the reduction of the Public Debt by the application of the surplus revenues is still going on at the rate of $100,000,000 per annum. The cancellation of debt since July 1 is $16,000,000, and the further relief to the yearly interest charge since that date is $1,000,000 per annum.

The demand for Money for trade purposes and in the prosecution of the new railroad undertakings of the country has become more active, and 7 to 10 per cent. are the rates paid on nearly all time engagements, including discounts on mercantile paper. At the same time the supply of Money in Wall street on temporary loan is quite free, and the Bankers are borrowing from day to day on Stocks at 5@6 per cent. This circumstance proves, first, that a large amount of Foreign Capital is used in this way, and secondly, that Money lenders are disposed to hold their balances at control by lending strictly on call, in the expectation that rates will go up late in the season.

In Domestic Produce there is a good export demand, and the clearances of Breadstuffs and Provisions are better than than time last year.

The results of the last Cotton Crop have been summed up, and are, briefly, a gross crop of 2,974,351 bales; an export to foreign markets of 1,957,311 bales, of which Great Britain took 1,454,532 bales, leaving for home consumption out of the crop 1,017,037 bales. The actual home consumption of the year being 1,137,340 bales, it follows that the stock on hand on the first of September, 1871, was reduced 120,303 bales.

PRODUCE AND PROVISIONS.

NEW YORK, Monday, Sept. 16, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,500,000	Meal, bbls	4,590
Oats, "	270,000	Flour, "	57,898
Wheat, "	497,500	Eggs, "	5,738
Rye, "	—	Cotton, bales	14,149
Barley, "	4,500	Hops, "	685
Malt, "	31,980	Wool "	1,549
Seed, "	1,485	Butter, pkgs	15,670
Beans, "	1,425	Cheese "	22,130
Meal, bags	648	Lard, "	3,908
Peanuts bu	3,070	Dried fruits, pkgs	2,100
Pork, bbls	505	Cut Meats "	1,389

Beans.—The stock of mediums is very light, and there is not enough of the new crop coming in to meet the demand. Prices still rule high. The relatively low prices of marrowfats bring a little more demand for this description. The stocks are very fair and freely offered.

We quote Mediums, prime $3.05@3.12 per bushel; good do., $2.50@2.75; fair do., $2 30@2.50; prime marrowfats, $2.75@2.90; good do., $2.10@2.75; common and fair do., $2@2.25.

Beeswax.—Shippers are in the market and have secured considerable stock at late prices. Holders, at the close, are a little firm in their views. Sales at 31@35c. for Western, and 35@36c. for Southern.

Broom Corn.—Sales are small, most parties waiting until the new crop comes to hand. The nominal prices are 3@5c. for red; 5@6c. for green; and 7@8c. for hurl.

Butter.—There has been a good demand for fine grades of butter, and though the receipts look ample they do not contain enough of the desired quality, now that all buyers are calling for it. A proof of its scarcity is the advance in pails which opened on Wednesday last and has been sustained during the week. There is a strong feeling in table grades now that no reliance can be placed on immediate arrivals of comparatively cheap Western. Low grades of state is. stock have gone out of the market to a considerable extent. Exports since our last, 937 packages, most of which goes to Europe.

We quote:—Orange Co. pails, choice, 30@35c., other State pails, 23@28c.; State selections, 28c.; good to prime firkins, 24@26c.; do. half tubs, 21@26c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 20@21c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.; Pa. and N. J. pails, medium to fine, 23@30c.; poor, 15@18c.

Cotton.—The new crop has been received freely the past week, and prices are lower, with an unsettled feeling. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16⅝	16⅝	16⅝	16⅞
Good Ordinary	19¼	19⅝	19⅝	19⅝
Low Middling	20⅜	20⅝	20⅝	20⅝
Middling	21⅛	21⅜	21⅝	21⅝
Good Middling	23¼	23½	23⅝	23⅝

For forward delivery latest sales on the basis of low middling are at 19⅝c. for Sept.; 18⅜c. for Oct.; 18⅜c. for Nov.; 18⅝c. for Dec.

Cheese.—Trade has been very slow the past week from shippers. The cable advises a decreased consumption on the other side and a less confident feeling there, and shippers have preferred to wait until there is a more settled feeling. The arrivals have been very light here, and with a better home trade very slight changes have been made in prices. We quote State factory, choice, 13⅛@13½c.; good to prime, 12½@13c.; fair lots, 11½c.; State dairy, 12@12½c. for good to prime, 11@11½c. for fair lots; Ohio factory, 11½@12⅝c. for good to prime.

Dried Fruits.—Apples have been received freely, and the market is weak with a dull trade. Peeled peaches are held firmly, but the demand is small as yet. Blackberries are held at 10½c., with small sales only. Cherries are scarce and high. The quotations are, for Southern apples, 3¼@6c.; do. sliced, 8@9c. Peeled peaches at 14@17c. for Ga., 12@14c. for Va., and 11@20c. for North Carolina. Unpeeled peaches at 5c. for quarters, and 6c. for halves. Cherries, 22½c. Plums, 14@15c.

Eggs.—The market has improved, notwithstanding the arrivals have been larger. At the close, the high prices check trade to some extent. Sales at 26½@27c. for Western, 27@28c. for State and Pa., and 28c. for Jersey.

Flour.—Prices further declined ten to fifteen cents immediately subsequent to our last report, but at the lowest point the demand from the home trade became active to stock up, and at the close, with an insufficient supply, prices are higher than quoted last week, the improvment most marked on the low grades, for which the demand is especially active. Shippers have been buying but very little, their orders from the other side being small, and but very little disposition to execute them, in view of the momentarily high cost of ocean freight room.

Superfine State	$6 15	@	6 60

Rye, common to fine	4 50	@	5 30
Corn meal, Western	3 40	@	3 75

Fresh Fruits.—Peaches are winding up, as the presence of Smocks and White Hearths signify. A few Crawfords are quoted at $1.50 ₱ basket. Apples are dull and few lots are selling. The fancy retailing sorts are lower, as the local demand is running upon peaches. Bartletts are in good supply and only prime large, sound lots will bring $11. Seckels thus far have run poor. Flemish and Duchess slow of sale. It is reported that we shall have other fancy pears in stock next year. A few Belle Lucrative are even now offered from wholesale stands. Grapes are in fair supply, but there are few lots that run evenly sound. Plums are rather scarcer, but buyers during the glut became used to low figures, and sellers do not close out rapidly. Melons are easy in prices, as the weather is cool and against their use. We quote: Fancy apples, $1.25@1.50 ₱ bbl.; common, 50@75c. do. Delaware peaches, extra, basket, $1.25@1.50; Del. fair, 75c.@$1 do.; N. J., 50c.@$1.25. Egg and other fancy plums, $5@7 ₱ bbl; Green Gages, $1@6 do., for small to large; common, $3@4 do. Grapes are quoted at 10@13c. for Iona, Delaware and Catawba; Concords, prime, 8c.; poor, 3@5c. Nutmeg melons, fine, $1.50@2 ₱ bbl.; common, 37@75c. do. Watermelons are now arriving from N. J. only. In addition to the old style of green melons the striped Gypsy is in stock. No. 1 quoted at $20@25 ₱ 100; No. 2, $10@12; culls, $6. Peanuts dull, at $1.60@1.90 for Norfolk and $1.40@2 for Wilmington.

Grain.—Prices of wheat have advanced about 2c. The milling demand is brisk for Winter grades, and with small stocks of these sorts holders are not anxious to realize at the improved prices. Spring grades are plenty and offered freely at the quotations, but the advanced rates of ocean room limit the shipping demand. We quote No. 2 Spring in store, $1.55@1.57; No. 1 do., $1.60@1.63; new Winter red Western, $1.55@1.70; new amber Western and Southern, $1.70@1.75, white do. at $1.80@2.01. Corn is higher and active for export; sales at 62½@65c. for steamer lots of Western mixed, 62@63½c. for sailing do., 64@68c. for white, and 61@65c. for yellow. Oats are moderately active. The demand is mainly for old mixed, which is scarce. We quote at 48c. for old white Western, 40@42c. for new black do., 43@44c. for new mixed, 46c. for new white.

Hay and Straw.—The Shipping demand is improving and the home trade is brisk. There is a fair amount of stock coming in but the supplies do not accumulate to any extent, most holders willing to accept current prices promptly. We quote new shipping hay at $1@1.05; retail do., $1.35@1.40; salt, do., 55@80c.; clover, 75@80c. Straw at $1@1.05 for long rye, 75@85c. for short rye, 70@75c. for oat.

Hops.—Prices are fully 10c. lower than last week, with a depressed feeling. The crop on the other side is large, and it is now conceded that our crop will be somewhat larger than last year. Growers have put their prices down, but at the figures they name find very few buyers; 30c. is almost the best figure offered in the interior, with 35c. asked. A small lot—25 bales—new English has been received, but has not been disposed of. We quote:—New York, growth 1872, at 38@42c.; Eastern do., 38@42c.; Western do., 38@42c.; old at 10@20c.

Peas.—Green sell at $2.

Poultry and Game—Prices are again lower with increasing arrivals. Ducks at 75c@$1 per pair. Geese at $1.75@2 for Western per pair; $2.50@3 for Jersey do. Prairie chickens, 85c. per pair. Woodcock, $1.25. Partridges, $1.12@1.25. We quote dressed poultry at 19@20c. for prime State chickens; 18c. for fair lots do.; 19@20c. for prime State fowls; 18c. for fair do.; 22@23c. for prime turkeys; 18@20c. for common. Live poultry at 15@16c. for spring chickens, Western; 18c. for Jersey; 14@15c. for fowls; 19@20 for Jersey turkeys; 18@19c. for Western.

Provisions.—The market for mess pork has ruled strong and there has been a free jobbing trade in cash pork which has included quite a quantity to go directly out of market. Speculative pork is only sparingly offered and $14.00 is a free bidding price for Sept. or Oct. Jobbing lots are firm at $14.20. Extra prime has advanced to $11.50. Prime mess has been bought largely for continental use, and after recent sales of 2,000 bbls. at $12.25@12.50, the remainder of the unusually small stock for the season is held at $13. Beef hams are dull at $32. Beef is firmer in price, Western and Southern tierces are extremely scarce, and city packed extra India will bring $25@27. We quote of ordinary stock plain mess bbls. 5@7c., India mess tcs. nominal at 16@20c., prime mess tcs. 13@16c. Bacon is a shade weaker in the absence of orders, and some city packers are disposed to shade 9c. Sept. or Oct. For Winter months there have been a few sales of short clear at 8¼c. for Jan. and Feb. Cut meats dull; the suspension of trade in smoked obstruct operations in pickled meats, and the same may be remarked of other pickled meats. Lard is steady at 9 3-16 for Western, 9¼c. for kettle. City is dull at 9c, but has been bought largely into Oct. at that price. Tallow easy at 9 5-16c. In hhds. for city, 8¾@8¾c. for country pkgs. free. Stearine is firm at 10¾c. for tcs.

Tobacco.—There is a good business in all descriptions and a firmer feeling. Virginia, common to good lugs, 7¾@8¾c.; low to mediumf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.		Heavy Grades.
Lugs	8½@ 9	c.	9 @ 9½c.
Common to medium leaf	9¾@10		9¾@10¾
Good do	10¾@11		11 @12½
Fine do	11½@12½		13 @14
Selections	13 @14		15 @16
New crop Seedleaf.			
Connecticut and Mass. fillers	14		@16
seconds	26		@35
New York State running lots	10		@13¼
Pennsylvania do medium	12		@14
fair	15		@17
fine	18		@22
Ohio, running lots	10½@15		
Wisconsin and Western	8½@10		

Seeds.—Timothy is held firmly at the late advanced prices, as it is believed the crop will be small. Sales at $3.75 up to $4.25. Clover quiet at 9¾c. for O., 10¼c. for Indiana and Michigan, 10½c. for State.

Vegetables.—Peachblow potatoes sell higher. Early Rose are plenty, and in the buyer's favor. Sweets are in full stock, and lower. The quotations for potatoes are for bulk lots.

Early Rose, bbl., $1.50@1.75; Jackson White, $1.25@1.50. Tomatoes, 50@90c. Squash, per bbl., 75c.@—. white and yellow. Cucumbers, ₱ bbl., 25c.@$1. Cabbages, $8@10. Onions, red, ₱ bbl., $2.00@2,50; yellow, $2@2.25. Sweet potatoes, $3.25@4. Pickles, $1 per 1,000. Pumpkins, $7@8. Garlic, per 100 bunches, $10@12. Russia turnips, per bbl., $2.50@3.50.

Whisky.—There is a fair business and a steady market, at 93c. for Western.

Wool.—There is a better trade in fleeces. Manufacturers are in the market and buying comparatively quite freely, encouraged by the increased sale of goods. Slight concessions are made in instances, but as a rule holders are firm in their views. For foreign descriptions there is hardly so much inquiry. The firm prices ruling at the late London sale checks any important decline in prices here, notwithstanding there is a fair amount of stock on sale. Latest sales are of Ohio fleeces at 60c., fine delaine at 70c., Georgia at 56c., pulled at 55@60c. for super lambs, Texas at 31@33c., Spring clip California at 28@31c., slightly burry Cal. 27c. We quote fleeces at 55@58c. for New York and Mich.; 56@62c. for Ohio; 55@58c. for Indiana and Wisconsin; 50@56c. for Illinois; 40@47c. for Texas fine; 30@35c. for do., coarse. Pulled, 52@62c. for extra.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Sept. 7, 1872.

THE market at Little Falls, for the week ending Sept. 14, continues to be dull, with light sales of factory. About 930 boxes farm dairies were delivered, and were sold at prices ranging from 11½c. to 12½c., the latter being top rates for extra fancy. In factory make, the offerings were between 12,000 and 15,000 boxes, but the views of buyers being below those of sellers, the transactions were only about 4,000 boxes. We give quotations of sales as follows:

Fays	13	Herkimer	13
Mohawk Valley	12½	Herkimer Co. Union	13
Reyder	13	Hill	13¾
Danube Cold Spring	13	Johnstown Cold Spring	12¾
Bates	13	Keys	13¾
Billinger	12¾	Manheim	13
Bethel	13¾	Minerville	13
Brockett's Bridge	13¼	Neighbor	12¼
Brockett & Foter	13	Newville Ass'n	13½
Cayudutta	13	Pauling	13
Christmar	13	Russell	12¾
Cold Brook	13¼	Shell's Hush	13¾
Cold Creek	13¾	A. Smith & Co.	13
Cruine's Corners	13¼	Smith Creek	13
Dunkle	13	Stratford & Salisbury	13¾
Florida	13	Stone Arabia	13
Freeman	12¾	Suttville	13¼
Getman	13	Van Hornsville	13
Henderson Associat'n	13¼	Zimmerman Creek	13

Butter now begins to come forward in small quantities, and Welch tubs were taken at 23@25c.

The weather has been warm, and no frost as yet to injure afterfeed. Grass is abundant, and cows in Herkimer Co. are doing well.

LIVE STOCK MARKETS.

NEW YORK, Sept. 11, 1872.

CATTLE have arrived less freely, but there was an overstock last week, so that a smaller number suffices now. There are even more arriving now than can be sold, and prices are easier. Sheep are a shade lower, while lambs have sensibly declined and go off slowly. Hogs advanced a little, but are tame just now. There are more sent in dressed from nearly all points as the weather grows cool.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,860	40	2,818	32,150	41,204
" last week	11,963	76	2,896	31,033	38,797
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—After the hard close last Monday, with a good many cattle left over, there were 191 cars fresh arrivals up to Thursday, hence there was no chance for any improvement in prices. Texans were far too numerous to suit our butchers, but failing to get what good native stock they wanted, these long horns were bought under protest. A few droves Wintered in the States were good, and sold at 9½@10¼c., but most of the lots were through cattle, poor and scrawny, some of them so wild that a rifle was called into requisition to stop their mad career, and these would only sell at 7@8c., many of them still awaiting purchasers. Taken as a whole the market was a hard one, and there is no immediate prospect for an improvement. Fat cattle are not plenty, and these still keep at 13@14c., making fine stock worth twice as much as poor Texans. The only change from last week is a little advance in the best and a corresponding decline in the poorest. Some Texans sold at cost in Chicago.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb	13½ @ 14	13 @ 13¾
Good to prime	12 @ 13¾	12 @ 12½
Medium	11 @ 11	11 @ 11¾
Poorest grade	7 @ 10	7½ @ 10
Average sales	11½ @ —	@ 11¾

Hogs.—There is an increase in the receipts, and more are selling alive, generally at 5¼@5½c., some rough going at 5c. Dressed sell at 6¾@6¾c. for the bulk, pigs going at 7@7½c. They reached 7½c. one day. Jersey-dressed are worth 8@8½c., with a good demand.

Milch Cows.—Milk is doing better, and that would help the sale of cows, only that thin or cow beef rules very low, so that, as a whole, we call cows unchanged, or $30@65 per head.

Veal Calves.—Cooler weather helps the trade, and prime calves are doing better, quite a good many Jersey and Pa. fat veals selling for 10c. Arrivals are quite free, but all are taken. Grass calves sell at 3@4½c. per lb., $5@10 per head. Some of them are very large, weighing close up to 300 lbs.

Sheep and Lambs.—While fat sheep are not plenty and are in fair request at nearly the rates of last week, lambs are a drug at 1c. decline. They sell at 6¾@7¼c. for poor to rather thinnish lots, and 8@8¾c. for good to prime. Fat sheep rarely exceed 6¾c. with really good at 6¾c., and so down to 5c. for thin, and 4@4½c. for bucks. The average of 9,565 sheep and lambs was $5.43 each.

LATEST.—Monday, September 16, 4 P. M.—Beeves.—Arrivals to-day, 185 cars at Communipaw, 87 at 100th St., and 37 at Weehawken, making 5,113 for the present market. Texans were largely in excess of the demand, and sold slowly at 7¼@9c., while fat natives were scarce and much wanted at higher prices. The best sold 14@15c. per lb., whole droves averaging 14¼c.

Sheep and Lambs.—Arrivals for to-day's market, 2¼ car loads at Communipaw, 15 at 48th St., and 23 at 40th St., making 8,445 on sale. The market ruled active, and prices were rather better, good sheep selling readily at 6¾c., with prime at 7c., and a few very extra at 7½c. Lambs went quick at 8¼c. for fine lots. A few brought 9c.

Hogs.—Receipts to-day, Sunday included, 2 car loads at Communipaw and 89 at 40th St., making 11,971. There is no change in live, a car of State selling at 5¾c. Dressed went at 6¾@7¼c.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

The Pennsylvania Company, and
The Grand Rapids and Indiana Railroad Company.

The road is entirely completed and in operation, and extends from Fort Wayne, Indiana, to Richmond, 90 miles in the State of Indiana, and connects the Pittsburgh, Fort Wayne and Chicago Railway, the Grand Rapids and Indiana Railroad, and the whole system of roads under the control of the Pennsylvania Company in Indiana and Michigan, with the Cincinnati, Hamilton and Dayton Railroad to Cincinnati and Southern Ohio and Indiana. The road is leased for 99 years to the Grand Rapids and Indiana Railroad Company, and operated by it for the joint account of the guarantors, and by a contract entered into between the Grand Rapids and Indiana Railroad Company, the Pennsylvania Company, lessees of the Pittsburgh, Fort Wayne and Chicago Railway, and the Cincinnati, Hamilton and Dayton Railroad Company, for reciprocal interchange of business; all these Companies agree to throw all their freight and passenger traffic which may be appropriately done over this road, thus insuring it from the outset a large volume of business. The holders of these Bonds are thus trebly secured:

First—By a first mortgage on a finished road now in full operation.

Secondly—By a contract for interchange of business with three prosperous and powerful corporations, controlling in its favor a vast amount of business.

Thirdly—By the direct and absolute guarantee, jointly and severally, by ENDORSEMENT ON THE BONDS by the above mentioned three Companies.

The whole issue of the Bonds is $1,800,000, or $20,000 per mile, and but a limited amount are now offered to investors. Price, **92 1-2** and Interest. Circulars and information furnished by

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

$5,000,000.

A PRIME INVESTMENT

AT A

LOW PRICE.

THE

CHICAGO AND CANADA SOUTHERN

FIRST MORTGAGE SINKING FUND 30 YEARS'

7 PER CENT. GOLD BONDS

INTEREST PAYABLE APRIL AND OCTOBER AT UNION TRUST CO.,

AT

90 AND ACCRUED INTEREST.

This road is the western link in the new AIR LINE from Buffalo to Chicago, and runs from the Detroit River to Chicago in nearly a straight line.

The road is a part of the same line as the Canada Southern and is being built by the same men, viz.: Milton Courtright, John F. Tracy, David Dows, Wm. L. Scott, Henry Farnam, R. A. Forsyth, John. M. Burke, M. L. Sykes, Jr., all directors either in the Chicago and Northwest or the Chicago, Rock Island and Pacific; George Opdyke of the Midland Road; Sidney Dillon, Daniel Drew, John Ross, David Stewart, Samuel J. Tilden, Kenyon Cox, and other prominent railroad men.

The road, like the Canada Southern, will have steel rails (60 pounds to the yard) throughout; is practically straight and level; much shorter, and can be run with greater speed and safety than any other road connecting Buffalo and Chicago.

Twenty-five miles are finished and running; seventy-five miles more are so far advanced as to be finished by January 1, and the entire road will be completed during the ensuing year. Steel rails and ties for one-half the entire road have already been purchased.

The builders of the road control enough of its Chicago feeders to obtain for it a profitable business from the start, having projected the line to accommodate existing business, and having seen the necessity for another trunk line between Chicago and the Atlantic seaboard, located expressly with the view of obtaining the cheapest transportation practicable.

The branch lines will make the shortest connections between Chicago and Toledo, and Chicago and Detroit, as well as between all these points and Buffalo.

The Canada Southern Bonds, in every particular like these, were eagerly taken, the last of them several weeks ago, by the best class of investors, and were on the market a shorter time than any other railroad loan of like amount for years past.

The proceeds of these bonds will complete the entire line, and we recommend them with the same confidence as we did the Canada Southern, and regard them as in every way a choice security.

TO DAIRYMEN AND CAPITALISTS.

1,000 Acre Dairy Farm for Sale, with Stock, Implements, &c.

PRICE.....$40,000.

The subscriber offers for sale SPRINGWATER FARM, consisting of 1,000 acres, situated on Sengog Island, Ontario Co., Canada, and distant three miles from Port Perry, the terminus of the Whitby & Port Perry Railway, and close to the waters of Lake Sengog, where there is an abundance of fish and game.

This farm is specially adapted for dairy purposes, being watered with numerous springs, all the buildings being supplied with water from this source, conducted through pipes, as well as cattle yards, &c. There are on the place twelve houses for workmen, five large barns, horse and cattle stables, sheds, pens, &c., and one large dairy building, through which a stream of water constantly runs. The soil is first-class, never failing to produce heavy crops. There is a reserve of wood land in connection with it, sufficient to meet the requirements of the place. The farm would be sold in one, or two blocks of 500 acres each, the purchaser having the option to take cattle, stock, horses and implements at a fair valuation, made by disinterested parties.

TERMS OF SALE.—For the Land—$10,000 down, balance on mortgage for from 5 to 10 years, with interest at 7 per cent. per annum. For Stock, Implements, &c.—$5,000 down, balance in one year, without interest. Parties desiring to see the place, or to purchase, will please address WM. S. SEXTON, Port Perry P. O., Ontario, Canada.

A CHOICE FARM FOR SALE.—Situated 1½ miles south of the County Seat, Girard, Crawford Co., Kansas. Mo. River, Fort Scott and Gulf R. R., runs on the east side of the farm, about 200 feet from the east line. Contains 160 acres, all under fence; 125 acres under cultivation; 1,300 apple trees; 200 standard pear trees; 500 peach trees; with house, good corn crib and granary, hog lots, &c. It is well watered, and I will sell it at $40 per acre; one-third down, the balance in one and two years. Apply to H. W. CONVERSE, Fort Scott, Kansas.

FARM FOR SALE.—A GOOD DAIRY Farm, situated 4 miles from the Erie Railroad Depot, at Friendship, N. Y., containing 350 acres. Well watered, good orchard, buildings, and stabling sufficient for 60 cows. For particulars, address BUTTS & MCCLUMPHA Friendship, N. Y.

Implements, Machinery, &c.

This Machine with present improvements is guaranteed to do all every want of the household, for either plain or fancy work. It knits all sizes of Stockings and Socks, with heel and toe complete, and is a never-ending source of amusement to ladies of leisure, as well as profit and easy support to those that require it.

Agents wanted every where by the BICKFORD KNITTING MACHINE COMPANY. DANA BICKFORD, President and General Business Supt., 689 Broadway, New York.

CARHART'S PULVERIZING CULTIVATOR has more practical points than any cultivator in use, and is indispensable as a farm implement. Price, $22. C. C. BRADLEY & SON, Manufacturers, Syracuse, N. Y.

ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats, Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler—No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

For further particulars, address P. P. MAST & CO., Springfield, Ohio.

MONEY FOUND IN THE SEWERS!

THE

Goux Fertilizing and Sanitary Co.

beg to call the attention of Farmers, Market Gardeners and others to their natural manure. This manure, manufactured from pure human excreta, collected by means of Goux's patent closet system, and mixed with the best fertilizing absorbents, is suitable for every kind of crop, and being remarkably rich in nitrogen (the basis of Ammonia), and soluble phosphates, it affords the plant a liberal supply of natural food, in the most concentrated and readily available form possible.

For further information, apply to or address the Company, at their office, corner of Varick, Vestry and Canal Sts., New York.

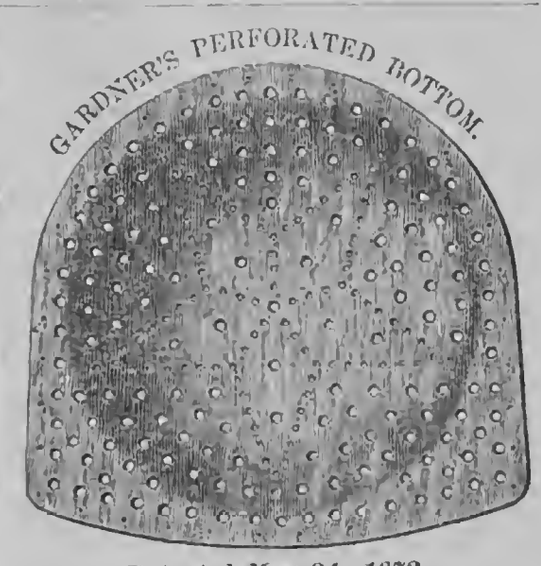
E. M. BOYNTON, 80 Beekman St., N. Y., Sole Proprietor.

AMES PLOW COMPANY. IMPLEMENTS AND MACHINES. 53 Beekman St., New York, and Quincy Hall, Boston.



Patented May 21, 1872.

GREAT IMPROVEMENT IN CHAIR SEATS.

Various have been the efforts of men to produce a seat which should be comfortable, light, comely, durable, and also admit of universal application. The degrees of success have been as varied as the effort; but within the last year the long-sought was revealed to an observing, practical genius, and is hereby offered to the public, in full confidence of its instant appreciation.

The seat is composed of three layers of veneer (boards as thin as a knife blade), the grain of each lying in an opposite direction to its neighbor, all glued firmly together in a slightly dishing form, adapted to the person. The entire thickness slightly exceeds one-sixth of an inch. We thus have moderate cost, little weight, neatness, great beauty if desired, and a lasting quality which, in usual service, may properly be called eternal. *While it is especially adapted to reseating chairs by any one who can nail down a carpet*, it is coming rapidly into use for the better class of chairs for sumptuous apartments. The slightest observation will convince the most skeptical of its unequaled merits.

5 Beekman St., New York.

CONTRACTS TAKEN!
Rights for Sale.
AGENTS WANTED.
"EAGAN'S COMPOSITION."
(Patented March 5, 1867.)
Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.
Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:
It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.
It is free from mud and dust, and is noiseless.
It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.
The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.
Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.
Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,
Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of those objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,
Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.
Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.
Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.
Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is neatly and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.
Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipes.

CEMENT.
As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.
Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.
First premiums have been awarded to Eagan's Composition from the following Fairs:
California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.
OFFICE OF UNION RAILROAD COMPANY,
ST. LOUIS, MO., 28th March, 1871.
This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1863. Since that date the tenus of the railroad have passed over that portion of the track where the concrete is used, *700 times each day,* while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 23 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.
SAM'L N. PIKE, Pres't.
DAVID ALLERTON, Vice-Pres.
W. C. MOORE, Treasurer.
A. WELLES, Secretary.
E. McMURDY, Director.
D. D. T. MOORE, Director.

A FELINE REBUS.

TARRANT'S SELTZER APERIENT. Trade Mark. Patented.

TREAT THE HUMAN MACHINE GENTLY.

The winding passage thirty feet in length through which the main portion of the waste matter of the system is discharged, is lined with a membrane as delicate as silk and as sensitive as a net-work of nerves can make it. Neither constipation, colic, diarrhœa, dysentery, or any other bowel complaint, can be cured by abusing and convulsing this tender membrane with a furious purgative. The best and safest remedy in such cases is that mild balsamic and delightful tonic laxative,

TARRANT'S EFFERVESCENT SELTZER APERIENT,

which heals, tones and invigorates the irritated intestines, while it relieves them from the morbid humors which provoke abdominal disease. Sold by all Druggists.

Factories, Wallingford, Conn. Salesroom, 36 Park Row, New York.

ESTABLISHED 1837.

TO INVESTORS.

To those who have funds to invest in large or small amounts, or who wish to increase their income from means already invested in other less profitable securities, we recommend, after full investigation, the Seven-Thirty Gold Bonds of the Northern Pacific Railroad Company. Bearing seven and three-tenths per cent. gold interest, (equal now to 8¼ currency,) and sold at par, they yield an income considerably more than one-third greater than U. S. 5-20s. They are Coupon and Registered, the lowest denomination being $100, the highest, $10,000.

Nearly one-third of the Main Line of the Road will be completed and in operation with a large business the present season. All the property and rights of the Company, including a most valuable Land Grant, averaging about **23,000** acres per mile of road, are pledged as security for the first mortgage bonds now offered.

All marketable stocks and bonds are received in exchange at current prices. Descriptive pamphlets and maps, showing Route of road, Connections, Tributary Country, &c., will be furnished on application.
